BARRIERS FALL

105 Negro Homes In All-White Areas

By CLARENCE HUNTER
Star Staff Writer

At least 105 Negro families have moved into or purchased homes in previously all-white neighborhoods in suburban Maryland and Virginia over the past two years.

An additional 15 Negro families have moved into neighborhoods west of Rock Creek Park in the District during the same period, the Metropolitan Washington Housing Program reported today.

James Harvey, a staff member of the American Friends Service Committee which sponsors the housing program, said records maintained by his organization do not include Negro families living in exclusively Negro neighborhoods in suburban Maryland and Virginia. Nor do the records contain the few Negro families who are long-time residents of areas which have developed around them as exclusively white neighborhoods.

Began Efforts in 1962

When American Friends began its program of neighborhood desegregation in the area in 1962 it could count only about 10 Negro families living in predominantly White areas, Harvey said. The known number of Negro families in these areas today is 120, he added.

Most of the Negro families have moved into Montgomery County, Harvey said. Movement into Northern Virginia and Princes Georges County has been slower, he pointed out, because not enough houses in these areas have been offered for sale on an open occupancy basis.

Also, citizens groups working for voluntary neighborhood integration have not been as active in Northern Virginia and Princes Georges as they have been in Montgomery County, Harvey said.

Beginning Desegregation

The Washington Housing Program reported also that suburban apartment developments are beginning to desegregate. The program's records show 15 Negro families living in six—three in Arlington County and three in Montgomery County—apartment developments. Harvey said a half-dozen or more of the families live in Arlington area apartments.

The beginning of residential integration in suburban apartments is not so spectacular or obvious, but it does seem to indicate a rapid movement toward expanded opportunities in the many suburban apartment buildings, Harvey noted.

Homes purchased by Negroes in suburban neighborhoods previously closed to them ranged from $11-$12,000 to $40,000 and higher. Harvey said the "low $20,000s" would be about the average purchase price of a home bought by Negroes who have made the switch to the Maryland and Virginia suburbs in the past two years.

More Negro families would locate outside the District if they could find desirable housing at prices they can afford, Harvey said.

"Our fair housing program is moving quite well," he said. "We are getting more houses people are willing to sell on an open occupancy basis, but we still don't have enough houses for the applicants who are looking for good housing in good areas."

An indication of the program's success is the fact that more real estate firms are willing to cooperate by selling residences without racial considerations, Harvey said. More volunteer citizens groups are interested in desegregating their neighborhoods, Harvey added.

No Decline

The movement of Negro families into formerly all-white neighborhoods has not been accompanied by a decline in real estate values nor has there been any unpleasant community reactions other than slight discourtesies which disappeared as the new residents became known as individuals and neighbors, the report stated.

Harvey said there has been no community tension necessitating police attention.

Negro families are settling in the suburbs without benefit of local fair housing laws such as the District regulation which forbids racial discrimination in the sale and rental of housing, Harvey said.

The Washington Housing program, directed by Merlin A. Myers, is beginning a new effort to further desegregate suburban housing. "We are forming a group to conduct educational efforts in Negro communities about the new opportunities which are available in housing," Harvey said.

Harvey estimated at least 90 percent of the Negroes who recently moved into the suburbs were aided in some way by his organization in their search for satisfactory housing. The minority families who located and negotiated their purchases alone probably benefit from the community goodwill the Housing Program has worked to establish in the metropolitan area, Harvey said.

This map shows the dispersion of Negro families who have taken advantage of open occupancy housing opportunities in the Washington Metropolitan Area. The dots represent only those Negro families known to have moved or bought homes as of last Oct. 1 and represent at best only about 20 percent of the number of homes known to have been available for rent or purchase on a freedom of choice basis. The triangles represent desegregated apartments. The Metropolitan Washington Housing Program map does not show desegregated Woodbridge, Va. and Belair, Md. developments.

The Right Way

Some 105 Negro families are known to have moved into previously all-white neighborhoods of the Washington area within the last couple of years. In terms of our total population, that number is not great. But an analysis of the highly diversified suburban areas into which these families have settled, and more importantly, the manner in which they have accomplished it, are impressive indeed.

For as the American Friends Service Committee points out, and the fact is quite remarkable, no major incidents have accompanied the moves. Many, indeed, may not have been aware that such a resettlement was taking place. Initial tensions, in the few instances where they arose, have been eased by the quietly persuasive efforts of civic groups and the clergy, and by the passage of time as the "outsiders" have become known to their new neighbors as individuals. And that, of course, is precisely as it should be.

The families covered by the American Friends' study report moved for a single reason: To find homes which met their needs at prices they could afford. In a sense, however, each of them also is a pioneer. For our metropolitan region can never become a cohesive community, it can never solve its pressing social and economic problems, until the present artificial pattern of geographical segregation by race is broken. Logic requires that there be a greater distribution of Negroes in the suburbs—just as a greater proportion of white families must be attracted to return once again to the central city.

NEGRO FAMILY SURVEY TABULATIONS

February 10, 1965

No. of families interviewed: 17

Type of dwelling:

A. Apartment: 0

B. House: 17

Detached: 10
Semi-Detached: 2
Row: 5

Person interviewed:

HUSBAND:(or husband and wife): 8
WIFE: 5
SINGLE OR DIVORCED WOMAN: 2
OTHER: (daughters in late teens) 2

1. Length of residence here:

Less than one year: 2
One to two years: 8
Two to three years: 3
Over three years: 4

2. Renting or buying:

BUYING: 16

(Price in fee)

$ 9,200 -	1
12,500 -	1
13,600 -	1
14,000 to 14,499 -	4
14,500 -	2
16,000 -	3
22,000 -	1
Don't Know -	3

RENTING: 1
Rental: $125.00 per month

3. Age of house:

Under five years: 2 Five to eleven years; 14 Twenty-five years: 1

4. How many bedrooms: Two bedrooms: 1 Three bedrooms: 16

5. Neighborhood of present home:

CITY: 8		COUNTY: 9	
Norcroft:	2	Anne Arundel: 4	
Woodbourne Hghts:	2	Glen Burnie -	3
Mt. Washington:	1	Odenton -	1
Yale Heights:	1	Baltimore County:	5
		Reisterstown:-	1
		Pikesville -	2
		Owings Mills -	1
		Woodlawn -	1

6. How long have you lived in the Baltimore area?

HUSBAND		WIFE
1	Under 10 years	2
4	10-19 years	5
3	20-29 years	6
4	30-39 years	2
3	40 years and over	2

7. From what neighborhood did you move here?

CITY: 15		COUNTY: 2	
Eastern:	2	Baltimore County:	1
Northwest:	11	Anne Arundel:	1
Northern:	1		
Southern:	1		

8. Owned or rented previous home? Owned: 5 Rented: 12

9. How many bedrooms did you have there? One: 5 Two: 6 Three or more: 6

10. In what state did you live most of your life?

HUSBAND		WIFE
13	Maryland	13
	North	1
2	South	3

11. Live as a child?

HUSBAND		WIFE
11	Maryland	12
	North	1
4	South	4
11	Urban	11
4	Rural	6

12. Do you plan to stay in the Baltimore area?

YES: 15 NO: 0 UNCERTAIN: 2 (no explanation)

13. Do you plan to stay in this neighborhood?

YES: 14 NO: 0 UNCERTAIN: 3 (might buy bigger/better home

14. Number and age of adults and children in household?

A. Adults: One adult: 2 Two adults: 15

B. Ages of related adults:

In 20's:	6
In 30's:	17
In 40's:	7
In 50's:	1
In 60's:	1

C. Number of unrelated adults: 0

D. Age and school status of children:

	PUBLIC	PRIVATE
Teens, out of school:	2	
Teens, in school:	5	0
Under 13 in school:	13	0

E. Pre-school: 6

F. Total persons in household:

One: 1 Two: 3 Three: 6 Four: 5 Five: 0 Six: 1 Seven: 1

15. Highest grade completed by adults in household:

MEN		WOMEN
	Elementary, not completed:	1
	Elementary, completed:	1
4	High school, not completed:	1
6	High school,completed:	6
1	College, not completed:	3
2	College, completed:	3
2	Graduate study:	2

16. Did adults of household go to school longer than their parents?

MEN		WOMEN
8	YES:	5
1	NO:	2
6	DON'T KNOW:	10

17 & 18. Type of employment:

MEN		WOMEN
2	Professional: (not including teaching)	1
1	Executive:	
1	Teaching:	5
	Technician:	1
3	Clerical:	2
5	Skilled labor:	1
3	Unskilled labor:	3
	Not employed:	4

Jobs Listed Men:

Merchant Seaman - Union
Steelworker - Bethlehem
Shipping Clerk - Lamb Brothers
Clerk - Post Office
Coal Car Operator - Bethlehem
Teacher - public school
Machine Operator - Dial Chemical Co.
Printer-HEW, federal government
Owner - fuel company
Telefax Operator - Western Unir
Dentist - self-employed
Transit Operator - BTC
Chemical Engineer - Edgewood Arsenal
Postman - U.S.
Tent Repair - Fort Meade

Jobs Listed Women:

Asst. Professor - Morgan
Barmaid - cocktail lounge
Nurse - City Hospitals
Day worker
Teacher - public school
Audit Clerk - Social Security
Domestic - private home
Dental Asst. - Balto. Health Dept.
Agent - insurance company
Teacher - public school
Teacher - public school
Teacher - public school
Inspector - Continental Can Co.

19. Approximate total (combined) income before taxes and deductions for family - 1963?

$ 5000 - 7499:	5	$ 12,500 - 14,999:	0
7500 - 9999:	2	15,000 - and over:	2
10,000 - 12,499:	2	*Don't Know:	6

*The "don't know" category includes households in which the following jobs are held:

HUSBAND	WIFE
Merchant Seaman	Barmaid
Dentist	Dental Assistant
Shipping Clerk	Domestic work
Coal Car Operator	Teacher
Owner (Fuel Oil Co.)	Auditor Clerk
Postman	Not employed

20. Religious affiliation:*

Catholic: 3 Protestant : 12 Other: 3 (one Jehovah's Witness, one Seventh Day Advent One Jesus Only)

21. Location of church?

A. In Negro neighborhood: 12
In predominantly white neighborhood: 7

B. Near old residence: 8
Near new residence: 2
Near neither residence: 8

22a. How did you hear about this house and neighborhood? Who recommended it?

Real Estate broker: 4
FHA or VA: 9
Newspaper ads/for sale signs: 3
Other: 1

b. What were your misgivings concerning your choice?

None: 6
Fear of white neighbors' hostility: 1
(Didn't know it was a white neighborhood: 1)
No specific answer: 9

c. What other neighborhoods did you consider? [Only one of the 17 families answered this question.]

23. What did your friends and relatives think about your move to this house?**

Approved: 9 Disapproved: 0 Apprehensive: 4 Neutral: 1

Skeptical about being allowed to buy: 1 Skeptical about hostility: 3

Don't Know: 2

24. If your friends and relatives expressed interest in moving to this neighborhood what would you advise?

Recommend: 14 Not Recommend: 3

Comments: Three said Negroes shouldn't bunch up; one feared white hostility.

25. How did you think the residents would feel when you moved here? [This question was misinterpreted by both interviewers, as "How did the residents feel....?" Tabulations of the answers have therefore been included in #26.]

*Total equals more than 17 because some husbands and wives attend separate churches.
** In some cases more than one attitude expressed.

26. What kind of a reception did you receive when you arrived?

Friendly: 4 Neutral: 3 Mixed (some friendly, some unfriendly): 5

Unfriendly: 1 Hostile: 4 (See attached sample of answers.)

27. Childrens'contacts in neighborhood:

Friendly: 7 Relaxed: 4 Hostile: 1 No children, or children too young: 5

Comments: Two parents reported that white parents told their children not to play with Negro children but that they play anyway.

28. Adult contacts:

Some neighbors friendly: 9 Little contact: 8

29. Is there a local neighborhood improvement association?

Yes: 2 No: 6 Don't Know: 9

Family participates: 1 Family asked to join: 2

30. Do you belong to any civil rights groups? Yes: 6 No: 11

What groups? NAACP: 5 Baltimore County Human Relations Comm.: 1

31. Do you belong to any interracial groups? Yes: 5 No: 12

Kinds of groups: Citizens: 1 Fraternal: 1 Professional: 1 Church: 1

School: 1

32. Do you belong to other organizations? Yes: 2 No: 15

33. In general, what do you think of your new home and surroundings?

Enthusiastic: 13 Only some members of the family like it: 4

34a. What things do you like best about neighborhood?

Quiet: 8 Convenient: 7 Clean: 4 Like house/grounds: 3

Price right: 2 Excellent neighborhood services: 1 Good School: 1

Nearby play area: 1 In the country: 1

b. What don't you like about it?

Nothing: 10
Narrow minded residents: 2
Coldness of neighbors: 1
Little social life: 1
Children disrespect property: 1
Worry about depreciating properties and area: 1
Too little sound-proofing between houses: 1

35a. Does a stable integrated neighborhood seem possible to you?

Yes: 8 No: 1 Skeptical: 3 No, because Negroes are being kept out: 1

Yes, if there were less mobility due to job changing: 1 Don't Know: 3

b. Do you think the white residents here accept integration?

Yes: 3 For a while only: 3 No: 3

Some have no choice financially: 2 Don't Know: 6

36. Do you think the white residents will stay if other Negroes move here?

Stay: 7 Leave: 4 Depends: 3 Don't Know: 3

37-38. How would you feel if other Negroes moved -

Into the block?		Into the neighborhood?
O K:	12	O K : 17
O K, if they have high standards:	4	
Not O K:	1	

Comments:1.Negroes should avoid bunching.
2.Prefer neighbors with not too many children.
3. They should be able to afford the property they buy.
4. We would welcome Negroes in neighborhood if there aren't too many of them.

39. In what situations other than neighborhood and organizations do you have contacts with white people?

At work: 12 At school: 3 At church: 1 Social: 2 Public Accommodations: 3

40. How frequent are these contacts? [Answers unclear]

41. What kinds of contacts?

Casual: 1 Routine: 10 Friendly: 5 No answer: 1

Answers to Question 26 - Negro Family Survey

Question: What kind of reception, if any, did you receive from the residents when you arrived? Were there any expressions of hostility? Why do you think the residents acted as they did?

Answers: (2) "They were very cold and still are. They have a way of showing you you are not wanted - a look on their faces. Some of the women now show signs of wanting to be nice to us, but most of the men are still hostile. I guess they thought they were settled in this neighborhood for life, and then I moved in."

(3) "One night someone put human feces on our door. Our next door neighbor told us we interfered with his job (which he would lose). He apparently told his wife if any trouble started while he was at work for her to take the car and leave. I wonder what they thought we were going to do. He put his house up for sale right away and we were asked if we had a friend who wanted to buy it. The white family who finally bought it are very friendly to us. Another neighbor offered her services and gave us information about neighborhood facilities."

(4) "One family put rusted nails in our driveway and phoned us several times. At first the residents would drive by and stare. They must have felt insecure - as if we were taking something away from them. But now they know we are here to stay and everything is alright. Some are very friendly."

(5) "Neighbors said to me they preferred nice Negro neighbors to hillbillies."

(6) "There was a bomb threat. The police came right out and gave me wonderful service."

(7) "They welcomed us. One neighbor asked us to dinner."

(13) "We were welcomed into the neighborhood, and, more important, our son was accepted."

(14) "Range of reactions: some curious, some baffled, some cool, some friendly, but no hostility."

(15) "The hostility was immediate. People stared all during the day we moved in. We were still unpacking that evening when a white man walked right into the house and, red-faced and mad, demanded to know who sold us the house and how much we paid for it. Then he stormed out. I called the county police and they acted as if they couldn't care less.

We had other similar intrusions. Then an arrow was shot through our window. The police took two hours to come, so I went to police headquarters and insisted on seeing the Captain. He was indifferent, and said they wouldn't bother to check the arrow for fingerprints. That same night a bomb was thrown into the house. I shot into the air with my gun, and that brought the cops on the double.

Later, when my nephew was in the house, another window was broken and he contacted the NAACP. A letter was written to the Governor who threatened to send in federal troops for protection. After that things quieted down."

House and Garden Tour

One of the most successful projects of WMAN has been the Fall House Tour, given three times in the past. Not only was over $500 raised by each of these tours, but many people from other sections of the city and from the suburbs visited homes in the neighborhood, discovering for themselves the attractiveness of our community. This year WMAN would like to vary the idea by having a House and Garden Tour. To be successful, many people are needed to help with a variety of tasks. Please look over the list of people needed to see where you could contribute your skills and then call Mrs. Steele at CH 2-1196 to let her know where you would be willing to help.

hostesses	distribtue posters nad flyers
prepare refreshments	address letters
serve refreshments	give secretarial help
publicity	serve as treasurer

Policy Committee Formed

Matthew Bullock has been appointed to be chairman of a committee which will meet to consider the long range plans of WMAN and its place in the community. Committee members will be chosen from the membership and from the community at large. The committee will make recommendations to the Board for their disucssion and consideration.

At the February Board of Directors meeting, Mr. Bullock was presented with a copy of PHILADELPHIA DISCOVERED in appreciation of his work as President during the past year.

Free NO PARKING Signs

Trucks may not be parked overnight on residential streets, according to the new law passed by City Council. The city is willing to put up NO PARKING signs where requested by residents. If your street needs a sign to indicate NO PARKING for Trucks, call Mrs. Steele at CH 2-1196. She will take care of the request.

How to Get Around the Zoning Laws

Several new gimmicks are being used by speculators to avoid the intent of the zoning laws and the protests of neighborhood groups such as WMAN.

In one of these gimmicks, the speculator secures a demolition permit immediately upon acquiring a property and clears the ground of existing structures. When he thereafter applies for a zoning change, it is for new construction on vacant ground. The Germantown Community Council warns that a "very real danger exists that this practice can result in the loss of desirable properties in many areas of Germantown if it becomes widespread." The Zoning Committee of the GCC is working on specific remedial actions which can be taken.

In another, the building plans for an apartment shown to the City Zoning Board meet the required number of parking places -- the only hitch being that it is impossible to park an American car in the space allowed. WMAN has written Councilman Bellis requesting a change in the Zoning Code to provide for positive certification by traffic experts on driveways and parking spaces.

Vote to Oppose Down-grading of Zoning

Legislation is being introduced by Mr. Bellis to downgrade zoning on Greene Street between Haines and Harvey Streets from C2-R4 to C2. WMAN sent a strong letter of protest to the City Planning Commission opposing the proposal on the basis that 1) we oppose any zoning changes while the Northwest District Plan is in the formulative stages and 2) we oppose lowering zoning below the classification necessary to construct the intended building.

WMAN is supporting a bill to upgrade the zoning in the area of Burnham, Arbutus and Wayne Avenue. The bill will upgrade the area from R4 to R2 and will only affect future construction, not the homes presently being built on the site.

Award Winners

The winners of the WMAN poster and essary contests were Miriam Soifer, Grade 7, for her essay on West Mt. Airy, and Amy Neifeld, Grade 5, for her poster. Both received $25 U.S. Savings Bonds. Fred Locke took second prize for his poster and Debbie Weis and Sara Gerould shared thrid prize for their posters.

Business establishments in the neighborhood cited for improvements to the exteriors of their establishments were:

National Art Supply Co.	730 Carpenter Lane
Gable Hardware, Inc.	6839 Germantown Avenue
Nicholas Hair Styling	6915 Germantown Avenue
Mt. Airy Medical Building	7060 Germantown Avenue
Maurice W. Waite - Apothecary	7130 Germantown Avenue
Roth and Son Florists	7150 Germantown Avenue
McFarland's Barber Shop	7149 Germantown Avenue
Mt. Airy Cold Cuts	7151 Germantown Avenue
Richard C. McElhinney-Jeweler	7151 Germantown Avenue
Tony's Shoe Repai	20 E. Mt. Airy Avenue
The Sweet Shop	22 E. Mt. Airy Avenue
Capri Discount Shop	24 E. Mt. Airy Avenue

Attention Neighborhood Bath-tub Sopranos, Altos, Tenors and Basses

The WMAN singing group, not deterred by a blizzard on the first meeting night, is going to meet again on Sunday evening, April 25th at the home of Mrs. Ruth Steele, 7139 Cresheim Road at 8:30 P.M. All those who enjoy group singing, by note and rote are welcome. You need not be a member of WMAN to join the fun. Mr. Anatol Holt will lead the singing. Please call Mrs. Arthur Komar, CH 7-2741 to indicate interest, so that she can begin to make up a list for future notices.

Beware of the Dog

Several children on their way to and from schools have been frightened by dogs loose on the streets. Please keep your dog in the house or yard between 8 and 9 in the morning, 12 and 1 in the afternoon and 3 and 4 after school.

Membership Leads Still Needed

Dr. Robert Anderson, V. P. of WMAN and its Membership Chairman, requests WMANers to send the names of any new residents to Mrs. Steele, so they may be welcomed to the community and invited to join us in our work.

Girl Scout Movie Benefit

Local Girl Scouts are selling tickets at 50¢ each for "Flipper", to be shown at the Sedgwick Theater on Monday, April 19 at 7 P.M. The proceeds will be used to finance a local Senior Scout Troop to Girl Scout Roundup (the equivilant to Jamboree), this year being held in Idaho. Get tickets from any Girl Scout or by calling Mrs. Betty Henken, VI 8-3540.

OUR LOCAL REALTORS HELP KEEP WEST MT. AIRY A GOOD PLACE TO LIVE -- AND TO BUY A HOME IN.

AUGUST 28, 1965

230 Negro families in move to suburbs

By BAKER E. MORTEN

Quietly and without fanfare, people like Jack House and Joe Wiley are proving that fair housing in the suburbs can work successfully.

Jack, a 25-year-old car salesman with a dauntless air, lives with his wife and three children in a meticulous three - bedroom bi-level home which sold for $17,400 in Prince Georges County.

Joe, a reserved 31-year-old liaison officer with the Internal Revenue Service, bought an immaculate four-bedroom place in Montgomery County for his wife and two children. It cost $21,000.

Jack has lived at 7603 Franklin Dr., Seat Pleasant, Md. since last December. Joe moved into 3913 Wexford Dr., Kensington, Md. three weeks ago.

* * *

BOTH MEN live miles apart, in two separate communities, both attest to the success of fair housing, and both are tickled pink about "the advantages" of integrated suburban living.

Jack and his wife, Barbara, had a rough time getting their home in the suburbs once it was learned they were colored. Joe and his wife, also named Barbara, had no trouble at all.

But, even with the problems he experienced in getting the house and a few more since he moved in, Jack figures the advantages of suburban living outweigh the disadvantages.

"We're in a nice, quiet neighborhood; we've got a big yard for the kids to play in; it's peaceful out here . . . the perfect place for raising children," he beamed.

Joe doesn't have a gripe in the world about his new home and neighborhood.

"The neighbors invited to help us move in and fix things up when they first heard we were coming. Mothers in the neighborhood have offered to take my daughter to the carnival with their children, and I've even been offered a spot in the car pool by a co - worker in the area," Joe reported.

* * *

JACK AND JOE are two of about 230 colored families who have moved to the suburbs during the past two years. The AFRO sought them out to record their experiences in a housing market which has offered only limited opportunities for colored Amercans — but which seems to be registering some improvement.

Jack is one of five non-white families living in a Seat Pleasant housing development called Peppermill Village. It's a beautiful complex of bi - level homes with rolling acres of grass - covered front and rear awns, shrubs and trees.

There are a number of children in Peppermill Village, but the neighborhood is peaceful, clean and fresh in spite of it.

A maintenance man employed by the development builder, "is there within minutes after a service call is made," Jack's wife explained, adding that nothing goes unrepaired on her street.

Jack figures he got an unbeatable deal on the house for $17,400.

"I wanted a home in the District," he reflected, "but I couldn't afford the place I wanted."

* * *

HE SAID when he was house - hunting in Washington he found homes of inferior quality in non - wite neighborhoods which were priced from $5,000 to $7,000 more than his suburban home.

Joe, who moved to the Washington area from Connecticut last August, said that mortgage payments, taxes and insurance on his house approximate "within $5 what we were paying for rent on an apartment we took shortly after we arrived here."

The internal revenue agent moved his family into an apartment in Chillum, Md., a few blocks across the District line at Eastern Ave. when he came to Washington. The apartment, he said, is now all - colored.

Jack had problems getting his place after tracing it down in a newspaper ad. The complex is FHA (Federal Housing Administration) sponsored, so that discrimination in sales is prohibited.

* * *

JACK WAS told there were no more homes for sale in Peppermill at first, then he went to James Harvey, director of the Metropolitan housing program of the Committee.

Harvey sent out white testers, who found a bumper crop of places available. Eventually Jack was showed the block. He put a deposit on the house, returned to Harvey and more testers soon discovered that other houses were available in the block.

Finally, the matter reached the builder after about a month of testers and phone calls. The builder showed Jack six homes in the 7600 block of Franklin Dr., and his deposit was transferred to the house he liked—7603.

Then came a fight over credit approval, which required a lawyer to straighthen out. After that there was trouble in getting final inspection approval of the house, and then the builder balked at turning on the utilities — heat, light, water, gas, etc.

Threats to withhold FHA monies from the builder soon corrected the problems, and Jack moved into the house in December.

"There seems to be a feeling of tolerance for us by most of our neighbors," he said. "Some of them have played pool with me in the basement recreation room."

Jack's wife wishes children in the neighborhood would play more with their three - year - old son, Wade. The couple has two other children also, 16-month-old Tina Louise and Angelia, who is three months old.

* * *

ONE OF THE few unpleasant experiences that Jack recalls involved a neighbor across the street.

"My mother-in-law took sick in Pennsylvania (the couple is from Pennsylvania) on the night our telephone went dead," he explained, "and I asked the lady across the street if I might use her phone to report the mishap to the telepone company.

"She made me feel like it was a chore," he concluded.

But, all things considered, Jack feels that the neighbors are not cruel and the situation is improving.

"I've got the home I wanted, I'm happy in it, and I'd do it over again if I had to," he chuckled.

Joe didn't go through a real estate agent or a builder to buy his home. He dealt directly with the owner "who was interested in selling on an open occupancy basis."

As a result, he was fully moved in within a week after contracting to buy the place.

AGAIN, JAMES HARVEY helped Joe and his family by referring them to Suburban Maryland Fair Housing, an agency "which went into action beautifully to provide us with a listing of 20 houses in the price range we wanted."

Joe said the family settled on the house at 3913 Wexford Dr., moved in, and have been literally swamped with neighbors who welcomed them into the neighborhood.

"Most everybody out here has been aggressive in making themselves known to us," Joe smiled, adding:

"The people here are cosmopolitan, and they have a broad range of interests—particularly in the arts and music. The mothers are the kind who take their children to carnivals and are thoughtful enough to realize that our little girl might like to go.

"This is what makes the neighborhood beautiful."

Joe was transferred to the D. C. area after being promoted to a higher job level in the Internal Revenue Service. He sold a home in the suburbs of Connecticut when he moved.

* * *

HE AND HIS wife have two children, six-year-old Leah, and two-year-old David. The Mrs. is expecting their third child this fall.

"I can't think of a single unpleasant experience since we've been living here," Joe reported.

His wife added, "The past three weeks has demonstrated what we're looking for — comfort, privacy, pleasant association with neighbors and an opportunity for some type of social intercourse."

Joe's wife is a school teacher. Jack's wife is a keypunch operator at the Goddard Space Flight Center (Greenbelt, Md.) for the National Aeronautics and Space Administration (NASA).

* * *

BOTH FAMILIES credit Harvey and the fair housing groups for opening up more housing opportunities for non-whites in the suburbs.

Quietly and without fanfare, people like Jack House and Joe Wiley are proving that fair housing in the suburbs can work successfully.

They are doing it with the help of the American Friends Service Committee, Suburban Maryland Fair Housing, Prince Georges Fair Housing, Montgomery County Fair Housing and Northern Virginia Fair Housing.

The number to call is 547-1690 for information about housing opportunities in the suburbs.

Know Your Neighbors

Tea n' Talks Set for Sept. 18 and 19

What's a Tea n' Talk?

A place to talk of cabbages and kings, eat home-baked goodies, drink tea (and coffee) and best of all meet your neighbor and learn a bit about each individual.

Each year, Neighbors, Inc.—your neighborhood organization in Brightwood, Manor Park, Shepherd Park and Takoma D. C.—attempts to bring together as many people in the community as possible at the home of one of its active members.

Hopefully you'll enjoy the good fellowship of these teas so well that you'll want to get more involved in Neighbors, Inc. if you're an inactive member, and certainly will want to join if you are not a member now.

Saturday and Sunday, September 18 and 19 are the days they'll all be held, whether it rains or shines. Listed below are the places and times for each of the teas. There's one near you. So plan now to come and bring your neighbor.

SATURDAY, SEPTEMBER 18:

Hosts and Hostesses	Address	Time
Mr. & Mrs. John Thurber and Mr. & Mrs. Marvin Caplan	6009 3rd St. NW	9-11 pm
Mr. & Mrs. William Harvey and Mr. & Mrs. S. J. Simmons	1325 Holly St. NW	9-11 pm
Mr. & Mrs. Charles Rodgers	720 Whittier St. NW	9-11 pm

SUNDAY, SEPTEMBER 19:

Mr. & Mrs. Robert Lee and Mr. & Mrs. William H. Denham	1419 Whitter Pl. NW	2:30-5 pm
Major & Mrs. Roy A. Tate and Mr. & Mrs. Josef C. James	1313 Sheridan St. NW	3-5 pm
Mr. & Mrs. Larry Pearl	1637 Madison St. NW	3-5 pm
Mr. & Mrs. E. Franklin Warner	246 Madison St. NW	2-4:30 pm
MANOR PARK OPEN TEA NEIGHBORHOOD COMMONS—In courtyard between 8th & 9th Sts. and Longfellow and Madison Sts. NW (in case of rain at Brightwood Methodist Church, 8th & Jefferson Sts. NW)		2:30-6 pm
Mrs. Barbara Atkinson	8361 E. Beach Dr. NW	3-5 pm
Mr. & Mrs. Norman L. Brown	1438 Iris St. NW	5-7 pm
Mrs. Ruth Stack and Mr. & Mrs. Joseph L. Hairston	1316 Floral St. NW	4-6 pm
Mr. & Mrs. Lewis Diuguid	1647 Primrose Rd. NW	3-5 pm
Mr. & Mrs. Luther Burnett	7433 8th St. NW	4-7 pm
Mr. & Mrs. William Peer	6615 5th St. NW	4-7 pm
Rev. & Mrs. Roy E. MacNair	7003 Piney Branch Rd. NW	4-7 pm
Mr. & Mrs. Hans Spiegel	6621 1st St. NW	4-7 pm

For further information call Beverly Sharp, 882-4590.

Dues Pay for Effective Action

Are you one who thinks of Neighbors, Inc. as an extra-effective civic association that looks after the neighborhood housekeeping—items such as trash, street lights and traffic—and serves as the spokesman of the residents on matters of school appropriations, zoning, freeways and the like?

Or are you one who sees the qualities of Neighbors, Inc. as unique assets to your family and your neighborhood?

True, NI does all the things that citizens groups do. But its effectiveness makes it the organization with a difference.

If you look at NI as only a civic association, you may be satisfied with paying $3 or $5 in dues, including your newsletter subscription. But if you regard NI as a substantial institution such as your church, synagogue, union, club, or school for which you pay taxes or tuition, you are likely to think, "NI certainly means more to me than a few cents a week!"

On this basis, what do you feel NI is worth to you? Ten cents a week? Twenty-five cents? On a yearly basis, 10¢ adds up to only about $5; 25¢ to about $12.50 and 50¢ to about $25. Your contribution is tax deductible!

An Aware Community:

CITIZENS IN THE KNOW make the best kind of neighbors. NI members are the effective ones. Photo shows a typical Neighbors, Inc. membership meeting. Everything from schools to subways was on the agenda last year including a talk by D.C. Commissioner Walter Tobriner. Other NI activities include the annual Art and Book Festival which has focused the attention of the entire metropolitan area on our neighborhood.

N. I. Concerns Bring Better Place to Live

In many neighborhoods American children are being prepared for the space age in their schools but are growing up with stone age superstitions and prejudices about people who are of a different race or religion or nationality.

Although some neighborhoods are moving to right this defect in their children's education, one unique neighborhood has already done something about it.

You're lucky enough to be living in this neighborhood, which is comprised of the residents of Brightwood, Manor Park, Shepherd Park and Takoma, D. C.

About seven years ago a group of these residents formed an organization. It was called Neighbors, Inc. Its goals were to stabilize the racially changing areas by educating white families about speculative real estate practices, by interesting the general community in an exciting, vital day-to-day experience in integrated living, and by working to keep the neighborhoods attractive, the school curricula standards high, and to improve community facilities.

That small group of neighbors has now grown to our present organization—more than 1,700 strong.

We have received national publicity for our efforts. By and large, the area has stabilized into an attractive, integrated community.

The job is far from done, however. In addition to continuing our stabilization work, strengthening our schools, and combating neighborhood deterioration, the organization is branching out to find even more imaginative ways to make our area a better place to live.

Among the concerns of NI committees is now the root causes of juvenile delinquency and what role a community group can play in combating it.

The best use for public and private land in the area has also become the organization's concern, with the hope that our stores, parks, public buildings and new residences will add to the beauty of our neighborhood, and act to improve the values of our homes.

As NI's Statement of Purpose reads:

"By bringing neighbors together in projects based on common interests we demonstrate the democratic ideal of all people building one community. In these ways we are making our neighborhood a vital and lovely place."

BRING A FRIEND TO A TEA N' TALK

Let's All Build Together . . .

BETTER RECREATIONAL FACILITIES, the goal of NI's Recreation Committee. Initiates action to improve existing programs and is the catalyst for starting new ones. Call chairman Wesley Copeland, TA 9-7892.

CULTURAL OPPORTUNITIES for adults and children. Here members of the Markush family, the inspiration for Community Singers, sponsored by NI, entertain at a meeting arranged by the Program Committee. Chairman is Benjamin W. Mintz, 882-2468. NI also has Playreaders and Chess and Garden Clubs.

Put Your Talents to Work On An N. I. Committee

Neighbors, Inc. committees are manned by active, concerned area residents who bring their talents and interests together on behalf of all. The work is vital to the continuance of the organization and to the steady growth of our unique community. In addition to those described in the photo captions on this page, other committees are:

The Hospitality and Welcoming Committee which provides information on services and a greeting for new residents. *Call Chairman Mercides Botts,* TU 2-7399.

The Membership Committee recruits and helps maintain membership in Neighbors, Inc. *Call Charles Perry,* 882-0519.

The Publicity Committee gets news about Neighbors, Inc. to those outside our area and maintains a speaker's bureau. *Call Ruth Stack,* RA 3-6720.

The Real Estate Committee works for a stable integrated area and for freedom of residence throughout the Metropolitan area. Keeping alert to real estate activity, it curbs unethical practices and maintains a housing information service. *Call Larry Pearl,* RA 3-1507.

The Transportation Committee involves itself with ensuring adequate public transportation services and investigates highway developments to make sure they're assets not drawbacks to the NI area and to city dwellers. *Call co-chairmen Robert Lee,* RA 3-8231 and *William Peer,* RA 6-1047.

Ways and Means Committee is concerned with fund raising activities in behalf of NI. *Call John Thurber,* 882-3267.

Subcommittees include Large Benefits, *Hilda James,* RA 6-2009; Appeals, *Mary Riegel,* 882-0817 and Grants, *Ed Cogen,* 882-5168. People with specialized knowledge in any of these areas are urged to contact the proper subcommittee chairmen.

The Neighborhood Planning Committee will work on developing and promoting plans for good land use in the NI area. This will include facilities and locations for schools, recreation, shopping centers, transit stations, etc. *Call Fred Vogelsang,* 291-7543.

Another new committee—Social Problems—is devising constructive programs to meet social problems which may arise in our area such as juvenile delinquency and the problems of disadvantaged families. *Call Raquel Frankel,* 291-7038.

The Personnel Committee concerns itself with recommendations on new employees of the organization and use of employee time. *Joan Stern,* RA 6-3780 is its chairman.

Reverend Roy McNair, RA 3-7111 is chairman of the By-Laws Committee which reviews and reports to the membership on the organization's operating rules.

The Neighbors Newsletter is issued by a Committee headed by *Mary Riegel,* 882-0817.

Preparing and presenting statements to the D.C. Commissioners, at House and Senate hearings and at special hearings is the work of the new Legislative Committee chaired by *Ed Cogen,* 882-5168.

Area Reps Will Answer Questions

Neighbors, Inc. is governed by a Board of Directors of 20 people, elected by the entire membership for two year terms. Of these eight are area representatives, two elected from each of the four neighborhoods.

If you wish assistance or advice about a community problem, call your area representative. They're also the people to advise about undue pressure from real estate firms.

NEWSLETTER

Membership Drive to Reach Every Home

For the first time in WMAN history, all home owners and apartment dwellers in the area who are not members of WMAN will be reached by mail in a membership drive this fall. Each family will receive a letter inviting them to join, the brochure "What's On Your Mind?", and our "Green Country Town" pamphlet, which describes the advantages of Mt. Airy. The mailing will go to approximately 4200 homes.

At the moment, about one family in seven belongs to WMAN, and the Board hopes the percentage will rise as a result of this mailing. The cost of sending this extensive mailing will be between $250 and $300; however the cost will not be borne by the treasury. Funds are being solicited privately.

Personal letters are currently being sent residents whose names have been sent to the office. Many new members have joined WMAN as a result. There is about a 45% return on these letters --- an unusually high response. Send the name and address of a newcomer and other potential members to Mrs. Steele, who will follow up the lead with a letter.

Other new members have joined WMAN after block meetings on specific problems this summer. WMAN was represented by Dr. Robert Anderson,David Randall and Mrs. Steele at a meeting of the 200 block of W. Sedgwick Street and the 7000 block of Cresheim Road, and by Dr. Anderson and Mrs. Steele at a meeting of the 100 block of W. Sedgwick Street. In each instance, WMAN was able to offer help on specific troubles, from getting a litter basket on Sedgwick St. opposite Mower St. to dealing with some disorderly young people.

Need your leaves raked? Vegetable garden turned over? Need your car washed and waxed for the winter? Want some muscle-power to help clean the basement? Need an "I'll-be-there-when-it-snows" snow shoveler for the winter? Need a baby-sitter? Our neighborhood boys and girls want to work and work hard. Call MRS. DE VAULT, CH 7-8402 to secure help.

WMAN Moving into Problems of Rental Properties

Primarily concerned with homeowners in the past, WMAN is expanding its activities to include rental properties. While some apartment owners in the area manage their apartments on an "open housing" basis, others do not. They refuse tenants they would gladly accept, were the perspective tenants "white". This discrimination can seem distant to the homeowner, but to an apartment seeker refused an apartment, it's of immediate concern.

The WMAN Real Estate Practices Committee hopes to work in the rental area. Names of all owners of apartments over six families will be collected and the plans will include approaching the owners for discussion of the problem and the urging of them to sign a policy statement agreeing to find both Negro and white tenants for buildings. This policy statement would be similar to the one signed by brokers relating to house sales.

WMAN is also taking immediate action by encouraging apartment house owners to change to a policy of open-housing. Recently a letter of support was sent the owners of McCallum Manor, who leased an apartment to a Negro woman this summer. In addition, a letter was written to two builders opposing their planned construction of an apartment for Negro tenants at 245 E. Johnson Street.

Seven Signs Removed

The campaign against SOLD signs up over the seven day limit continues. Over the summer, seven signs were removed at the request of the WMAN office, all within a day of the request. Please report any SOLD signs up more than seven days to Mrs. Steele, CH 2-1196, so they can handled as quickly as possible.

Parking Signs

"NO TRUCK PARKING FROM 6 PM TO 6 AM" will be installed upon request. Please send requests to Mrs. Steele, CH 2-1196.

Zoning Activity Down

In its only zoning case this summer, WMAN supported neighbors in their opposition to a planned apartment in the 7000 block of Lincoln Drive, a street of private homes, except for three commercial properties extending down from the corner of Lincoln Drive and Mt. Pleasant Avenue. The request for a zoning variance was not granted by the city.

"DON'T CALL US -- WE'LL CALL YOU" petitions are the way to beat unscupulous real estate brokers; if your neighborhood is blanketed with "sell" postcards from a broker, or if you receive such a card or a phone call, call Mrs. Steele at CH 2-1196. She will help you with our campaign.

WMAN Active in School Affairs

The Houston School Home and School Association has invited Louis Levy, Dr. Robert Anderson and Mrs. Ruth Steele to speak on Thursday, October 14 at 8 PM on a panel called "Mt. Airy: Action! or Exit?" All three speakers are active members of WMAN and will speak on Zoning, Real Estate Practices and City Services.

WMAN sent letters to Mayor Tate and Richardson Dilworth, chairman-elect of the new school board, offering our help to the new board. When the new school board was being selected, WMAN submitted a list of people recommended by our Schools Committee; of the names sent in, three were chosen for the new school board.

Ralph Bieber, chairman of the Schools Committee, announces a shirt-sleeve seminar on the School Budget which will be held by the members of the Board of Education's Administrative Staff on October 12 in the afternoon and October 14 in the evening. Any WMANer who is interested in attending and could report back to the Schools Committee is invited to call Mr. Bieber at GE 8-7474 in the evenings.

"Operation Garden" Succeeds

Neighbors and commuters using the Carpenter Lane station of the PRR have appreciated the station's flower garden along Emlen Street, created by the hard work of Mrs. Martha O'Conlon, a WMANer who planted and cared for this station garden all summer.

Grass at all three stations in West Mt. Airy -- Allen Lane, Carpenter Lane and Upsal --was cut three times this summer with funds collected by the Rail Road "Fix Up" Committee, Donald Scott, chairman. Tubbed flowers, two to a side, were placed at all three stations. And the PRR itself came through with repairs to platforms and driveways, eliminating uncounted hazards. The repairs will continue at all three stations until completed.

Police Anxious to be Useful

The Police Department is making an all-out effort to remove abandoned cars from the neighborhood as quickly as possible. Captain Dohrmann of the 14th District reports that after these cars are stripped of tires and wheels, special machinery is required to remove them and the whole problem becomes expensive. However, the department has acquired a new flat bed truck which is capable of handling three cars at one time, thus increasing efficiency. Commissioner Leary has written that West Mt. Airy has top priority in this drive and that the next month should see much improvement.

The additional red cars to be seen on the streets these days are part of a preventive campaign by the Police Department. Each car covers a smaller area than previously covered and is in radio contact with district headquarters at all times. Our streets are safe -- the Police are helping to keep them that way.

Live Animal Show on October 16

Joe Cadbury, WMAN Board Member and Natural Science instructor at Germantown Friends School, will present a live animal show on Saturday afternoon, October 16, at 2:30 at the Allens Lane Art Center, Allens Lane and McCallum Streets. Admission for adults and children is fifty cents (50¢) Tickets will be on sale at the door.

. . . and neighborhoods are people.

THE LONG HOT SUMMER IN BALTIMORE

Baltimore's long hot summer began late, with demonstrations against segregated apartments starting August 28 and continuing through September.

Many events led up to the decision by the Congress of Racial Equality and the Baltimore County League for Human Rights to demonstrate. Progress toward open occupancy has been discouragingly slow. Limited-coverage Fair Housing Ordinance #1083 was defeated by the City Council on June 1st in spite of thorough and sober testimony in favor of the bill and racist histrionics from those in opposition. CORE efforts over a period of 18 months to initiate communications with homebuilders and apartment house owners bore fruit only after CORE representatives arrived uninvited at the office of the Chairman of the Apartment House Owners Association. Only then did the chairman agree to call on representatives of the housing industry to discuss with CORE the long-standing grievances of the Negro community.

When these discussions produced no change in the housing industry representatives' attitudes toward voluntary desegregation, but only a conditional promise to support "metropolitan legislation," CORE turned to demonstrations to dramatize the urgency of the issue.

The Baltimore County League for Human Rights, having made its own on-the-scene investigations of apartment house discrimination, simultaneously demonstrated at the sites of several County developments.

The pressure of the civil rights action was felt strongly enough so that the apartment house owners and homebuilders called a meeting with representatives of the real estate industry and the human relations commissions of Baltimore City and Baltimore and Anne Arundel Counties. This group became an *ad hoc* committee to seek solutions to the controversy. An initial decision was to enlarge the group to include the civil rights activist groups and Baltimore Neighborhoods. Also Baltimore Neighborhoods was asked to design a questionnaire for apartment house owners and homebuilders regarding their policies and attitudes on open occupancy. BNI's Research Advisory Committee has submitted a draft of the questionnaire for final approval of and distribution by the Apartment House Owners Association.

RUTLEDGE SPEAKS AT BNI MEETING

Edward Rutledge, Executive Director of the National Committee Against Discrimination in Housing, spoke at an open meeting of the BNI Board of Directors on September 13 and stimulated a spirited interchange on the importance of fair housing legislation. Mayor McKeldin, City Council President Thomas D'Alesandro and others participated in a lively question period following Mr. Rutledge's presentation of a resume of recent events and problems on the national housing scene.

Mr. Rutledge feels that legislation on state and local levels is essential to opening up the housing market, but that the extension of Presidential Order #11063, which makes non-discrimination a requirement for builders receiving financial benefits from federal government agencies, will also help. He urged his audience to work for both goals.

In addition to BNI's directors, members of the Advisory Board, the Research Advisory Committee and others who have directly participated in BNI's work were invited to attend this special meeting. President Panitz has indicated that such meetings will become regular events about every threemonths.

Enclosed with this Newsletter is the July-August issue of TRENDS, the publication of the National Committee Against Discrimination in Housing, of which Mr. Rutledge is the head. BNI's members and friends should become aware of the important work of this organization. It is the only national agency devoted solely to equal housing opportunity and has spearheaded the fight for democratic practices in housing since 1950, being largely responsible for the achievement of legislation in New York and elsewhere. It is the best source there is of information on developments in this field. You are urged to become a regular subscriber to TRENDS.

THE LONG HOT SUMMER *(Continued)*

Baltimore Neighborhoods offered its services as mediator to the apartment house owners association and to CORE at the time of the initial confrontation in July. It is our hope that we can serve the community at large by helping to find a solution to the controversy. Baltimore Neighborhoods' aim is, of course, the achievement of equal housing opportunities for all citizens without regard to race.

Other issues were being brought to public attention simultaneously. A group of residents of a depressed community in Northwest Baltimore, led by the Civic Interest Group, protested local police, recreation and housing discrimination. The Mayor met with them and subsequently initiated an investigation of the quality of city services in the area. Cardinal Shehan stated that, while he opposed the idea of pressure for desegregation being applied exclusively to Catholic developers, he strongly favored open occupancy.

Positive developments included the decision by one owner to desegregate his development. He wishes to avoid publicity until other owners join him but he is not trying thereby to dodge the implications of his decision. Elsewhere in the city, in the Belair Road section, an interracial couple has moved into an all-white garden apartment development. This move-in is apparently being accepted calmly by the residents and the management.

A prominent Colt football star purchased a home in a Baltimore County development and moved in without incident. A few "for sale" signs went up but, thanks to intelligent and tactful dissuasion by a leading real estate broker and a series of community meetings conducted by BNI, most of these nervous homeowners decided to stay put. Several other arrivals of Negro residents into segregated communities have given BNI opportunities to apply its educational program for stabilization, and each such move-in improves Baltimore's chances of achieving a truly democratic community.

The main question is whether the Negro citizens of Baltimore are willing to wait indefinitely for the realization of what they regard as their full share of democratic rights. There must be legislation to guarantee housing rights, and there must be recognition on the part of powerful individuals and groups in the housing industry of their responsibility for positive voluntary action.

BNI STAFF ADDITIONS

William L. Hankins joined the staff of Baltimore Neighborhoods, Inc. on July 18. He is one of 29 Eleanor Roosevelt Memorial Foundation interns who have been assigned for one year to various intergroup relations agencies throughout the country. A Texan, a teacher and a former Peace Corps volunteer, Mr. Hankins spent two years in India teaching at an agricultural college in Mysore and working with residents of small villages on the improvement of rice cultivation and sanitation.

Mr. Hankins is engaged in various phases of BNI's program, primarily in stimulating Negro families to take advantage of developing housing opportunities. BNI is fortunate in having a new staff member with Mr. Hankins' rich background, energy and enthusiasm.

Also joining the staff for a five-week period are two seniors of the College of Notre Dame, Edith Smith from Greenwich, Connecticut and Jacqueline Tillman from Columbus, Georgia. They and 16 other Sociology majors are gaining direct experience through working in various community planning and welfare agencies.

In addition to becoming familiar with BNI's program and daily activities Miss Smith and Miss Tillman are conducting the third phase of the Negro family survey in which businessmen, clergymen and neighborhood association officers are being interviewed concerning the impact of a Negro family moving into predominantly white neighborhoods.

The first phase was the interviewing of 17 Negro families who had moved into the white neighborhoods; the second phase (carried out by the same 18 Notre Dame students last spring) comprised the interviewing of three white families in the vicinity of each Negro family. Miss Tillman and Miss Smith are also analyzing the geographic distribution of racially designated rental advertising to determine to what extent it accelerates racial changes in neighborhoods.

* * *

Much of the Negro community is buried under a blanket of history and circumstance. It is not a lasting solution to lift just one corner of that blanket. We must stand on all sides and we must raise the entire cover if we are to liberate our fellow citizens.

One of the differences is the increased concentration of Negroes in our cities. More than 73 percent of all Negroes live in urban areas compared with less than 70 percent of the whites. Most of these Negroes live in slums. Most of these Negroes live together-- a separated people.

Men are shaped by their world. When it is a world of decay, ringed by an invisible wall, when escape is arduous and uncertain, and the saving pressures of a more hopeful society are unknown, it can cripple the youth and it can desolate the man.

--from President Johnson's Howard University Commencement address, June 4, 1965

Negro Increase In Suburbs Seen

By William A. Payne
Washington Post Staff Writer

An American Friends Service Committee housing expert predicts that within three years 10,000 Negro families will be living in previously all white Washington area suburbs.

James H. Harvey, AFSC housing director, made his prediction on the basis of the rate of suburban housing integration each month for the past 2½ years.

Harvey said that since February, 1963 housing integration has increased 12.5 per cent each month. He believes that this rate will continue during the next three years.

"I see nothing on the horizon to militate against it," he said.

On the contrary, he said, three factors will boost integration: increased demand for housing which Washington cannot satisfy; Federal housing laws that promote integrated housing, and a stepped-up Federal effort to provide low- and middle-income housing for Negroes working for government agencies in the suburbs.

Government Action Needed

Harvey said that unless the Government is prepared to help provide more suburban housing for its Negro employes as Federal agencies move out of the city, the Government's goal to grant equal opportunity will be impaired.

In new housing is available only to whites the Government would then be accepting the perpetuation of a pattern of segregation, he said.

Harvey said one example of Goverment decentralization was the movement of the Naval Ordnance Laboratory to White Oaks, Md. There, he said, only five or six Negro employes are living in the suburbs. The remainder live in Washington and commute.

He said the Bureau of Standards, which is moving to Gaithersburg, faces a similar problem. For many Negro employes below GS-5, it would not be economical to live in Washington and commute to keep their jobs.

Apartments 'Closed'

The AFSC study indicated that the increase in integrated housing has taken place mainly in lower Montgomery County and Prince Georges County. But the breakthrough has been in the buying and renting of homes rather than apartments, Harvey said.

Apartments remain the real bottleneck, he said. Negro families are drawn to suburban apartments because many of them can afford the comparatively cheap rents as advertised in the newspapers. But Negro applicants, he said, are told, "We don't rent to colored" or "We aren't integrated yet."

Even when Negro applicants are allowed to fill out applications, soon they receive rejection letters from the management without any explanations, Harvey said.

The AFSC housing map shows that since October of 1964 Negro families had moved into six apartments in the suburbs. From February, 1963, to October, 1964, Negro families moved into five previously white apartments.

No Exodus

The AFSC also said that in 70 per cent of the Beltway area, whites live within a mile of a Negro family. Property values have not dropped, Harvey said, and neither has there been an exodus.

When Negroes leave the suburbs—because of job transfers or better housing opportunities—they do not necessarily sell to Negroes. Sometimes whites buy from Negroes or rent from them. "There is no pattern," Harvey said.

Harvey has little use for questions about whether a number of Negroes really want to live in the suburbs.

"Until you get open occupancy, equal opportunity in housing or a good choice, market surveys are pretty useless," Harvey said. "Let's open up housing and then we can see."

And he said no one should expect that when a house is available for Negroes it will be quickly gobbled up. The AFSC study shows that Negroes purchased only one-third of the houses available. He said Negro buyers are beginning to show more selectivity in buying.

According to the AFSC study more than 300 Negro families currently are living in previously all-white neighborhoods in the Maryland and Virginia suburbs. The study does not include scattered Negro communities in the suburbs.

NI BACKS D. C. BUDGET

NI's statement on the District budget for fiscal 1967 was presented by Ed Cogen before the D.C. Commissioners October 4th.

NI urged the restoration of funds for an addition to Shepherd Elementary and to acquire a site at 13th and Van Buren, either for a projected new junior high or an elementary school.

NI advocated the replacement of Shaw Junior High at once and supported the allocation of funds to replace Takoma Elementary and to build an addition to Taft Junior High.

NI opposed all Highway Department's bridge and expressway construction requests, and especially the North Central Freeway project. NI protested that the Department of General Administration has recommended that $1.7 million be budgeted for the freeway, despite the fact that the entire project is presently being restudied.

Other recommendations made by NI are:

1. The addition of 13 roving youth leaders to the Recreation Department staff, instead of the five proposed.
2. Expansion of the summer operating schedules of swimming pools, and heating of pool club houses in the winter to provide additional recreational space.
3. A field house for Shepherd Playground.
4. Evening centers at four schools in the area, rather than only one at Coolidge, and the expansion of their schedules from October through April. (Present schedules are from November to March.)
5. Approval of all the budgetary requests for the Council on Human Relations and, in addition, funds for employing an information specialist to help this agency conduct a city-wide educational program.
6. Additional housing inspectors to allow code conservation action in all gray areas of the city.

NI PICKETS COMMISSIONERS FOR R. E. MOVE

NI was one of eight local groups which protested the D. C. Commissioners' "disregard of the public interest" in their recent appointment to the D. C. Real Estate Commission.

On October 8, S. Churchill Elmore was appointed to the five-man regulatory agency that supervises the licensing of the city's real estate brokers. The agency has power to suspend or revoke the licenses of brokers or agents found "unworthy" because of discrimination in sales or rentals.

Instead of choosing one of the many qualified individuals who has demonstrated concern for solving problems of segregated housing and other housing ills, the groups charged the D. C. heads with taking a step backwards by appointing a candidate endorsed by a segregationist organization, the Washington Board of Realtors, which excludes Negro real estate agents and which publicly opposed the adoption of the city's fair housing order.

Elmore told the Washington Post reporter he felt the city's fair housing order was legal, but said he would rather not comment on whether the R. E. Commission should actively enforce the order.

At this point, NI sent a letter to Tobriner which asked for Elmore's resignation, stating that "unless all appointees are completely committed to the Commissioners' stated policy in support of open occupancy in housing ... then your regulations are an empty promise for D. C. citizens."

On October 17 and 18, telegrams were sent to the Commissioners by several organizations. They pointed out that there was grave doubt that Elmore would effectively enforce the fair housing regulations and requested a meeting with the commissioners.

To underline NI's concern, NI's executive committee authorized picketing in Neighbors' name. NI and CORE pickets walked in front of the District Building on Oct. 18, 20 and 21, while handbills describing the dissatisfaction of all six groups were handed to passers-by. (Cont. on p. 2, Col. 1)

General Meeting for NI Members and Friends

THURSDAY, NOVEMBER 18 at 8:00 p.m.
"D.C. SCHOOL OUTLOOK: CONSTRUCTION AND CURRICULUM PLANS"

Speakers: GRANVILLE WODSON, Assistant Superintendent for Buildings and Grounds;
MRS. LUVERNE C. WALKER, Director of Curriculum, D. C. Public Schools.

With the Pucinski (Special House Education Subcommittee) investigation of the D. C. Schools making news, you have an opportunity to learn first hand about plans for school construction, new ideas on plant, equipment, and curriculum and the impact of federal aid on D. C. Public Schools. There will be time for discussion.

(A Brief Business Meeting will Preceed the Speakers)

Place: ALBRIGHT MEMORIAL E.U.B. CHURCH -- 4th and Rittenhouse Streets, N.W.

On October 20, the Post reported that Commissioner Duncan met with Elmore to discuss the civil rights groups criticism that Elmore had taken an equivocal stand on the city's fair housing regulation. Duncan said afterwards that he was reassured that the appointment was a good one.

Thereupon, Elmore issued this statement: "I have at no time taken any so-called 'strong stand' against the housing ordinance. Moreover, I have been a supporter, am now a supporter and will henceforth be a 100-percent supporter of the fair housing law as well as the laws and regulations of the Real Estate Commission. . .

"I intend to treat every person and issue with the highest degree of objectivity and respect and indulge only in fair and impartial consideration of all, at all times."

Elmore was sworn in as a member of the Real Estate Commission on October 21. George Lardner, Jr., a Post columnist, stated that although picketing and protests failed to block the appointment, the fair housing groups still "scored a point or two." The appointee has pledged solid support of the city's open housing ordinance. Mr. Lardner also says that "the controversy also puts the Commission itself on the spot. All its members should find it much more difficult to drag their feet on Washington's 22-month-old fair housing order in regulating the real estate business in town."

NI and the other groups are continuing to call on the D. C. Commissioners to meet with them to discuss their criteria for appointment to the Real Estate Commission and other important boards of the city, and to urge the establishment of procedures for informing the public when vacancies occur.

In addition to Neighbors, Inc. the other organizations which participated in some or all phases of the protest are: CORE, D. C. Federation of Civic Associations, American Veterans Committee, Metropolitan Washington Housing Program of AFSC, Northwest Fair Housing Association, Americans for Democratic Action and the Episcopal Society for Racial and Cultural Unity.

OCTOBER NEIGHBORHOOD MEETINGS REPORTED

The fair housing groups were discussed at the TAKOMA meeting. The frustrations a Negro meets in suburban house hunting on his own were stressed by Doris Stanley. Mrs. Stanley, a Negro, moved to the suburbs to escape the ghetto areas, which lack essential education and recreation facilities.

Ed Sharp was elected to the NI Board of Directors as TAKOMA representative.

At the MANOR PARK meeting, Marvin Caplan gave a detailed explanation of the Education Committee's response to the Board of Education's request for suggestions on a boundary for Rabaut School. Hans Spiegel, Neighborhood Planning Committee, made some proposals for the NI area and discussed the probable impact of the subway stop at Blair and Cedar on the neighborhood.

A discussion on the future of integrated schools and of the racial balances in the

(Cont. in next column)

District in general was the highlight of the SHEPHERD PARK neighborhood meeting held October 18 at the home of Norman Brown.

Representatives of the Shepherd PTA reported on their dealings with the Board of Education on two issues, the addition to the school and Shepherd's status as an "open honors" school. There was discussion of plans to set up pre-school playgrounds in the area. (See story on page 3.)

NI BUDGET FOR 1965-66 ADOPTED

The 1965-66 budget, adopted by the Board of Directors, provides the same level of expenditures as last year. See summary:

INCOME:		
Memberships	$ 9,000	
Appeal, contributions	2,000	
Grants	5,000	
Benefits, incl. ABF	8,500	
Miscellaneous	270	
Total income	24,770	
Cash on hand 9/1/65	9,550	
TOTAL ASSETS		$ 34,320
EXPENSE:		
Salaries, workmen's comp. social security, etc.	$18,017	
Office rent & equipment	1,325	
Telephone and telegraph	425	
Printing and stationery	250	
Postage	600	
Other Office supplies	600	
Membership drive	600	
Other committees, publicity and meeting expenses	1,170	
TOTAL EXPENSE		22,987
RESERVE FOR FISCAL 1966-7		$ 11,333

OUR WONDERFUL VOLUNTEERS!!!!

Louise Manning	Louise Perry
Geneva Escoe	Cora Pope
Laura Clarke	Mieke Mehlman

--October--

Carolyn Smith	Mary Parrish
Laura Scott	Jean Davis
Virginia Kemp	Lauraine Duncan
Sylvia Rosenfeld	Evelyn Johnson
Evelyn Cook	Ruth Gainer
Marge Brockman	Jeri Jones
Ann Adams	Sue Farrell
Mignon Wilson	Dorothy Bialek

Special notice should be given to Virginia Kemp, who is a former secretary and excellent typist. She has been coming with her five-month-old baby every Monday morning and working a minimum of two hours each week. The baby is absolutely no problem, according to the staff. Would that there were more like her!!

PROGRESS ON NEIGHBORHOOD COMMONS

The Neighborhood Commons is now well on the way to completion, thanks to the assistance we were able to get during the summer from various public-spirited people and organizations.

Special thanks should go to Mr. J. C. Turner, of the D. C. Central Labor Council, who got equipment for levelling the Commons and digging a foundation wall; to the local of the Bricklayers Union, which sent a group of apprentices to help build the wall; and to the National Council of Churches, which assigned a team of youngsters under its anti-poverty program to help with the Commons.

TOWARD OPEN HOUSING IN MONTGOMERY COUNTY

The President of the Montgomery County Chamber of Commerce has gone on record supporting a suggestion that the Chamber must play an active part in promoting integrated housing in the county.

The suggestion, made by Frank E. Wall, Jr., community relations director for IBM's Federal Systems Division in Rockville and a past president of the Chamber, told the Chamber that his firm and others are having difficulty finding housing for their Negro employees. Mr. Wall cited the large number of firms which work on federal contracts and must hire all qualified persons. He said companies do not like to turn away Negro applicants because there is no housing for them. The Chamber, he says, could really do something about the problem as a group.

President Baughman of the Chamber indicated that Wall's proposal resulted in a favorable response from many county residents, including other Chamber of Commerce members. The Chamber "has got to keep up with the times," he said. "We would be making a great mistake by putting our heads in the sand."

The Chamber of Commerce represents the Montgomery County business community.

# # # # #

The Montgomery County Education Association has sent a letter to County realtors urging them to make their services available to "all ethnic groups." "We deplore the situation that Negro teachers face in securing housing in Montgomery County." the statement declared. The Association has a membership of 90 percent of the public school teachers in the County.

COMPLAINT OF HARASSMENT EFFECTIVE

A real estate salesman from Leonard Vogel and Co. was charged with harassing a Shepherd Park resident by telephone. A complaint was sent by the homeowner to the salesman and to Vogel. Vogel's reply, which apologized for the incident, stated, "Our staff has been repeatedly instructed not to solicit listings in Shepherd Park either by phone or letter." He also indicated his desire to do business "in a manner that will bring credit to my company and me." The salesmand, too, expressed his regret for the entire incident.

Next newsletter deadline — November 29

OVERDEVELOPMENT AT BLAIR AND GERANIUM

George N. Tipp, Federal Realty Company, recently applied for building permits for ten $30,000 split-level homes at Blair Road and Geranium Streets N.W. Five of the lots will be virtually landlocked; they will each have adjoining eight-foot street frontage combined to form a common forty-foot driveway. Lot sizes for the three-bedroom homes are all a little more than the minimum required by applicable zoning regulations.

Neighbors, Inc. is attempting to stop the development, but there is not much cause for optimism, according to Ed Cogen of the Real Estate Committee.

Arthur P. Hatton, Planning Director of the Zoning Commission, explained that the D. C. zoning code sets, among other requirements, minimum lot size, but does not specify how much of the property has to face the street. The only street-frontage requirement, he said, comes from the Highway and Sanitation Departments, which say that each home must have eight feet of driveway space.

NI has requested the District to study present regulations regarding frontage. As a Post editorial states, "The practice of permitting houses to be stuffed at random into the centers of blocks continues to violate the principles of healthy development."

NI members have appeared before the Fine Arts Commission and the Office of Urban Renewal. An appeal to the Board of Zoning Adjustments is contemplated.

WELCOME MAT

Dr. and Mrs. Robb Taylor have recently moved to Cedar Street. Dr. Taylor is with the Office of Education. They have three children at Takoma, one at Paul, and one at Coolidge.

Mr. and Mrs. Richard J. Medalie and their two pre-school children are new residents on Sudbury Lane. Mr. Medalie is an attorney.

Mr. and Mrs. William Marshall and their baby are newcomers on Sheridan Street. He is a teacher at the Cardozo High School.

Mrs. Esther Norkin has recently moved to the 6600 block of Georgia Avenue. Mrs. Norkin works for the Jewish Social Service. Agency. She has three children at Takoma.

TOWARDS PRE-SCHOOL PLAYGROUND FOR SHEPHERD

Several groups in Shepherd Park are making preliminary plans to obtain a pre-school playground in the area. The need is acute; the PTA census taken last spring showed 356 pre-school children in the area, plus 520 in school. At present only the limited facilities at the Shepherd School exist to serve this large group.

Locations must first be determined, either at the school ground or in various small plots scattered throughout the area. It is hoped that imaginative play equipment of the modern type can be obtained. The Shepherd Park Citizens Association, the PTA, as well as NI, are interested in this project. All who would like to help are urged to call Ruth Cogen, 882-5168.

MRS. WARE ATTENDS NATIONAL CONFERENCES

Two national intergroup relations associations held their national conferences back-to-back in Chicago earlier this month. NI sent Executive Director Margery Ware to learn what new directions and practical ideas there are in civil rights and housing. Her report follows:

The topic of the National Committee Against Discrimination in Housing (NCDH) Conference was "A Thousand Harlems--How to Break up the Racial Ghetto." Perhaps the most important papers were given by George B. Nesbitt, "New Directions for the Fair Housing Market." and by Dr. Kenneth B. Clark, "How to Break Up the Racial Ghetto--a National Perspective."

Mr. Nesbitt, Director of the Low-Income Demonstration Program, Housing and Home Finance Agency, called upon fair housing groups to work with low-income families because they are "most readily upward-mobile" and federal programs can provide the needed housing. Dr. Clark, Professor of Psychology, City College of New York, and author of Dark Ghetto, declared the ghetto is a concentration camp which destroys and dehumanizes the Negro. Society has developed a systematic pattern to institutionalize its racism. The ghetto, a self-perpetuating pathology, uses the schools to destroy the creativity of the Negro child. A continuation of slavery and the supporting psychological attitudes show that Americans have never come to grips with the humanity of brown-skinned people. Ghettoes are maintained in a free, democratic society, through the power of government and politicians--both, white and Negro, by economic power, by the power of labor unions and by important clusters of operational power. "We must find a way to mobilize enough power against the power which maintains the ghettoes. How can we tie status gains for the white to efforts to break up the ghetto?" Dr. Clark challenged.

The theme of the National Association of Intergroup Relations (NAIRO) conference was "Breaking Patterns of the Past--The New Demands on Professionals." Both Bayard Rustin, Director of the A. Philip Randolph Institute, and John Buggs, Director of the Los Angeles County Commission on Human Relations, dealt with the cause and significance of the Los Angeles riots and proposed ways to prevent future "Watts."

"A View from Two Cities" followed. Edwin Berry, Director of the Chicago Urban League, urged an attack on segregated schools and the exclusion of housing from the Civil Rights Act Title VI. Mr. Buggs outlined a far-reaching program to be tried in Los Angeles. There were also sessions on breaking open suburbia and the role of religion, labor and industry in the fair housing movement. In addition, there were six how-to-do-it workshops for fair housing groups. (Ed. Note--Mrs. Ware was a resource specialist for a workshop on keeping neighborhoods integrated.)

Other NAIRO sessions covered compliance with Title VI of the Civil Rights Act, poverty, race and community organization

(Cont. next column)

approaches to a free housing market, and "American Pluralism from the Negro's Side of the Line."

The NAIRO conference sent a message to President Johnson and other officials urging Congress to appropriate funds for the "rent supplement" program in the 1965 Housing Act and the President was asked to eliminate abuses of the "free choice" criteria for compliance with school desegregation regulations.

The NCDH conference urged the President to extend the executive order on housing, to ban discrimination by financial institutions covered by government authority. The meeting also supported the naming of Dr. Robert Weaver as the Secretary of the Department of Housing and Urban Development. Dr. Weaver is the present Administrator of the Housing and Home Finance Agency.

Notes of the conference sessions are available in the NI office.

NEIGHBORHOOD SERVICES COMMITTEE NEEDS HELP

The Neighborhood Services Committee has assumed responsibility for setting up a network of block representatives. Those interested should call Mary Monroe, 291-8543.

The committee appeared before the Board of Zoning Adjustment on two cases last month, Chairman Carol Rende reported. The establishment of an auto repair shop in the 6900 block of 4th Street was opposed. The committee also opposed a variance allowing use of an apartment building basement for apartments in the 600 block of Longfellow Street. The proposed apartments would increase the density of the building by one-third. Decisions on the cases are still pending.

MEMBERSHIP DRIVE PROGRESSES

Membership Chairman Charles Perry reports that about $3,050 has been received for memberships in October. We now have a total of 1500 members of which approximately 250 are new. There has been a substantial increase in family memberships and so far more than 100 members have contributed $10 or more. Last year's total by November was $4,000.

Figures are not as high as could be expected, which is partly due to the fact that many people are promising to mail their dues in. A red check in front of your name on the address page of this newsletter means that your renewal has not been received. Please mail your dues as soon as possible.

Totals for the membership drive follow, as of October 28th:

BRIGHTWOOD:	$ 147	and 45 members.
MANOR PARK:	$ 941	and 309 members.
SHEPHERD PARK:	$1,277	and 261 members.
TAKOMA:	$ 473	and 106 members.

NI SUPPORTS NEIGHBORHOOD PROGRAMS

At the October board meeting, $10 was voted for Recreation Center Halloween Parties in the area--Emory, Fort Stevens and Takoma.

The board also decided to donate $30 to the Teenage Development Program. The money will be used for refreshments at the Saturday morning lecture series for girls.

SENIOR CITIZEN DISCERNS NI SPIRIT

One spontaneous response to the Publicity Committee's leaflet mailed to all NI residents came from a senior citizen. She wrote:

"This morning an NI news came. At last, I believe I have found the reason this is such a pleasant neighborhood. I have been living in it for 28 years. Of all the families that were here at that time three remain. But those that have replaced them are outstanding. Their yards and homes are beautiful, and their children well trained. If all children were trained as these are there would be no child trouble. If this is an example of what NI can do I wish you would get out into other parts of D.C. and to all parts of the United States.

Yes, in this neighborhood, live as people should live and are happy."

(Signed) A most interested person.

Has anyone expressed the NI spirit better than the one who signed herself "A most interested person"?

= = = = = = = = =

Be a block representative; help your neighbors. Little time required, no pay. Call Mary Monroe, 291-8543, for details.

The Board has decided to look for new office space for NI. If you have a suggestion, please call the office.

LEAF AND BALL TRASH COLLECTION: If 50 people are interested, the Neighborhood Service Committee can supply burlap bags 6½ ft. by 6½ ft. for $1.50 each. Call Mr. Stallans, TA 9-7392, evenings. The Department of Sanitation has requested that leaves be put in the tree box section rather than in the street.

CLASSIFIED ADS

ANNETTE'S DANCE WORKSHOP. St. Stephen and the Incarnation Episcopal Church. Friday evening and Saturday classes for ages 5-16. Classical ballet, toe, modern dance. For information call 588-7586 or 882-5582.

BULLETIN BOARD

All are welcome to the informal OPEN HOUSES held in NI homes. Guests bring their own refreshments. Open houses will be held November 5 at the home of Mr and Mrs. Socrates Litsios, 7212 Blair Road; and November 12 at the home of Mr. and Mrs. Ed Cogen, 1418 Jonquil Street, N.W. Both open houses begin at 8:30 .

The Board of Directors will have a special meeting to consider the revision of the BY-LAWS. It will be held at Trinity Church on November 17 at 8:00 p.m. The regular board meeting is scheduled for November 18.

Future meetings of the CHESS CLUB are: Nov. 18, Socrates Litsios, 7212 Blair Road; Nov. 24, Charles Brown, Apt. 305, 1450 Somerset Place. Meetings begin at 8:30 p.m. All are welcome.

The PLAYREADERS will meet Sunday, Nov. 7 at 7:30 p.m. at the home of Mr. and Mrs. Earl Brechman, 1443 Locust Road (291-8220). Two plays of Ionesco will be read. All are welcome.

GARDEN CLUB Meetings: Nov. 3 at Mrs. L. McConnell, 7120 3rd Place; Nov. 17 at Mrs. B. Bush, 5416 N. Capitol St.; Dec. 1 at Mrs. E. Brooks, 427 Oglethorpe St. Those folks interested in helping with Christmas Greens Show at Takoma Library Dec. 13-17, please call Mrs. Coleman, TA 9-7275 for details.

WHISPERS !!!!!

*** Area resident Melvin G. Bergman, a law student at American University, recently received the Don Monroe Gasto Memorial Award for the highest scholastic average in a course in constitutional law. The award was given at the University's 10th Annual Law Day, according to the Star.

*** Last month's issue of Neighbors Ink made the Star. It ran a feature story on NI's Rabaut-Paul boundary proposal in the October newsletter.

*** NI member Jerry Cline of Howard University participated in a symposium on public education in Washington. Supt. Hansen and School Board members also participated, according to the Post.

**** Rev. Dr. Robert Spieler has kindly permitted the Community Singers of Washington to practice at St. James Lutheran Church.

**** An article by Marvin Caplan appeared in a recent issue of Progressive Magazine, entitled "The Trials of Integration," It dealt with the experiences of the Caplan children in resegregated schools.

**** NI member Greta Dobb's daughter, Susie, is acting in the children's musical "Off We Go" at the Washington Theater Club, 1632 O Street, N.W.

ANNUAL REPORT

A SUMMARY OF 1965 PROGRAM ACTIVITY

From Birth to Maturity

Baltimore Neighborhoods, Inc. was conceived in 1959 as an agency to provide positive programs to facilitate neighborhood stabilization in communities into which Negroes were moving. The need for such an organization was demonstrated when several neighborhood associations that had been independently working on the problem realized that broadly based community action was essential to the goal of neighborhood stability. At that time the problem of blockbusting was severe and panic and flight were characteristic of many Baltimore communities.

With the impetus of the Greater Baltimore Committee and other civic and religious groups the organization was launched.

The program in the period of 1959-1964 emphasized community education and organization around the issues of race and housing. In 1960 BNI was instrumental in securing the passage of an anti-blockbusting ordinance.

Work with local neighborhood improvement associations and housing industry groups was begun and significant progress was achieved with these groups.

In 1961 it became apparent that a program of stabilization was, by itself, insufficient to secure the BNI's objectives, and an additional program element was added---the expansion of housing opportunities for Negroes throughout the metropolitan area. It was clear that racial stability was an elusive goal so long as the major portion of the housing market was closed to Negroes.

Early in 1962 we were successful in convincing the Real Estate Board that racial designation in classified advertising was harmful in many ways. Following this the local press ceased to accept such advertising for housing sales. As an anachronism such designations remain in use on rental units.

Each year saw new developments in extending the BNI program into greater outreach in the metropolitan area. With the signing of the Executive Order on Equal Opportunity in Housing in 1962 there was created a new tool for making new housing in the suburban area more readily available to nonwhites.

The Good Neighbor Pledge Campaign was launched in the fall of 1963. The goal was not achieved but the campaign resulted in vastly increasing community awareness of the issues implicit in the concept of welcoming "into my neighborhood any responsible person of whatever race."

By 1963 there was also a growing sense of urgency regarding legislative efforts to establish equal opportunity in housing solidly based in law. The omnibus civil rights ordinance of 1963 included a fair housing provision. Although this portion of the ordinance failed, the acknowledgement by substantial and responsible elements of the community that this was an urgent issue became more clear.

Following this a special commission was formed by the City Council to look into the question of housing discrimination in Baltimore and make recommendations for legislative action. The Berney Commission recommended legislation in its report of November 1964.

4/11/64

Also during that month was held the Greater Baltimore Conference on Equal Opportunity in Housing. Over 600 persons attended this day-long conference at the Belvedere Hotel. No other single event has done as much to thrust the issues of race and housing on the conscience of the Baltimore community as this significant effort of community education. The impetus for the conference was provided by the BNI board of directors, and the leadership and coordination of the conference was the responsibility of the professional staff.

It must also be said that the Conference was instrumental in Baltimore Neighborhoods becoming a mature and recognized organization in this community.

The foregoing represents a brief overview of activities prior to 1965. What follows is a detailed accounting of 1965 in specific areas of program.

I Community Education

The backbone of BNI rests on our knowledge of the Baltimore community in terms of housing integration and its relationship to all aspects of community life. The transmission of such expertise and experience is dependent on a program of community education. Such education is accomplished by bringing to the local neighborhood association, church or synagogue, trade union, civic organization, housing industry organization, and civil rights group all the relevant facts about BNI, its program and the part individual organizations may play in securing the objectives of stability and equal opportunity.

Eco stability

Our community education program has, in the past year, emphasized work with religious insitutions and neighborhood associations. The staff participated in scores of meetings---large and small---in which there was opportunity to provide information and understanding on the issues.

Our efforts at neighborhood stabilization following the move-in of the first Negro family took place in the neighborhood

of Woodmoor, Scotts Hill, Mt. Washington, Rutherford Heights, Parkside, Woodberry, and Midwood. These neighborhoods are located in both city and county and reflect the outward thrust of the nonwhite movement.

In most of the foregoing, panic was minimized and flight prevented. The Woodberry experience was the sole one of violence and failure. Following the move-in of the Negro family and the subsequent violence, the family was forced by these circumstances to move back to the ghetto.

Throughout each of these experiences our efforts were aimed at securing the right of Negroes to rent or purchase housing and to help the community to understand that the presence of a Negro family was not cause for panic.

The pledge campaign referred to in the introduction was begun anew last year under the auspices of a three faith group of sponsors. This group sought 10,000 signatures to a pledge similar to the earlier pledge which BNI sponsored. Again, the goal was not achieved but much progress was made in the discussion which centered around this effort. Plans are in the making for achieving the goal in 1966.

Another aspect of our community education effort is observed in the annual meeting which drew 325 persons in 1965. In addition, the newly-conceived idea of holding periodically "public" meetings of the board of directors had a significant effect at its first attempt. The resultant publicity of these two events in May and September, provided much in terms of community education.

A final element of this program lies in our concern for relationship between public schools and neighborhood stabilization. This concern goes back to our bringing to the attention of the Board of School Commissioners the need to re-examine public school policy in regard to transfer, transportation of students, school districting and part-time education. When new policies were adopted by the Department of Education there remained a continuing responsibility to see that the policy directives were effective. Because the relationship between the local school and neighborhood stabilization is so great we have maintained a continuing interest and concern in this topic. During the past year several meetings with interested parents, representatives of the Department of Education and the staff of BNI were held. With the succession of a newly-appointed Superintendent of Public Instruction we are hopeful that additional progress can be achieved.

Question #7

II Relations with the Housing Industry

Notable progress was observed during 1965 in increasing the activity and awareness of the Real Estate Board of Greater Baltimore to the issues of race and housing.

On the heels of the November 1964 Conference, the Real Estate Board approved a resolution calling upon President Johnson to expand the coverage of Executive Order 11063 on Equal Opportunity in Housing. This action resulted in nation-wide publicity. After one year the Baltimore Real Estate Board remains the only board in the nation to have taken such action. Several BNI board members and advisory board members played key roles, as members also of the board of directors of the Real Estate Board, in securing this significant action.

The Neighborhood Committee of the Real Estate Board continues to provide leadership to realtors on the important role they play in establishing equal housing opportunity. Upon recommendation of this committee the Real Estate Board made two significant policy changes: (1) to include the question "open occupancy, yes, or no" on all multiple-listing contracts, and (2) to provide for a Real Estate Board by-law amendment requiring each realtor to sell on an open occupancy basis when requested to do so by the owner. As a result several such listings have been secured in white neighborhoods. Once again the participation of several BNI board members significantly directed the course of the Neighborhood Committee's deliberations and decisions.

For the first time in 1965 efforts were undertaken at establishing liaison with the Apartment House Owners Association. This was a direct result of the increasing need for rental housing for Negro families. Also, the summer of 1965 saw the beginning of a series of demonstrations, by civil rights groups, at the site of several new apartment developments.

Only slight progress was achieved in developing contacts with the Association. On the other hand, contact with several individual owners was productive. At least one large development is at present considering a policy and program of desegregation. BNI staff and board members have been intimately involved with the owners in the creation of a program which will insure the success of these efforts.

Under the auspices of the AHOA and BNI a survey of owner attitudes on open occupancy was conducted in late 1965. The results are being analyzed by the Research Committee and will be available in thirty days.

In 1966 we can anticipate increased contact and dialogue with the AHOA. It is hoped that the current president of that organization will accept a BNI board position, to which he has been nominated.

An outstanding area of failure of communication and contact has been with the Maryland Home Builders Association. During the past several years repeated efforts at establishing contact have met with an unwillingness of that association to have any significant relationship with BNI. Contacts with many individual builders reveal a desire to promote positive programs, but efforts at action on the part of the association have been unsuccessful. In the future we must find a means to break through this barrier.

III Public Action to Achieve Equal Opportunity in Housing

BNI has been intimately involved in providing leadership in the attempt to secure fair housing le gislation. In 1965 a second effort was made with the introduction of a fair housing ordinance in the City Council. This measure failed in June and still another commission was created by the City Council to study the issue and make recommendations. On this commission were three members of the BNI board. By November the commission had recommended that effective fair housing legislation be once again introduced in the City Council, and on November 29, 1965 the Council President introduced a conprehensive bill (drafted by a BNI board member) which had strong support from the Archdiocese of Baltimore, the Baltimore Jewish Council, the Baltimore Council of AFL-CIO Unions, the Federation of Civil Rights Organizations and the Maryland Council of Churches. This support was later strengthened by the addition of the Greater Baltimore Committee.

Early in November a "housing rally and march" had been conducted by the Federation of Civil Rights Organizations to dramatize the urgency of the housing segregation issue. Over 2,500 persons participated in this event which did much to once again shake the conscience of the Baltimore community.

The summer demonstrations had also given new impetus to the need for passing fair housing legislation.

Although it is not possible to predict the outcome of the present ordinance, it can be said that considerably greater support, much of it from formerly opposing groups, now exists for the measure. A classic example of the shift that has taken place is that of the Greater Baltimore Committee. When the first ordinance was introduced in 1963, the GBC opposed it on the grounds that a city-only ordinance would be disadvantageous. When the second measure came up in early 1965 the GBC expressed no public position, for or against the measure. And now we have the wholehearted support of that organization for the fair housing ordinance now pending.

The only area where public action has occurred to insure equal opportunity is in that housing built with federal assistance -- FHA, VA, urban renewal, etc. In the Baltimore region some builders have deliberately shifted to conventional financing in order to avoid compliance with the Executive Order. Nevertheless some FHA and VA housing has been constructed, and each year since 1962 has seen an increasing amount. During 1965 one development in northwest Baltimore County sold two homes to Negro families and has experienced no difficulty in making subsequent sales to white families.

One complaint against an FHA builder was filed with the local FHA office. This family was refused a contract after the builder accepted a substantial down payment. The case is still open pending the submission of additional information by the applicant.

Properties foreclosed by the Federal Housing Administration and the Veterans Administration are also available on a nondiscriminatory basis. Several Negro families have secured good housing in white communities by this means. However, much remains to be accomplished in acquainting potential Negro homeseekers of the opportunities which exist in this and new housing built with FHA and VA mortgage assistance. More will be said on this subject in the section of this report which follows.

"Operation open city" type program

In acting in a consultative capacity to the Housing Study Advisory Committee of the Human Relations Commission of Baltimore County, the Executive Director was in an excellent position to assist this body in undertaking the important study of the problem as it relates to Baltimore County. This Committee met regularly over a four month period in fourteen sessions. The product of this effort was a report which recommended enactment by the County Council of appropriate fair housing legislation. This recommendation has been adopted by the Human Relations Commission and will be forwarded to the County Council.

We have been asked to serve in a similar capacity to the Anne Arundel County Human Relations Commission in a study to begin in January 1966.

Periodically the Executive Director has been requested to advise and consult with groups in other parts of Maryland and out of state. On three occasions during the past year he has gone to Hagerstown in order to advise on specific problems of housing integration. Similar requests came from Boston where community leadership had under consideration the formation of an organization similar to BNI. Also, we are in receipt of frequent written requests for information on BNI program, organizational structure, etc.

IV The Internship Program

The expanding needs of BNI programs and activities demanded the addition of staff. In order to make this possible at virtually no increase in existing budgetary allocations an intern was secured by BNI. This novel program provides an opportunity for young people to derive valuable experience in the field of intergroup relations with agencies actively involved in the field. Sponsored by the Eleanor Roosevelt Memorial Foundation and the National Association of Intergroup Relations Officials this program has provided career opportunities to almost one hundred college graduates.

BNI was assigned an intern in mid-July. His previous experience included public school teaching and a tour of duty with the Peace Corps in India. His current assignment is to develop contacts in the Negro Community which will facilitate the stimulation of nonwhite consideration of housing available in nonghetto neighborhoods. Many houses available on an open occupancy

basis are not ultimately sold to Negro families. In large measure this is due to a lack of awareness, by Negroes, that such housing is even available to them. By increasing this contact and awareness it is hoped that additional Negro families will avail themselves of these housing opportunities. The coming months should result in significant results from this effort.

Because of a matching grant from the Hoffberger Brothers Fund the internship program will be completely self-sustaining for the twelve month period from July 1965 to June 1966.

V Research

Planning for research projects continued, in 1965, to be carried out by the Research Advisory Committee. This Committee consists of 19 specialists with academic and professional orientation in relevant fields. They contributed time, ideas, and occasionally many hours of work to BNI research endeavors.

The following projects have been initiated or pursued during 1965:-

1. Three-phase survey of 17 Negro families who have bought in white neighborhoods, of their neighbors and of business and community leaders in the areas.

2. Survey on practices of Realtors operating in Baltimore County with respect to Negro homeseekers.

3. Survey of apartment house owners with respect to policies on renting to Negroes.

4. Consultation on a survey to examine the outcome of the good neighbor pledge campaign.

Available?

5. Updating a 1963 study of Negro housing demand.

6. Analyzing the distribution of racially labeled classified apartment rental advertising.

Negro or white surveyors

The first three projects involved the completion of questionnaires designed by the Committee. For the first-mentioned survey volunteer interviewers were trained by the staff as to the aims of the survey and in techniques of interviewing, and each respondent was personally contacted. Questionnaires for the surveys of Realtors and apartment house owners were mailed to members of those groups. Tabulations of the surveys were done by the staffs of both BNI and Sidney Hollander Associates, and by a volunteer statistician.

One of the purposes in doing research is to bring to the public certain facts about race and housing. The results of the

survey of Realtors have been interpreted both for the Real Estate Board of Greater Baltimore and for publication in a national journal. Similar publicity is slated for the apartment house owners' survey, the results of which may also be incorporated into the forthcoming testimony supporting fair housing legislation.

The richest in information of all BNI's research endeavors is the three-phase investigation related to Negro families in predominantly white communities. This project has yet to be analyzed. Funds for a professional analysis and interpretation of this data should be found in 1966.

The purpose of the survey conducted by the Inter-religious Committee for the Good Neighbor Pledge Campaign is to find out wherein the campaign failed and to renew efforts to turn it into a success in 1966.

The use of a current report on Negro housing demand will be on the community education level: to give neighborhood groups an idea of why Negroes move into white residential areas and to make the real estate industry aware of the extent of the requirements for homes for Negro families.

In 1962 the significance of racially labeled for sale advertising in accelerating neighborhood changeover was so apparent that the Real Estate Board requested the Sunpapers to prohibit race labels in this kind of advertising. Plotting the geographic distribution of racial designations in rental ads for 9 weeks in 1965 showed less of a pattern of predicting or determining changes in racial occupancy, but it was thought significant enough to be transmitted to the Real Estate Board.

VI SALE-RENT PROGRAM

From its inception BNI has offered two listing services to the metropolitan community. One of these is the listing of homes available for sale or rent on a nondiscriminatory basis, and the other assisting white families to find housing in biracial neighborhoods and Negro families in predominantly white neighborhoods. In 1965 this program continued on a modest scale: 88 home listings were recorded within the year, about 27 of which were sold or rented with BNI assistance; and 56 homeseekers requested our help, of whom 18 found homes through our efforts. This program has involved considerable staff time, for each request requires several contacts not only with the buyer or seller but also with cooperating brokers, neighborhood association spokesmen, etc.

About a dozen real estate brokers have at some time given assistance to BNI's sale-rent program, with perhaps one-third of these being in continuing touch with us concerning homeseekers or available homes. It is hoped that in 1966 we may increase the number of brokers with whom we can work. Such brokers must not only subscribe to the principles of open occupancy but must practice them and train all agents employed by their firms to do the same.

Growing concern about fair housing by the white community, through BNI's educational programs, has enlarged the number of white open occupancy sellers and white buyers seeking homes in integrated neighborhoods. Our aim in 1966 is to accelerate this trend, as well as to encourage Negroes to find homes outside of the traditional ghettos.

There are now about four grass roots fair housing groups in early stages of organization; these groups will seek home-owners in suburban areas who are willing to sell without discrimination. The Contemporary Trends Housing Committee, which has pursued an educational program to stimulate Negro buyers, has been active for nearly three years. Newest in the fair housing field is the Baltimore County League for Human Rights, with plans for organizing several area fair housing groups in suburban communities which surround the city. The role of these groups in making available to all buyers many new houses will greatly enhance the progress of metropolitan Baltimore in dispersing the ghettos. It is our hope that BNI can play the role of coordinating the listings and the activities of these groups to achieve maximum effectiveness.

VII AWARDS

Baltimore Neighborhoods, Inc. received two awards in 1965:

The Fair Housing Practice Award from the Baltimore Community Relations Commission.

The Outstanding Community Organization Award from the AFRO-American Newspapers.

Neighbors, Inc.
5802 Georgia Avenue, NW
Washington, D. C.

Gentlemen:

From various sources I have learned of your organization and its efforts and achievements in stabilization of neighborhoods in Washington. At present I am making a study of neighborhood associations in communities where open occupancy is becoming a reality as part of a larger project on urban planning in the South. I plan to compose a pamphlet soon which would aid other groups in forming their own associations and which would offer hope to neighborhoods presently under disruptive pressures, those that fear for their future.

I have found that the experience of people who have survived similar circumstances encourages others and other neighborhoods. For this reason, I would appreciate any material you have about your own efforts - how your organization was formed, the forces which made it necessary, the problems and conflicts you have endured, and the results you consider most valuable. Please include any suggestions you might have for those who want to unite their own neighborhoods.

I am anxious to complete at least a preliminary report in the next few days. The composition may undergo numerous revisions, but I'm sure you'll agree that neighborhoods may not have time to wait for the definitive study; they need to consider their peril and means of salvation now.

Sincerely yours,

Mureland Griffith Smith, FAIA
Director, Urban Planning Project

MGS/jdg

AMENDMENT TO THE BY-LAWS OF THE REAL ESTATE BOARD

OF GREATER BALTIMORE - January 25, 1966

Add Section 4 to Article 3 of the by-laws as follows:

Realtors Obligations to Buyer, Seller

Section 4 - As real estate professionals motivated by principles of fair dealing with the public, their fellow Realtors and their clients, Realtors recognize that it is the right of the property owners to select buyers and/or tenants of their choice in the sale and/or rental of their property. Also important is the Realtor's recognition of the right of buyers to negotiate without restrictions as to race, creed, color or national origin, for the purchase or rental of property in all areas.

It is the obligation of the Realtor to respect the right of owners to select as well as the right of buyers to negotiate.

In accepting an exclusive listing, therefore, it is incumbent up- the Realtor to exert every effort, throughout the term of his agency, to secure a qualified buyer or tenant, regardless of race, creed, color or national origin, provided he be acceptable to the owner in accordance with the terms as set forth in the listing contract. Similarly, the Realtor shall, unless inconsistent with the expressed instruction of the owner, extend every prospect, regardless of race, creed, color or national origin, a full opportunity to inspect and negotiate for the purchase or rental of property.

Atlanta, Ga. 30303

Dear Mr. Smith:

Your letter of January has been referred to my desk.

A full and complete response to your letter should encompass more than the material which I am sending to you, under separate cover, and would certainly be more comprehensive and in detail than the pamphlet which you are hoping to compose. As you suggest, groups already under the "disruptive pressures" of neighborhood change are not able to wait for a "definitive study." I am, therefore, sending you some material and herein will suggest a few things which have occurred to us at the Commission after some experience with a number of efforts at "neighborhood stabilization."

The Commission is aware and has had some contact with neighborhood stabilization efforts in some ten or twelve areas of the city and has noticed that each of these efforts has had enough uniqueness for us to state clearly that the soil of neighborhood racial change is unique enough in each case to require different methods of organizational cultivation in order to achieve "neighborhood stabilization." We are also aware that many programs occur under the name of "neighborhood stabilization;" it has been used to develop wholesome programs of integrated living, as a vehicle of fear for the few remaining majority families, and as a weapon of exclusion.

The most successful positive neighborhood stabilization effort in Philadelphia, of course, is the West Mt. Airy Neighbors. However, I think it is fair to say that the type of housing, including the size, the socio-educational background of the neighbors themselves, and the professional occupations of most of the leadership made this a somewhat unique situation. In this situation, the understanding and work experience of the majority of the community, certainly made for far greater understanding and acceptance of the minority community than in most other sections of our city. Also the price of homes made it apparent that the incoming families were fairly "easy to accept."

PHILADELPHIA'S OFFICIAL AGENCY TO PROMOTE EQUAL RIGHTS AND EQUAL OPPORTUNITY FOR ALL PEOPLE,
ADMINISTER FAIR EMPLOYMENT PRACTICE ORDINANCE AND CITY AND STATE ANTI-DISCRIMINATION LAWS.

rec'd 2/25/66

In other areas of our city, programs of "neighborhood stabilization" have not always been as successful and many have made constructive contribution only in that they slowed down racial change; not that they achieved stabilization. Of late we have had the feeling that our efforts and those of the community people involved are being and will be more successful. Whether this is due to increased effectiveness on our part, greater commitment on the part of community residents or simply that "there is no place left to run" is not immediately apparent.

In all of our efforts there has, however, been two common threads: 1. Community organization for understanding racial change and its implications and 2. Community organization to maintain the attractive and constructive characteristics which attracted the original residents and which undoubtedly were also attracting new residents. The particular projects and the programs used to develop these two themes, of course, depend very greatly upon the community, its physical layout, the ethnic and religious prevalencies, and the amount of staff time that we are able to give to it. All of the techniques used are within the "community organization discipline;" that is helping people to understand the problem they face, decide for themselves what the solution should be and then work toward that solution.

As you can see from the material which I am sending along, some of it is aimed at community people in general, some at leadership, and some is aimed at and has a training purpose. All of these approaches must be used in varying degrees, with the particular community determining the proper emphasis. The relative success of a neighborhood stabilization effort depends less on specific techniques than it does on such other factors as availability of staff, flexibility of program goals, availability of comparable housing and living accommodations, and the general surrounding intergroup climate, so a wide variety of programs must be ready and available.

I hope that some of the information I have sent along will be of help to you. Thank you very much for sharing your concern with us.

Good luck in your project.

Sincerely,

Lary Groth

Dear Mrs. Ware:

I have reviewed thoroughly the material you sent me in January on Neighbors. Since then the Southern Regional Council has written a booklet about neighborhood stabilization, which I am enclosing. I would appreciate your reading this pamphlet and giving me your candid criticism which would aid us greatly when we begin a revision shortly.

I will be in Washington the week of April 4th. At that time I will call you in the hope that there might be a mutually convenient time when I might come by and see you.

Sincerely yours,

Moreland Griffith Smith, FAIA

Gentlemen:

I have read the material you sent me in January, and I would like very much to talk with you about the problems of housing and community organization. A few weeks ago the Southern Regional Council completed a booklet about neighborhood stabilization which I am enclosing. I would appreciate your reading this pamphlet and giving me your candid criticism to guide us in a revision.

I will be in Washington the week of April 4th. At that time I will call you in the hope that we might arrange a mutually convenient time the latter part of the week or possibly the first of the following week for a meeting with you.

Sincerely yours,

Moreland Griffith Smith, FAIA

AMENDMENT TO ANTI-BLOCKBUSTING ORDINANCE

MARCH 17, 1966

[This amendment became a part of Anti-Blockbusting Ordinance #502 which was enacted into law on April 4, 1960. It prohibits mass real estate solicitation.]

SECTION 7. Solicit properties for purchase or sale by door-to-door solicitation in person, by telephone or by the mass distribution of circulars.

ORDINANCE NO. 502

...making unlawful certain practices by real estate dealers, brokers, agents and salesmen in connection with real property, defining the said offenses and defining the penalties thereof.

By the City Council of Baltimore, April 4, 1960.

Section 1. Be it ordained by the Mayor and City Council of Baltimore, That a new section, Section 69A, be and the same is hereby added to the Baltimore city code (1950 edition), title "police" to follow immediately after Section 69 thereof, and to be under a new sub-title, "Real Estate Practices," and to read as follows:

REAL ESTATE PRACTICES

69A. (a) (1) This ordinance shall apply to real estate dealers as herein defined. Real estate brokers shall mean any person, association, co-partnership, or corporation, foreign or domestic, who for another and for a fee, commission, or any other valuable consideration sells, purchases, exchanges, leases, rents, or collects rent, for the use of real estate or who attempts or who offers by verbal solicitation, advertisement or otherwise to perform any such function or who is engaged in the business of sub-dividing and selling land in building lots or sites. Real estate salesmen shall mean any person who performs on behalf of any real estate broker, any act or acts authorized by the real estate licensing law of Maryland, Code Article 56, Section 212, etc. (1957 Edition), as amended

from time to time, to be performed by a real estate broker. Real estate dealer shall mean one who is regularly engaged in the business of dealing and trading in real estate or leases and options thereof. Real estate shall include leaseholds and all other interests in real property.

(2) Any person, partnership, association, or corporation who for another in consideration of compensation by fee, commission, salary or otherwise or with the intention or in the expectation or upon the promise of receiving or collecting a fee, does, offers, or attempts, or agrees to do, engages in or offers, or attempts, or agrees to engage in, either directly or indirectly, any single act or transaction contained in definition of real estate broker or real estate salesman in this section, whether said act be an incidental part of a transaction or the entire transaction, shall be deemed a real estate broker or real estate salesman within the meaning of this ordinance.

(3) Notwithstanding the foregoing definitions the terms real estate broker and real estate salesman shall not include; receivers, trustees, administrators, executors, guardians, or other persons appointed by or acting under the judgment of or order of any court; public officers while performing their official duties as such; any bank, trust company, or mortgage loan institution organized under the laws of this state or the United States with respect to the management or sale of any property acquired through or in connection with mortgage foreclosures; investment

homebuilders with respect to the sales of rental of housing constructed by them; attorneys-at-law who are not regularly engaged in the real estate business and who do not hold themselves out by sign, advertisement; or otherwise as offerring to the general public the services authorized to be performed by real estate brokers and persuant to the real estate licensing law of Maryland, Code 1957 edition, Article 56, Section 212, etc.; and any person holding in good faith a duly executed power of attorney from the actual owner authorizing the sale and conveyance or leasing of any real estate where only one such transaction is involved or any duly licensed auctioneer with respect to sale of real estate at public auction.

(b) No real estate broker or salesman shall, or shall attempt to:

(1) Use any contract form for the listing of property for sale, rent or exchange or any contract form for sale, rent, or exchange of property or advertising matter which includes the name of any association or organization of which the broker or salesman is not a member.

(2) Retain the services of any person as a salesman on a purely temporary or single transaction basis as a means of evading the law regarding the payment of commissions to non-licensed persons on some contemplated transaction.

(3) Act for more than one party in a transaction without the prior knowledge and consent of all parties for whom he acts.

(4) Refuse, or fail within thirty days after demand to account for, or to remit any monies coming into his possession which belong to others, or refuse or fail to promptly furnish a duplicate copy of all listing contracts to sell or rent property or of any lease or contract or sale when prepared by a real estate broker to all parties to any such contracts or leases, or fail to retain a copy of such contract. Noting in this subsection shall be construed to authorize any such broker or salesman personally to prepare any such legal paper in his practice.

(5) Fail to disclose to any person with whom the broker or salesman is dealing any material fact or information within the knowledge of the broker or salesman concerning or relating to the property with which the broker or salesman is dealing.

(6) Make any untrue or misleading statement in any attempt to obtain a listing of real property for sale, knowing such statement to be false or misleading, or knowing that the broker or salesman making the statement has insufficent knowledge of its truth, or falsity to warrant making the statement.

(7) Accept a listing contract to sell property unless such contract provides for a definite termination date without

notice from either party, or accept any listing contract which provides for a net return to the vendor leaving the broker or salesman free to sell property and retain any excess over the price named by the vendor.

(8) Pay or receive any rebate, compensation or commission from any person whatever except the seller of the real estate without the prior knowledge and consent of all parties to the transaction.

(9) Have any interest, directly or indirectly, in the purchase of any real estate which he or his organization has listed for sale, where such purchase is made during, or within six months after the termination of, such listing.

Provided, however, that this paragraph shall not apply in cases in which a broker enters into a listing contract and a simultaneous "trade in" agreement, whereby the broker or any interest, either directly or indirectly, offers a guaranteed price for the listed property within a certain period in order for the seller to purchase another residence, either new or existing housing.

(10) Disregard or violate any of the provisions of the Maryland Real Estate Licensing Law (Code, 1957 Edition) Article 56, Section 212-232, as amended from time to time.

(c) No real estate broker, salesman, or dealer shall, or shall attempt to:

(1) Pursue a continued flagrant course of misrepresentation or make any false promises directly or through agents or salesmen or advertising or otherwise.

(2) Make any misleading or untrue statements in advertising real property including advertising for sale or rent as an agent or broker without disclosing in such advertising the name of the advertiser or the fact that the agent or broker or where any such advertising is published over the name of a licensed real estate salesman failing to disclose in such advertising the name of the broker for whom such salesman is licensed to represent.

(3) Solicit or induce any party to a contract lease or agreement to break such contract for the purpose of substituting a new contract lease or agreement when such soliciting, or inducing is motivated by anticipated personal gain.

(4) Guarantee or authorize or permit any person to guarantee future profits which may result from the sale of real property.

(5) Solicit or offer for sale real property by offering "free lots" or conducting lotteries or contests, or offering prizes for the purpose of influencing a purchase or prospective purchaser of real property, or advertising or offering "Free appraisals" unless the advertiser is equipped and stands ready to appraise real estate to any person requesting such an appraisal free of charge regardless of the purpose for which such an appraisal is requested.

(6) Make any untrue or misleading statement to induce the sale of real property, whether to the person making the representation or to any other person, knowing such statements to be false or misleading or knowing that the maker of the statement has insufficient knowledge of its truth or falsity to warrant making the statement.

(d) No real estate salesman shall:

(1) Accept a commission or valuable consideration as a real estate salesman for the performance of any act as a real estate salesman without the knowledge and consent of the broker named in his license.

(e) A violation of the provisions of this section shall be a misdemeanor and any person convicted thereof shall be subject to a fine of $100 and not more than $500 or to imprisonment of not more than 60 days or to both such fine and imprisonment at the discretion of the court. Where an offense is committed by one or more individuals acting for a corporation, it shall be deemed to be the offense of the corporation and the individual. Where the offense is committed by one or more individuals acting in behalf of a partnership or association, it shall be deemed to be the offense of the partnership or association and the individual, and also the personal offense of any partner or associate who aids, abets, directs, counsels and/or knowingly participates therein.

Section 2. And be it further ordained, That if any section, provision, or clause or word of this ordinance is found by a court of competent jurisdiction to be unconstitutional or invalid for any reason, such unconstitutionality or invalidity shall be restricted to the particular provision, section, clause or word found to be unconstitutional or invalid, it being the legislative intent that the provisions of this ordinance are severable.

Section 3. And be it further ordained, That this ordinance shall take effect from the date of its passage.

Approved.....

EDWARD L. HOLMGREN
Executive Director

March 18, 1966

Mr. Moreland Griffith Smith
Southern Regional Council, Inc.
Five Forsyth Street, N.W.
Atlanta, Georgia

Dear Mr. Smith:

I have read the special report on Neighborhood Stabilization and would like to make a few observations on it.

The document represents an excellent analysis of the problems posed by racial change and the current responses to create stability.

After twelve years of activity in specific efforts on neighborhood stabilization in Baltimore and Chicago I have learned much about the problem and its effect on the community. 1966 - 12 = 1954

You have correctly stated that organization becomes the single most important element in any given situation. This is true. However, organization devoted to activity in a single circumscribed neighborhood can only have a short-term or delaying effect on the total problem.

The fact that any neighborhood has begun to change results from a combination of specific and peculiar conditions:

1. Proximity to the ghetto.

2. Older and less desirable housing to the potential white buyer.

3. Discrimination against Negroes entering the market.

Of course, other factors may be present to exacerbate or even mitigate the problem. However, one cannot escape the fact that the overwhelming fact that creates the problem is discrimination. Thus, even if meaningful efforts are undertaken at stabilization in one or two neighborhoods, they can only be effective to the extent that the whole market, or increasing elements of that market,

are open to nonwhites.

Without activity to establish this condition neighborhood stabilization efforts can only be delaying actions which may slow down the rate of change. Examples like Hyde Park-Kenwood in Chicago are special because a vast urban renewal program entered the picture to remove all of the sub-standard housing, most of which was formerly occupied by low to moderate income Negro families, and recreate a community which is interracial, to be sure, but also of a single-class character.

The point is that a stabilization program must be tied, hand-in-glove, with metropolitan-wide efforts to establish open occupancy. Our program has attempted to weld these two elements together in order to establish stability and to disperse nonwhite demand over a greater geographic area.

METRO
Eco - Stability

There is much more to all of this, therefore, I will look forward to hearing from you after April 4th in the hope that we can meet and discuss it in detail.

Very sincerely,

Edward L. Holmgren
Executive Director

from Sect #1, dictated 4/6/66

Questions and Answers from Margery Ware, Neighbors, Inc., Washington.

1. They have found as everyone that the real estate agents are perhaps the most difficult to deal with, and I don't believe they're findings are anything different from what we have heard before. They were able to have great deal of effect by assembling evidence against one particular agent and making a charge about him to the governing board of real estate agents, who put him on probation and a warning and after that they didn't have as man, blatant promotion of block busting techniques. It was rather interesting to note that she felt that the school problem was where the most difficult as this is a continuing matter always needed in all school work of up-grading the schools. Their main problem in schools comes at the junior high school level because of prejudices concerning socializing of the sexes which starts at this age. They helped in these particular problems by having the principal of the junior high send one or more people to each of the elementary schools to prepare the students for the transition to the junior high school problems. They also have a monthly meeting of their education committee and at which the principal of that school attendsand they work out a constructive program approach including support of the budget for the schools and the D. C. government . In all of their problems they use the newsletter to set forth everything favorable that is happening in the neighborhood. They also had a"rumour clinic" in their newsletter in which they investigated all rumours and gave facts. They found that the average person does not take the trouble to ~~investigate~~ ascertain the difference between fact and fiction.

2. You will note in the literature all of their continuing programs which are included in the listing of committees. Their staffing problem seems to be mainly a matter of finance and conviction by the governing board as to the particular needs for the time. You will note that at the present they have less staff than they did the two previous years.

 From list #1, dictated 4/6/66

3. They have had two professional members of the staff in the past and only have one at the present time which is Mrs. Ware. She is a sociologist by training. I believe she feels she needs now aprofessional community organizer as well as a professional office manager or business manager.

4. Where does the money come from? The Meyers Foundation originally gave them $28,000 for three years, matching $3,000 additional later. At the present time they have produced approximately $4,500 from the Art and Book Festival, membership and some larger donations. This becomes increasingly difficult year by year. 5. They have had an Eleanor Roosevelt NAIRO intern and found it very successful. 6. When their 1965 Annual Report is printed they will mail us a copy.

7. They have maintained community interest by keeping the needs up to date, keeping aware of what the people, concerned parents and other people in the neighborhood areinterested in at the particular time. Also they keep the junior high students occupied by hayrides and parties and visits to other parts of the community, choral groups and participation by interested parents. Their stress in the future will be more on community development because they feel they have gone to this particular stage in their development. They have an effective help by the conference of clergy, both Negro and white, and excellent help by having an extremely able superintendent of the junior high. Their help in other areas of the city and in neighboring Maryland and Virginia has developed a pride of accomplishment in this particular neighborhood. They have used the method of visiting people who have prestige and improving the prestige of the neighborhood and associating themselves with the prestige needs of the metropolitan area of Washington, D. C.

FROM BELT # 22 dictated 4/6/66

The following are Mrs. Ware's comments on our paper.

p. 3 - define "block busting" - had ~~differenc~~reference to defining the difference between the meaning of blockbusing by the real estate people and block busting to them means complete Negro community making a complete expanded Negro ghetto, whereas the blockbusting by the integrationists means inserting one Negro into a neighborhood to make it accessible to other Negroes within a reasonable proportion; it is possible an open community.

"decline drastically" - she felt that this should be stated a little bit more clearly as this seems to indicate that we agreed with the real estate people's contention that property values when Negroes moved in positively would decline whereas the proof has been ~~to the contrary.~~ in Washington and the rest of the country is that property values become the greater in the integrated neighborhood.

P. 4 - the same idea in the insertion of "apparently."

Negroes? - she thought was out of place and needed reviewing.

realtors - she felt needed defining because of the patented or trademark term "realtors" should be more descriptive.

"...practically impossible to halt.." - she felt indicated our agreement with the real estate people and that we shouldn't be this discouraging.

p. 5 - "...neighborhood association..." - she felt that most old neighborhood associations could not be used and that therefore this should be qualified by saying"where possible" to utilize old associations. She felt that most of the constitutions of old associations could not be changed legally and therefore could not be used.

p. 6 - I cannot recall her specific detailed comment on reverse.

She felt on the footnote #4 that ~~ou~~ there are numerous others and either should be included or at least mentioned that there were numerous others.

p. 7 - she couldn't quite go for the "Commercialize", also down further

Belt #2, dictated 4/6/66 - remarks by Mrs. Ware on paper.

"realtors" there was the same criticism on the use of patented terminology. The "South" circled, she said this was even done outside of the South.

p. 8 - "realty offices with listings" - she felt the same thing was true not only with realtors but ~~with~~ listings is a coined term and that informational help on availability of residences, if called listings, the realtors had a legitimate claim of claiming the neighborhood organizations were operating as realtors without lisences.

re: signs - she felt there were adverse points on the utilization of signs and that this should be brought out that this was a matter of decision for the neighborhood group as to whether this was good policy or bad. They did not use it, and found that they did not have to use it.

p. 9 - here againshe questioned the title "Capitalize"

p. 10 - I think she had her feelings hurt that we did not include Neighbors, Inc. in Washington. She felt that they were the originators of the idea; she had to admit though that MacGregor Estates was basically southern and good to mention.

"real estate office" - again clarification. Possible we could use businesses selling brokerage residential property or something like that.

p. 11 - At first glance there may seem discriminatory and so on. She felt should be clarified a bit. She also felt that it should be definitely stated that a fair housing law was not a cure-all.

For all intents and purposes she felt this special report was helpful and could be very useful. She felt however that it was not strong enough, that it should be more positive. I believe that Mrs. Ware also felt that we should bring out in our neighborhood stabilization program the fact that rumours have to be counteracted by getting exact facts on all of this and letting people know, not depending upon them to investigate rumours. Also the possibility of utilizing the

clergy for support for moral reasons. I am just stating this as a question mark, would the possibility of utilization of their breakdown of communities and possibly a listing of some of the community services like street lights, traffic control ordinances, city services, transportation, employment, etc, etc., All of the documents that Mrs. Ware gave me I am going to bring home in my briefcase as they are too heavy to mail. This is also true of data gotten from American Institute of Planners.

April 19, 1966

Mrs. Margery T. Ware
Executive Secretary
Neighbors, Inc.
5802 Georgia Avenue, N. W.
Washington 11, D. C.

Dear Mrs. Ware:

The talk I had with you about your work with Washington Neighbors, Inc. was very stimulating. I think that your story told in detail would be enlightening and encouraging to many in the rest of the country. During my two weeks in the Washington area I also talked with Mr. Edward L. Holmgren, Baltimore Neighborhoods, Inc. and Mrs. Ruth Steele, West Mt. Airy Neighbors, Philadelphia, about their organizations and activities. WNI's account combined with BNI's and WMAN's would cover a wide range of organizational attitudes, neighborhood situations, leadership potential and community response.

If the financing could be worked out SRC would like to underwrite publication of these accounts as a three-part series on neighborhood associations. Later we could add the stories of other groups in other cities, hopefully some from the eleven Southern states. Would you be interested in writing about Neighbors, Inc. for publication in this manner? We could do the editing here. The length would be up to you, perhaps 15 to 25 pages. You could, of course, have as many copies for private distribution as you would like, although we would hope the major distribution would be of the articles as a group. After we have an idea of the length you think your article would be and the number of copies you would want, we could then get an estimate of the cost involved in publication. With

that information we would see how much of the cost SRC could assume with NI contributing the rest. I am contacting Baltimore Neighborhoods, Inc. and West Mt. Airy Neighbors, asking them for their reactions to this project.

Please let me hear your reactions to this idea and whether you believe you would have the interest, time and funds for such a project.

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

RE: Realtors* & Sellers' Rights in Open Occupancy Sales.

I. Obligations and Rights of a Realtor re showing a house -

A Realtor whose original contract with a seller specifies "open occupancy" violates both his contract with the seller and the by-laws of the Real Estate Board (as specified in the January 25, 1966 amendment to the by-laws) if he refuses to show the house to Negro buyers.

If the original contract does not specify open occupancy the Realtor's refusal does not constitute a violation of the contract even if the seller informs him of his wish to sell open occupancy. He may then release the listing without obligation and the seller may find another broker who agrees to abide by an open occupancy contract. However, the broker has a right to refuse to release the seller from the contract, in which case the seller must wait until the contract expires to obtain a new broker. The seller can withdraw his house from the market for the duration of the contract.

II. Rights of Other Realtors -

If a Realtor has a contractual arrangement to sell open occupancy but refuses to let another mutiple lister show the house to a Negro client he is violating the Real Estate Board's regulations and can be penalized. If he has no such contract but the seller wants his house shown to all qualified buyers, and another broker has a Negro client whom the first broker will not permit to see the house, the second broker can then make a direct contact with the owner.

III. Rights of the Seller re showing and selling his house -

In any case a seller may show his own house to whatever prospective buyer he pleases, on the understanding that when he does so he is acting as the broker's agent and is still obliged to pay the broker's commission. If the seller receives an offer from a financially qualified Negro purchaser which he wishes to accept the Realtor must accede to the seller's wishes or forfeit his commission on the sale. If the original contract between seller and Realtor specified open occupancy and the latter refuses to execute the sale to a qualified Negro, he is liable to action by the Real Estate Board.

It is ethical, from a Realtor's point of view, for a seller to give information about his house to anyone he pleases. He may not "list" (i.e. make a contract with) another broker or real estate operator, but a fair housing group is not a brokerage and does not "list" in the Realtor sense of the word. It is simply acting as a referral service or clearing house for information regarding housing available without discrimination.

---

* "Realtors" are broker members of local Real Estate Board and of the National Assn. of Real Estate Boards. Most Realtors are also members of the multiple listing service.

. . . and neighborhoods are people.

THE FAIR HOUSING ORDINANCE CAN BE PASSED

Proposed Ordinance #1083 is now before the City Council. It has a chance of passing only if all who believe in fair housing make their wishes known to their Councilmen.

The proposed ordinance would prohibit discrimination based on race, religion or national origin in the sale, lease or financing of all housing in Baltimore with the exception of owner-occupied one- or two-family dwellings. It has been estimated that approximately 45% of all housing units in the city would be covered.

Hearings on the fair housing ordinance are scheduled for Tuesday, May 18 and Thursday, May 20, before the Council Judiciary Committee. Proponents of the bill will be heard on the first date and opponents on the latter. Particularly needed to speak on behalf of the bill are spokesmen from organizations not traditionally heard from on civil rights legislation, such as business groups, neighborhood and homeowners' organizations and religious groups to which Councilmen belong.

Second and third district residents especially must contact their Councilmen, who are probably pivotal in this fight. Letters, phone calls and delegations should be directed in great numbers to these Councilmen.

The Federation of Civil Rights Organizations has been conducting peaceful demonstrations before the City Hall every Monday evening between 5 and 6 p.m. for the passage of the ordinance. These will continue until it is brought to a vote. The Federation believes that demonstrations are an important way of expressing public sentiment in favor of fair housing and has urged all those in support of the bill to participate. It is also urged that there be a large turnout at the two Judiciary Committee hearings on May 18 and 20th, at which time the City Council Chamber should be filled with fair housing supporters.

CONGRESSMAN SCHEUER TO ADDRESS BALTIMORE NEIGHBORHOODS' ANNUAL MEETING

The Honorable James H. Scheuer, Congressman from New York City, will be the guest speaker at the fifth annual dinner meeting of Baltimore Neighborhoods, Inc. on Thursday, May 27 at the Sheraton Belvedere Hotel. Congressman Scheuer is serving his first term in Washington, a city in which he participated as a developer in the urban renewal of the Southwest section.

Before assuming the duties of his first elective office Mr. Scheuer devoted much of his time to various residential redevelopment projects in New York, St. Louis and five other cities, as well as the Washington project. He is an urban renewal specialist who has always maintained a concern for the need for fair housing. He was the chairman of the Housing Advisory Council of the New York State Commission Against Discrimination and was the first recipient of the Walter White Award given by the National Committee Against Discrimination in Housing.

The Board of Directors of BNI has established a fair housing practices award which will be presented for the first time at the

annual meeting. The criterion for the selection will be that person or group who, in the previous year, has made the greatest contribution to the achievement of equal opportunity in housing in the metropolitan area. A special BNI committee is now deliberating the choice of the recipient for 1965.

Henry J. Knott, prominent Baltimore builder will be the dinner chairman. His wit and brevity will enhance everyone's enjoyment of the annual meeting. There will also be a report on the progress and new activities of BNI.

Baltimore Neighborhoods' members and friends who wish to attend the annual meeting may use the form below. Reception at 6 P.M.; dinner at 7 P.M.

MODEL NEIGHBORHOOD OF INTEGRATED LIVING

On May 10 Windsor Hills officially launched an ambitious neighborhood effort to become a model integrated community. At a well-attended ceremony City Council President Thomas D'Alesandro, III congratulated residents on their forward-looking program.

The Windsor Hills neighborhood program has a two-fold emphasis:

1. To develop better services, more communication, and a greater sense of community within the neighborhood.
2. To attract interested white buyers and tenants.

"In today's market," the Windsor Hills Improvement Association states, "integration can only be maintained through a strenuous search for white buyers. Yet it is difficult to become preoccupied with the ratio of white residents without violating the very spirit of open occupancy. A further irony is that each success in attracting white residents implies a further limiting of the already scarce supply of homes available to Negroes. For this reason, we are adopting a larger aim than simply to encourage new white residents. Our aim is to achieve in community spirit and neighborhood standards a model of integration which, we hope, could influence real estate practices generally towards open housing."

BNI Executive Director Edward L. Holmgren and Board member Dr. Alfred B. Starratt were also speakers at the Windsor Hills ceremony.

MEETING NOTICE

The Christian Family Movement announces a meeting to explain and publicize its program of Educational Interracial Home Visits. Everyone is welcome at the meeting on Sunday, June 20th at 8 P.M. Place: St. Margaret's Episcopal Church, 141 Hickory Avenue (off 1700 block E. Joppa Road), Towson.

NEIGHBORS WIN FIGHT AGAINST EMLEN ST. TAVERN

The application to transfer a liquor license to 7113 Emlen St. was withdrawn in a telegraphed statement to the Liquor Control Board on June 2, one day after 100 neighbors met with WMAN lawyer Paul Levy to plan for the hearing on the proposed taproom.

"The way the neighborhood banded together so quickly shows the strength of West Mt. Airy," Ruth Steele, WMAN Executive Secretary, said.

WMAN and block leaders from the area began the fight against the taproom as soon as the notice of the proposed transfer was posted. They requested a public hearing and took petitions of protest from house to house. A total of 700 people in the area signed the petitions. When the hearing was delayed, WMAN requested that it be held before summer vacations began so that concerned neighbors could be present to testify.

Paul Levy, WMANer, handled all the legal work and WMAN Vice President Fred Gaines organized the meetings. Many people took petitions around and stirred up interest in the problem. Many thanks to everyone who helped in winning the battle.

WMAN IS IN JUNE "GREATER PHILADELPHIA"

WMAN's zoning successes and real estate practices are featured in an article called "Panic Anyone" in the June issue of the Greater Philadelphia Magazine.

SWIMMING POOL PLANS PROGRESSING

Response to the mailing on building a swimming pool were excellent -- over 250 people expressed strong interest in the idea and informal negotiation for a site has begun.

As soon as cost estimates are completed, more definite plans will be announced in a bulletin to the membership. If all goes well the pool will open next summer.

Wouldn't it be a good idea if everyone chipped in a few dollars to hire some boys and girls to work around the community fixing up publicly owned property over the summer vacation? Not only would it be useful to the kids, but it would help keep our community attractive.

This pipe dream of ordinary citizens creating such a project has become a reality in GIPSY, a project sponsored by the Germantown Community Council. GIPSY hopes to hire 15 boys and 15 girls this month to clear the Awbury Arboritum area of old cars and junk, to clear vacant lots and build tot lots in their place, and to make similar neighborhood imporivements.

GIPSY already had 30 applicants before the first of June. It has the kids, and now it needs the adults. It needs people willing to give a dollar or two to make GIPSY succeed.

Why should we contribute? First, to give 30 young members of our community the immense satisfaction and pride that comes from having a dollar in your pocket that you earned yourself. Second, to give them the satisfaction of doing jobs their own community needs to have done - not "make work" but real work that benefits us all. Third, the work projects are planned and supervised to give the kids the chance to learn basic job skills and attitudes, to work hard with pride. And fourth, your contribution will get some of those community cleanup projects that need doing, done.

Your gift of $1.25 will pay one boy or girl for one hour's work.
Your gift of $7.50 will pay one boy or girl for one day's work.
Your gift of $37.50 will pay one boy or girl for one week's work.
School will soon be over -- please send your check now to GIPSY, Vernon House, Philadelphia, Pa. 19144.

Lawrie Hamilton, Editor

RESPONSE TO SHPPING QUESTIONNAIRE GOOD

Many WMANers have returned the flyer sent out by the Mt. Airy Planning Council concerning the Mt. Airy shopping district from Mt. Pleasant to Allens Lane along the Avenue. There is still time to return the questionnaire. A number of excellent suggestions were received, and plans are underway to implement them. If you would like to put in your ideas there is still time to do so. Send them to Mrs. Steele at the office.

Our representatives to the Planning Council are Frederick W. Herbine, Jr. and Stan Barby. Other organizations represented on the council are the East Mt. Airy Neighbors, the Sedgwick Neighbors and the Mt. Airy Development Corporation.

RAILROAD STATIONS SHORN, READY FOR ADOPTION

Over $500 has been contributed to the Railroad Station Clean-up Fund already and the work began at all three stations as soon as the rains ended. It will be completed soon.

The Committee is now looking for several people or a garden club to adopt a station and make long range garden plans for it and do some permanent planting. If you are willing, or would be if there several people to work together on it, call John Keller, chairman, at CH 8-2569.

HOUSES AND GARDENS BEING SELECTED FOR FALL TOUR

Mrs. Eleanor Wichterman, committee chairman, and Martha Barry, have been visiting houses and gardens to select those for the fall house and garden tour. Sunday, October 2 has been chosen as the date for the tour. A variety of homes, both large and small, will be included.

TUTORIAL VOLUNTEERS NUMBER 12 SO FAR

Twleve WMANers have volunteered to tutor local school children in a joint tutorial project with the Unitarian Church of Germantown. More are needed. Each tutor will be trained in the techniques and attitudes needed to help children overcome their learning problems, and will work with one or two children children at a time. If you are interested, call Mrs. Steele at CH 2-1196 and leave your name.

WMAN ADDS 22 NEW MEMBERSHIPS

Twenty-six families joined WMAN during the months of April and May, and four dropped out. Four of the new memberships came from a canvas of a section of Pelham Road by Mrs. William Sullivan. Mrs. Sullivan also manned the WMAN booth at the Henry School Fair on Saturday, June 4, where several more people joined. WMAN thanks the Henry School Home and School Association for inviting us to the fair.

LETTER ON ZONING SENT TO BELLIS

A letter opposing a recently introduced bill (No. 1798) which would allow contractor's yards in shopping districts was sent to Councilman Isadore Bellis on May 10 by President Lou Levy.

In the letter, Levy said, "The presence of such yards in commercial areas would actually discourage people from going to such areas in the city to shop. This inevitably aids the decline of commercial centers in the city..... Rather than permitting the passage of such a bill, City Council should comb through the classification of permitted uses in commercial districts and remove therefrom or prohibit on ground floor level any uses which do not add to the attractiveness of the area as a shopping district."

A letter was also sent to the attorneys for Cliveden Hall, reminding them of their agreement to plant shrubbery along the edge of their parking lot. The reply was favorable.

WMAN OFFICE WILL BE BACK TO NORMAL SOON

For the last month an answering service has been handling calls to WMAN for Mrs. Steele, who undertook a substitute teaching job for a sick friend. As soon as school ends, the office will function again as usual.

A new A.B.Dick electric mimeograph has been purchased by the Board. WMAN had been using the machine at Summit Church for a number of years, but it finally collapsed. Our sincere thanks to Summit for its important contribution to our activities.

IS "AGRICULTURAL TRASH" YOUR PROBLEM?

WMAN's City Services Committee will be studying a bill now being drafted by the City Solicitor's Office on the disposal of grass clippings, leaves and weeds, known as "agricultural trash" at City Hall.

The problem is that it is against the law to burn the trash and it is difficult to get the city to pick it up with their regular trash collections.

The city's ordinance on the planting of trees was revised recently Our City Services Committee is studying the new bill and may form a subcommittee on trees, which add to the value of a house and the desirability of a neighborhood.

CITY SERVICES RENDERED

600 block Carpenter Lane:	Clean Sweep secured
Unit block Carpenter Lane:	Abandoned car removed
Cresheim Road above Allens Lane:	Kitchen range removed and anti litter sign installed; police patrol requested
6600 Germantown Avenue:	Use of building as public rental hall being investigated by WMAN Zoning Com.
Germantown Avenue at Mt. Airy Avenue:	Illegal parking around State Store call to attention of Police; situation improved.
6600 block McCallum Street:	Clean Sweep secured
Germantown Avenue at Phil-Ellena Street:	L&I inspection of candy store requested; Litter basket installed in front of store
unit block Pelham Road:	Abandoned car removed
Quincy Street and Westview:	L&I inspection requested of problem property (name withheld)
Quincy Street and Pelham Road:	Overflow of water reported; crew sent immediately.
Three gas stations at Lincoln Drive and Mt. Pleasant:	L&I inspection made and all three ordered to clean behind properties. City will do job and bill owners if not done by stations.

State Money for Planning, Or What $350,000 Can Do For Your Community

THE DIVISION OF COMMUNITY PLANNING

If the State Legislature approves $350,000 for planning, here's what it will do for your community

- Take **You** Off the Waiting List

At least 35 Alabama communities are on a waiting list right now. The Division doesn't have enough planners (or enough funds) to help you.

- Get **You** a Planning Program

$350,000 can mean planning this year instead of next year or the year after. With $350,000 the Division can hire the planners to assist **your** community.

- Make **You** Eligible for Federal Aids

Your community can get in on at least 24 Federal Programs, programs that require you to have comprehensive planning. Your community alone can bring back $350,000 to Alabama in Federal funds—if you have a planning program.

- Give **You** the Most for **Your** Tax Dollar

Why let other communities get planning and Federal programs while you have to wait?

Ask your Senator and your Representative to approve $350,000 for planning as soon as they can. It could mean $350,000 in Federal funds to **your** community.

YOU'LL WANT TO KNOW . . .

Federal Aid Planning Requirements for communities under 50,000

You don't have to have comprehensive planning so far for:

- 1 • Grants for Neighborhood Facilities
- 2 • Public Facility Loans
- 3 • Grants for Advance Acquisition of Land
- 4 • Urban Planning Assistance Program

1. Comprehensive community planning for:

- 7 • Advances for Public Works Planning
- 8 • Some programs of the Farmers Home Administration
- • All Federal programs requiring the Workable Program

You must have:

Land use plan
Thoroughfare plan
Community facilities plan and Public Improvements program

2. Workable Program for:

- 9 • Public Housing
- 10 • Urban Renewal
- 5 • FHA Rental Housing for Low and Moderate Income Families
- 6 • FHA Mortgage Insurance

You must have:

1. Codes and ordinances
2. Comprehensive community plan
3. Neighborhood analyses
4. Administrative organization
5. Financing
6. Housing for displaced families
7. Citizen participation

3. Areawide planning for:

- 11 • Urban Mass Transportation Grants
- 12 • Open Space Land and Urban Beautification Grants
- 13 • Grants for Basic Sewer and Water Facilities

You must have:

Community Planning Workshop

this fall

in

North Alabama

DEAR PLANNER:

My community is trying to get a planning program going. But we've had unexpected delays on our application for Federal funds. And now people seem to be losing interest in planning.

How can we tell people in the community about planning and get their support? What are some things the planning commission can do?

A concerned citizen.

Dear Concerned:

First, does your planning commission hold **regular** meetings? The law requires meetings only once a month; but twice a month is better; and once a week, best of all.

Second, do you have a **program** for each meeting? The Huntsville Planning Commission meets every week, with two meetings a month for zoning and subdivisions and three meetings a month for planning.

Since your community won't have as much zoning and subdivisions to handle as Huntsville, you'll be able to use more meetings to win support for planning. Here's one way to do it:

In the meetings where you're not handling zoning and subdivisions, invite a community leader to speak to the planning commission. Suppose you have the leader of a business group. We'll call him Fred Baker.

Ask Fred to talk about what his business group feels the community needs. Say his group wants more offstreet parking downtown. There's your chance to tell Fred how a zoning ordinance can require storeowners to provide the offstreet parking he's talking about.

Fred can go back to his business group and tell them about the zoning ordinance. He can pass out the literature you slipped in his pocket during the meeting. He can invite the planning commissioners to come and speak before the businessmen. And by talking to his group, Fred can help you win support for planning.

Getting community leaders to talk about planning is one way to win support for planning. Another way is for planning commissioners to work on individual projects.

For example, a planning commissioner could make a study of offstreet parking requirements. And while he's at it, the planning commissioner can ask Fred Baker and some of his business group to help.

You won't be able to invite all your community leaders to speak to the planning commission. But you can invite them to help with individual projects or serve on committees.

Say your community wants to acquire some land for recreation. One or more planning commissioners, together with the community leaders you ask to help you, can find out what state and federal agencies can help you acquire the land.

And to reach the people you couldn't inform through your community leaders, do like the successful businessmen, clergymen, civic clubs, and politicians do: **advertise.** Radio and TV programs, literature in public places, films, newspaper articles, talks to civic groups, and contests for high school students—these are tested ways of selling products, people, and planning in your community.

When you write to "Dear Planner," address your letter to the:

Newsletter Editor
Community Planning Division

Our thanks to the many planners working in Alabama for your help in writing this column.

This is a Planner.

He is also a Speaker.

At your request, the Community Planning Division will send him to speak to your community.

A LOOK TO THE FUTURE

County Zoning - How Will You Administer It?

fallacy:

You have to zone the whole county at once.

fact:

You can divide up the county and zone any part of it at a time; you don't ever have to zone the whole county if you don't want to.

fallacy:

When you zone, you tell a man what materials to build his barn with.

fact:

A zoning ordinance is not a building code; you can tell a man not to put a barn next to a grocery store, but you can't tell him what materials to build the barn out of.

fallacy:

Zoning tells you what lot width, street paving, curbs and gutters, sewers and utilities you must have.

fact:

Nope. You're thinking of subdivision regulations.

Zoning regulates the "kind, character, and **use** of structures and improvements," by business, industrial, residential, and other zones.

BOARD NAMES NEW COMMITTEE CHAIRMEN

The Board of Directors approved the nominations by President Charles Rodgers of nine new chairmen of NI standing committees. They were: Neighborhood Services, Franklin Warner; Finance; Ben Mintz; Real Estate, Warren Kornberg; Personnel, Paul Berger; Recreation, Wesley Copeland; Neighborhood Planning, Chester Relyea; Social Services, Clarice Rioux; Legislative, Michael Gottesman; and Transportation, William Peer. Thelma Lee was named Membership Committee Chairman at the July Board meeting.

Also at the July meeting, the Board accepted the resignation of Wesley Copeland as Recreation Chairman, with regret. Mr. Copeland will be devoting his time to earning a doctorate in chemistry at George Washington University.

The Board elected three of its members to serve on the NI Nominating Committee this year. They are: Carolyn Jackson, Warren Kornberg and John Thurber.

Three additional appointments to the Board still have to be made. The Recreation, Education and Publicity Committee Chairmen have not as yet been appointed.

ANNUAL ART AND BOOK FESTIVAL: A SUCCESS

The Fourth Annual Art and Book Festival, held June 18-21 at Coolidge High School was a huge success. Throngs of people attended the four-day affair, which netted NI a total of approximately $5,000, by an early estimate.

Arts, crafts and non-professional art sales totalled $6,200. $3,100 worth of books were sold, and refreshments, including the Bake Sale, accounted for $938. These gross sales figures compare very favorably with last year's totals of $4,900, $2,500, and $350 for the same categories. Gross sales totaled over $10,000. Gross sales receipts are substantially higher than net sales totals, because many of the items at the Festival are sold on a commission basis.

Many thanks go to all the NI members who made this Art and Book Festival the Best Ever!

MRS. WARE, EXECUTIVE DIRECTOR, RESIGNS

In a letter to the NI Board of Directors, Mrs. Margery T. Ware, Executive Director of NI, submitted her resignation, to be effective August 7. The Board accepted the resignation with regret. In her letter, Mrs. Ware said, "I wish to resign for personal reasons. It has been a wonderful experience to have been joined with NI members in helping to demonstrate democracy at a time when the world needed it so sorely. I wish NI continued success."

Mrs. Ware has been executive director of Neighbors for over seven years, and has worked untiringly on behalf of the organization during that time. She came to NI after seven years with the Washington Urban League where she was Community Organization Secretary and at one time Acting Executive Director.

During her stay at NI, Mrs. Ware has been responsible for obtaining grants totalling almost $90,000 for the organization. This month, she was instrumental in obtaining a $1,000 grant from the Public Welfare Fund, a private foundation which last year awarded NI a $4,000 grant. Mrs. Ware has no plans at present.

Naomi and Marvin Caplan will have an informal get-together for Mrs. Ware so her friends will have an opportunity to say farewell. The party will be held at the Caplan's, 1210 Geranium Street, N.W. on Saturday, July 30 from 8:30-10 p.m. Please call Naomi if you wish to help plan the party, TA 9-0298 (eve.).

PLAYGROUND LIGHTING DRIVE

A solicitation drive in the NI area to light three of the area's playgrounds this summer has been initiated by NI. The drive is part of the city-wide program urged by Vice President Hubert Humphrey, and the NI area goal is $1500. The three playgrounds in our area are: Takoma, Fort Stevens, and Rudolph-Emory. If you have not been contacted by your block representative, contributions may be sent to the NI office.

rec'd 7/18/66

OFFICIAL BUSINESS

The NI Board of Directors, at its June meeting at Holy Comforter Church, heard a report from William Peer, Transportation committee chairman, that NI representatives met with elected officials of Takoma Park, Maryland, to explore the possibilities of a common plan for development of a rapid transit station near the intersection of 4th and Cedar Streets.

The Takoma Park Council has considered securing a city planning consultant to draw up plans for the station and surrounding area and invited NI to participate in the planning. (At a meeting on July 6, the Neighborhood Planning Committee, chaired by Chet Relyea, was asked to try to get the National Capital Planning Commission to recommend to the District Commissioners that they back Takoma Park's request to the Metropolitan Washington Council of Government for help in securing a planner.) A motion was approved directing the Planning Committee to continue its negotiations with Takoma Park officials on the subject.

Clarice Rioux, Chairman of the Social Services Committee, and outgoing chairman Raquel Frankel, reported on a proposal to train volunteer teams of adults to serve as friends and advisors to young people involved in court cases, either as plaintiffs or defendants. They said the Social Services Committee has been in contact with other organizations that might be interested. The proposal is part of a comprehensive plan in the social and mental health areas the committee has been exploring with Howard University. After extended discussion, the Board approved a motion directing the committee to explore and develop the program through the exploratory and organizational stages on condition that it keep the Board informed of developments.

A motion was approved that NI supported the Welfare Alliance Protest March June 30 for in Washington, in support of increases/welfare recipients. NI posters were carried in the parade.

The Board also approved a recommendation of the Real Estate committee that NI contribute $50.00 to the Metropolitan Washington Housing Program of the American Friends Service Committee to be used in Negro buyer encouragement projects. Mrs. Carol Rende was designated NI representative to this subcommittee of AFSC.

Mrs. Hilda James reported that the net profit from the Isaac Stern Benefit Concert was $3,438.39.

Bill Peer reported that some residents in the Lamond area have requested NI assistance in obtaining better police surveillance of the area's Recreation Center.

SEE YOU AT THE

NI PICNIC - JULY 24
YES?

BOARD HOLDS ALL-DAY SEMINAR

An all-day seminar for outgoing and incoming members of the NI Board of Directors was held Saturday, June 25, at the home of Ruth and Ed Cogen. The purpose of the seminar was to review NI's current situation and to set guidelines for the scope and nature of the program for the next year.

NI President Charles Rodgers presided over the morning session, which was largely taken up with a discussion of how the Board could facilitate the conduct of its business at meetings. Mr. Rodgers requested that committee chairmen submit to the NI office a brief outline of their activities a week before each Board meeting. The outlines are to include a schedule of committee meetings so that any Board member wishing may attend any meeting in which he or she happens to be interested.

The second session, a discussion of the relationship of the committees to the Board and to each other, was presided over by Ed Cogen, Vice-president. In the course of this discussion, each of the chairmen gave a brief resume of his committee's work and plans for the future.

The third session, presided over by Paul Berger, chairman of the Personnel Committee, discussed NI staffing requirements. This portion of the seminar was in executive session.

The final topic of the day's program, finance, was postponed until later. Thanks go to Ruth Cogen, who supervised the lunch and refreshments.

NI RECEIVES VIP LETTERS

In a letter addressed to Marge Brockman, chairman of the Fourth Annual Art and Book Festival, Mrs. Dean Rusk wrote:

"Thank you all and all the workers of the Art and Book Festival for your invitation to join you the other night. Mrs. Barber and I enjoyed ourselves, not only among the art work but visiting with the residents of the area. As always, I do come away with a lift of the spirit.

"We hope the Festival has been rewarding for all concerned.

"With sincere regards,

Virginia Rusk"

Mrs. Ware, executive director, recently received a letter from former NI President Bob Good, who is now Ambassador to Zambia. The letter reads, "Though we never have time to give much evidence of it, we think of you-all at Neighbors Inc. very often indeed. It was wonderful to see so many friends, however briefly. The work here continues challenging, and, we think, important. Affectionate best wished to all."

Bob and Nancy

A check to NI in the amount of $100.00 was enclosed with Ambassador Good's letter.

FROM THE EXECUTIVE DIRECTOR'S DESK

After seven and one half years, I have submitted my resignation as executive director of Neighbors, Inc. I leave with regret as I am devoted to the people and the organization and what it has achieved.

As I leave, the controversial discussion over the present purposes and how the organization is to function continues, but fundamental issues have not been resolved, and basic problems, therefore, remain unanswered. My commitment to NI impells me to leave with you several observations based on my professional experience.

First, the division in the Board over what NI's role should be is real. It would be a great disservice to the organization for Board members to delude themselves that it can be glossed over. The controversy must be resolved. The statement of purpose must represent the goals of NI, because the nature and scope of the program flow naturally from the purpose. Staffing requirements in turn stem from the program.

Second, it is imperative that procedures be adopted by which these decisions about purpose, program and staff can be made. If given the assistance of other Board members (serving on sub-committees under the chairmanship of Committee members) and provided with the services of professional consultants*, the Program and Planning Committee established under the new by-laws could perform this function.

It seems to me that three important tasks lie before the Planning Committee. They are:

1. Review the purpose of the organization
2. Determine what the nature and scope of the program is
3. Define committee assignments clearly

Recommendations should have the full and urgent attention of the Board until decisions are made, methods of implementation determined, and procedures and deadlines instituted to see that the decisions are put into effect without delay. Planning Committee recommendations should also go to the Personnel Committee.

If this is accomplished, much will have been done to avoid indecision, bad compromises, conflicts between committees, deterioration of committee function and a breakdown in the policy-making role of the Board of Directors.

Third, the Board as a whole must take a real leadership role if NI is to have a leadership role in the community. Individuals of good will must be resolute rather than

(cont. in col. 2)

passive. It is indispensable, above all, that each and every Board member take a vital and active concern for the good and welfare of Neighbors, Inc.

I hope that will be a growing respect for, and a deepening sense of the worth of, each individual member of the Board, and a growing devotion to goodwill and healthy interpersonal relations.

I am grateful to all who have been of assistance to me personally and to those who have contributed so much to the organization itself.

Best wishes for your future.

Sincerely,

(Mrs.) Margery T. Ware
Executive Director

*"Pursuant to the March 1st memo received by the Executive Committee from the executive director titled "The Choice Before Neighbors," Elma Denham moved that an ad hoc committee be established (consisting of community organization people) to investigate how an analytical study of Neighbors, Inc. can be undertaken, further that a progress report of such a committee is to be presented at the June meeting. This motion was supported and passed. Such professional analysis is deemed important and imperative by members of the Executive Committee."

--Minutes, Exec. Com., 4/26/66

LETTERS TO THE EDITOR

Gentlemen:

The recent controversy over the immediate goals of Neighbors, Incorporated, and the means for fulfilling them, appears to have aroused much interest and some controversy within the organization. There does appear to be sub-stantial agreement that the long-range goal is to maintain a racially balanced community. Since there is agreement on the fundamental issue, the organization should be flexible enough to accomodate different points of view on how to fulfill our primary purpose.

The organizational structure could be modified to accomodate persons who want to concentrate their energies on problems that lie within the geographical boundaries of Neighbors and also persons who want to work on problems that transcend the local boundaries. A dual committee system, with perhaps a vice-president heading each system could be established: one set of committees would be concerned with primarily local problems, and the other would be concerned primarily with problems and issues that are not limited to this geographical area. Both sets of committees would be represented on the Board of Directors which would still be concerned with the over-all direction of the organization.

The dual structure would provide an organized means for individuals to express their interest, and to remain active in Neighbors, Incorporated. For example, one source of disagreement is over the proper role of NI with regard to open occupancy housing. There certainly exists a need to keep abreast of housing in the area, and a committee could continue to work on sales and rentals in the neighborhood. Another committee could be established to work on housing problems outside the boundaries.

The interest of the individuals willing to serve should be taken into consideration in the determination of the exact composition of the committees.

A danger of a dual structure is that resources of the organization may be spread too thin, and the effectiveness of coping with any problem would be reduced. The system would permit diverse interests to be expressed

(cont. on p. 4, col. 1)

LETTERS TO THE EDITOR (cont'd.)

through the Organization, and the pool of willing workers may be enlarged. With the dual system, the Organization can be made flexible enough to accomodate various points of view, and the energies could be spent on tackling the real issues and problems.

Sincerely yours,

Milton Maier

Dear Editor:

After 18 months in NI's area, I've read with intense interest the letters in the last few issues of Neighbors INK dealing with NI's role.

If the subject is not totally exhausted, I'd like to add to the discussion this assertation: in a descending order of importance, I think NI's priorities ought to sound something like this: First, NI's basic purpose is establishment and maintenance of an integrated residential and business community. Our first concern is with whatever directly affects integrated living here.

This would include, obviously, real estate operations in the NI area, great emphasis on settling these people happily, and considerable emphasis on anything we here can do to encourage fair-housing practices in other areas-- the District west of the Park, for example, and the suburbs--so that NI's area is not simply a hole in the dike thru which can pour the otherwise damned-up demand for decent housing for Negroes.

Second, we must be concerned with local issues which excite from time to time the population of our area, such as school district boundary changes, locating of a proposed freeway, and the like.

Third, I think we must be concerned with the permanent factors which affect the quality of life in any neighborhood because the quality of life which can be enjoyed here is what we are selling. So we should be deeply involved in whatever affects our local schools, zoning, law enforcement, recreation facilities which are-- or are not--found here, and so forth.

Fourth, we have a logical concern with city-wide issues which affect the quality of life throughout the city, including our own area: school budget and District budget, lack of public higher education in the District, District freeway patterns as a whole, rapid transit, police and fire departments, teachers' salaries and--yes--teachers' union if, as I believe, teachers affect the quality of education in District schools. Here also would belong subjects like city planning and urban renewal, public health water and air pollution, safety, welfare, public housing. Decisions made in these areas will inevitably affect the lives of District residents, including NI members.

Fifth, I would place the larger issues which can impinge upon our lives, especially proposes legislation, in fields like civil rights, equal opportunities, poverty programs, civil liberties, problems of the very young and the very old. You might call this category of concerns the "good and welfare" category.

Sixth, I would place what I call "discussion group topics", Viet Nam policy, United Nations, Africa, Southern voting drives, how to raise children or grow tulips successfully. These interest many of us; there is nothing wrong in letting interest groups develop within NI so long as we all clearly understand that NI's primary and secondary concerns--creating a successful integrated community and the local and larger issues which directly affect our chances for success--come first in our plans.

Perhaps I am out of order now, but I would like to add a note about residents who choose to move out of NI's area or stay but remove their children from public schools. Certain basic disadvantages impair the quality of life anywhere in the District. We who choose to live here for the advantages do so in spite of those disadvantages but we cannot ignore them. We cannot vote. Our city cannot enlarge itself by annexing unincorporated villages or other municipalities and many pressures which develop here somehow must simply be contained. We have no junior college or public university. We have a school system which inevitably reflects these problems, as well as some other problems which the system itself has created: the track system and the Amidon philosophy are two examples. Along with many public schools, District schools seem to emphasize "changing children to adapt them to school needs, demands, and abilities". I would like a school system which adapts itself to the needs, demands, and abilities of children. I am tired of schools which reward conformity--I want schools which regard production, accomplishment, creativity and intellectual excitement. I want schools which reflect to at least some degree--what has been discovered about how we human beings learn, what motivates us, which classroom conditions promote learning and which discourage it, and indeed what kind of learning leads to a satisfying life. In the Spring 1966 issue of American Child, S. M. Miller says, "many schools are more interested in seeing that the children who enter their classrooms are easier to handle rather than more effectively taught". Exactly. And I am sick and tired of such schools, regardless of the color of the student body.

I say this knowing very well that the two public schools in which my children are enrolled--Takoma Elementary and Paul Junior High--are among the very best in the District each has an imaginative, conscientious principal who has developed a fine faculty. But the basic inadequacies--both economic and philosophic--of District schools and the basic disadvantages of living in the District do remain, and NI must accept them as a given part of the problem.

Some of us may move to Maryland one of these days just to vote, or to send our children to the state university and not because we do not like the wonderful neighborhood and beautiful surroundings we have enjoyed here.

Sincerely,

Stina Santiestevan

BLUE RIBBON SCHOOL PLAN BACKED

A comprehensive draft of a plan for schools in the NI area was presented by representatives of the NI Education committee and the University of Maryland at a special meeting June 23 at Paul Junior High School. The seventy-five people in attendance included two secondary school principals, and representatives of PTA groups from Coolidge, Rabaut, Paul, Brightwood, Shepherd, Takoma and Whittier schools.

The audience overwhelmingly supported further exploration of the plan, which is being revised in light of suggestions made. Another open meeting will be called as soon as the revision is completed.

The NI Board gave its approval to the plan at the Board Seminar in June.

Marvin Caplan, who heads the sub-committee working on the plan, said efforts are being made to get some phases of the plan into operation within the coming school term.

POOL AND RECREATION NOTES

The following is a schedule for swimming at Takoma Pool:

Category	Days	Hours
all ages	Sat., Sun	10:30-5:30
all ages	M/W/F	6p.m.-8:15
adults only	T/Th	6p.m.-8:15
children's lessons	weekdays	9a.m-12
ages 6-11	weekdays	1:p.m.-2:15
ages 12-14	weekdays	2:45-4:15
ages 15-18	weekdays	4:30-5:30

Small children must be accompanied by adults; on weekday mornings, small children accompanied by their parents may use the wading pool after 10 a.m. If in doubt about whether or not you may use the pool at any given time, call pool manager Mr. Barski, at RA- 36281.

A course in life-saving, under a qualified instructor will be offered at Takoma Pool the end of July if ten or more interested adults will let Mr. Barski know of their desire for the course.

Shepherd Park Sun Dial will continue through August 19; last two week session starts August 8. The program accepts children between the ages of 3-6. For further information call Mrs. Helen Pagliano at the Recreation Center. The Shepherd Garden Club meets Monday mornings at 10 a.m., and is open to children over seven. The Regional Jacks Tournament will be held at Shepherd on July 7 at 2 p.m. There is a daily arts and crafts program at the center from 2-4 p.m. for children of all ages.

Fifteen girls in a Teenage Leadership Program under the supervision of Amy Cipes, have been inducted as full members in the city-wide Teenage Leadership Program.

The Manor Park Club, an organization for boys 10-14 needs donations for equipment for the boys. They may be sent to Mr. William McCormick, 6301 16th Street, N.W.

FAIR HOUSING NOTES FROM ALL OVER

The Summit Apartments in Rockville has adopted and put into effect an open-occupancy policy in rentals. The development has 235 units.

The Prince Georges County Democratic Steering Committee has adopted a platform urging fair housing legislation for that County.

The infamous Proposition 14, a referendum backed by the California Real Estate Association which prohibited the state from interferring with the right of anyone wishing to sell, rent or lease his property, or to decline to do so, "as he (the seller) in his absolute discretion chooses", was declared unaconstitutional by the California Supreme Court.

Fourteen Washington neighborhoods, the NI area among them, will be part of a nationwide, three year study of what happens when a residential area becomes integrated. The study will begin this fall, and the study is being done by the National Opinion Research Center, an affiliate of the University of Chicago.

A Washington apartment house owner and the resident manager of the building were fined $300.00 each for violating the city's fair housing code by refusing to rent to a Negro. The case was the first to be handled under the Corporation Counsel's new policy to seek convictions and fines in the Court of General Sessions, rather than having such matters conciliated by the Human Relations Council. Those fined were: Lawrence Lenkin, owner of the Parkhill Apartments, and Grace O'Dell, the manager.

Many people have noticed the new storefront office of Northwest Washington Fair Housing Association, at 5804 Georgia Avenue. Mrs. Doris Ingram has been employed as the part-time executive secretary of the organization. Office phone is: 723-4166.

The Southeast Neighbors have selected the Reverend Charles E. Walden as executive secretary of their group, which is concerned with community problems in southeast Washington.

THANKS TO NORTHGATE JAYCEES

Mrs. Marge Brockman, chairman of the Art and Book Festival, expressed our thanks to the Northgate Jaycees for their help to NI during the Festival. The letter reads, "I want to thank you for your contribution to the success of our Art and Book Festival. With our limited resources we would have been hard put to set up and dismantle the show without your help. ...please accept my warmest personal thanks."

MOST RECENT CENSUS TRACT FIGURES

Census tract figures, based on the Community Renewal Program's 1964 data show the residential population for our census tracts are : Shepherd Park, 7.5% non-white; Takoma, 36.2% non-white; Brightwood, 7.8% non-white, and Manor Park, 64.9% non-white.

RESEARCH ADVISORY COMMITTEE

METROPOLITAN BALTIMORE NEGRO HOUSING DEMAND, 1966-1970

The Research Advisory Committee of Baltimore Neighborhoods, Inc. estimates that for the five year period, 1966 through 1970, the Negro housing market will require an average of 4,000 additional units per year, or approximately 20,000 houses or apartments over the five-year period, which are not now occupied by Negroes. This estimate is based on figures made available by the Baltimore Urban Renewal and Housing Agency in connection with its Community Renewal Program, and it is consistent with estimates from the same source regarding racial change in Baltimore City since 1960.

Most of the new demand comes from new Negro household formation, but demolitions resulting from highway construction and renewal programs are also a significant factor. Some of the demand, too, is expected to arise from increased vacancy of sub-standard housing. Migration, on the other hand, is not expected to be a factor in Negro housing demand because in recent years there has been no net in-migration of non-whites into the Baltimore Metropolitan area, and no change in this pattern is anticipated in the next five years.

As in the past, most of the additional Negro housing demand will be met by change from white to Negro occupancy of existing units. However, the research group noted that in the past two or three years an increasing portion of the middle-income Negro housing demand is being met by new private construction which had previously been practically unavailable for Negro occupancy. In the current year, for instance, new households, compared with virtually none in 1962.

Few new

Some of the demand will also be filled by conversion of existing structures to provide more dwelling units. No estimate is made of the portion of demand which may be filled by public housing nor the portion of total Negro occupancy which may reach the metropolitan counties, since these events are influenced by public policy not susceptible of economic forecasting.

In any case, the majority of this demand will have to be met either by extenstion of Negro occupancy in racially changing areas or by a greater availability of housing to this market in areas beyond the limits of Baltimore City and within other neighborhoods not presently occupied by nonwhites.

Urban Planning Project

THE LAST WHITE FAMILY ON THE BLOCK

BY MARVIN CAPLAN

MARVIN CAPLAN *is a reporter for the Washington bureau of Fairchild Publications and covers Capitol Hill. He is also president of Neighbors, Inc., a recently formed organization of white and Negro residents in his section of Washington, which is working to improve relationships among the people and to preserve, if possible, the integrated character of the area.*

ON HOW many white and how many Negro skins does integration depend?

J. Lindsay Almond, governor of Virginia, believes the presence of a single Negro child in a student body of a thousand is unconscionable mixing. Until the courts stopped him, he shut down any school threatened with racial blemish.

Morris Milgram, the Philadelphia builder who specializes in integrated suburban developments, set a quota in his first project of 55 per cent white and 45 per cent Negro. In subsequent ones, the proportion has varied, but he has kept them about two thirds white.

"Percentages, percentages," says my wife. "It's all a matter of percentages." She thinks Governor Almond is absurd. But she looks with favor upon Mr. Milgram.

The neighborhood we live in was a white one for about thirty years. Five years ago, Negro families began moving in and soon occupied about half the houses. Perhaps by now the percentage has shifted in their favor. That's too many, says my wife. She says it with a heavy sense of confusion. For she wants integration. She welcomed the U.S. Supreme Court school decisions. With a feeling of pride and rightness we saw our oldest child go off to a recently integrated elementary school. But the first year that she went, the school was 56 per cent white. Last year it was 70 per cent Negro. This year it is about 85 per cent.

When the Negro families first appeared, many white families fled into the surrounding suburbs. We came here three years ago, attracted by the roominess of an old house, after the first panic had subsided. White families are still moving out, but at a slower rate, circumspectly, as if their moving now is a betrayal of those old neighbors who still remain. The PTA loses three white board members during the school term. The publicity chairman resigns (shamefaced) from the Citizens Association. Membership drops in the white churches. Percentages shift.

"If only a white family would move in," an old resident cries, as a marooned person cries for the sight of a sail. "I have nothing against the Negro. Some of the families moving in are lovely. But if only a white family would move in!"

Like most good middle-class city neighborhoods, ours has a serene, substantial look. The houses, one family, with large porches for the most part, stand back upon well-tended lawns. Old trees shade the yards and sidewalks.

The advent of Negro families has made little change in the physical appearance of our streets. Houses are still painted regularly. Grass is cut. The pavements are swept, the gardens cherished. The streets are empty in the summer. An occasional child, no matter what his color, will look well cared for. And if he is Negro, he is almost certain to be particularly well dressed and neat.

Reprinted by the Philadelphia Commission on Human Relations with the permission of the Author and the Atlantic Monthly

From Philadelphia about Washington, D.C.

Even our next-door neighbor, a stanchly Southern widow of seventy-five who has lived most of her adult life here and can recall when the high school across the street was vernal wilderness where you picked huckleberries in the summertime and went ice skating on the creek in the winter; even she concedes that the four Negro families on our block are not objectionable. She hated to see them move in. "But," she says, with a strange pride, "*our* Negroes are different."

Then what is it that we fear? Why does the heart of almost every white person drop when a For Sale sign goes up? Speak to an old-timer in our block, or down the street, where the change has been more rapid, and almost invariably, except for an occasional complaint about the increase in children's noises, since most of the newcomers have young families, you will hear stories of how industrious and considerate our new neighbors are, what good care they take of their homes.

Yet each small disturbance is magnified in the wide eyes of fear. A new neighbor has a noisy party, cars drive up late at night, people appear on the street talking loudly or laughing, or two boys, or two gangs, one white and one Negro, get into a fight, and rumor runs through the neighborhood like fire. That's what we fear! Negro turbulence. Where is it? Next door? It is seldom next door. But it's down the street, next to old Mrs. Grandy, who lives there all alone, poor soul. Or it may not even be in our neighborhood. It may be blocks away in a poorer one. It doesn't matter. Each loud or violent incident is premonition. *Our* Negroes are different. But who knows who will follow them?

Sometimes, like a thunderbolt, the violence does strike next door, or near enough to frighten us. Four doors away, an elderly white widow is raped by a Negro burglar. It does not quiet my neighbors to read of a white suburban burglar who perpetrated the same crime upon his victim.

Live for the moment, I tell my wife. The trick is to learn to live with the Negro family next door to you (as yet, there is none). You simply cannot keep your reason if you try to live next door to every Negro in the neighborhood and next to everyone that may move in throughout the years we live here. It is good advice, but neither of us can quite accept it.

THERE are two things, among others, that we white families fear: overcrowding — two or three families, evacuees, as a rule, from the city's redevelopment projects, friends, cousins, sisters, aunts, pooling their meager salaries in order to move into a modest one-family house; and profanity and violence on our quiet streets.

Yet a friend of ours, in a section of the city whose complexion is still unchanged, tells us with composure that in the big old houses on her block retired white couples have begun, illegally, to take in boarders. But they are all one color there, and no one reports them or moves away because of the proliferation of unlicensed rooming houses.

Another friend, who lives in a fashionable suburb, tells us with helpless amusement of the old bachelor who bought the house next door to hers and installed his mistress. Nothing stirs in there till after sundown. Then there are quarrels, curses, screaming all night long. But he is a well-known roué, scion of an old Virginia family, whose pranks have furnished the neighborhood with gossip for many years. My friend tells the story as a dinner joke, perhaps even with a touch of pride at having a local celebrity for her neighbor. She does not plan to move.

In our city it has become fashionable to live in the mid-city slums. Young professional couples, often with a child or two, buy a tiny cramped row house in the oldest section of town and proceed to remodel at great expense. They furnish it with the skimpy, compact furniture that is one of the triumphs of contemporary living, scatter a pound of grass seed on the tiny plots out front and back, and settle down contentedly across the street from the still unregenerate, stinking lairs of Negro drunkards, thieves, and prostitutes.

In our neighborhood the houses were built by generous hands. The rooms are generally lofty and well proportioned. We have porches and fireplaces. The kitchens are light and large enough to eat in. The yards are big and rarely without old trees. Yet it is a rare young white couple that will consider moving into one of these houses. And when a Negro moves in — usually a government worker, a pharmacist, or a teacher — consternation grips white families for blocks around and For Sale signs sprout on the front lawns.

If a strange man walked up to you on a public street and spit in your face and yelled, "I hate your guts!" you and everyone around would have a right to think he was insane. Yet white people do that to Negro families in my neighborhood every day and no one pays any attention to it.

Why? Surely you know why! Behind the appearance of middle-class respectability is the specter of Porgy and Bess, Catfish Row, and sex. Intermarriage is the abruptly blurted fear. We white people think it and voice it in our attempts to fathom the situation we are in. Beneath those clerky, neat exteriors the untamed African nature may still be lurking. Or it may not lurk at all.

We are caught either way. Either intermarriage is wrong because of racial traits and racial inferiority, or it is wrong — But there we stop, and reason evaporates in the air.

"It is all right for them to go to school together, but they should not play together," a teacher in my daughter's school says firmly.

"Why not?" asks my wife.

"Because then they'll grow up thinking there is no difference."

Well, noise and sex aside, aren't there other reasons for moving? Like calls out to like. "You know they would rather be with their own kind," a Jewish woman who is moving said to me. Graciously. Magnanimously. And what could I say to her? You shouldn't have to tell a Jew what is wrong with ghettos.

I'm Jewish, and sometimes I feel as if I'm standing on my head. We, the people of the Book, who have been oppressed by quotas, wish, if only there were quotas! We, the people who have been choked in restrictions, want to see movement into this neighborhood restricted. We who profess to hate hatred now find cause to hate.

Whose fault is it? Who is to blame for racially changing neighborhoods? The Negroes who precipitate the change? But they come because they desperately need houses and there are very few open to them, and it is our communal will to herd them into one neighborhood at a time rather than let them move freely wherever they please. The real estate dealers who find homes for them? Some of them try to scare us into selling our homes. But they say they only carry out our wish for homogeneous neighborhoods. They want to make money, and if white people allow rumor, panic, and causeless hatred to override their common sense, the dealers can't be held entirely responsible. The white families, then, that run without knowing their neighbor? But their animus was bred into them as children; they flee not out of prejudice alone but to escape the terrible tension of living with an unknown people. The city that does nothing? The school that does nothing? The church that does nothing? Blameless, blameless, we are all to blame.

Sometimes I wonder why any Negro wants to live among us. I asked a Negro neighbor, "Would Negroes be happier in an all-Negro neighborhood?" He thought they would, for he at least did not welcome the strain created by the presence of white people. But, he said, if there are no whites around, the police will begin to think of our neighborhood as a Negro district, the real estate brokers will think so, the teachers and the trash man. And gradually the experienced teachers will ask for transfers. The policemen will appear more rarely. The broken street lamp will go unrepaired. The gutters will be unswept. And the awful stench of the slum ghetto that the Negroes are trying to escape will begin to haunt our streets. And even if, physically, nothing in our neighborhood should change except the complexions of the home owners, still the Negroes there will know they have failed again; they approach the center of the American community as one goes toward fool's fire in deep woods or toward the mirage in the desert, only to find no warmth, no drink, and nothing but the limbo he has always known. And yet the approach to the center will still be made.

Of every thoughtless, frightened white person who moves from this street I should like to ask one question: What will you do when the first Negro family appears in your new neighborhood? For, of course, that family will appear. Those of us who run from integration run in a circle. The time we gain by our evasion is only the time it takes to run off and around until we come suddenly face to face with the problem once again.

Having asked my question, where am I then? With the best will in the world, how can we stay? The neighborhood is "tipped," as real estate dealers like to say. Even though there is a larger number of white than Negro families here, few white families will move in; only Negro families will come readily, and it seems to us, in our moments of despair, that we are only a few years away from living in a Negro neighborhood. "Yes, yes," a liberal suburban friend says to my wife. "I understand. It isn't that you're prejudiced. It's just that you don't want to be the last white family on the block."

How reasonably she puts it. Who can dispute the soundness of what she says? Yet, even as she speaks, an old question nags me. Is it skin that matters? What about personal worth? If Mahatma Gandhi were alive today and moved into my block, some of my white neighbors would take one look at those sheets, those bare feet, and those ragtag disciples, and their homes would be up for sale by nightfall.

Still the questions keep flooding back, addressed to me personally. Do I believe in brotherhood? Do I believe we are all born free and equal? Do I believe in the sacredness of the individual? Suddenly I am pushed beyond easy platitudes into that difficult and stony place where we are forced to take a stand for our professed convictions or abandon them. I can't abandon them. Governor Almond is right. Integration can depend upon a single person. And if I am sick of prejudice, if, as a Jew, I know in my blood and bones what it means to be stamped "Refuse" and thrown out on the garbage heap, I have no choice. I must remain.

CAN YOU AFFORD TO GAMBLE

ON YOUR HOUSE?

Home owners like you throughout the city are being bombarded with post cards, bothersome phone calls or letters urging them to "sell for cash."

The result: Cash losses to the seller running into hundreds or even thousands of dollars.

Glib salesmen try to dazzle you with talk of all cash transactions---or in some cases panic you into selling with sinister hints of changes in your neighborhood. But you owe it to yourself to get the housing facts.

Let's take a look at some of these typical "all cash" deals from the records in the Office of the Recorder of Deeds.

• The owner of a home in the 600 block of Quackenbos Street, N. W., worth $18,000 (based on evaluation of tax assessment) was talked into selling to a speculator for $15,000---all cash. The day the sale was completed the house was resold for $18,500 with a $3,000 down payment. Had the original owner sold on a conventional financing basis through an agent his cash gain would have been at least $1,450* more than he got from the so-called "cash deal."

• A house in the 500 block of Sheridan Street, N. W. was sold to a woman for $9,500. She was in the employ of a real estate broker to whom she "re-sold" the house for $10,500. On the same day it was re-sold to a family for $13,500 with a $1,550 down payment. Estimated cash loss to owner---$1,547.50.

• A semi-detached brick house on Whittier Street, N. W. was sold by a panicky owner to an agent for $16,000---again all cash. Next day the house was re-sold for $19,500 to a buyer with a $5,500 down payment. Loss to original owner---with conventional financing $2,047*; with FHA financing the owner would have netted $3,000 more than his "cash deal."

If these owners had observed the three cardinal DON'T's of home ownership, they would have avoided these costly losses.

DON'T let yourself be fooled by promoters of "all cash" deals.

DON'T let yourself be stampeded by scare talk of declining real estate values in your neighborhood.

DON'T deal with agents or firms who use high pressure tactics in trying to get you to list your home for sale.

And here are some DO's which will assure you a maximum return on your home investment if you decide to sell:

DO allow yourself a reasonable time to sell your home so you can avoid painful "desperation" selling.

DO explore the possibilities of FHA (Federal Housing Administration) and VA (Veterans Administration) financing for your home so that you can attract a broader range of buyers. (Down payments are lower, but you get the same amount of cash.)

DO make sure that you have a reputable agent who can be depended on to protect your interests and that of your community.

And when in doubt or in need of guidance in selling your home, call on the free Housing Information Service of Neighbors, Inc. It was created for you by persons like you.

---

* The five percent real estate commission and a second trust have been taken into account. See Appendix, page 2, for details.

A P P E N D I X

When a house is sold with conventional financing, the payment to the owner is usually made up of three parts. The purchaser makes a down payment. The balance is made up by one or two loans. The purchaser gets a lump sum from a lending institution and pays it to the owner. The document obligating the purchaser to repay the loan is called a "First Trust."

If more money still is needed, the owner may lend the purchaser the balance. This obligation is called a "Second Trust."

The owner may sell the Second Trust, usually getting 55 cents to 75 cents on the dollar for the face value of the trust (i.e., a discount of 45 to 25 percent). If the owner chooses to keep the second trust and the purchaser makes a full repayment, the owner will get the full amount of the second trust.

In figuring how much the owners in the three cases reported above would have gained by selling their houses with two-trust financing (instead of cash) we have allowed only 55 cents on the dollar for the sale of the second trust. If the owner got a more favorable discount rate or holds the trust to maturity, he would receive a still larger amount for his house.

For those interested in the way we arrived at our figures, the following example is given:

	Cash Deal	Conventional Financing
Price of House	$16,000	$19,500
A. Details of Financing		
Down Payment		5,500
First Trust		13,000
Second Trust ($1,000 - sold at 55% of value)		522
B. Gross Cash to Owner		$19,022
Less 5% agent's commission		975
C. Net Cash to Owner		$18,047
Cash Price of House - Cash Deal		16,000
D. OWNER'S CASH LOSS		$ 2,047

THE HIGH COST OF MOVING

Everyone knows the painful truths about the high cost of living. But many of us have had no chance to think about another expense that can be just as painful -- the high cost of moving.

If you are thinking of moving now, or in the future, it will pay you to know beforehand some dollar and cents facts. To help you, Neighbors, Inc. has consulted a responsible real estate man and court-approved appaiser* who is thoroughly familiar with D. C. property. The figures below are those you would face in selling a $14,000 house in the District and in buying the equivalent house in one of the counties.

Outdated

FIRST FACE THE HARD FACT OF POSSIBLE DEPRECIATION: The first thing to remember is that prices of real property throughout the District generally are depressed. A house bought in Washington before 1950 for $14,000 (with a down payment of $1,500) has probably depreciated to a present market value of $11,900, or a loss of $2,100.

1960

If it is sold for cash rather than with a mortgage or trust, the house bought in 1950 is worth only $8,500, or a loss of $5,500. (This is reason enough to think twice before making a quick cash deal.)

IF YOU SELL THE HOUSE FOR $11,900 YOU PAY THESE COSTS:

Real Estate Agent's Commission (5 per cent)	$595.00
Federal Revenue Stamps	13.20
Moving to Maryland or Virginia	150.00
	$758.20

If there are two trusts or mortgages on the D. C. property, add the following expenses:

Release of two trusts	$20.00
Recording Releases	6.00
Notary Fees	6.00
Trustees' Fees	20.00
Title Company Services	15.00
	$67.00
Grand Total:	$825.20

NOW IF YOU ARE LOOKING FOR A HOUSE IN THE SUBURBS: Prices in the suburbs are higher due to the greater demand for these houses and increased building costs. The D. C. home bought at $14,000 before 1950 if located in a comparable neighborhood in Maryland or Virginia would cost you approximately $18,000.

IF YOU BUY A NEW HOME FOR $18,000 YOU FACE THESE EXPENSES:

Title Examination and Title Insurance	$145.50
Tax Certificate	2.50
Preparing Documents of Conveyance and 2 trusts at $10 each	30.00
Notary Fees	6.00
Recording	13.50
State Stamps ($1.10 per $1,000 deed only) (Additional stamps if there are trusts)	
Appraisal Fee	10.00
Fire Insurance (per year)	34.20
	$285.30

Finally, it should be noted that real estate taxes in Maryland are much higher than in the District -- approximately two to three times higher. And at settlement, you have to pay taxes for four or five months in advance. Based on these modest estimates, the total cost of such a move would be at least $3,210.50 (or more if you sell for cash) plus more expensive taxes with an initital payment of four or five months in advance.

These figures are "low estimates", we are told, of the total cost involved in fleeing from Negro neighbors. These are just a few reasons why those of us in Neighbors, Inc. like it here and hope that you, too, are "staying put."

Come Realty Sharks,
Or Frowning Friends,
They Shall Not
Be Moved:

NEIGHBORS, INC.

By Barbara Hogan

WHEN Marvin and Naomi Caplan moved their family into the rapidly integrating neighborhood of Washington's Manor Park in 1958, they had two things in mind.

"Marvin believed in integration," Naomi explains, "and he wanted to live in accordance with his convictions.

"I liked the place," she adds with a laugh, "because it had a swimming pool."

Community-minded, the journalist and his psychologist wife quickly became aware of several disturbing situations.

For one thing, their other white neighbors, with visions of plummeting property values dancing in their heads, were putting up "For Sale" signs like mad.

Negroes had been moving into the previously all-white neighborhoods ever since the 1948 Supreme Court decision which ruled that the long-revered "restrictive covenant" was not enforceable by the courts. This "covenant," written into a will or deed, provided that certain properties were to be sold to members of the Caucasian race only. *Continued*

Neighbors' members welcome any reason to mingle, work, party, discuss community problems. Top, women gather their children and hold an outdoor coffee. Couple, upper left, joins in chorus of singalongs at Saturday night shindig. Lower left, a summer day camp held in Shepherd Park, a prestigious, once all-white area, above.

The Tactic Called 'Block Busting'

But, by 1958, the Negro influx was swelling.

Real estate sharks, it was evident, smelled panic—and cash, if they used the proper tactics. Brokers began encouraging Negro immigration and white migration.

Their questionable tactic was to sell high-priced houses in the predominantly white neighborhoods to Negroes, then convince the whites that their property values were in jeopardy and that they should sell their homes quickly (and at considerable losses). If his pitch was successful, the real estate man then sold the "abandoned" white homes at a goodly profit for himself.

This is called block busting. It exploits both Negroes and whites.

The Caplans didn't like it. Neither did a number of their neighbors.

Another thing they didn't like was that their Negro neighbors had no representation in the community's civic association. And because of the presence of some teeth-clenched segregationists in the association, no representation was foreseeable.

Understanding begins with the young. Below left, pre-schoolers play London Bridge at D. C. Recreation Dept. sponsored day camp, play it cool, above.

These circumstances were the motivation for a new interracial civic organization called Neighbors Inc., of which Caplan was founder and first president.

Its membership today covers a 250-block area in Northwest Washington, bounded by Ingraham Street, Rock Creek Park and Blair Road.

Member neighborhoods include prestigious Shepherd Park, Takoma Park, Brightwood and Manor Park.

Neighbors Inc. members sang loud the praises of their neighborhoods' prestige, culture, amicability, educational and social status. To combat the crafty real estate men, they set up a free Housing Information Service which is still in operation and has six volunteer workers. They seek to quell panic and engender an intelligent approach to integrated neighborhoods.

More than 80 white and Negro families have found houses in the Neighbors area through their efforts.

Continued

'Integration Is No Longer A Dirty Word Here'

Today, three out of every ten of the approximately 40,000 people in these neighborhoods are Negroes. One thousand of the 40,000 are participating members of Neighbors.

Neighbors area residents are upper middle class professional people: journalists, lawyers, professors, government workers, businessmen. Esther Peterson, Assistant Secretary of Labor; Lee White, Assistant Special Counsel to President Kennedy; Howard Mitchell, Director of the National Symphony Orchestra and John B. Duncan, District Commissioner, are among the impressive names of home owners. Homes range in value from $15,000 to $70,000.

The story, so far, is familiar to many Washingtonians. But there are other aspects of it to be considered now.

How successful, for instance, has Neighbors been in correlating human values with property values? How do its members fare living side by side with members of a race from which they've been segregated all their lives?

Schools in the areas—four elementary, Paul Junior High and Coolidge Senior High—are integrated, but not all of the students' friends live in integrated neighborhoods.

"My teenage girl," one Shepherd Park resident laments, "takes a hell of a lot of needling from some of her friends who think we're kind of kooky. I tell her to smile, keep her mouth shut and relax."

White and Negro neighbors swim together, babysit for each other, work together on community projects, have afternoon coffees and Saturday night parties like any other neighborhood.

"When all this started," Naomi recalls, "we were looked upon as very suspect. Now, I think, integration is no longer a dirty word here."

This is not to say that all things have been foreseen or accepted. Integration at the elementary and pre-school levels could develop into later dating, even marriage.

This possibility was brought up at one of the ladies' afternoon coffees.

A Negro mother of three knitted her brow while she mulled it over: "This is something the children will have to work out. They've got their own lives to live."

Neighbors Inc.'s $25,000 a year income is raised by projects like Book and Art Fair, above, foundation grants, contributions. It's incorporated under D.C. law.

"I want my child to marry a Jew," said a Jewish woman. And if the Negro were a Jew? "I'd be worried," she admitted. "I've got prejudices. Why not tell the truth."

"It's not an important question," allowed another white mother. "I've never given it any thought. Besides my children are very young."

"We have a mixed marriage in my neighborhood," one woman piped up. "And the wife says their basic problem is that she's a woman and he's a man."

Later, a Saturday night party-goer elaborated: "You see, we're not idealists. Just practical people. Me, I love this neighborhood. The people are stimulating. I've lived here for 15 years, and I intend to stay. Integration is happening: I'm accepting it."

The Committee to Sustain an
Integrated Neighborhood

Dear Friend,

A search is underway for people who desire to do something to improve interracial relations, who have a pioneering spirit, and who are looking for a place to live.

White families seeking a home have a vast assortment from which to choose. Realtors make no attempt to sift out the few who might welcome the opportunity to live in an integrated neighborhood. The homes which are for sale in any such area are shown only to Negroes.

Better homes for Negroes are a large potential market for the housing industry. However, we, the Committee to Sustain an Integrated Neighborhood, wish to challenge the concept that this development must move in solid blocks maintaining a "ghetto" structure. It should move, instead, according to the desires, and the ability to pay, of each family.

In our neighborhood, Wilkinsburg Manor, there has been no way of replacing white families as they move away for a variety of reasons. It is to meet this particular need that this committee has directed itself. We would like to continue to demonstrate that Negro and white families can live comfortably side by side, maintaining the quality of the neighborhood.

We invite you who are in sympathy with our goals to visit us and to help us reach out to find prospective residents; principally white and Oriental, as the Negro community already knows about us. For further information and to find out what houses are currently for sale please call Mrs. Dorothy Bower, 242-4645 or Mrs. Trudy Gaskins, 731-4204.

Sincerely yours,

The Committee to Sustain an
Integrated Neighborhood

REPORT TELLS NEW NI PROGRAM

The Seventh Annual Report of NI has been included with this newsletter. It may give members and non-members alike a better understanding of the organizations goals and programs.

*

A group of Russian teachers of English will be at Georgetown University this summer. The Foreign Service Student Council has been asked by the University to provide informal contacts with American families. Any NI member who would like to share a barbeque supper, an automobile ride, or any other evening or week-end activity with one or more of these teachers, please call Hilda James at 726-2009.

*

FLASHES!!!

In a book titled, "Equality and Beyond: Housing Segregation and the Goals of the Great Society," George and Eunice Grier, NI members, discuss the problem of racial patterns in housing, and suggest a number of changes to alter this pattern.

Thomas J. Hysong, 17, NI area resident, won fourth place in the International Science Fair held in Dallas, Texas, in May.

Dr. Jacob Fishman, NI member, and Director of the Howard University Institute for Youth Studies, was named director of a joint D. C. Health Department-Howard University College of Medicine project which will attack mental health problems in a wide area surrounding the University.

John D. Fauntleroy, NI member, has been appointed to the Special Police Trial Board.

Dolly Davis, a June Coolidge High School graduate and Junior Neighbors member, will be attending Smith College on a scholarship this fall.

The Neighborhood Commons Committee has elected Mrs. Carlton Garrison of Madison Street, chairman. Mrs. Garrison replaces Marvin Caplan.

b BULLETIN BOARD

The next issue of INK, a combined August-September issue, will appear early in September.

No Board meeting is planned in August. The next one is scheduled for September 14, at a place to be announced.

MORE FLASHES!!!

Dr. Larry Graves, a founding member of NI, will be the new principal of Rabaut Junior High School.

Dr. Martha Corcoran Sager, has been named to head Marjorie Webster Junior College.

Wanda Lee, daughter of Mrs. Thelma Lee, an NI member, recently won an honorable mention for a block print in the Washington Post- Recreation Department Art Show.

In a Post photograph on July 1, a sign reading, "Neighbors, Inc. Supports Welfare Recipients" was shown. The sign was carried in a march protesting the administration of welfare in the District.

Dr. James M. Nabrit, NI area resident, has been named U. S. Deputy Representative to the United Nations by President Johnson. Dr. Nabrit is on leave as president of Howard University.

Ralph Temple, NI member, has been named staff counsel of the National Capital Area Civil Liberties Union.

The Community Singers , sponsored by NI and the D. C. Recreation Department, presented their summer concert on June 3.

Executive Director Margery T. Ware recently spoke on "Open Occupancy Housing" at a real estate training program sponsored by the Washington Real Estate Brokers Association and the Adult Education Department of the D. C. Public Schools. She also lectured to the Human Relations Institute at American University earlier this month.

The Reverand Robert F. Spieler of St. James' Lutheran Church is the new Secretary of the National Capital Area Ministerial Association.

Recent Post pictures showed two NI children, Mary MacNair and Jennifer Hott, with their pets at the Takoma School Pet Show.

Ralph Fertig, NI member and head of Southeast Neighborhood House, was featured in a Post article on programs and facilities for children in the District.

URBAN ATLAS: 20 AMERICAN CITIES

Joseph R. Passonneau
Richard Saul Wurman

a communication study notating selected urban data at a scale of 1:48,000

This work has been supported by the following foundations and institutions: Dun and Bradstreet Foundation, Inc., the Graham Foundation for Advanced Studies in the Fine Arts, the Brunner Foundation, the National Aeronautics and Space Administration, the Saint Louis Regional Planning and Construction Foundation, the Institute of Urban and Regional Studies, Washington University, and the School of Architecture, Washington University.

a new, unique, and invaluable tool . . .

for the

- **manufacturer and distributor**
- **urban planner and architect**
- **builder and realtor**
- **banker and insurer**
- **sociologist, political scientist, economist**

Not only are urban areas burgeoning — so is the study of urban problems. The amount of raw data being piled up is growing so rapidly and becoming so massive that it is more and more difficult to make effective use of it. A method of enlivening these long tabulations by displaying them visually, in such a manner that distributions and correlations of variables can be seen at a glance in map-like representations of the urban scene, has obvious advantages. All those involved with the changing patterns of the urban scene — urban planners, realtors and social agencies, large employers and political groups, builders and bankers and machinery makers — would find in such a compact display information useful in answering critical questions.

Where should massive urban renewal schemes be concentrated?
What areas of any one city show good investment potential?
What different types of architecture are needed in different areas of any one city?
Where should research on slum conditions, on voting intentions, on buying habits, be conducted?
Where should new transportation lines be laid down?
Does urban organization show any dominant pattern, city by city?
Where should marketing promotion be concentrated?
Should branch operations be opened up in another city?
What existing patterns can be incorporated in long-range urban planning?

THE *URBAN ATLAS:* A SOURCE BOOK ON THE BASIC FACTS OF URBAN LIFE FOR 20 MAJOR AMERICAN CITIES THE *ATLAS* SHOWS . . .

RESIDENTIAL POPULATION DENSITY

from the *U. S. Census of Housing: 1960 City Blocks* and the *U. S. Census of Population and Housing: 1960 Census Tracts.* Population density is recorded in five graduations:

People/Grid Square	People/Gross Acre
50 to 200	3.2 to 12.8
200 to 500	12.8 to 32.1
500 to 1,200	32.1 to 83.6
1,200 to 3,600	83.6 to 238.0
3,600 and over	238.0 and over

TOTAL INCOME DATA

from the *U. S. Censuses of Population and Housing: 1960 Census Tracts.* Total income is recorded in seven graduations:

Dollars/Grid Square
$0 to $ 250,000
$ 250,000 to $ 750,000
$ 750,000 to $1,500,000
$1,500,000 to $2,500,000
$2,500,000 to $3,750,000
$3,750,000 to $7,500,000
$7,500,000 and over

LAND USE DATA: from planning commissions and similar agencies in each city. Non-residential land use given includes industrial complexes, institutions, parks, airports, etc.

THE *URBAN ATLAS:* A PIONEER APPROACH TO DATA ORGANIZATION

Graphic Example: St. Louis

Potentially, the *URBAN ATLAS* can describe every quantifiable feature of the modern city. The authors illustrate the scope of these display techniques by giving St. Louis expanded coverage, with industrial data from Dun and Bradstreet, Inc., showing urban industry by gross sales, location, number of employees, and type of industry; with population growth changes from 1910; with non-white population percentages; and with the location and number of churches.

URBAN ATLAS: 20 AMERICAN CITIES

Joseph R. Passonneau
Richard Saul Wurman

a communication study notating selected urban data at a scale of 1:48,000

17½ inches x 20 inches — 127 Plates of maps
74 pages — 63 double-spread fold-out pages
12 distinct colors, as many as 5 on one map
printed on durable high-finish enamel stock
bound with screw-type post binders for easy map handling

SPECIAL PREPUBLICATION OFFER: $87.50 625/-
After March 31, 1967: $100.00 715/-

ADAPTING THE METHOD TO SPECIALIZED NEEDS

The maps serve as "illustrations" of a revolutionary technique in information display. The technical specifications given in the *Urban Atlas* will aid others in fitting the method to their own needs and purposes, using their own data, and displaying it at their own appropriate scale. For example, a national manufacturer could plot the distribution of his and his competitors' plants on a continental scale as easily as a health agency could plot the incidence of various diseases on a neighborhood scale.

PREDICTION OF FUTURE TRENDS

Coupled with a computer that can analyze data and is geared to print out the results in map form, the method can be adapted to predicting the future on the basis of present trends. Thus, after inputing the demographic distributions of an area from the censuses of 1950, 1960, and 1970, the probable distributions that will obtain in 1980 can be computed and directly overprinted on a conventional map of the area. Computer-aided analysis of relationships between variables, as well as their rates of change, can be displayed in an easily comprehensible way.

THE CITIES FEATURED:

Atlanta
Boston
Chicago
Cincinnati
Cleveland
Denver
Detroit
Houston
Los Angeles
Miami
Milwaukee
Minneapolis-St. Paul
New Orleans
New York
Philadelphia
Pittsburgh
St. Louis
San Francisco
Seattle
Washington, D. C.

"The form of the city, at all scales, is the crystallization of often invisible relationships. These may be the relationships of topography and transportation, the activities of a person or of an institution, they may be a history of psychic associations."

INDUSTRIAL COMMERCIAL

The maps shown here and on the front panel of this folder are sections (in full size) of two of the New York City maps contained in the *Urban Atlas*. The map on the front depicts land use. The map on the back plots personal income per unit area against population. The relative visual impression of a neighborhood's color — from predominant red through (overprinted) purple and mixtures to predominant blue — allows an immediate evaluation of the neighborhood's economic character. In the *Urban Atlas*, both these maps measure better than 16 inches by 32 inches.

The Traverse Mercator Projection used for the maps preserves true areas and distances.

WNI

WASHINGTON - Notes for the file

1. In one of your publications that was sent me you said your two key problems were real estate agents and the public schools. How have these problems been handled over the years, especially the schools?

   Washington has found, as has everyone, that the real estate agents are perhaps the most difficult to deal with, and the findings are not any different from what we have heard before. They were able to have a great deal of effect by assembling evidence against one particular agent and making a charge about him to the governing board of the real estate agents who put him on probation with a warning. After that Neighbors, Inc. didn't have as many blatant promotions of blockbusting. It was rather interesting to note that Mrs. Ware felt that the school problem was the most difficult for for this is a continuing matter, always needing attention , to upgrade schools. The main problem in schools comes at the junior high level because of prejudices concerning socializing of the sexes which starts at this age. They help in these particular problems by having the principal of the junior high send one or more people to each of the elementary schools to prepare the students for the transition to the junior high school and attendant problems. Washington Neighbors, Inc. also has a monthly meeting of their education committee at which the principal of a school attends, and they work out a constructive program approach including support of the budget for the schools and the D. C. government. In all of the problems, Washington Neighbors, Inc. use the newsletter to set forth everything favorable that is happening in the neighborhood. Neighbors have also had a "rumor clinic" in their newsletter in which they investigated all rumors and gave facts. Neighbors found that the average person does not take the trouble to ascertain the difference between fact and fiction.

2. What are the continuing programs at NI; what have they to offer;' how are they staffed?

   In the literature all of the continuing programs are included in the listing of committees. The staffing problem seems to be mainly a matter of finance and conviction by the governing board as to the particular needs at the time. At present they have less staff than they did the two previous years.

3. How many are on your professional staff? What are their functions and the services they offer?

   They have had two professional members of the staff in the past and only have one at the present time who is Mrs. Ware. She is a sociologist by training. I believe she feels she needs a professional community organizer now as well as a professional office manager or business manager.

4. Where does the money come from for your budget, especially foundation grants? What sort of proposals are sent in and to whom?

   The Meyers Foundation originally gave NI $28,000 for three years and matched $3,000 in addition later. At the present time NI have produced approximately $4,500 from the Art and Book Festival, membership and some larger donations. Getting the money becomes increasingly difficult year by year.

5. Have you ever had an Eleanor Roosevelt NAIRO intern?

   Yes, and they found him very successful.

6. How is the budget at this time? I noticed in your 1963 Annual Report that you had a deficit.

   When the 1965 Annual Report is completed, they will mail us a copy.

7. Have you maintained community interest and concern over the years? How? If not, where do you diagnose the trouble to lie?

   NI have maintained community interest by keeping the needs up to date, keeping aware of what the people need, what concerned parents and other people in the neighborhood are interested in at the particular time. NI also keeps junior high students occupied with hayrides and parties and visits to other parts of the community; they also have choral groups and these activities have the participation and support of interested parents. In the future the stress will be more on community development because Mrs. Ware feels they have gone to this particular stage in their development. NI has an effective help by the Conference of Clergy, both Negro and white, and excellent help by an extremely able superintendent of the junior high. Their help in other areas of the city and in neighboring Maryland and Virginia has developed a pride of accomplishment in this particular neighborhood. They have used the method of visiting people who have prestige and improving the prestige of the neighborhood and associating themselves with the prestige needs of the metropolitan area of Washington, D. C.

Urban Planning Project

SUBURB WHERE EVERYONE'S WELCOME

Concord Park near Philadelphia is one of the nation's few private housing developments operating without the color line

by GUSTAV K. WIENCKE

"I heard it on the radio," said a Negro war veteran. "The announcer said any veteran could buy a house in Levittown. *Any* veteran!"

That was three years ago when a brand-new city was being mass-produced not far from Philadelphia's northern edge. A new house, out away from the grimy, crowded old sections of Philadelphia, was the dream of this young Negro father of two.

"We went out to Levittown, a whole bunch of us. All vets. Why, they wouldn't even give us an application blank." It was a snub that stung.

Moving his family to the suburbs seemed to him an impossible dream, but it was fun just to drive out from the city and look at new houses with spacious yards for children to play in. Once he even stopped at an attractive ranch house—large lot, a kitchen that looked as if it had been transplanted intact from the pages of a women's magazine, a speed-discouraging curved street, and a bus stop a few hundred yards away. But, remembering his rebuff at Levittown, the veteran didn't have the courage to talk to another white salesman. So he started his car and headed for home.

"A few days later I was talking to a friend of mine. He was telling me about a development he had seen where our people could buy. Concord Park is its name, he said."

After the friend gave directions for reaching Concord Park, the veteran realized it was the same section he had been wistfully eying. "I just hadn't read the fine print where it said, 'democracy in housing.' You bet I didn't lose time. I went back and put the down payment on a house."

Finding a new house he could buy was amazing for the veteran, but more astonishing was the "open-occupancy" policy of this 139-house development. Quietly Concord Park had broken a rigid and hidden taboo which excludes 450,000 Philadelphia Negroes from buying practically even one of the 200,000 new houses that went up in the Philadelphia area in the ten years since the war. (The 1,927 units made available to Negroes were mostly apartments or units in public low-income housing.)

The man to break the white curtain that realtors, bankers, and builders had strung up was a young builder, Morris Milgram, who feels it ethically wrong to build houses that could be bought by white people only. He hadn't planned to make building his career, but his father-in-law had pressed him to come into the construction business with him. "I'll join you," Milgram said, "if you'll let me build houses anyone with the money can buy." The older man finally yielded, although insisting on one stipulation—Milgram must learn the construction business first. Four years later the young builder was ready to begin his experiment.

"Fine *idea!*" the money and mortgage men told him. After two years of stalling and evasive tactics, they came out bluntly and told him to forget his principles. "We're only interested in making money," they said. A wealthy man refused to invest money in what he considered an impractical dream, but offered the young man a gift of $1,000—which he refused. Finally Milgram teamed up with a Bucks County builder, George Otto, and the two formed a stock company. In 1954 they raised funds to buy truck-farm acreage and built a $13,000 sample house. The initial mortgage money came from a Manhattan bank.

One Sunday in September, 5,000 people filed through the sample house, but at the end of the month, only seven white families had made deposits compared with fifty from Negroes. "Those were nights when I'd wake up in a cold sweat," the idealistic Milgram reminisced. "I'd tell myself 'You're building another Negro ghetto, instead of integrated housing.'"

Things began to brighten when a new sales manager, Stuart E. Wallace, took hold. He really believed in Milgram's idea—to the point of buying a house and moving in himself. He saw to it that all the sales personnel were given special training for the job.

We watched Wallace at work when the doorbell rang in the sample house. He would spring into action as a family of unsuspecting buyers entered. Unsuspecting, because no sign outside indicated that this was any different from other developments. First, there would be the tour of the house to see its features—built-in TV-antenna, modern kitchen, many extras that raised the FHA evaluation by $500 over a very similar house in a nearby development.

The prospects would agree that the house *was* a good buy and they would sense something more than just picture window and green lawn. They felt an easy, warm neighborliness. There was laughter and a bit of fun as they talked. (Some residents later told us that they had moved into Concord Park because they wanted neighbors like the salesman.)

Then without swallowing hard or apologizing, the salesman led them over the next hurdle. "One of the wonderful things about these houses, you know, is that they are sold on an open-occupancy basis," he would explain. "They are open to any financially qualified family, regardless of race. Democracy is practiced here, not merely preached."

If this family was like most of the white prospects, it would quickly insist, "Of course, we're not prejudiced, but. . . ." The salesman always took time to talk things over, to listen again to the old folklore about the effect of skin color on house values. (When the last house at Concord Park was sold, its price tag had jumped $1,500. Any house bought here in 1954 is now worth $1,000 more.) Wallace knows, however, that statistics won't erase deep emotional feelings. Often the prospects exclaimed, "This house is just what we've been looking for. I don't care who lives next door. . . ."

The most formidable hurdle still had to be surmounted, and the salesman couldn't do much to help. The new buyer had to face the raised eyebrows, ridicule, opposition of well-meaning relatives and friends, people on the job. "You mean you'd live with Negroes! What about your children—your chances for a better job?"

And too often the prospects telephoned the salesman. "We're so sorry . . . an ideal house. But why do you sell to Negroes?" they'd say. Others didn't back down, and white families began to move in.

"In time we had to set a controlled-occupancy ratio, even though we didn't want to," says the builder. "It's 55 per cent white to 45 per cent non-white for at least three years. We expect that this will keep the community stable." Negro buyers are sympathetic to the builders' reasons.

Every house has now been sold, and the corporation has paid its stockholders a

reasonable profit. What's more, they have recently formed two corporations, with capital of $250,000, for two new open-occupancy housing projects. One got its start when a group of Presbyterian clergy and laymen urged Otto and Milgram to build another "Concord Park" in central New Jersey.

But is this experiment as successful as it looks? What was the reaction of the old-time residents in conservative Bucks County —for example, the people in all-white Trevose, of which Concord Park is now a part? Some surprising discoveries came out of visiting the people in Concord Park as well as near it.

One would have expected to find a good many professional people in Concord Park —"the place is loaded with schoolteachers," someone said—and people of rather liberal views. It was surprising to hear family after family refuse to admit that they, as white persons, had ever wanted to live in an integrated neighborhood. "We just wanted a good house. When we bought, we thought if the Negro neighbors would mind their business, we'd mind ours."

"Sure, we have squabbles," a steelworker admitted. "But race doesn't make any difference." In a snowball fight, an alarmed mother saw that all the children on one side of the street were Negro, but a second look told her that it was laughing girls who presented a target for the boys on the other side.

Neighborliness and friendships simply grew up on the basis of common interests. A Japanese helped his white neighbor with shrubbery and landscaping. A Negro secretary gave tips on shorthand to a young white mother who wanted to qualify for a job.

In the summer a street is roped off for square dancing, fathers have pitched in to build and equip a playground, and a community civic association has brought new neighbors closer together. "There's so much going on here," said a white teen-ager with sparkling eyes.

George Grier, a sociologist living in Concord Park, supplied a large array of verified facts. He had made a thorough study of all the Concord Park families for the University of Pennsylvania and for the Fund for the Republic. For a fact, 85 per cent had bought here *mainly* because they liked the houses and physical features of the development. For the most part, the white families were not crusaders for open-occupancy housing. Less than a fourth had ever belonged to any interracial group, and 37 per cent had never had any Negro friends before. On the other side, most of the Negro residents came from the most depressed housing area in Philadelphia. Their average annual family income ($6,350) was a cut higher than their white neighbors'. Many white residents remarked that the Negro children tended to be better disciplined and better dressed.

These were average, American-born Philadelphians, half of them mechanical workers, and about half indicating preference for Protestant churches. Evidently an ideological bent in favor of integrated housing had not been necessary to make Concord Park succeed. An extensive direct-mail advertising campaign to 15,000 people known as liberal in their views resulted in only two sales.

SUBURB WHERE EVERYONE'S WELCOME

In this respect Concord Park differs from Greenbelt Knoll—a nineteen-house integrated development put up by the same builders in Philadelphia. Here functional, modern houses, which have won architectural awards from the American Institute of Architects and the city of Philadelphia, are spread among hundred-foot trees. Buyers of this $20,000-$30,000 housing all believed in interracial living before moving in, and many had been looking for this kind of community.

Ald Trevose is separated from its new extension by a high Pennsylvania Turnpike embankment which curves between like a shielding arm. None of the Negro families interviewed reported any unfriendly experience, either in shopping or visiting nearby churches. A swimming pool did turn down white applicants on the basis of a Concord Park address, and a local volunteer fire company expressed coolness to one Negro applicant. Some white residents have been accepted, however.

When it comes to Protestant churches, the climate seems chillier. Checking up in the village of Trevose brought comments such as, "It's all right if they stay over there. But when it comes to joining our church, I draw the line."

"Don't you think they would rather be with their own kind? As long as churches are separate, shouldn't they go to their own?" remarked a mild-mannered resident who refused to take sides.

"Why, the church is the main social contact for our young folks," said a spirited grandmother. "If they get in, first thing you know there'll be intermarriage."

"I never get over there," confessed another. Concord Park might as well be fifty miles away so far as he was concerned.

It was taken for granted that Negro Catholics would go to the nearest church, but lines of Protestant communication have also been laid across the turnpike when two Negro families joined the local Methodist church. Three others established a similar relationship with Episcopal and Baptist churches nearby, rather than continue making a twenty-mile round-trip to their former churches in the city.

When asked how the Negro families came in, the chairman of the Methodist membership committee, a pleasant, plain-spoken white-haired woman, smoothed her apron and came right to the point. "You know about our 'book of discipline'? Well, that's what we have to go by. Our pastor never asked me or anyone. He just took them in and said that was the way it had to be done."

She seemed relieved that this was simply a matter of Christian doctrine on which the congregation had no vote. When pressed whether she approved, she shrugged and said, "If I don't like it, I can withdraw my membership."

"Our pastor didn't ask them to join. They asked him," it was said. Actually, a friendly letter of welcome had been issued by the ministerial association to all newcomers in Concord Park. Another matter had to come to a vote—could the church building be used for an interracial kindergarten sponsored by Concord Park parents? Permission was granted, an indication of friendliness beyond mere politeness.

"I don't think you can find nicer people anywhere," declared a white woman who had been engaged to baby-sit and had seen Concord Park houses from the inside. One could see the ice of old feelings melting in the warmth of personal friendships.

The Concord Park survey indicated that almost every family had some "religious preference," but two-thirds were inactive or became inactive on moving out to the suburbs. "I guess I'm just a backslider," admitted a Negro Presbyterian. He still held nominal membership in a city church, seventeen miles away, but had just been "too busy" to attend services. "No, I wouldn't hesitate a bit if I wanted to go to the Presbyterian church in Bristol," he said.

No one interviewed knew of any personal or house-to-house church visiting program, but it was no secret that a minister going around calling would be a welcome sight—additional evidence that Concord Park belongs. Perhaps even more than many suburban communities, these new neighbors are open to make a new start in a fellowship based on faith. In a prosaic, matter-of-fact way, people here have learned to like and trust their neighbors. Many old fears and suspicions have melted away. This showed up in the first election for civic association officers. Election was by secret ballot for the best qualified persons. And when the votes were counted, the Negro veteran who had been turned down at Levittown was elected treasurer.

Reprinted, by permission of PRESBYTERIAN LIFE, as a public service by the Philadelphia Commission on Human Relations.

Urban Planning Project

WEST MT. AIRY NEIGHBORS

STATEMENT OF POLICY

We, the residents of West Mt. Airy are resolved that ours shall be a friendly, stable, representative, and high quality neighborhood. We recognize that a community which desires to be inclusive of all people is subject to those pressures which are a product of racial restrictions in the larger housing market. We subscribe firmly to the right of every decent American citizen regardless of color, ethnic origin or religion to obtain a home of his choice anywhere in the market. We subscribe to educational and legislative programs to eliminate racially restrictive practices.

As long as such restrictive practices generally prevail, we believe it necessary to act affirmatively to assure that our neighborhood shall remain well balanced racially. We look with disfavor upon those Real Estate brokers who operate without proper regard for the best interest of the neighborhood.

We invite the cooperation of all brokers by following the rules of practice listed below.

a. To refrain from the wholesale solicitation of entire blocks of residents.

b. To avoid veiled allusions to deteriorating values or a panic situation in order to stimulate sales.

c. To refrain from pressure tactics to unsettle the minds of owners as to the future value of their property.

d. To make conscientious effort to find white as well as Negro buyers for homes in an integrated neighborhood.

e. In listings and ads, to describe the neighborhood without resorting to references such as "mixed," "broken," etc.

f. To recognize that "For Sale" and "Sold" signs have a disquieting effect on the neighborhood, and thus to keep the number and duration of such signs at a minimum.

We invite all residents of the area to report practices of brokers, both as to compliance and in violation of these rules to the West Mt. Airy Neighbors. The officers of the West Mt. Airy Neighbors pledge that they will take every action possible to support cooperating brokers and to take action against those who disregard our interests.

Philadelphia, Pa.

good human relations depend on you!

A TEN-POINT PROGRAM

for citizen action in Human Relations

The objective of this program is a peaceful, secure community where dignity and mutual respect, equal opportunity, law and order, and civic responsibility prevail for and among all peoples of every race, color, religion and national origin. Responsibility for achieving this objective rests with government, educational institutions, religious and civic organizations. But the success of this program will depend largely on what you and your fellow citizens say and do. Special responsibility for supplying information for organization, promotion and guidance of program lies with the Commission on Human Relations and the many cooperating agencies. The following 10 points are guides which agencies, institutions, organizations and you and your fellow citizens can follow:

1 USE THE AGENCIES

a. Report rumors and tension situations to the proper authorities. If there is danger to life and property, call the police. Report all other situations to the Commission on Human Relations.

b. Clear up complaints of discrimination. Don't let them fester! Refer complaints to the Commission on Human Relations. Whether real or imagined, feelings of discrimination breed resentment and tension.

2 GET THE FACTS; SQUELCH RUMORS

Don't believe everything you hear! Don't pass it on without checking! Don't ignore rumors either. Get the facts and correct false information. If the facts reflect danger, call the proper authorities and cooperate with them in providing a remedy.

3 ORGANIZE COMMITTEES

Organize human relations committees or their equivalent in your Home and School Association, your church, club, veterans' organization, neighborhood or block organization. Make the committee responsible for getting and disseminating factual information on problems that concern the group or neighborhood.

4 PLAN PROGRAMS

Plan informational and educational programs for your organization or neighborhood. Call on community agencies for help and guidance.

5 ATTEND TRAINING PROGRAMS

Attend leadership training programs conducted by the Commission on Human Relations and various community agencies, or arrange for leadership training programs for your neighborhood.

6 PLAN POLICE-COMMUNITY PROGRAMS

Plan a police-community relations program for your neighborhood. Invite your district police captain to work with a citizens' committee to promote communication and cooperation between police and community.

7 FOCUS ON THE POSITIVE

Share your success stories! The world hears too much about prejudice and conflict. Let the world hear more about good will and constructive citizen action. The greatest incentive to civic leadership is recognition. Tell your story to newspapers, radio and television stations and to the Commission on Human Relations and other agencies. Use your church bulletin.

8 JOIN BLOCK ORGANIZATIONS

Organize block by block in your neighborhood. Tie in with the city-wide groups that are promoting these programs.

9 VOLUNTEER FOR CIVIC DUTY

Hundreds of civic organizations and community agencies need volunteers. They cannot provide needed services without your help. Civic duty is not a personal sacrifice; it is an opportunity to enrich your own life.

10 TEACH RESPECT FOR LAW AND ORDER

Teach confidence and trust in the American way of life. Teach understanding, courtesy and good will to those who may differ in color, religion or culture. Your utterances in the home, on the street, in the classroom, church or meeting will influence your children, other children, your fellow citizens to act with good will.

COMMISSION ON HUMAN RELATIONS

An Official Agency of the City of Philadelphia

For information about community agencies that will assist organizations and individuals in planning and promoting human relations programs contact the Commission at: 601 City Hall Annex, MUnicipal 6-4670.

THE PEOPLE
GROW
TOO
THE COMMISSION ON HUMAN RELATIONS
An Official Agency of Philadelphia
425 City Hall Annex
Philadelphia 7, Pa.

TO UPHOLD THE RIGHTS OF ALL CITIZENS . . .

Three times in a fifteen-year period the citizens of Philadelphia decisively reaffirmed their commitment to equality of opportunity and their respect for the dignity of every individual.

First, in 1948 Philadelphians enacted the Fair Employment Practice Ordinance that declared employment discrimination based on race, color, religion or nationality to be illegal. They established a Fair Employment Practice Commission to administer that ordinance.

Four years later, the citizens provided in their Home Rule Charter for a Commission on Human Relations to administer antidiscrimination laws and to promote equality of opportunity in all areas of community life. It was the first municipal human relations agency in the nation to be made a functioning department of city government.

And then in 1963, Philadelphians gave additional powers to their Commission on Human Relations. They adopted a Fair Practices Ordinance that not only prohibited discrimination in employment, but in housing and public accommodations as well.

The people of Philadelphia declared repeatedly that racial, religious and nationality factors shall not deprive any citizen of full equality. The Commission on Human Relations is the instrument through which they guarantee and uphold the rights of all citizens.

As an official city agency, the Commission does not promote the interests of any one group. It does come to grips with the evils of discrimination and segregation that primarily victimize minority people. But the results of its work—equality, interracial understanding, neighborhood peace and harmony—benefit all of Philadelphia.

. . . IN EMPLOYMENT – PUBLIC ACCOMMODATIONS

The Commission receives and initiates complaints of discriminatory practices and intensively investigates each to ascertain the facts and seek a just solution. When necessary, the Commission holds informal hearings and attempts, through conciliation and persuasion, to correct clearly established violations of the Fair Practices Ordinance.

If conciliatory methods fail, the Commission has the power to issue subpoenas, hold public hearings and start court proceedings to gain compliance with the law.

A three-pronged compliance and counseling program is conducted by the Commission to promote acceptance and affirmative implementation of fair employment practices throughout the city's business and industrial complex. Employment patterns are determined through on-the-spot inspections of plants and offices; surveys are conducted on an industry-wide basis, and systematic reviews are undertaken to determine the extent to which firms doing business with the City comply with the anti-discrimination clauses in their contracts.

If evidence of discrimination exists the Commission insists upon strict compliance with the law and provides guidance on the implementation of merit employment practices.

The investigative activities of the Commission are supported by a variety of educational programs. These are designed to encourage all citizens of the community to support equality of opportunity in employment and public accommodations.

. . . IN COMMUNITY RELATIONS

The Commission conducts a far-reaching program of community services to improve relations among different racial, religious, and nationality groups. In this way it promotes cooperation, understanding, and mutual respect among all citizens. These services include:

Helping citizens to form community groups and organizations, develop programs of neighborhood improvement, and involve themselves in programs and activities that will help eliminate misunderstanding, hostility and fear.

Assisting, consulting, and cooperating with existing community organizations, public and private agencies, schools and other institutions involved with human relations programs and problems.

Cooperating in a tension control program to cope with, and eliminate conflict situations that develop between different racial, religious, and nationality groups and individuals.

Conducting a police-community relations program in cooperation with the Philadelphia Police Department, to promote understanding and respect between law enforcement agencies and the general public.

This phase of the Commission's work is designed to encourage citizen action in solving community problems. As citizens cooperate in programs and activities which build peace and harmony they also gain respect for their fellow citizens whose customs and way of life may differ.

. . . IN HOUSING

Complaints alleging discrimination in the sale, rental, and lease of commercial housing are processed by the Commission in the same manner as those involving employment and public accommodations. Attempts are made to adjust each case through conciliation and persuasion. If this fails, formal steps are taken to reach a fair solution.

Educational programs are conducted by the Commission to gain compliance with the law and promote support for equal opportunity throughout the housing market.

A program directed toward the all-white community promotes understanding of the causes of population changes; interprets the anti-discrimination law, and encourages active efforts by residents to integrate neighborhoods, support open occupancy practices, and oppose panic-inducing real estate practices.

Residents in minority neighborhoods are encouraged to exercise their rights to purchase or rent housing of their choice and to assume responsibility in working for neighborhood integration by shopping in the total market. Guidance is given on effective means of seeking, selecting and financing homes.

The aim of the Commission's housing program is to promote an open housing market in which all families are free to shop and move without restrictions based on race, color, religion or national origin.

. . . THROUGH RESEARCH

An essential aspect of the Commission's program is the constant search for factual data with which to support and expand programs and activities. The Commission gathers and disseminates to public and private agencies and the general community information to help replace rumors, fallacies and myths about racial and ethnic differences. Among the significant contributions to the field of intergroup relations made by the Commission in recent years have been the following:

- Three reports on Philadelphia's non-white population based on the 1960 Census, covering demographic, housing and socio-economic data.
- Summary of local housing research pertaining to factors affecting housing desegregation.
- Report on Philadelphia's Puerto Ricans, with 1960 Census data.
- Study of a representative sample of 1,500 Negro Philadelphians to determine their values, aspirations, and attitudes toward segregation, their feelings about race, and confidence in the future as related to their social status.
- Summary of a sociologist's inquiry into the relationships between migration and delinquency.
- Report on the intergroup relations aspects of urban renewal.
- Survey of property standards in racially changing neighborhoods.

. . . THROUGH INFORMATION AND EDUCATION

Interpretation of its objectives, programs and activities to the general public and specific segments of the public is one of the Commission's major responsibilities. Through its information and education programs, it attempts to help the community understand the benefits of equality and wholesome intergroup relations.

In pursuing these objectives the Commission relies heavily upon the mass media serving the Philadelphia area. In addition, the Commission's story is carried to the community through a variety of printed materials, films, filmstrips, and other visual aids.

Information and education activities conducted throughout the year include employment counseling programs for minority youth and their parents, human relations programs in churches and other community institutions, and programs to acquaint interested groups and individuals with the provisions of the City's Fair Practices Ordinance.

A quarterly publication reaches thousands of citizens and provides information on Commission program activity. Other newsletters and special reports, produced periodically, are distributed to more limited audiences and reflect in more detail the Commission services and approach to its responsibility.

Consultation and advice on public relations and educational programs in human relations are provided to the Commission's own staff and are available to citizen groups, other City departments, and public and private agencies.

NEIGHBORHOOD BEHAVIOR AND STANDARDS

Neighborhoods do not maintain good standards of behavior automatically. It takes responsible activity and sensible cooperation. Two very important things are necessary:

First, the standards that the responsible people in the neighborhood want upheld must be clearly and strongly stated for all residents to understand.

Second, strong leadership is needed so that the great number of law abiding, well behaved residents, both white and Negro, are not placed at the mercy of a few irresponsible or foolish troublemakers. Religious people particularly must meet their obligations to provide community leadership.

What can be done to rally the majority of good, respectable citizens in your neighborhood to guard community peace and safety?

Issue a clear statement of what standards of conduct you want respected and make sure that every single resident of your area gets a copy and has the copy discussed with them. Teams of residents should personally distribute and post and discuss this statement. The statement might include remarks on the following topics:

1. NOISE: Be a thoughtful and good neighbor:

   a. When the hour is late remind departing guest to say goodby indoors.

   b. Practice on musical instruments at reasonable hours.

   c. Make household repairs when it will not disturb neighbors.

   d. Quiet down parties and celebrations by midnight.

   e. Don't use your automobile horn as a doorbell.

   f. Don't let your pet's barking or yowling become a nuisance.

   g. Don't play radio or TV loudly at night.

2. CHILDREN: Be proud of your children as responsible junior citizens:

   a. Teach them, by precept and example, to respect the rights of all others and to thoughtfully refrain from any action that will annoy your neighbors; to refrain from playing in their yards or on their lawns without permission; to protect their property and the contents thereof as if it were their own; to try to prevent their playmates from doing anything that would damage or destroy anyone's property in any way!

Philadelphia, Pa.

b. Teach them to practice reasonable restraint in their play. Obviously play will create some clamor, but none of us would want our children to indulge in unrestrained shouting and protracted screeming, for their own sake as well as for the sake of the neighbors whom it would annoy.

c. Teach them pride in their neighborhood, sportsmanship, and respect for law and order (including the City's official "teen-age" curfew).

d. Teach them the kind of politeness, friendliness and thoughtfulness that will make everyone proud of them, and secure in the thought that they will carry on in their parent's footsteps.

e. Teach them safety; avoidance of play in the street; care in playing in driveways; removal of toys from drives; care around stoves and fires; restraint from play with matches or fireworks; closing and locking of doors at night and otherwise when warranted; etc.

3. PETS: Give them care and affection while seeing that they do not infringe on the rights of others or create a safety hazard:

a. The law requires licensing and immunization of pets. Your veternarian can give you details. Your careful conformance will help everyone.

b. The law also requires that dogs be on a leash when outdoors. Not only is there danger to children when dogs roam at random, and at times in packs, but there is also danger to your pets. Furthermore, foraging through trash and garbage cans, spilling the contents, creates a serious nuisance and sanitation problem.

4. TRASH: City ordinances require that trash be put out in covered containers or in securely closed bags or packages to prevent dispersal throughout the area by the wind, scavengers, children or pets. Loose paper should never be left out. In the past, violations have resulted in fines when discovered by the police.

5. DRIVEWAYS: The drives that service our blocks are private and not subject to city cleaning service. We are all responsible for keeping them clean and neat. Discarded or forgotten toys or children's vehicles create a hazard in the drives and are a nuisance to those who must stop and remove them. The cooperation of all, particularly our children, is essential to keep our drives clean, in good condition and safe.

6. AUTOMOBILES: Be thoughtful of your neighbors when you park on the street and in the drives. They may have to leave or enter their garages when you are not about, and they may be in a hurry on an important mission. See that your guests and those who deliver to your homes realize this problem and are also thoughtful of your neighbors when they park.

   a. The repair of automobiles on city streets is forbidden by city ordinance and it disrupts the quiet and interferes with the desirable appearance of our neighborhood. Don't make it necessary for police intervention.

   b. It is also illegal, as well as detrimental to the appearance of a residential neighborhood, to place automobiles in semi-storage on city streets by removing one or more wheels and blocking up the axle. Obviously this would also be an infringement on the rights of the neighbors that should be avoided under all circumstances.

   c. Use of residential streets for the continued or nightly parking of commercial vehicles would also constitute objectional use of public thoroughfares and would be most objectional in a residential neighborhood.

   d. The need for extreme care on the part of motorists traversing the driveways where children sometimes play is obvious. Therefore the maintenance of slow speed in such drives is a basic neighborhood standard.

7. CONSTRUCTIONS: We should all know that the law requires that we obtain a building permit from the City before we alter any building we own in any dimension, or demolish any part of it, or substantially rebuild or stucco any wall, or partition a room. Detailed information on such permits can be obtained from the Department of Licenses and Inspections. This department protects all of us from improper uses of buildings and land which create dangers or speed neighborhood deterioration. Therefore, our cooperation constitutes another vital neighborhood standard.

8. COMPLAINTS OR PROBLEMS: If there are extreme cases of irresponsible people who cause trouble but do not violate any law, bring such cases to the attention of Community Agencies. The Family Service Agency, The City Department of Mental Health, or Alcoholics Anonymous may be helpful in many cases.

   If there is racial friction, notify the Commission On Human Relations, MU 6-9700.

The Police-Community Relations Officer for your local district is most ready to help you build up neighborhood standards. Your own Community Organization can best act as a clearing house for complaints.

Urban Planning Project

'RESTRICTED' AREA: DOES IT PAY?

Values Usually Not Affected by Lifting Bars

The value of "restricted" neighborhoods is getting critical attention now that covenants no longer stand up in court.

Some appraisers are arguing that elimination of racial bars to owning property makes it more, not less, attractive.

They are asking for a new look at the old belief that, when minorities move into an "exclusive" area, values decline.

The idea that property values are protected by restricting residential neighborhoods to particular groups is being re-examined. Evidence recently come to light suggests nonsegregated residential areas often add to, rather than subtract from, market values.

These new appraisals are getting increased attention as a result of U. S. Supreme Court decisions that prevent so-called racial covenants from being enforced through lawsuits. The Court reaffirmed its stand on this issue at the year's first session when it refused to hear new arguments on a decision that held that property owners who violate covenants cannot be sued by neighbors.

Investment. Some professional appraisers, in fact, doubt that restrictions add much to property values. Charles Abrams, writing in *The Appraisal Journal,* says that mixed neighborhoods usually provide a better long-term investment and notes:

"There are hundreds of such sections in America that have gone on securely for generations, and thousands of others could be built if we could ease the housing shortage for minorities. Some have even had the unique quality of moving up from slum status: Greenwich Village and Yorkville in New York City, Georgetown in Washington, and parts of San Francisco are examples."

Mr. Abrams goes on to point out that, in a section of Queens in New York, a housing project was built several years ago and opened to all races and creeds. The project itself created no disturbance in near-by neighborhoods and, indeed, "the land around the project has more than trebled in value." He adds that mortgage lenders in the New York area are coming to regard nondiscriminatory housing developments as sound financial investments.

Similar findings are reported by Belden Morgan, an appraiser in the Los Angeles area. After examining the influx of Negro families into Los Angeles, and their "invasion" of white residential areas, he concludes that property values usually hold up, or advance. He notes in an article for the Society of Residential Appraisers that "panic selling" by white property owners sometimes follows early sales to Negroes, and that prices drop as a result. But "after the first hysterical selling phase passes, prices become stabilized, then gradually increase under pressure of Negro bidding."

Mr. Morgan adds: "People are learning this. Many districts today go through a transitional period in occupancy without any signs of hysteria and without any collapse in prices. The only effect from an economic viewpoint is a broadening and strengthening of the market by virtue of the increased demand."

Better markets. "It usually will be found," Mr. Morgan says, "that sales activity is greater in racially mixed areas, especially in low and moderate price ranges, and that the high effective demand among Negro buyers not only sustains price levels but often increases them." An exception is noted in a high-priced residential area in Los Angeles, where prices fell 10 to 15 per cent after nine Negro families moved in among several hundred white families. But in an adjoining area, where values run from $10,000 to $15,000, prices advanced after the neighborhood became 20 per cent nonwhite.

In view of these developments, real estate appraisers are being asked to revise their opinions of the effect that minority population movements have on property values. Mr. Morgan suggests that an examination of the facts is likely to overcome many prejudices. Actually, a number of real estate developers have discovered a thriving market for homes among minority groups who in recent years have increased their incomes and now can afford better homes.

There is growing pressure to eliminate discrimination in housing just as there is pressure to end discrimination in employment and other fields. Public housing projects in New York have been nonsegregated for many years. There will be no segregation in future developments in Washington, D. C. In San Francisco a nonsegregation policy has been adopted for all urban redevelopment projects. The basic idea is to put into practice the edicts of the courts that racial covenants are inconsistent with the U. S. Constitution.

WORTH MORE IN A 'MIXED' NEIGHBORHOOD?
Some think it would be

From Philadelphia, Pa.

Urban Planning Projects

A STATEMENT TO REAL ESTATE BUSINESS MEN

FROM

THE RELIGIOUS COMMUNITY COUNCIL OF STENTON

The Stenton area is a pleasant residential section. It is our experience that most residents, regardless of their backgrounds, have moved here because they seek a pleasant neighborhood. We do not begrudge homes in our community to new groups moving in; but we resent tactics which turn blocks rapidly and completely from one group to another. We believe that the practices of some real estate offices in some sections of this area are harmful. They promote panic selling and a too-rapid turnover of homes. Such instability can only be harmful to community life.

We believe this rapid turn-over is not spontaneous, but occurs as a result of high pressure real estate selling: constant solicitation -- door-to-door, by direct mail, and by telephone -- of homeowners who have expressed no interest in selling. Some real estate men also use unethical arguments, rumors and misrepresentation of facts, as well as derogatory references to the racial, religious or national origin of new residents.

In the long run, everyone will suffer if practices which foster panic persist. A stable neighborhood, which can be sold on its attractions, community facilities and community spirit, regardless of race, religion or nationality, will benefit the real estate men as well as the home owners.

We urge you to eliminate the practices we have cited and to work out some plan whereby <u>all</u> real estate people licensed to practice must live up to standards which rule out high pressure selling methods so disastrous to any community, and which we know the Realty Boards have censured and the larger group of real estate men do not use. We will cooperate by never selling our homes, should the occasion arise, through any real estate agent who has pressured us or our neighbors in this manner. We will take every other proper step to insure that these practices shall prove unprofitable.

Philadelphia, Pa.

Urban Planning Project

What Happens When Neighbors Pay Money to Forestall Racial Change?

In some areas it has been found that home owners can be coaxed into paying money to "buy off" families who plan to sell properties to Negroes or others who have been barred from the neighborhood in the past. Sometimes it is proposed that the money collected be used to "bribe" Negro families to keep them from moving into an area. This kind of exploitation of racial fears is not only futile in today's housing market, but it is also costly. Obtaining money by exaggerating and distorting the issue of racial change in housing is an unfair practice, and residents who fall for such "pay up" schemes lay themselves open to financial pressure every time a local house is put up for sale.

Residents who are approached by people who want to start a fund to "keep ----- out of the neighborhood" should consider the following facts uncovered by the Philadelphia Commission on Human Relations in its work in racially changing areas.

1. Usually there are no legal safeguards, receipts, accounting or auditing of funds collected to forestall racial change. The solicitation is almost always under cover and a cloak of secrecy usually surrounds all negotiations and transactions. It is usual in such operations to keep the contributors completely in the dark about "details" after the funds have been gathered.

2. Smart operators with some real estate experience can make handsome profits by playing on the anxiety of property owners who do not know the facts about racial change. Not only do such operators make fees on individual property transactions, but they also frequently try to take a hand in all local transactions, setting themselves up as self-appointed bosses of local real estate changes, dictating to home owners about who is eligible to buy neighborhood property.

3. The scheme of collecting money to forestall racial change, once started, is good for repeated performances. This kind of neighborhood levy can be kept up as long as local residents can be kept fearful and uninformed.

4. Paying "protection" money against racial change just is not practical or realistic in today's housing market. In Philadelphia there are over 500,000 Negroes. Thousands of Negro families are in the middle income home buying market. It is financially foolish to think that a few neighbors can set up a road block to the growing movement of some of these families into established neighborhoods. The Commission on Human Relations has found various groups that have tried to bribe away racial change, but it has yet to find one that has been successful for more than very short time.

Philadelphia, Pa.

5. The practice of collecting money to maintain unfair neighborhood restrictions is based on false thinking about racial change. There are many excellent neighborhoods in Philadelphia where racial change has not adversely affected neighborhood standards. The old worry about an automatic drop in property values has been disproven time and again by local experience and reputable surveys. Obtaining correct information about racial change can save you and your neighbors embarrassment and money. (For further information contact the Commission on Human Relations, Housing Division, MU 6-4685, Room 625, City Hall Annex, Philadelphia 7, Pennsylvania.

Summary of
Sample Housing Cases
From the Files of the
Philadelphia Commission on Human Relations

Discrimination Against a Citizen of Chinese Background - Case D12-8-108

A businessman of Chinese ancestry attempted to purchase a home in the Northeast section of the city. His deposit was accepted, but later returned without explanation. Upon inquiry it was found the real estate agent had returned the deposit because of protests on the part of neighbors surrounding the property that was for sale. Despite prolonged efforts to dispel community objections to the sale of a house to this thoroughly reputable and respectable businessman and his family, it was not possible for the purchaser to obtain the dwelling that he wanted. Conferences of Commission staff with responsible local leaders launched a campaign of speaking engagements and local publicity that highlighted the unfairness and community danger of such hostility to housing changes.

Incendiary Vandalism Against a Non-White Family - Case C-7 3-225

An apartment in a row house in the Lower Germantown area was rented to a non-white tenant. Neighbors resented the coming of a non-white tenant in their all-white area. Minor vandalism frightened this tenant out of the apartment. The same measures drove a second non-white tenant from the premises. The property was rented for a third time to a Negro family with several children. At 1:00 A.M. in the morning an explosion shook the rear of the dwelling and set fire to the second and third floor apartments. Vandals had hurled a bottle of some explosive mixture against the rear of the dwelling. None of the tenants were injured but the danger was very grave because children were awakened in fright, and an aging woman who was a member of the family and a cripple, was sleeping in the house. The fire quickly spread to the adjoining home of two elderly women.

Before this very serious incident, the Housing Division staff had worked in the neighborhood to modify tension and organize local leadership. After the fire these efforts were redoubled and every resident of the area for several blocks was contacted as well as many local leaders. Close liaison was maintained with police and investigators of the Fire Marshal's Office. Several community meetings were held in which the neighborhood was organized to oppose such vandalism. The non-white family had to vacate the premises because they were not habitable after the vandalism. Community leaders proved to be reluctant to cooperate with the Commission on everything but the cessation of vandalism. Continued work in this area is called for but limitations of time and manpower have prevented further intensive activity in this community.

Harassment of a Home Seller - Case H1-4-4A

In a North Philadelphia neighborhood a resident decided to sell his home because of ill health. This property owner had experienced many heart attacks in the space of a single year. Neighbors resented the fact that a Negro buyer proposed to buy the property from this ill man. A campaign of threats and harassment by telephone was begun against the owner. Calls in the middle of the night and threats of violence endangered the life of the seller, who contacted the Commission on Human Relations. The Housing Division worked in the neighborhood to reduce hostility and to organize leadership that would work for community understanding of this racial change. A local minister was very cooperative and the Commission's activity relaxed the tension considerably.

Difficulties of a Veteran - Case H3-4-16

A young Negro veteran with six years experience as an officer with the Air Force attempted repeatedly to buy a new home in the Philadelphia metropolitan area and was refused because of his race. The agent of one new housing development told the man, who was a graduate of a well known university and employed in industrial management, that, "You would be an asset to any community," but refused to sell him a home because of his race. The family of the former serviceman had to separate because an adequate dwelling could not be found and the cost of storage for their furniture was severely taxing their budget. This family finally procured a home in an all-white area by having a white friend purchase it for them. They moved into the home under conditions of dangerous community tension and hostility.

Apartment Denied a Professional Woman - Case H5-5-26

A professional woman with wide experience in international social service work came to Philadelphia to fill a position with a national organization. This woman, who was a Negro, attempted to obtain a downtown apartment through various real estate firms. Her reputation and qualifications were beyond reproach. She was made aware that practically all the better apartment houses were extremely reluctant to rent her a dwelling. In most instances they would not rent to her under any circumstances. Efforts of white friends to intercede for her with several real estate firms were of no avail. Complaints against six different real estate agencies were filed with the Commission on Human Relations by the woman. The Commission was unable to persuade the real estate firms to alter their "no Negroes permitted" policies.

Property Owner Harassed for Renting to Negroes - Case H7-4-39

The elderly owner of a property in West Philadelphia rented apartments to non-white families because he did not believe in racial discrimination. This man was subjected to threats and his apartment house suffered vandalism and harassment by juveniles who were encouraged to prey upon the property by neighbors who resented the fact that Negro families lived there.

Italian-American Refused Land for a House - (No case Docketed)

A very prominent businessman who has been cited by the U.S. and the Italian government for his services in post-war reconstruction, complained to the Commission on Human Relations that he had been refused the purchase of land on which to build a house in the Philadelphia suburbs because he was of Italian descent. This gentleman's civic contributions were widely recognized both in Philadelphia and New York. The Commission on Human Relations was not able to attempt to assist this eminent person because his complaint involved an area beyond the city limits.

Puerto Rican Family Evicted - Case C-6-8-221

A young couple of Puerto Rican background rented an apartment in a private dwelling. Their qualifications were exemplary. The day after they moved in they were given notice to leave by the landlady because she had recieved complaints from neighbors who did not want Puerto Ricans in the area. The family moved at considerable distress to themselves, and the neighborhood two years later still has no Puerto Rican or non-white residents.

Apartment Denied Because of Restrictive Agreement- Case H3-5-17

A woman decided to move her family five blocks to a larger apartment. The family was Negro and had very good references and income. The real estate agent handling the apartment told the woman that he could not rent the apartment because it was on one side of a street where the owners had all agreed not to rent or sell to Negroes. The Commission on Human Relations received the complaint, but was unable to persuade the owner to disregard his agreement with his neighbors.

A Businessman Quits Real Estate Because of Discrimination Practices Case H8-2-43

In the course of an investigation it was revealed that a lawyer and businessman active in religious circles in his faith terminated his connection with a real estate office in which he had been a partner because of the unfair racial and ethnic discrimination that he found widespread in the housing field. He explained his action by stating that discrimination was so prevalent and unfair in the field that he could not, in conscience, engage in a business that so frequently contradicted the principles of the religious groups with which he worked.

Urban Planning Project

COMMISSION ON HUMAN RELATIONS
625 CITY HALL ANNEX
PHILADELPHIA 7, PENNSYLVANIA

WHAT TO DO ABOUT NEIGHBORHOOD STANDARDS

One of the most common fears among some residents of racially changing neighborhoods is that the neighborhood standards will decline, or that the buildings in the area will be abused or exploited. Often in fact, these residents would have no objection to racial change in itself, if they could feel assured that neighborhood standards are going to be well kept up and even improved. Here is where neighborhood leaders face their greatest challenge and opportunity. Neighborhood standards are best protected when residents are alert and united in support of good conditions. But neighborhoods, like people, can get lethargic and indifferent. Sometimes the fact of some changes taking place may be just what it takes to awaken a neighborhood to its problems, needs, and possibilities. Where should neighborhood leadership begin?

There are some basic rules to remember in working to clear up undesirable neighborhood conditions and improve a community's surroundings. First, know the facts about local conditions and have these facts documented. Suspicion, vague complaints or unproven charges are of no use to public or private agencies that are set up to help you. These agencies can only work on the basis of facts.

Second, know what agencies and organizations are most concerned with the particular problem on which you want action. We'll come back to discussing these agencies in a moment.

Third, organize support for your cause in a businesslike manner with clear purposes and good representation. Emotional mass protests or disorganized gripe campaigns simply complicate matters and are usually not efficient or constructive. Depending on the circumstances, you may find it appropriate to organize on a short-term basis to act on just one problem that needs work. Or you may see several things that need doing, and so may see need for some sort of ongoing neighborhood association. In either case, the Commission on Human Relations, Room 625 City Hall Annex (MU 6-4670) will be glad to consult with you. Further help and counsel may be had from your area office of Health and Welfare (see list below), or from the Philadelphia Federation of Community Councils, Parkway at 21st St. (LO 4-3400).

Now to list some types of neighborhood problems, and indicate some of the agencies which are concerned to help you with them.

1. Housing. Problems related to violations of the Housing Code, including overcrowding, dilapidation, fire hazards, faulty plumbing or heating, etc. etc. Contact: The information and complaint clerks of the City Department of Licenses and Inspections, City Hall Annex, 2nd floor (MU 6-2463,64,65,66).

Also the Philadelphia Housing Association, 1717 Sansom Street (LO 3-2485), a Community Chest organization. Much information on these problems will be found in the reference folder, "Partners for Good Housing: a Guidebook for Tenants, Landlords and Homeowners," prepared by the Philadelphia Housing Association, and distributed by the Department of Licenses and Inspections.

2. Zoning. Problems related to the Zoning Code, or to changes in the use of a building or of land.
Contact: Same as above, the information clerks, 2nd floor, City Hall Annex (MU 6-2463,64,65,66). The Zoning Division of the Department of Licenses and Inspections posts notices of proposed changes on properties, telling when and where persons may go for a hearing on a proposed change. The Division also investigates violations and checks permits for building alterations.
Also: the Citizens' Council on City Planning, 1717 Sansom St. (LO 4-5635) has a Zoning Alerting Service which will inform your group of all zoning changes for a charge of $15.00 a year. Many neighborhood groups find this a very useful service. To a group which is a member organization in the Citizens' Council, the charge for the Alerting service is reduced to $10.00.

3. Streets. Problems related to street repair, lighting, traffic signs and conditions, street surveys and design, garbage and trash collection (sanitation).
Contact: Department of Streets, 925 City Hall Annex, (MU 6-5562).

4. Real Estate Assessments.

Contact: Board of Revision of Taxes, Room 302, Commercial Trust Building (MU 6-4334)

5. Property Records and Deeds. The ownership of a property is usually a matter of public record fairly soon after any transfer is made. Information of this kind cannot be given by telephone, but you may look it up in the Records Department in City Hall. If you know only the location, go to the Registry Room, 163, or if you have fuller information, go to the Index Room, 170.

6. Police Service . Problems of law enforcement, community nuisances and juvenile behavior can be discussed with your local police district. Know what district you are in. Find out the commanding officer's name and get in touch with your local Police Community Relations Officer. Remember, your best insurance against crime is to cooperate with your local police officers, and alert them when indicated. Know them well.

7. Bars, Taprooms, Cafes. Problems related to places where alcoholic beverages are sold can be discussed with the Pennsylvania State Liquor Control Board, which licenses and supervises drinking establishments. Consult the Liquor Control Board in the Bureau of Licensing and Enforcement, 1400 Spring Garden St. (LO 8-4000, ext. 377).

8. Neighborhood Tension or Incidents. Problems of tension, violence, vandalism or bigotry related to race, religion or ethnic background should be brought to the attention of the Commission on Human Relations, Room 625, City Hall Annex (MU 6-4670) or to the Philadelphia Fellowship Commission, 260 S. 15th St. (KI 5-8430). These two agencies, the first one part of the City government, the second a civic agency, handle cases of discrimination, for instance, against Puerto Ricans, Jews, Negroes, people of various nationality groups. Situations involving a violation of the Pennsylvania Human Relations Act, which forbids discrimination in housing and public accommodations, may be referred directly to the Philadelphia office of the State Human Relations Commission, Mr. Harry Wagner, 1401 Spring Garden St., (LO 8-4000, ext. 8080.)

We have been discussing problems in the improvement of neighborhood conditions. Let's finish off with four more topics with which it is of prime importance to a good neighborhood to be actively and positively concerned.

9. Schools. Nothing is more basic to a community than to have fine schools! Take an active interest in your neighborhood school, and discuss your questions and any concerns with the principal. You can also get information from the District Superintendent of Schools for your area, or from Mr. Louis Bellen, Human Relations Coordinator for the Board of Education, 21st and the Parkway (LO 4-3800). Another resource is the Citizens Committee on Public Education in Philadelphia, 1538 Land Title Building (LO 3-5273). Schools improve in neighborhoods where people work steadily and with imagination at one aspect after another of school life in relation to children's needs and community aims.

10. Recreation. Conditions related to play space, recreation facilities, and how they are staffed and operated, can be discussed with the Department of Recreation, Room 424, City Hall Annex (MU 6-3600.) Here again is an opportunity for the creative use of the possibilities in your neighborhood.

11. Health, Welfare and Recreation Planning. The Philadelphia District, Health and Welfare Council, Inc., has its headquarters at 1617 Pennsylvania Boulevard (LO 8-3750.) Here is a broadly based and highly useful agency with which to consult on all sorts of problems about neighborhood health, welfare, recreation, leisure-time opportunities, and the problem of getting a new neighborhood organization off the ground. Contact your local area or section office:

Northeast 4700 Frankford Ave., CU 8-6422

North Central 1900 N. Park Ave. ST 2-9911

Columbia Section: same as above.
Poplar Section: 703 N. 8th St., WA 3-1544
"West of Broad" Section : 1704-10 N. 22nd St., PO 3-0756

Northern 151 W. Luzerne St., DA 9-8939

Southern in George W. Childs School, Room 206, 17th and Tasker, HO 5-1509.

West 635 S. 42nd St., EV 2-7518

Northwest Germantown Community Council, Vernon Park, Germantown. GF 8-9044

12. Neighborhood Planning. If you and your neighborhood becomes really involved and concerned with making and keeping your area a fine part of Philadelphia, you will want to turn for perspective and counsel to the City Planning Commission, 9th floor, 1317 Filbert St. (MU 6-4607) or the Citizens Council on City Planning, 1717 Sansom St. (LO 4-5635).

Good luck with your enterprise! And remember, your City Councilman may be able to assist you in dealing with any of these problems. Do you know him? Keep him informed.

Urban Planning Project

DELAYED ACTION PROBLEMS IN CHANGING NEIGHBORHOODS

by DENNIS CLARK

WORKING with racial changes in the housing field is a bit like being in the kind of Western television movie where the narrator breaks occasionally and says, "Meanwhile, back at the ranch. . ." some troublesome event is taking place. In the agencies that are concerned with racial change, with their small budgets and limited staffs, the same kind of line could be used for there are a great many events in progress. If we alter the line to "Meanwhile, back at the changing neighborhood. . ." we can look into some problems that have not received adequate attention because we have been so busy with the whole field of racial change in Little Rock, Levittown, Pennsylvania and elsewhere.

Most of the comment about the subject of racial change at the neighborhood level since World War II has focused upon the first effects of non-white entry into all-white areas. The most prominent reaction of new Negro neighbors has been what writers refer to as "panic". This condition includes the anxiety, confusion and misunderstanding that result in hasty sales of home by whites and community unrest that is often wilful and tragic. This first phase of racial change activates fears in the minds of white residents: fear of property devaluation and loss of social prestige, fear of neighborhood deterioration and crime and fear of panic itself and what such panic will lead people to do. This initial phase of racial change is a sort of shock period, because it may be an entirely novel occurrence in a community and because violence or threats of violence are at times involved. For this reason the "panic" problem has been examined closely, and many programs have been set forth to deal with the unrest that greets the first Negro families moving into a neighborhood. The Philadelphia Commission on Human Relations, for instance, has an excellent community leader's kit of program materials and a sound filmstrip on this problem. Such programs aimed at neighborhood "panic" have helped many communities to deal with racial change in a common sense fashion.

There are persistent difficulties, however, that follow the first phase of neighborhood changes and disturb residents even in a "mixed" neighborhood where the first effects of racial change are weathered. It would be unrealistic and unfair to everybody involved if it were not pointed out that there are "delayed action" problems common to most interracial neighborhoods, where citizens are trying to overcome generations of prejudice and false social ideas; community leaders especially should be prepared for these conditions.

The acceptance of racial change is a psychological and spiritual problem for a great many people in American communities. As such this problem goes deep into personality. It involves a whole scale of conscious and unconscious conditioning, subtle reactions and struggles of the will. It cannot be expected that such a problem can be solved by a few adult education sessions or block meetings. It may take the average white person who has been segregated from non-Whites in housing and community affairs a long time to unravel the difficulties that his own feelings and viewpoint present.

There is no definite timetable for gauging when these "delayed action" problems arise. Neighborhood panic itself may last for as long as three years depending on the neighborhood and housing type. Providing that an area does not suffer a major turnover in which a wholesale white exodus occurs, there is generally a relaxation of anxiety and tension after the first new Negro families have moved in. The

---

Mr. Clark, of the Philadelphia Commission on Human Relations, is co-author, with John McDermott of "Helping the Panic Neighborhood."

change has come, and unless there are aggravating influences, people settle down a bit even though they may still strongly resent the change. Communities, like biological organisms, can't stand tension constantly, so they tend to relax and life goes on normally—or seems to. This is usually when the second phase of racial change begins. This delayed backlash of racial change can stir things up in an interracial area very easily, pushing the tension upwards once more to the danger point.

There are many neighborhoods that have received Negro families for the first time in the great decade of mobility and prosperity since 1947. Some of these communities have worked hard to control racial panic and to foster good interracial neighborhood life. The areas that have succeeded in controlling panic and developing leadership for integration are of very high importance. They are the areas that will be watched to test the value of residential desegregation and they are the areas that are charting the future of democratic interracial housing patterns. These neighborhoods, having faced "panic" and dealt with it, are now confronted with "delayed action" problems that threaten interracial living.

My work with interracial neighborhoods leads me to believe that the following are the major difficulties that come to the fore in the second phase of neighborhood change:

The Segregation Push—There is a tremendously strong tendency for interracial neighborhoods to become all Negro even though they may be a good distance from actual heavy concentrations of non-white population. Real estate agents will divert white prospects and promote Negro prospects exclusively in an area despite the fact that the area may have responded well to racial change and be fairly stabilized. To some people non-white entry means automatic efforts toward total turnover and segregation. This sort of pressure may have to be fought by good interracial neighborhoods for ten years or longer. It is an extension of the real estate renegade's original panic tactics, but few areas are prepared for the long term treatment they receive from the segregators. Some neighborhoods are fighting it. A frequent accompaniment of the trend toward making a segregated island of a neighborhood is the tendency of taproom operators, enterprise to move in and undermine the dry cleaning businesses and other small enterprises to move in and undermine the residential character of an area. In Philadelphia leaders of interracial neighborhoods from various sections of the city have begun to come together to compare notes on how to face such pressures. Some areas have begun their own promotion campaign to promote the advantages and institutions in their areas to attract white home buyers and offset the "segregation push".

School Conditions—It is not only in the South that school integration stirs controversy. Residential desegregation means changing schools in a great many communities outside of the South. Concern over the effects of racial change on schools usually take three forms. First, there is the concern for the academic standards of the school. Bulging classrooms, tighter budgets and teacher shortages have brought considerable attention to bear on the quality of U. S. education in recent years. Racial integration simply magnifies this attention. Second, parents of children in recently integrated schools are likely to be concerned about the proportions that Negro enrollment will assume. White parents are fearful of having their children in the racial minority. Sex fears and a vague uneasiness attend this problem.

Third, a very great number of white parents, especially those in the large cities, fear for the physical safety of their children in interracial schools. The current high rates of delinquency, the criminal actions of numbers of non-whites in underprivileged districts and the feeling of many whites that there is something sinister connected with darker skin color

combine to create a fearful attitude on the part of white parents.

The school often becomes the key to whether or not a neighborhood will remain interracial or become a fully segregated area. Questions such as whether white parents will transfer their children to nearby all-white schools become very important to the entire residential pattern. The school at times becomes the scapegoat and symbol of racial integration for citizens who have only grudgingly tolerated interracial conditions and who distrust the integrity and qualifications of their Negro neighbors.

A vigorous parent-teacher association and good rapport with the school principal and the local supervisor of the school district are part of the answer to this difficulty. The PTA offers a place for persons of different races to come together, but beyond that, a good PTA provides a medium for community airing and sharing of human relations problems. Through such a group measures to promote frank discussion and real understanding can be pursued in an organized way. Suspicions and rumors about the school can be confronted with facts and the role of the school in an interracial neighborhood can be defined.

Class—There is a strongly held notion even among residents who have not moved in flight from racial integration that "... the first Negroes are decent, but the ones that come after are a lower class." Whites have so long thought of Negroes as being lower economic and social standing that they find it hard to believe that there are very many middle class Negro families. Class consciousness does tend to be sharpened in interracial areas. Some whites use class notions to "defend" themselves against close contact with Negro neighbors, while some families emphasize class distinctions and symbols to "prove" themselves acceptable to white residents. The little snobberies that people have developed take on a new meaning.

The only remedy for this condition is the kind of neighborhood democracy that looks beyond petty differences to what people really are. In a time of vast and rapid social and residential mobility neighborhoods can no longer hope to be islands of class devotees. Such a community just does not seem practical today.

The strongest argument that can be set against this exaggerated class consciousness is that neighborhoods do tend to draw people of the same general social level as the existing residents simply because of the price levels of houses and the fact that existing facilities are set up to serve certain levels of social needs. Neighborhoods without second-hand furniture stores, pawnshops and bookmakers hangouts do not suddenly acquire such facilities out of thin air. Middle class neighborhoods usually do not need such facilities, and the kind of resident who does need such facilities will probably not move to a middle class area.

One neighborhood leader commented recently, perhaps with tongue in cheek, that in his area he had reassured white residents about the class status of their new Negro neighbors. His method consisted of mentioning the Negro residents in connection with such activities as golf games, bridge tournaments, extended vacations and participation in professional societies. These activities were symbols of class status in this leader's area and he made sure that Negroes were identified with them.

Social Relations—After the first wave of tensions and anxiety in newly integrated neighborhoods have subsided the normal, day-today relationships between people come to the fore. The big differences between white and Negro that many white residents expected do not materialize. Instead, it is the ordinary behavior and attitude of Negro families that become the focus of attention. White residents are still somewhat distant and curious. Generally, they are a bit reserved even with the

friendliest intentions, and the day-to-day casual relationships of neighborhood life are not developed. A recent survey of integrated areas in Connecticut made by the Connecticut State Commission on Civil Rights indicated that there remained, despite physical integration, an extensive social gap between white and Negro families. A kind of cool "co-existence" seems to pervade the neighborhood that has recently experienced moderate racial change. In this kind of atmosphere little things assume great importance. Little differences become magnified. White residents focus their uneasy gaze upon entirely natural small relationships and distort the significance of trivial items of behavior. Physical contacts such as the shaking of hands or the wrestling of two children arouse a strange attention. Mannerisms, speech differences, food preferences and differences of dress receive unusual attention. Many Negro families are only one or two generations removed from the South, and certain Southern pronunciations, food preferences and expressions are still present among them even though they may be part of the urban industrial North in most of their habits and customs. These vestiges of Southern background are often exaggerated by whites, and instead of remaining details of family culture such as exist in all families they are regarded as signs of major differences by white observers.

Because of the long education of our white population in the folklore of racial "difference" it is very hard for many people to carry on normal relations with Negro neighbors. Negroes themselves often harbour suspicions and grudges about contacts with whites who have perhaps seemed arrogant and "stuck-up" in various situations. The process of re-education is a long one that can only be carried according to the time honored practice of convincing people of how much they have in common. The direct, interpersonal experience of interracial living with, all of the natural contact, stresses and opportunities that such living involves, is the only method of establishing the mutual acceptance and sympathy that ordinary social relationships imply.

Apathy—American neighborhoods are, it seems, particularly prone to lapse into long comas of civic indifference. After a racial change occurs there is at times some show of responsibility about community relations problems. If there is no total panic, good leadership may organize an area. Racial change often benefits communities in this respect. But when the novelty fades and Negroes are, to a degree, accepted as residents, the interest of local people declines. Perhaps the unfair tactics of real estate brokers tapers off, or perhaps the number of non-white families moving in dwindles because of tight mortgage money. The gains in leadership interest and organization begin to fall apart. Some people even brag that the changing neighborhood problem for their area is solved and ignore slowly developing conditions of tensions, school problems or cases of steady ostracism.

Some intergroup relations organizations have programs that seek to train community leaders to deal with neighborhood racial change. Such programs should place heavy emphasis upon the fact that local racial problems are seldom solved in a year, or two. The social distance that has built up over many decades between racial groups simply does not dissolve for most people because there has been a little contract or a few meetings full of brotherhood slogans.

A long term, sustained effort is needed to guide communities out of the negative atmosphere of racial exclusiveness. This particularly is true of the interracial neighborhood, because such areas become the targets of many tension-producing influences. As long as there is a housing market that is broadly subject to racial restrictions, the racially changing neigh-

borhood will be subject to abnormal pressures and conditions. Unfair real estate tactics, extraordinary concentration of pent up Negro home buying power and the abnormal reactions of white residents who feel that integration makes their area strange and inferior are some of the difficulties that persist in interracial neighborhoods. Leadership training with respect to racial change must take into account the long term problems that racial change brings. If an area can be organized there are many program ideas that leaders can use to keep apathy from frustrating good community development in human relations. What seems to be lacking is an understanding of the long term nature of the problem. Human relations problems, like those involving education, traffic, recreation and housing quality, will always be around in one form or another.

People who accept the responsibility for bringing about peaceful racial integration at the neighborhood level cannot do so through one-shot or piecemeal efforts. To get community leaders, even seasoned ones, to understand this is to run the risk of painting a discouraging picture of interracial problems. Local leaders, however, are capable of surprising sacrifices and hard headed wisdom. Some are beginning to recognize that they are indeed on a new frontier in working to build strong local life in the American urban scene. The smug isolationism of sealed off neighborhoods is passing. The inefficiency and expense of deserting neighborhoods as soon as a problem arises is being revealed. The attractions of strong community life are more and more evident. Dealing with the "delayed action" problems of racial integration will produce the kind of neighborhood cooperation that will be more than a match for the jerry builders, exploiters and short-sighted men who have been the plague of our local community life in the past.

800 COMMERCIAL TRUST BUILDING
PHILADELPHIA 2, PENNSYLVANIA

DO REAL ESTATE VALUES NECESSARILY DROP WHEN NEGROES MOVE IN?

Three real estate opinions:

"Neighborhood values in areas newly occupied by colored people have sharply increased and will continue to increase."

George W. Beehler, Jr., Rev. of Society of Residential Appraisers, Sept., 1945, p. 3

"All real estate values rest ultimately either on the income or rent-paying abilities of the occupants."

Oscar I. Stern, Rev. of Society of Residential Appraisers, Jan., 1946, p. 4

"Actually whether prices rise or fall depends upon the extent of the demand and the ability of the market to bid up prices, and has nothing to do whatsoever with racial characteristics."

Belden Morgan. Rev. of Society of Residential Appraisers, March, 1952, p. 9

A social scientist:

"It is the rapid and panic-inspired movement of the whites out--rather than the movement of a few Negroes in--that leads to the fall in property prices in areas where Negroes enter."

Robert C. Weaver. "The Negro Ghetto." Harcourt, Brace and Company, 1948, p. 297

A newspaper opinion:

"Nobody has ever proved that what makes a neighborhood deteriorate is the color or creed of the people who move into it. The real cause is changing use of property. When a speculator buys a three-family apartment building and cuts it up into warrens for 18 families, it is the overcrowding and intense use of the building, not

the race of the tenants, which contributes to neighborhood decay."

The Chicago Sun, Jan. 27, 1948
(Editorial)

Two trade journal opinions:

"An arresting but still insufficiently known fact is that Negroes who buy homes in transition neighborhoods do not depreciate their value. The first few sales to Negroes often depress market values temporarily. But after the wave of scare-selling subsides, prices generally climb past where they were before."

House and Home, April, 1953, p. 47

"In recent years more and more experts have put forth studies debunking the once widely held notion that property values slide in transition neighborhoods."

House and Home, April, 1955, p. 194

Three scientific studies:

"After the scare-selling period, the prices of property in the area of transition go up sharply until they reach the high level prevalent in the old minority group area and are considerably higher than those in equivalent areas occupied by the majority group."

Arnold M. Rose, etc., American
Sociological Review, Oct., 1953,
p. 498

"The sales records gave no evidence of any relation between the racial composition of the area and housing values."

Chester L. Hunt. Social Problems,
Winter, 1959 - 1960, p. 200

"Two broad conclusions stand out: First, price changes which can be connected with the fact of non-white entry are not uniform, as often alleged, but diverse. Depending on circumstances, racial change in a neighborhood may be depressing or it may be stimulating to real estate prices and in varying degrees. Second, considering all of the evidence, the odds are about four to one that house prices in a neighborhood entered by non-whites will keep up with or exceed prices in a comparable all-white area."

Luigi Laurenti. Property Values and
Race: Studies in Seven Cities.
University of California Press, 1960,
p. 52

Urban Planning Project

COMMISSION ON HUMAN RELATIONS
625 CITY HALL ANNEX
PHILADELPHIA 7, PENNSYLVANIA

WHAT TO DO ABOUT NEIGHBORHOOD STANDARDS

One of the most common fears among some residents of racially changing neighborhoods is that the neighborhood standards will decline, or that the buildings in the area will be abused or exploited. Often in fact, these residents would have no objection to racial change in itself, if they could feel assured that neighborhood standards are going to be well kept up and even improved. Here is where neighborhood leaders face their greatest challenge and opportunity. Neighborhood standards are best protected when residents are alert and united in support of good conditions. But neighborhoods, like people, can get lethargic and indifferent. Sometimes the fact of some changes taking place may be just what it takes to awaken a neighborhood to its problems, needs, and possibilities. Where should neighborhood leadership begin?

There are some basic rules to remember in working to clear up undesirable neighborhood conditions and improve a community's surroundings. First, know the facts about local conditions and have these facts documented. Suspicion, vague complaints or unproven charges are of no use to public or private agencies that are set up to help you. These agencies can only work on the basis of facts.

Second, know what agencies and organizations are most concerned with the particular problem on which you want action. We'll come back to discussing these agencies in a moment.

Third, organize support for your cause in a businesslike manner with clear purposes and good representation. Emotional mass protests or disorganized gripe campaigns simply complicate matters and are usually not efficient or constructive. Depending on the circumstances, you may find it appropriate to organize on a short-term basis to act on just one problem that needs work. Or you may see several things that need doing, and so may see need for some sort of ongoing neighborhood association. In either case, the Commission on Human Relations, Room 625 City Hall Annex (MU 6-4670) will be glad to consult with you. Further help and counsel may be had from your area office of Health and Welfare (see list below), or from the Philadelphia Federation of Community Councils, Parkway at 21st St. (LO 4-3400).

Now to list some types of neighborhood problems, and indicate some of the agencies which are concerned to help you with them.

1. Housing. Problems related to violations of the Housing Code, including overcrowding, dilapidation, fire hazards, faulty plumbing or heating, etc. etc. Contact: The information and complaint clerks of the City Department of Licenses and Inspections, City Hall Annex, 2nd floor (MU 6-2463,64,65,66).

Also the Philadelphia Housing Association, 1717 Sansom Street (LO 3-2485), a Community Chest organization. Much information on these problems will be found in the reference folder, "Partners for Good Housing: a Guidebook for Tenants, Landlords and Homeowners," prepared by the Philadelphia Housing Association, and distributed by the Department of Licenses and Inspections.

2. Zoning. Problems related to the Zoning Code, or to changes in the use of a building or of land.
Contact: Same as above, the information clerks, 2nd floor, City Hall Annex (MU 6-2463,64,65,66). The Zoning Division of the Department of Licenses and Inspections posts notices of proposed changes on properties, telling when and where persons may go for a hearing on a proposed change. The Division also investigates violations and checks permits for building alterations. Also: the Citizens' Council on City Planning, 1717 Sansom St. (LO 4-5635) has a Zoning Alerting Service which will inform your group of all zoning changes for a charge of $15.00 a year. Many neighborhood groups find this a very useful service. To a group which is a member organization in the Citizens' Council, the charge for the Alerting service is reduced to $10.00.

3. Streets. Problems related to street repair, lighting, traffic signs and conditions, street surveys and design, garbage and trash collection (sanitation).
Contact: Department of Streets, 925 City Hall Annex, (MU 6-5562).

4. Real Estate Assessments.

Contact: Board of Revision of Taxes, Room 302, Commercial Trust Building (MU 6-4334)

5. Property Records and Deeds. The ownership of a property is usually a matter of public record fairly soon after any transfer is made. Information of this kind cannot be given by telephone, but you may look it up in the Records Department in City Hall. If you know only the location, go to the Registry Room, 163, or if you have fuller information, go to the Index Room, 170.

6. Police Service . Problems of law enforcement, community nuisances and juvenile behavior can be discussed with your local police district. Know what district you are in. Find out the commanding officer's name and get in touch with your local Police Community Relations Officer. Remember, your best insurance against crime is to cooperate with your local police officers, and alert them when indicated. Know them well.

7. Bars, Taprooms, Cafes. Problems related to places where alcoholic beverages are sold can be discussed with the Pennsylvania State Liquor Control Board, which licenses and supervises drinking establishments. Consult the Liquor Control Board in the Bureau of Licensing and Enforcement, 1400 Spring Garden St. (LO 8-4000, ext. 377).

8. Neighborhood Tension or Incidents. Problems of tension, violence, vandalism or bigotry related to race, religion or ethnic background should be brought to the attention of the Commission on Human Relations, Room 625, City Hall Annex (MU 6-4670) or to the Philadelphia Fellowship Commission, 260 S. 15th St. (KI 5-8430). These two agencies, the first one part of the City government, the second a civic agency, handle cases of discrimination, for instance, against Puerto Ricans, Jews, Negroes, people of various nationality groups. Situations involving a violation of the Pennsylvania Human Relations Act, which forbids discrimination in housing and public accommodations, may be referred directly to the Philadelphia office of the State Human Relations Commission, Mr. Harry Wagner, 1401 Spring Garden St., (LO 8-4000, ext. 8080.)

We have been discussing problems in the improvement of neighborhood conditions. Let's finish off with four more topics with which it is of prime importance to a good neighborhood to be actively and positively concerned.

9. Schools. Nothing is more basic to a community than to have fine schools! Take an active interest in your neighborhood school, and discuss your questions and any concerns with the principal. You can also get information from the District Superintendent of Schools for your area, or from Mr. Louis Ballen, Human Relations Coordinator for the Board of Education, 21st and the Parkway (LO 4-3400). Another resource is the Citizens Committee on Public Education in Philadelphia, 1538 Land Title Building (LO 3-5273). Schools improve in neighborhoods where people work steadily and with imagination at one aspect after another of school life in relation to children's needs and community aims.

10. Recreation. Conditions related to play space, recreation facilities, and how they are staffed and operated, can be discussed with the Department of Recreation, Room 424, City Hall Annex (MU 6-3600.) Here again is an opportunity for the creative use of the possibilities in your neighborhood.

11. Health, Welfare and Recreation Planning. The Philadelphia District, Health and Welfare Council, Inc., has its headquarters at 1617 Pennsylvania Boulevard (LO 8-3750.) Here is a broadly based and highly useful agency with which to consult on all sorts of problems about neighborhood health, welfare, recreation, leisure-time opportunities, and the problem of getting a new neighborhood organization off the ground. Contact your local area or section office:

Northeast 4700 Frankford Ave., CU 8-6422

North Central 1900 N. Park Ave. ST 2-9911

Columbia Section: same as above.
Poplar Section: 703 N. 8th St., WA 3-1544
"West of Broad" Section : 1704-10 N. 22nd St., PO 3-0756

Northern 151 W. Luzerne St., DA 9-8939

Southern in George W. Childs School, Room 206, 17th and Tasker, HO 5-1509.

West 635 S. 42nd St., EV 2-7518

Northwest Germantown Community Council, Vernon Park, Germantown. GF 8-9044

12. Neighborhood Planning. If you and your neighborhood becomes really involved and concerned with making and keeping your area a fine part of Philadelphia, you will want to turn for perspective and counsel to the City Planning Commission, 9th floor, 1317 Filbert St. (MU 6-4607) or the Citizens Council on City Planning, 1717 Sansom St. (LO 4-5635).

Good luck with your enterprise! And remember, your City Councilman may be able to assist you in dealing with any of these problems. Do you know him? Keep him informed.

Urban Planning Project

filmstrip focuses attention on neighborhood integration

produced by:

Philadelphia Commission on Human Relations

Room 800 — Commercial Trust Building

an official city agency

showings can be arranged by calling municipal 6-9700 ext 782

"You don't understand! That little girl . . . her parents just bought the house across the street."

The Commission's new filmstrip, "The House Across the Street," a dramatic story of a changing neighborhood is now available for public showings.

The filmstrip is designed as a visual aid to the Commission's continuing efforts to remove racial and religious restrictions from the housing market and to counteract panic and flight when a neighborhood is undergoing racial change.

It tells the story of a family faced with the prospect of having Negro neighbors living in the house across the street and how this family and its neighbors view this as an impending tragedy. In graphic detail the story relates the care with which a Commission representative points out the dangers inherent in some attitudes about race and the threat this poses to the peace and stability of the neighborhood.

"Mother . . . this is Laura Norris."

The Norrises proved themselves as individuals. As they prospered, they planned to give their son and daughter some of the luxuries of a democracy . . .

At the school meetings there was a chance to get acquainted, to evaluate, to judge the individuals.

The changing neighborhood provides a test of those moral principles on which our nation is founded . . . the principles on which our children must grow and endure.

Summary of the film....

"PROPERTY VALUES AND RACE"

FACT OR FICTION...? Belief: Property values always drop when a nonwhite family moves into a white neighborhood.

SCIENTIFIC INQUIRY An economist, Dr. Luigi Laurenti, put this belief to scientific test by a five-year analysis of 10,000 home sales in San Francisco, Oakland, and Philadelphia. With the aid of expert appraisers and local brokers, all-white areas were carefully matched in every important price-determining respect with racially-mixed districts of up to 60% nonwhite population. A total of 39 neighborhoods, averaging 10 to 15 blocks with 200 to 350 single-family, owner-occupied homes, were compared to discover any price differences. Sales data were collected from the period well before entry of nonwhite families and continuing over several years of mixed occupancy.*

FINDINGS

In 40% of the Comparisons
No difference

In 45% of the Comparisons
5 to 26% higher

In 15% of the Comparisons
5 to 9% lower

VERIFICATION And in 1961, to study further developments in Dr. Laurenti's San Francisco neighborhoods, the Council for Civic Unity checked thousands of recent home sales. Similar studies, by other independent researchers, were made in Chicago, Kansas City, Detroit, Portland, Albany, Rochester and New York. All these studies have verified Dr. Laurenti's findings: **That the entry of nonwhites into previously all-white neighborhoods is much more often associated with price improvement or stability than with price lowering.**

VERIFICATION The San Francisco Regional Director of the Federal Housing Administration, Robert Macduff, states that in the long experience of his FHA office, there has been no instance of retardation of prices because nonwhites have moved into a neighborhood. If white residents panic and flood the market with several homes for sale in the same block, prices may go down temporarily, but soon readjust.

VERIFICATION As long ago as 1946 and 1945, two well known appraisers, Oscar I. Stern and George W. Beehler, Jr., wrote in the **Review** of the Society of Residential Appraisers: ". . . the axiom that colored infiltration collapses the market is no longer true," and, "Neighborhood values in areas newly occupied by colored people have sharply increased and will continue to increase."

---

*Dr. Laurenti's study has been published as **Property Values and Race,** University of California Press, Berkeley: 1960: $6.00.

VERIFICATION An internationally-known housing expert in New York, Charles Abrams, stated: "It is not the race, religion or color of a group that affects value but a complex of factors which differ in each case. What many Realtors forget is that there are, among all minorities, good and bad folk, cultured and ignorant, socially acceptable and socially abominable. Most Americans are minorities of one sort of another."

VERIFICATION Mrs. Marian Yankauer Perry, author and attorney said about the Rochester and Albany study: "We were unable to ascertain one single instance where the arrival and the presence of the Negro family had depreciated property values in that neighborhood. Individual houses being put up for sale in new housing developments nearby were sold without difficulty and at advantageous prices to the sellers, and in all cases to white families." But, she added, unscrupulous operators often made fat profits by buying from whites at a "panic price" and selling to Negroes at a high price.

VERIFICATION White residents of racially mixed neighborhoods in San Francisco, Berkeley and Marin County, state in the film that their property values have continued to rise.

CONCLUSION **A widely-held myth has been exploded by careful and objective research.**

PROPERTY VALUES AND RACE is a 24-minute, 16 m.m., black and white, sound film. Purchase cost: $100.00 per print, including 1,000 copies of above summary. Additional summaries: 10 for 25¢; 25 for 50¢; 100 for $1.50.

Some Suggestions About Neighborhood Meetings

In Racially Changing Areas

What Kind of a Meeting?

There are three kinds of meetings that have been held successfully to deal with problems in racially changing areas:

1. Block Meeting - which includes residents of a single block of a street. This type of meeting is usually small, very informal. Any block resident is eligible to participate. This meeting has the advantage of real grass roots contact and a very democratic basis. On the other hand, it may be hard to find leadership on a single block. If blocks federate, the resulting group may become top heavy with organization since every block in a neighborhood would be represented.

2. Neighborhood Leadership Meeting- includes the key persons, opinion makers and most informed residents of an area. Very often this kind of meeting is called by some institution (church, synagogue, etc.) and representatives may be from other institutions. This group can bring strong, intelligent influence to bear on problems, but may not have adequate knowledge of the feelings and tendencies of the residents of particular blocks.

3. Simple Membership Meeting - includes anyone in the entire neighborhood who is committed personally to working on the changing neighborhood problem. Participation can be drawn from many areas of the neighborhood. These groups are usually most efficient and are composed of reliable people. As disadvantages, these groups have to contend with the danger of becoming isolated elites or personalized cliques instead of networks for neighborhood education.

Any of these meeting types or combinations of them may be used depending upon the needs of your area. Certain other factors about such meetings should be stressed:

1. The meeting should be small (25 people top limit). To discuss racial change, a question that is emotionally loaded for many people, in a large group is usually a mistake. The meeting should be called or chaired by someone from the area who is : a. known, b. respected, c. not unacceptable to residents because he is highly controversial.

Philadelphia, Pa.

This is worthwhile suggestion list. I believe these have been lifted from some other source. (3/16/66)

2. Although the meeting should be open to all residents, some care should be taken to insure that the clear majority of those attending are stable and reasonable people. Extremists should be in the minority.

3. The meeting should be held on "neutral" ground, that is, a place that people will feel free to come to without feeling that they are under the auspices of any specific religious, political, ethnic etc. group.

4. It is preferable to hold block meetings in a home. This is an informal atmosphere that sets a tone of neighborliness. Evening meetings are best, but shopping nights and those on which important or popular TV shows are scheduled should be avoided. The meeting time should be late enough so that parents can put children to bed before attending.

5. The meeting should preferably be held shortly before the first Negro family moves in. People want to talk about this subject then.

6. Be sure that the purpose of the meeting is clear. Take care to avoid any rumor or suggestion that the meeting is being held to keep non-whites out of the area. The meeting must be clearly designated as one at which the question of neighborhood change will be discussed.

7. Be sure that leadership is firm enough to set an informal friendly tone for the meeting. Opposing points of view should be freely accepted, but conflicts should not be violently expressed. The tone of controversy should not dominate. The tone of reasonable, practical discussion should.

8. Set specific goals for the meeting. Responsibility should be fixed and some provision should be made for people to report back.

9. Keep track of time. Having some coffee and tea on hand for the session adds a note of relaxation and friendliness.

HOW TO COPE WITH REAL ESTATE PRESSURE TACTICS

When a Family of a Racial Group New to Your Neighborhood Moves In

A. When you receive postal cards or ads from brokers:

1. Note date, name of broker, address of house cited as sold.

2. Mark face of card "Refused--return to sender," and return to postman or put back in mail slot for the postman.

B. When you receive phone calls or personal visits from brokers:

1. Before you listen to the solicitation, ask, "Who is this speaking? Are you a licensed real estate salesman?" If the reply is "No," say, "Then let me speak with a licensed broker of this firm. I do business only with licensed brokers."

2. This may end the conversation, but note date, name of firm, name of person calling, any evidence received as to where a telephone call was made from (an office or a home).

3. If you do talk with a licensed salesman or broker, you might explain:

   a. That you object to this kind of solicitation.

   b. That you ask him definitely to see that his firm does not trouble you this way again.

   c. That if you are approached again by his firm you propose to report this to the Commission on Human Relations and to your neighborhood association, because such solicitation after your request to stop it is now forbidden by the Penna. real estate licensing regulations.

   d. That if you have occasion to sell, you will not use a firm that uses these tactics of impersonal solicitation.

   e. That you belong to the.....(Neighbors Association) which opposes these panic-creating pressures.

4. Important: Take these records of your experience to your block or community organization. Be especially sure to report any misrepresentation of fact.

C. Use of signs:

1. A number of "For Sale" signs displayed at one time on one block may increase panic selling. If there is any likelihood of this, urge neighbors who have legitimate reasons for selling to work through brokers and advertising instead of using signs.

2. "Sold" signs serve no purpose except to advertise a particular real estate firm. They mar the appearance of a block and may increase panic selling.

3. Both "For Sale" and "Sold" signs are now subject to a city ordinance, Section 9-608 of the Philadelphia code for service businesses, which forbids having them on the premises for more than 7 days after an agreement of sale has been signed. If you observe a "Sold" sign which has been up for eight days, or if you can vouch for the fact that a "Sale" sign is up more than a week after an agreement of sale has been reached, please notify your neighborhood association, or telephone the Housing Division, Commission on Human Relations, MU 6-4687. Give the house number, and the name and address or telephone number of the real estate office. Your name will not be used by the authorities in requiring the office to remove the sign.

4. In some neighborhoods under pressure of much soliciting, people have displayed signs in window or elsewhere, saying, "THIS HOUSE IS NOT FOR SALE" or some similar wording.

Note: Local Philadelphia groups have the permission of the Commission on Human Relations to reproduce this article for distribution under the name of their organization if desired.

FORMAT FOR PARLOR MEETINGS
on Fair Housing

Changing Neighborhoods: Problems - Facts - Solutions

1. At 8:30 P.M. (or as close as possible to that time) the host will welcome the guests briefly and introduce the Discussion Leader and Resource Person for the evening or serve as Discussion Leader himself.

2. The Discussion Leader will begin by reading the Introductory Remarks and the Dicussion Questions. Each question should then be discussed separately. After discussion is completed on a question, or after the time allotted has been used, the Discussion Leader will ask the Resource Person to present the facts relative to that question if these facts have not come out during the discussion.

3. After all of the questions have been discussed, or at 10:30 P.M., the Discussion Leader will distribute the Good Neighbor Pledge cards and read the closing statement.

4. The Discussion Leader will be asked to write a brief summary of the sense of the meeting for use at a culminating meeting.

INTRODUCTORY REMARKS

Tonight we are here to discuss what is considered one of the major issues of our day: housing, or more specifically, changing neighborhoods. This is a problem which many of us have faced, which some of us are now facing, and which the rest of us must anticipate facing. We cannot, like a child, crawl under the covers; we cannot emulate ostriches and hide our heads in the sand; nor can we shout "Stop the World!"

What then, can we do? To begin with we can become informed of the facts and come to understand the problem. This is why we are here tonight, to achieve understanding.

We have a list of Discussion Questions which covers the crucial elements of the housing problem. Let us condsider them together.

(Discussion Leader begins questions)

Discussion Guide for Resource Person and Discussion Leader P 15

OUR CHANGING NEIGHBORHOODS

1. Question: What really happens to neighborhood property values following the move-in of a Negro family?

Answer: There is absolutely no factual evidence to support the widely-held contention that property values will drop whenever non-white families move into a previously all-white neighborhood. The facts all point in the opposite direction. Since the early 1950's a number of documented studies* have been made in a number of cities (including Baltimore) which prove beyond a doubt that prices are more likely to rise or to remain stable than to decline when Negro families enter all-white areas.

Property values in any area depend upon a variety of factors unrelated to race. Basically, prices fluctuate with supply and demand. If white residents flood the market with more homes for sale than the demand can promptly absorb, there is apt to be an abrupt (although probably temporary) decline in values. If, on the other hand, residents accept Negro newcomers without hysteria, the value of their property will remain stable or may even increase.

In other words, what happens to the value of his property is squarely in the hands of the white homeowner in the neighborhood. If it declines he must place the blame on his own and his neighbors' attitudes and actions.

Since Baltimoreans are inclined to be skeptical as to whether developments in other communities have any bearing on their local scene (have you not heard the insistant remark, "But Baltimore is different"?), we will do well to examine some Baltimore facts and figures.

In 1956 a study was made of four blocks of Longwood Street in the City. The sale prices to Negroes from 1953 to 1955 (when all but a few homes passed from white to Negro occupancy) was compared with the sale prices of the same houses when sold to whites between 1947 and 1953. Price data was obtained on 31 of the 40 homes in the 2500, 2600 and 2700 blocks of Longwood. In the 2500 block the average price increase was $2,700.00 including ground, in the 2600 block about $3,550.00 and in the 2700 block about $2,900.00. The range

*See Equal Opportunity in Housing, A Selected Bibliography of Materials for Study and Use, Compiled by the President's Committee on Equal Opportunity in Housing, Washington, D.C., 1964.

of prices to the Negro purchasers was $11,500 to $17,500.00.*

A later study of property values (1960), in which more than 22,800 residential sales in Baltimore were analyzed, concludes that "property values do not invariably decline when Negroes are admitted to occupancy in previously restricted neighborhoods." There was a tendency for homes under 50 years of age to increase in value when subject to open occupancy.**

The Commission on Race and Housing, in a 10 year study financed by the Fund for the Republic, examined 34 neighborhoods in San Francisco, Oakland and Philadelphia and found that, other factors being equal, the value of the houses in 85% of the cases either showed no significant change or actually increased with the entry of Negro buyers. (Newsweek 9/3/62)

[Note: Do not fail to mention the fact that Negroes pay more than do whites for houses of the same quality.]

2. Question: What happens to the quality of education in neighborhood schools after integration takes place?

Answer: Scientists agree that there are no innate differences in intelligence or talent between whites and other races. So it is not necessarily true that white children will suffer when integration takes place in schools. However, it would be less than honest to claim that classroom teaching in some instances has not had to be modified to meet the needs of culturally deprived Negro or white children. To overcome this problem will take time, wisdom and effort on the part of teachers, parents and planners of curriculum. This is the price we must all pay for the years and years that white Americans prevented Negroes from enjoying the full rights of citizenship.

Planners will have to devise new programs and provide more teachers to help Negro children catch up, the teachers will have to give patient attention to these young people's special needs, and parents will need to devote much more time than ever before to what is going on in the classrooms. They must press for and insist upon new standards of excellence.

[Note: A comment might be made about P.S. #59. This is in a well integrated neighborhood and the school has been successful in maintaining its former high standards for those students who are able to work up to those standards. Integration of this school did not result in lowering of educational level of white pupils!]

*Dr. Clifton Jones, Changes in Cost of Homes With Change in Racial Occupancy, White - Negro, in Four Blocks on Longwood Street, Baltimore, 1956.

**Dr. Homer E. Favor, The Effects of Racial Changes in Occupancy Patterns Upon Property Values in Baltimore, 1960.

3. Question: What about safety on the streets after neighborhood integration occurs?

Answer: As in the case of property values, safety depends on factors that are only indirectly related to race. With infrequent exceptions, the kind of violence that makes neighborhoods unsafe at night are perpetrated by persons who have not shared in the economic benefits of the society in which they live. Since these persons are not able to afford homes in middle class communities, the integration of largely owner-occupied neighborhoods is not a cause of lawlessness.

It is unfortunate that there is sometimes a correlation between areas of substantial Negro residence and poor law enforcement. Residents who are determined to maintain high quality communities can, however, make a concerted and effective effort to gain adequate police protection against lawlessness. One gets the impression that the police department tends to write off integrated neighborhoods, along with all-Negro ghettos, as outside the realm of their control, but insistence by local citizens on proper police protection can have a salutary effect on this condition.

The same, incidentally, is true for the maintenance of streets, sidewalks and alleys, the upkeep of private homes, the orderliness of private yards, the provision of adequate lighting and the efficient disposal of garbage and sewage. City services can be effectively insisted upon by local residents. If results are not readily forthcoming, letters to city officials and newspapers editors are potent weapons.

In any case the reputation of mixed neighborhoods as places in which crime runs rampant is considerably over-rated. Phoenix, Arizona, for example, has a higher per-capita crime rate than New York City; and Washington, D.C., whose percentage of Negro residents is higher than any city outside the South, is only 27th among large cities in rate of criminal offenses.

[Note: Emphasize that crimes are not likely to be committed by the residents of the neighborhood when the residents have a financial stake in their homes.]

4. Question: Do Negroes need to expand into white neighborhoods? Are there not enough available homes for them in the areas where they already live?

Answer: A recent study of the average annual demand for new homes for Negroes in Baltimore concluded, conservatively, that 5,000 additional units per year were needed. The supply to meet this need must come either from new construction or from the transfer of homes now occupied by white people to non-white occupancy.

New construction for Negro occupancy has always been negligible in Baltimore, nor has this situation changed since President Kennedy signed the Executive Order in November 1962 prohibiting discrimination in federally financed housing. Many local builders have turned away from federal financing rather than accept Negro clients.

Hence, it is the transfer which will provide the vast majority of the housing units needed by the Negro community. These can occur either adjacent to the present Negro ghettos, in new areas which then rapidly become ghettos, or in a dispersed manner throughout the suburban areas of the city and surrounding counties. Take your choice. The enlarging of present ghettos and creation of new ones will solidify segregation, with those innumerable attendant evils that ultimately affect the entire community.

5. Question: Can neighbors, working together through an improvement association or other civic organizations, effectively maintain the stability and quality of neighborhoods after racial change?

Answer: Citizen action can provide the means for neighborhood stabilization---and has done so in many communities. If neighborhood groups work to educate all the residents, fears can be allayed and a mass exodus prevented. Residents must be informed at well-publicized neighborhood meetings about the experiences of other communities which have successfully achieved stable integration, about stable or enhanced property values, about the excellent record of property maintenance and financial responsibility by Negro homeowners, about Negro families as good neighbors and Negro children as potentially good students.

They must be alerted to the unscrupulous tactics of real estate speculators and "blockbusters", who will use rumors and threats to frighten white residents into making hasty sales from which these speculators are the only beneficiaries.

The ultimate decision as to what happens after a non-white family moves into a neighborhood is largely in the hands of the white majority. This is particularly true in older communities near areas of non-white concentration. If, when a Negro family moves in, the white residents assume that the first Negro purchase of a home means an inevitable change to all-Negro occupancy, and then act in such a way as to assure a changeover, they will accomplish what social scientists refer to as the "self-fulfilling prophecy."

[Note: Be sure to mention Baltimore Neighborhoods which have successfully stabilized:

Ashburton - about 50% white - 50% Negro
Lauraville - also about 50-50

Windsor Hills - 30% white - 70% Negro--more than 50 white families have purchased homes here in recent years.
Kenilworth - about 60% white - 40% Negro (area is northwest of The Alameda and Winston Avenue)
Mt. Washington, Woodmoor, Scotts Hill and many others - a few Negro families in each have had scarcely any long range affect on these communities.

Some neighborhoods are not as successful. Usually they do not have strong neighborhood associations or we find the homes to be older row house type in which residents have too little emotional or financial investment.]

6. Question: Given the demand for more housing for Negroes and, at the same time, the desirability of maintaining stable neighborhoods, is there any solution other than open occupancy?

Answer: The battle to stabilize changing neighborhoods (previously discussed) is made infinitely harder by the lack of housing opportunities in many sections of the city and in almost all the areas within the surrounding counties. Sales and rentals are made virtually impossible by the determination of owners, real estate brokers and builders to keep these areas all white. Acknowledging the increased need for housing of all kinds by Negroes, we must recognize that Negroes must either push outward the boundaries of their present ghettos or disperse to all sections of metropolitan Baltimore. If the latter is to take place, there must be a radical change in attitude and behavior on our part.

To achieve open occupancy without law would involve the assent of nearly all homeowners, landlords, builders and real estate brokers. Although progress is being made in winning cooperation from these groups the progress is slow. Citizens from minority groups cannot wait---nor can democracy wait.

Whenever legislation to gain racial equality is proposed, opponents always counter with the words to this effect, "You can't legislate morals. People must be educated first!" This position is predicated on the premise that education and law are mutually exclusive.

Recent studies of social scientists demonstrate that the simple dissemination of correct information has no direct effect on either attitude or action. It has been observed, rather, that the behavior of individuals is determined in large measure not by their attitudes but by the group situation. The same individual

who shops and works side by side with Negroes (because the group situation demands such behavior) can be the most rabid opponent of Negroes entering his neighborhood (because, again, the group situation demands or encourages such behavior).

Legislation, therefore, is invaluable to the implementation of any program to assure equal treatment of minorities. Legislation helps establish a group situation which will be unfavorable to discrimination. Those who discriminate become violators of society's laws. Their attitudes may not quickly be changed, but their actions are affected. Those areas which have enacted Fair Employment Practices legislation testify to advances made in the realization of equal opportunity through the assistance of law. Above all, legislation becomes education. It becomes a tool, society's means of setting a goal and striving to implement it. Legislation creates a climate and framework for the community.

Short of legislation, various citizen activities may help to achieve greater opportunities for minority groups. Neighborhood associations can educate their members through discussion and consultation with professionals who have worked for open occupancy. Residents can help to stabilize their own neighborhoods by refusing to move when a Negro family comes to live there. They can discuss with other residents their willingness to have Negro neighbors. They can sign and get others to sign pledge cards asserting their belief in Negroes' rights to live there and their own intention to welcome Negro neighbors. And they can make their own homes available to all people without regard to color if they themselves must sell. How far these activities will eliminate the need for legislation in metropolitan Baltimore will depend entirely on how widespread can become their practices.

CLOSING STATEMENT

We hope that tonight's discussion has dispelled some of the fears, myths and prejudices which have clouded our thinking on this issue.

Allow us to summarize what, hopefully, we have all come to understand tonight. We are living in a growing, dynamic metropolis. The demand for additional housing being generated in the Negro community must be met---the only way to alleviate the problem of changing neighborhoods is to have an open housing market in which everyone is free to buy a house he can afford wherever he wishes. Until we realize that goal, we will be unable to change the present pattern of entire blocks changing from white to Negro occupancy, with concurrent suffer-

ing and economic loss to sellers and buyers.

Please understand that our purpose in calling these meetings has been to discussed openly a problem of concern to all of us. Those of us who believe that the best interests of our community will be served by open occupancy cherish the hope that as a result of our discussion we might convince others. It is not our wish to coerce but to persuade. If you are persuaded that this is the course of wisdom, we hope that you will implement this by signing the Good Neighbor Pledge Card, sponsored by the three religious faiths.

[Cards are distributed to each person-----Discussion Leader reads the pledge aloud]

[Note: Discussion Leader might point out that the pledge mainly states that the signer will accept any responsible family into his neighborhood. It does not pledge the person to sell his house to any particular person or group. Neither does it require that the signer work actively toward integration. The pledge merely reiterates the signer's belief in a basic democratic principle of our country.]

DISCUSSION

This is an attempt to point out some aspects of the data and does not attempt a complete explication of the results. Probably there are many significant features which I have missed and which others will pick up.

The largest number of realtors handled property in Baltimore County (89.6% of respondents). In all the counties, including Baltimore County, approximately the same number of dwelling units were sold in 1962 and in 1963 (the 1963 figure does not include Dec.). The majority of realtors (54.1%) sold between 1 and 50 homes in Baltimore County in 1962 and this was also true (55.2%) in 1963. The great majority (over 90%) sold no homes to Negroes in the Greater Baltimore area in 1962 and 1963. Of those who sold to Negroes, the average number of homes sold was between 1 and 3 in both 1962 and 1963, and the majority were in Baltimore County. In Harford County no homes were sold to Negroes in either of the two years, and in Howard and Carroll Counties, only one home was sold to a Negro family in each county in the two year period. However, one realtor (#25) sold 15 homes in Ann Arundel Co. in 1962 and 17 in that county in 1963.

Two-thirds of the respondents stated that they received no inquiries from potential Negro buyers regarding property in the counties. Thirty-eight respondents supplied information regarding what their firm's response to inquiries from Negroes was, all but 4 were negative and aimed at discouraging or refusing to assist the prospective buyer. Over 40 % gave no response to the question regarding what a salesman should do when approached by a Negro buyer and another 10.4% stated that the salesmen were not approached by Negro buyers. Of the remaining, 19 respondents (up to salesmen-8; up to owner-5; courtesy-6) did not have a set anti-negro response -- although those who left it up to the salesmen probably knew what their salesmen would do.

The majority (64.6%) said they were not willing to sell residential property in a white neighborhood to qualified Negro buyers, while 26% were willing. Of those who were willing, 7 would sell if the Negro community

were close or if the community itself were changing, while 15 would sell if the owner were willing and 4 if this were not a deliberate block-busting attempt.

The majority (75%) knew of no instances of whites selling to Negroes within their own companies, while 18.8 did. In response to the number of dwelling units sold, 87.5% either did not respond or said that their companies had sold no homes. Thus, 12.5% of those who did know of incidences of whites selling to Negroes within their own companies did not indicate the frequency of this. Of those who did respond, the frequency of this occurrence was low — one or two homes. The neighborhoods in which white homes had been sold to Negroes were, with 3 exceptions, all within Baltimore city and in changing neighborhoods. The 3 exceptions were in Baltimore County. The majority (71.9%) gave no reasons for not selling houses in white areas to Negroes, but of those who did, the responses were largely a reflection of the desire to maintain the status quo or avoid economic losses.

The great majority (88.5%) knew of no instances in their companies of Negroes selling to whites. Only 4.2% responded that they had sold under such circumstances and each had sold only one unit. The major reason given for not selling to whites is that the whites were not interested. However, 79% did not answer this item.

The principle barriers to open occupancy in the greater Baltimore area were economic and/or a desire to maintain the status quo (property depreciation-24; owners won't sell-17; panic neighborhood-12; desire for status quo-7). The second major barrier perceived was directly that of the existence of prejudice (living habits of Negroes-12; segregation policy or prejudice of realtors-11). The response that Negroes did not want to live among whites could also probably be classified as showing direct prejudice (7). Obviously, these 2 categories are interrelated, but one emphasizes more of the practical, business orientation, while the other is more directly and emotionally prejudiced.

One third of the respondents did not answer the question regarding the circumstances under which the barriers could be removed. Of those who did respond, 22 saw no circumstances which would allow for removing of barriers, while the remaining 42 saw various possibilities regarding how this could be accomplished. Particularly, they saw either an unanimous agreement among realtors or legislation as necessary. Combining these categories, 19 expressed these opinions. The education of Negroes was seen as the second most important for the removal of barriers-18, while the education of whites was a close third-17. Responses concerning time, demand of Negroes for county land, and examples of successful integration were given in 16 instances. The majority of those who answered did see some possibility of change.

The majority of the brokers (over 80%) felt that there would be economic reprisals accruing to any broker who sold a home to a Negro family in a white area. It was in this area that many brokers expressed themselves most forcefully. Usually, this expression was couched in economic terms, with only 2 respondents feeling that brokers who sold homes to Negroes in white areas <u>should</u> lose their licenses. The following are typical of the responses of those who emphasized the economics of the situation:

If a broker sold to a Negro family in a white area:

"he would be blackballed by all whites and his business would suffer or stop completely" #1

"he may as well close his office" #15

"We would be out of business overnight - without a question" #14

"His reputation would be ruined" #26

Thus, there appears to be an overwhelming agreement that the norm against open occupancy is an extremely strong one, the violation of which would be strongly and swiftly met with economic reprisal.

In the light of the perceived importance of the norm against open occupancy, it is not surprising to find that 75.1% of the realtors would be unwilling,

under the present circumstances to accept a listing if the seller wishes to make the listing available to Negroes as well as whites, except in changing neighborhoods. Almost one fifth (19.8%) would accept such a listing if it were not a blockbusting action, while 5.2% were either indifferent or unwilling to commit themselves (find out reason and then make decision).

The more liberalized policy of the Real Estate Board appears to have had little effect on the policies of the individual realtor firms since 80.2% reported that their firm had not altered their policy in the past five years. Of the 16 respondents who indicated the way in which their policies had changed, 9 indicated a definite change in the direction of liberalized policy.

A rating of the respondents was done by the student coders. They rated in terms of prejudice, honesty, cooperation and consistency. The validity of these ratings may be questioned but the results are interesting, particularly the evaluation of prejudice in which only 18.8% were rated as very prejudiced. This would seem to further enhance the notion of the realtor as primarily motivated by economic concerns. The following quote appears to represent the attitudes expressed by the majority of realtors and points to the necessity of education and legislation in the area of open occupancy.

> "If anyone can prove to me that a Negro introduced into a white neighborhood would not depreciate values from 4 to 6 thousand dollars, I could see doing what seems to be the popular trend today.
>
> I do not object to Negroes, I do object to the great economic burden they place on the white home owner when they move into a neighborhood. Is the government, the public, the Real Estate Board and the greatest 'dreamer' of all -- Mal Sherman -- blind to this fact?" #23

CODE FOR SURVEY OF REALTORS

1. Does your company handle residential property in:

COLUMNS				N	%	
1	Q-1a	0.	No information	4	4.2

54	(cooperativeness)			
		1. answered questionnaire completely	21	21.9
		2. left out answers	74	77.1
55	(consistency)			
		1. questionnaire completely consistent	75	78.1
		2. questionnaire inconsistent	19	19.8

Baltimore
Neighborhoods,
Inc.

"Men come together in cities
in order to live.
They remain together
in order to live
the good life."

—ARISTOTLE

The symbol of Baltimore Neighborhoods, Inc. is designed to signify the vast and intricate relationships of a great metropolitan community. Within, it is not symmetrical, because living relationships are not so; stable communities have many different types of people living together. Its inner lines flow into one another and suggest motion, representing the hum of human interchange. And when viewed from a distance, all these distinctly separate elements become a unity—a living whole—a great, intensely human, unceasingly active metropolis.

Baltimore Neighborhoods, Inc. was founded in 1959 by the Greater Baltimore Committee and other civic, neighborhood and religious groups. Since that time we have helped communities and families to meet the tensions of local housing integration, secured an anti-blockbusting ordinance for Baltimore City, worked to eliminate racial designations in real estate advertising, and brought to Baltimore one of the nation's first conferences on equal opportunity in housing, sponsored by the federal government.

Our aim is two-fold: to stabilize racially mixed neighborhoods and to help create new housing opportunities for Negroes and other minorities throughout the metropolitan area. Thanks to our work and the support it commands, the appearance of a Negro family no longer need mean panic and flight, and there are many residential sections where the two races work together for neighborhood progress.

We urge all individuals and groups who are concerned about the health and stability of Baltimore's neighborhoods to use our services. *If you wish to buy, rent or sell a home,* we will help you to deal on an equal opportunity basis, working through successful real estate brokers who support our policy. *If you want accurate studies of open housing in Baltimore and other cities,* we have extensive resource materials available for your use. *If you would like to meet others in your community who are working for secure neighborhoods and fair housing opportunities,* we can introduce you to them. *If you seek help or advice because rumors of change are circulating in your area,* please let us know immediately.

The Myths: "If a Negro family moves in, property values will tumble!" "The entire neighborhood will go!" "Standards will deteriorate!" "There will be open conflict!" On and on go the myths, feeding fear and price exploitation in almost every city in America.

The Facts: Large-scale builders of new homes in cities across the nation have been reporting success in selling on an open housing basis for at least a decade. By far the most extensive study of equal opportunity in housing, completed in 1960 by economist Luigi Laurenti of the University of California, exploded the myth that property values inevitably decline when minority groups are admitted into previously exclusive neighborhoods. Studying 10,000 real estate transactions over a nine-year period in San Francisco, Philadelphia, Chicago, Kansas City, Detroit and Portland, Dr. Laurenti found that in 41% of such neighborhoods values showed no change; in 44% they rose, and in 15% they fell for a limited period and later rose to or above previous prices.

Baltimore is no exception. Anyone can point out numerous sections where homes have "gone" — sacrificed in panic, only to have a speculator resell them at inflated prices. It is still easy to hear the fatalistic remark, "It is only a matter of time until we will have to move." Yet an exhaustive survey of 22,791 housing sales in Baltimore between 1954 and 1958, performed through the University of Pittsburgh by Dr. Homer Favor, showed results similar to those of Dr. Laurenti: *Housing of 50 years or less tended to have a* more stable *value in those Baltimore neighborhoods which had been recently opened to Negroes than in neighborhoods which remained exclusively white.*

The non-discriminatory policy in FHA and VA foreclosure sales, the President's Executive Order prohibiting discrimination in housing under federally insured mortgages, the rising standard of living of many Negro families, and the need for approximately 5,000

additional dwellings each year to serve Baltimore's growing non-white community will continue to increase the movement of Negroes into previously all-white suburbs. Recently Negroes have moved, generally without incident, into Glen Burnie, Milford Ridge, Pikesville, Woodmoor, Reisterstown, Scotts Hill, Woodbourne Heights, Northwood, Pimlico, Yale Heights, Odenton, Idlewood, Mt. Washington, Owings Mills and other previously all-white neighborhoods of the city and surrounding counties.

As the suburbs no longer present a "place to hide" for white families, the danger of rapid turnover throughout the entire metropolitan region will disappear, and neighborhood stability will become a reality. *Yet the scars of earlier "flights" remain, restrictions on Negro homeseekers are frequent, and panic still lurks just outside the door and around the corner.* Individuals and even neighborhoods can make little progress in support of neighborhood stability and equal housing opportunities when they work alone. Baltimore Neighborhoods, Inc. provides a way to unite all the forces at work for healthy, stable neighborhoods in the Baltimore area.

SIGNIFICANT OPINIONS ON EQUAL HOUSING OPPORTUNITY IN BALTIMORE

"Baltimore City and the surrounding counties will not be truly stabilized communities until ALL of their respective residential areas accept integration. As one who until recent years tried to evade this subject, it is now my firm conclusion that we can and we must change our community attitudes toward equality of opportunity in housing if we expect to support both the economic and moral fiber of metropolitan Baltimore."

WILLIAM H. C. WILSON
Past President
Real Estate Board of
Greater Baltimore

"We can no longer deny any of our citizens the right to a full and free choice in the selection of his home. Our entire community grows in justice, decency, and well-being as we wipe out the false barriers of racial segregation."

JAMES W. ROUSE
Chairman
Greater Baltimore Committee

"The principle of equal opportunity in housing will eventually succeed—the only question is how soon, and with how little panic and ill-will. The answer lies, more surely than anywhere else, with the wide range of private individuals and groups throughout our entire Baltimore urban area who care enough to work hard for equality of housing opportunity in their own neighborhoods."

THEODORE H. MCKELDIN
Mayor of Baltimore

To continue and expand its vital, unique program, Baltimore Neighborhoods, Inc. needs your help. Individual memberships start at five dollars a year. Neighborhood associations, businesses, churches and civic organizations may obtain group memberships. Special contributions to the work of Baltimore Neighborhoods, Inc. are always welcome. All contributions may be deducted for income tax purposes. *Address inquiries to* Edward L. COMMENTS:

6 - Baltimore Neighborhoods helpful.
each 1 - Neighborhood against.
Moved once, not again.
Groups co-operate.
More education needed.
Whites need leaders.
Real estate people helpful, if they want to be.
Concern for inter-marriage.
All humans.
Total integration will stop moves.
Have you seen the outcome?
Not now.
Are there stable neighborhoods?
What can business do?
Jewish migration hasn't stopped .
Eventually - 50% Negro.
Negroes by-pass this area.
Sexton is Negro - helps us accept integration.

7 Yes
30 No
8 No contemporary children

32. ADULT CONTACTS

2 Neighborhood activity
4 Over back fence
1 Coffee
4 Casual courtesies
6 Little contact
26 No contact

33. DO YOU BELONG TO ANY ORGANIZATIONS IN WHICH WHITE & COLORED MEMBERS MEET TOGETHER?

13 Yes
32 No

Church groups	7
School faculty	1
Professional	1
Political	1
Military and veterans	2
Scouts	1

34. DO YOUR NEGRO NEIGHBORS BELONG TO NEIGHBORHOOD ASSOCIATION (If there is one)?

2 Yes
12 No
18 Don't know
3 No association
10 Don't know if there is an association

35. (If Employed) AT JOB, DO NEGROES AND WHITES WORK TOGETHER IN SAME KINDS OF JOBS?

36 Yes
8 No
7 Don't know

[TOTAL EQUALS ANSWERS FOR BOTH HUSBANDS AND WIVES]

36a. TO WHAT OTHER ORGANIZATIONS DO YOU BELONG?

8 Organizations related to work
8 Educational, philanthropic, fraternal
4 Political, veterans
2 Church
5 Social
23 None

(Some respondents named more than one organization)

b. DO THESE ORGANIZATIONS TAKE ANY POSITION ON INTEGRATION? WHAT?

10 No
4 Don't know
6 Yes

5 In favor
1 Don't admit Negroes

25 No answer

37a. DOES YOUR CHURCH TAKE POSITION ON INTEGRATION? WHAT?

8 No
23 Yes - favors integration
1 Takes one position but acts differently
11 Don't know
2 No answer

b. HOW DO YOU FEEL ABOUT THIS POSITION?

20 Agree with church position
5 Disagree
3 Ambivalent
1 Undecided
16 No answer

38. IN WHAT OTHER SITUATIONS DO YOU HAVE CONTACTS WITH NEGROES?

13 Public accommodations
6 Employ household help
2 Church
5 Work
5 School
4 Neighborhood
3 Social
21 None

39a. WHAT DO YOU LIKE BEST ABOUT THIS NEIGHBORHOOD?

15 Convenience
17 Quiet, in the country, scenery, not crowded
8 Clean, well kept, neighborhood services, well-developed
13 People: friendly neighbors, playmates for children
1 Good school
7 Like house, grounds
1 Privacy (neighbors keep to themselves)
6 Nothing

b. WHAT DON'T YOU LIKE ABOUT IT?

6 Inconvenience: narrow streets, lack of public transportation, parking problems, traffic
5 Noisy, lack of privacy, lack of police protection
16 Unfriendly people, catty, nosey neighbors, elderly neighbors, too many children, too many families with pets
3 House too small
1 Everything
16 Nothing
3 Negroes in neighborhood

40. WOULD YOU ADVISE FRIENDS AND RELATIVES TO MOVE TO THIS NEIGHBORHOOD?

27 Would recommend
14 Not recommend
2 Up to them
1 Depends on family size
1 No answer

41a. DO YOU THINK A STABLE INTEGRATED NEIGHBORHOOD CAN BE ACHIEVED HERE?

24 Yes

People will accept it gradually	9
If all on same socio-economic level	3
If well handled	3
Is working/can work	4
Because people keep to selves	1

11 No

Someone always causing trouble, two races don't get along, we don't like Negroes	4
Can't sell house except to Negroes/Jews	3

41a. 2 Not if Negroes/more Negroes move in
2 Residents' socio-economic level too low
2 Other

10 Don't know
1 Transient neighborhood
3 Prejudice, panic
6 Other

b. DO YOU THINK WHITE FAMILIES WILL ACCEPT INTEGRATION?

23 Yes

5 Have accepted it
8 Are forced to accept it
1 So long as more Negroes families don't move in
2 If Negroes are the right type
3 But have some reservations, doubts
4 Other

6 No

4 Two races different, can't live together
2 Other

10 Don't know
6 Some do, some don't

42. WILL PRESENT RESIDENTS STAY OR LEAVE IF OTHER NEGROES MOVE HERE?

12 Stay
14 Leave
7 Depends
5 Some will stay, others move
7 Don't know

43. HOW WOULD YOU FEEL IF OTHER NEGRO FAMILIES MOVED INTO THE NEIGHBORHOOD?

12 Wouldn't like it
23 Wouldn't mind
8 Depends on type of Negro
2 Don't know

44. HOW WOULD YOU FEEL IF OTHER NEGRO FAMILIES MOVED INTO THIS BLOCK?

16 Wouldn't like it
17 Wouldn't mind
7 Depends on type of Negro
2 O K if scattered, not bunched
3 Don't know

45. NOW I HAVE ASKED YOU A LOT OF QUESTIONS. DO YOU THINK THERE IS ANYTHING I SHOULD HAVE COVERED IN THESE QUESTIONS THAT I DIDN'T? DO YOU HAVE ANY FURTHER OBSERVATIONS ABOUT THE SITUATION IN THIS NEIGHBORHOOD?

POSITIVE ANSWERS:

1. No, I wouldn't mind if they moved next door.
2. We all get along.
3. Don't like parents not letting children play with Negroes.

NEUTRAL::

1. White attitudes toward integration depends upon white financial position.
2. Majority don't mind a few Negroes, but don't want to be overrun.
3. Hard to have stable neighborhoods - can't sell to whites when you have to move.
4. Prejudice is learned from parents.

NEGATIVE:

1. I'm more concerned about property depreciation than integration.
2. Don't want to see intermarriage.
3. It's bad, that's all.
4. White friends and relatives look down on you when Negroes move into your neighborhood.
5. It's easier to accept when planning to move.
6. Colored people have their own places to go.

☐ HOUSE ☐ APARTMENT

☐ DETACHED ☐ CONVERTED SINGLE FAMILY DWELLING

☒ SEMI-DETACHED ☐ BUILDING INTENDED FOR MULTIPLE OCCUPANCY

☐ ROW

Good evening. I'm Mrs.....

There are 12 to 15 Negro families living in otherwise white communities in Baltimore City and Baltimore and Anne Arundel Counties. In each situation there has been a comparative absence of panic and flight following the entry of the Negro family.

The purpose of this study (and a companion study of the white residents of these communities) is to determine the attitudes of individuals and communities regarding the racial change in their neighborhoods.

[ASCERTAIN WHICH MEMBER OF HOUSEHOLD BEING INTERVIEWED:]

☒ HUSBAND ☒ WIFE ☐ OTHER ADULT FAMILY MEMBER [INDICATE RELATIONSHIP] _____

1. When did you move into this home? MONTH 5 YEAR 62

[LIST NAMES, AGES AND SCHOOLS ATTENDED]

[NAME]	[AGE]	[SCHOOL]
Michael Moore	16	City
Calvin Moore	15	City

e. Are there any pre-school children in the household? (How many?) 0

[LIST NAMES, AGES AND NAME OF SCHOOLS TO WHICH PLANNING TO SEND PRE-SCHOOL CHILDREN]

[NAME]	[AGE]	[SCHOOL]

15a. What was the highest school grade you completed? husband 11 wife 14

b. And your (wife/husband)?

16a. What was the highest school grade completed by your parents? FATHER 16

MOTHER 8

b. and your (wife's/husband's)? FATHER 8

MOTHER 12

17a. What kind of work does the head of the household do?

electrician

b. What company (does he/do you) work for? State Rosewood Hospital

18a. How many other members of the family living here are employed? 2

☐ NONE [SKIP TO QUESTION 19]

b. What kind of work does (he/she) do?
c. What company?

FAMILY MEMBER	KIND OF WORK	COMPANY
(1) wife	typist	City
(2)		
(3)		

19. What was the approximate total (combined) income before taxes and deductions for the family in 1963? $ 9,000.00

20. Do you regard yourselves as being Catholic, Protestant, or what?

☐ CATHOLIC ☒ PROTESTANT ☐ UNAFFILIATED [SKIP TO QUESTION 22]

☐ OTHER [SPECIFY]

21a. Do you belong to a church?

☐ NO

☒ YES [ASK:] b. What is the name of the church?

Union Memorial

c. Where is it located?

Halem & Warwick ave

18. How did you decide to move into this house and neighborhood? [PROBE] How did you hear about it? Who recommended it? What other neighborhoods did you consider? What were your misgivings concerning your choice?

I like the house.

through a agency
I had been looking for a couple of years. I look around good before I decided. Well this isn't the house I thought it was. It has many flaws. We like the house because of all the space on wide a track

19. What did your friends and relatives think about your move to this house?

They thought it was a really nice house.

20. [illegible]

21a. Do you [illegible]

NO

24. If your friends or relatives expressed an interest in moving into this neighborhood, what would you advise them to do?

(w) If you have a house paid for stay in it.

(h.) If my friends wanted to move here I would ask them to have the house appraised I'd like to go over the house with them because they're selling for ridiculous prices some 11,000 & up houses they're not worth 9,500. They're all basically alike in the block & why should they be sold higher

25. How did you think the residents would feel when you moved in here?

I never gave it a thought. This didn't interest me at all it wasn't the first time I'd moved into a neighborhood that was predominately white. I had been use to living in mix neighborhood all over the country.

26. What kind of a reception, if any, did you receive from the residents when you arrived? [PROBE]
Were there any expressions of hostility? Why do you think the residents acted as they did?

We were welcomed to the neighborhood and we given a dinner party by Mrs. Flannery Cartoonist at Sun Paper. The neighborhood accepted welcomed. Generally we were accepted. No hostility at all. We were invited to the churches in the neighborhood. The ones we were accepted by were very cordial

27. [IF ANY CHILDREN:] How much have the children in your family had to do with your neighbors here?

The age group is limited in block. but they associate with others in neighborhood & playground school

28. And the adults in the family—how much have they had to do with neighbors?

Very little my job is confined. I have little time to spend in neighborhood. My wife isn't overly friendly person. So she doesn't encourage to much. But we talk

29a. Is there a local neighborhood improvement association?

☐ NO/DON'T KNOW [SKIP TO QUESTION 30]

☒ YES [ASK:] b. Do you belong to it? ☒ YES ☐ NO

c. Were you asked to join?

☒ YES ☐ NO [ASK:] Did you make any efforts to join? ☐ YES ☐ NO

d. Have you participated in its activities?

☐ NO ☒ YES [ASK:] What activities? What did you do?

We have a neighborhood assoc you have to belong. This is stated in your deed. It for your own protection

30. Do you belong to any interracial groups?

☒ NO ☐ YES [ASK:] Which ones?

31. Do you belong to any civil rights groups?

☒ NO ☐ YES [ASK:] Which ones?

32. Any other organisations?

☒ NO ☐ YES [ASK:] Which ones?

33. In general, what do you think of your new home and surroundings?

The surrounding I like. It was what we were looking for. And for the house. The gloomers had worn off. But we like it.

34a. What things do you like best about the neighborhood?

It's nice & quiet. I brought within my means this to help for enjoyment.

b. What don't you like about it?

There isn't anything I don't like.

35. Does a stable integrated neighborhood here seem possible to you? [PROBE] Do you think that the white residents here accept integration? Why?

I feel a stable neighborhood is possible. They accepted it here. But people here always moving. For one reason or the other. Actd we have several Negro families here already. One white neighbor said to me. "This home is almost paid for why should spend my savings to buy a new house when my wife and I can buy go aboard or I can buy that boat I've always wanted."

36. Do you think that the present residents will stay or leave if other Negroes move here? No. because the other homes are for sale and they can't get the prices they want. If and when they do. Some will move.

37. How would you feel if other Negro families move into this block?
I feel it would the same as it was with white neighborhoods. We have about 40 negro families now

38. How would you feel if other Negro families move into the neighborhood?
I feel the same

39. In what situations other than the neighborhood [and organization activities] do you have contact with white people?
job, socially.

40. How frequent are these? dinners, parties and dances

41. What kind of contacts? socially

Thank you very much.

TO BE RETURNED TO: APARTMENT HOUSE OWNERS ASSOCIATION OF MARYLAND

NEWS/Baltimore Neighborhoods, Inc.
One Charles Center
Baltimore, Maryland 21201

Contact: Edward L. Holmgren
Exec. Director
SA 7-3194

FOR IMMEDIATE RELEASE

State-wide fair housing legislation has been advocated by a majority of apartment house owners participating in a metropolitan area study.

The survey was conducted by the Research Advisory Committee of Baltimore Neighborhoods, Inc. at the request of the Apartment House Owners Association of Maryland.

BNI was asked to determine the attitudes held by the apartment house owners in connection with open occupancy legislation. Questionnaires were sent to the entire membership of the association, and one-quarter of that group responded. The respondents owned a total of 17,536 apartment units in Baltimore and surrounding counties and represented a variety of apartment operations. Some of the important findings are:

1. More than one-half had never received a rental request from a Negro.

2. All of the owners who received requests for non-white occupancy declared that the frequency of such applications was minimal.

3. One-quarter stated that Negroes would be considered in the same manner as the white population if there were requests for occupancy.

4. Only one owner cited the lowering of standards as a probable consequence of open housing.

While the majority of those replying believe that desegregation is inevitable, most of the owners answering favored state-wide open occupancy legislation as the means of achieving this end. The greater

the number of units owned by the respondent., the stronger the advocacy for this kind of legislation.

These findings are consistent with the apartment house owners' recent announcement of their position in favor of metropolitan or state fair housing laws.

In commenting on the survey Edward L. Holmgren, executive director of the organization observed "that there is apparently a slightly improved readiness to accept Negro tenants than past experience and evidence has indicated.

"The fact that several apartment owners indicated that they had never received inquiries from prospective Negro tenants, but would accept qualified renters is a sign that some breakthrough on this issue might be taking place.

"In the past most Negroes have not sought to rent apartments in these places because they could expect that their applications would be refused on racial grounds. However, the landlords are not advertising their open occupancy policy and therefore it is impossible in most instances to determine which rental units, not in areas where Negroes live, might be available on a non-discriminatory basis."

BALTIMORE

1. Has your Good Neighbor Pledge Campaign been tried this year? Not yet If so, how successful was it? If not, what preparations are being made to get the 10,000 signatures? Religious campaign — Fall '66

2. Why did the business leadership respond favorably to the facts and implications of the housing problems for Negroes? How did you gain their sympathy? and understanding

3. Did the conference which led to the creation of Baltimore Neighborhoods, Inc. succeed because of the strong "respectable" backing, i.e., Greater Baltimore Committee, business and community leaders? Definitely [Definitely G.C.]

4. The Conference on Equal Opportunity in Housing, November, 1964: what were the preparations for it, the program, financing, speakers or leaders, results?

5. How did Baltimore obtain the cooperation of the Real Estate Board? Was this Conference on Equal Opportunity in Housing the deciding factor? Is the organization, the Real Estate Board, integrated? yes

6. What sort of staff (number and training) and services does the Baltimore Neighborhoods, Inc. have.

7. Baltimore Public Schools: How integrated? Does the situation reflect the housing pattern? Or are children bussed for some sort of racial balance? Are many children in private schools, parochial? page 3 underscored part - comment

8. What progress has been made with the Apartment House Owners Association regarding open occupancy?

9. Has the Real Estate Board's question on "open occupancy: yes or no" increased the availability of housing to non-whites? Have people been inclined to say no when confronted with this question for personal prejudice or neighborhood pressure?

10. Do you have the results of the survey of owners' attitudes on open occupancy which was conducted by AHOA and BNI? If so, may I have a copy? Page 4 Has the 1966 President of AHOA accepted BNI Board Position?

11. What has been the outcome of the impetus for a fair housing law? If it has passed does this reflect the present support of the business community (Greater Baltimore Committee)? Do you see a logical pattern to GBC progressive change page 5 of report?

12. Is there much hope for open housing in the suburbs - Baltimore and Anne Arundel counties? How do you go about trying to gain cooperation here?

13. I would like any other completed studies, and the copies of questionnaires you used, if available. (These studies are: 3-phase survey of 17 Negro families who have bought in white neighborhoods, of their neighborhoods and of business and community leaders in the areas; survey on practices of Realtors operating in Balt. County with respect to Negro homeseekers; survey of apartment house owners with respect to policies on renting to Negroes; consultation on a survey to examine the outcome of the good neighbor pledge campaign; upadating of 1963 study of Negro housing demand; analyzing the distribution of racially labeled classified apartment rental advertising.) professionally analyzed? complete? Page 7 Negro in white Surveys

OVER

14. Opinion on Single class neighborhood vs. Multi-class neighborhood? (Spot low rental housing or spot rent subsidy)

15. Other Civic Religious groups?

17. Has the Woodberry Neighborhood been integrated since the experience of violence? Is there any plan (specify note in Appendix)

(18) Any progress in Communications with Maryland Home Builders Assoc.

(19) Do you know of Mr Jack Tolbert US Chamber? Community Development work toward Metro-Economic Stabilization?

20. Any further results of FHA Complaint? page 5
What would you think the possibility of getting FHA to take the initiative aggressively rather than put the burden on the applicant. (Schools - Freedom of Choice)

21. Anything further on 1st ¶ page 6.

23. County Council Fair Housing Legislation status.

24. 54 Talks listed in Appendix of Annual Report in 1965 over what period were these 54 Talks made?

NEW SOUTH article

Notes for the files re: Baltimore Neighborhoods, Inc. - Holmgren

1. The Good Neighbor Pledge Campaign has not been tried again. Mr. Holmgren will follow the lead of a successful campaign in Boston which was a religious organization oriented campaign. He expects to conduct Baltimore's in the fall of 1966.

2. This was purely a matter of leadership. Mr. Holmgren feels that good leadership is almost a "cure all". In Baltimore's case it was Mr. Jim Rouse, a promoter and developer of "Columbia". It was done purely for business reasons to try to stabilize the tax space.

3. Definitely. The reason for Greater Baltimore's success was the leadership of Greater Baltimore's committee which was composed of a hundred highly selected leaders, and this was developed basically because of default in leadership by the Baltimore Chamber of Commerce.

4. BNI had help by the President's Committee on Equal Opportunity in Housing which helped financially as well as otherwise. The President's Committee on Equal Opportunity in Housing first had a conference in Boston, the second one was held in Baltimore. Baltimore's had a committee composed of 20 people to develop the program, background, papers, and approximatley 600 people attended a luncheon. The conference was held for a complete day.

5. Through leadership of Jim Rouse. Yes. Yes - happened as a fluke. The Real Estate Board sent out a letter soliciting memberships indiscriminately to all newly licensed real estate brokers. Through a little opportunistic politicing they took in six Negro brokers at one time. The multiple-listing bureau now has a Negro on the board of directors. Mr. Holmgren came to Baltimore in 1961; the Real Estate Board integrated in 1963.

6. BNI has two professionals, Mr. Holmgren, a University of Chicago graduate in political science. He later worked with Chicago housing authority, American Friends and Urban League. The other professional is his assistant, a graduate of Vasser in history, came from the Housing

Authority, Baltimore. They have one intern from NAIRO.

7. Baltimore population 42% non-white; school population 75% non white. School follows housing patterns. Schools have open enrollment; bussing only to overcome overcrowding, but this does help, of course, in the integration pattern. The new superintendent from New Haven is very good and has a positive program for the future. Again Mr. Holmgren emphasizes the importance of leadership. Mr. Holmgren feels that schools are simply the single most sensitive problem for BNI. This is where he finds more parental resistance, although Mr. Holmgren did not say so, but because of his successes and failures being so highly tied into the leadership he was able to obtain whether it was the real estate board or the schools, ~~I believe~~ he would case the city and move out in the matter of where he found good leadership response. It is rather interesting to note that the pattern of integration in Baltimore does not follow Washington, D. C. In Baltimore it is elementary school poorly integrated, junior high fairly integrated, high school well integrated. The tutorial project instigated by Fellowship House, conducted by high school children as tutors has been most helpful for a remedial program.

8. BNI serves on a retainer basis to AHOA. The breakthrough with AHOA came when Hopkins University required open listing on listings only by those who would agree to open occupancy. Again it was a matter of leadership within AHOA.

9. There hasn't been opportunity long enough to give a reasonable sampling. This is what they must find out. Mr. Holmgren knows that the result will depend entirely on how the AHOA interviewers ask the questions BNI hopes to conduct the training procedure.

10. Mr. Holmgren will furnish us with this. 1966 president of AHOA accepted, then declined BNI Board position evidently because of pressure.

11. Progress has increased each year but directly in ratio to leadership in officers, GBC; Baltimore Real Estate Board, and AHOA. Unless anti-blockbustin

laws are geared to fair housing legislation, Mr. Holmgren is not enthusiastic about it.

12. BNI is making progress in suburbs. One problem here is getting information across to the Negro community of what they can do. BNI is getting assistance of activist groups plus Negro church, social clubs, etc. NAIRO intern is meeting with these people.

13. Mr. Holmgren will forward this information to us.

14. Believes it has merits.

15. Other civic does not mean Kiwanas, Rotary type of organization. Religious groups included all denominations and sex.

16. Mr. Holmgren will send us a copy of the anti-blockbusting ordinance.

17. No, there is very poor organization in Woodberry.

18. This has been worked on (communications with Maryland Homebuilders Assoc.) there has been some success, but again this depends on who the officers are.

19. No - does not know Jack Tallent, U. S. Chamber of Commerce.

20. No. This FHA complaint is still in process (p.5). There is poor FHA leadership in Baltimore.

21. This is being furthered by utilization of NAIRO intern (1st paragraph, page 6).

22. - no no. 22.

23. The county council has passed a fair housing statute.

24. I didn't get an answer to #24 (54 talks as listed in appendix of 1965 Annual Report - over what period were these 54 talks made).

Type up questions 14 - 24 - these questions to accompany the letter with a copy of our notes on the questions for the file.

Should I Move to a Northern Virginia Suburb?
How Would I Be Received?

Should I Welcome a Negro as a Neighbor?
Should I Sell My House to a Negro?

NMH

OUR OBJECTIVE

Whoever you are, colored or white, the problem of segregated housing affects us all. It is of our making, it infects our society. We can solve it, if we will—and make our community a better place for ourselves and our children. The solution is to help Negro families buy or rent in neighborhoods of their choice as freely as anyone else. To this end Northern Virginia Fair Housing, Inc. has been organized.

Metropolitan Washington is webbed with walls of prejudice and indifference which prevent Negro families from moving out from the center of the city to the suburbs. Many of these families have incomes, positions and backgrounds typical of suburban residents.

These walls of prejudice must come down. For as increasing numbers of Negroes move North in search of equal opportunities, new ghettos, poisonous and explosive, are being formed in the hearts of northern cities. Today the capital is predominantly Negro. But Negroes comprise only about 6% of *suburban* Washington's population.

Here as elsewhere in America, Negroes, a century after emancipation, are demanding their full rights as citizens. Recent events make clear that these rights, in housing as in other areas of life, cannot longer be withheld without more hostility and more bloodshed than we have already suffered. In housing it is up to us to work out new patterns of living that are in keeping with the times — and with our most fundamental democratic and religious beliefs.

Northern Virginia Fair Housing, Inc., like more than 500 similar groups across the nation, is prepared to offer practical help through its housing information service and community relations advisors, to citizens in this area who would welcome equal housing opportunities for all in their own communities.

NVFH works closely with many like-minded groups such as the Urban League and Human Relations Councils. The Metropolitan Washington Housing Program of the American Friends Service Committee contributes invaluable professional services.

Q&A FOR WHITE PROPERTY OWNERS

- **1. Will the value of my property fall if a Negro family moves into our neighborhood?**

Information received to date on resale prices of houses in Maryland and Virginia shows that property values are not disturbed when Negro families move into previously all-white communities. Elsewhere in the nation, a seven-city study of 10,000 real estate sales over a 12-year period also contradicts the myth that values fall when a Negro family comes to a white suburb. In fact, the study shows that prices are four times as likely to increase or remain the same as they are to decline.

- **2. Will the new neighbors take good care of their property?**

Experience has shown that minority group families who move into your neighborhood take great pride in their homes and keep up their property as well as or better than their neighbors.

- **3. Is the arrival of a Negro family likely to lead to a shift to an all-Negro neighborhood?**

This is up to the neighborhood. Only the fear of such a shift will make it happen. Now that it is more and more common for Negroes to buy homes in previously all-white suburbs, the old fears about falling property values, etc. are losing their force, and reports of panic selling are rare. Part of this is due to the fair housing groups that have been formed across the nation. New Negro neighbors are welcomed smoothly in most instances, and the neighborhood carries on as before. In such communities white families have repeatedly purchased property adjacent to non-white newcomers. It is true that there is a tendency of minority groups to maintain old, segregated patterns of living. However, as equality of opportunity in jobs and education becomes a reality, the pressures for normal, free conditions in housing will eventually increase. The movement toward the suburbs will inevitably quicken. The formation of additional ghetto communities is unhealthy and unjust and will create explosive social tensions. To avoid this, NVFH is striving to work out sane and progressive housing policies now.

Q A

- **4. What about social relations with minority group neighbors?**

Similarity of interests, backgrounds and tastes determine the extent and character of any social relationships. What neighbors expect and deserve is respect, courtesy and a reasonable degree of privacy.

- **5. Is it fair to my neighbors to sell or rent to a Negro family?**

Certainly the feelings of old friends and neighbors are bound to be a factor in your decision. And some of them may not favor open housing. But this must be balanced against other factors just as real: denying a family the home they want and need—and an opportunity for them to live and bring up their children as first class citizens. With good management, your neighbors will suffer neither financial loss nor community friction. If your neighbors are simply prejudiced against Negroes, you must ask yourself whether this should prevent you from helping a family to a better life—and from giving your unprejudiced neighbors a chance to help realize the promise of America's democracy. To those who favor fair housing "in principle" but think it should happen "naturally," point out that integration always takes initiative and courage, and seldom occurs of its own accord. In almost all circumstances you will not only be fair to your community if you sell to a Negro family—you will be doing it a favor by expressing in action an established American principle.

Q&A FOR PROSPECTIVE BUYERS

1. Should I move to a Northern Virginia suburb?

Northern Virginia offers some of the most attractive suburban communities in the capital area. Several of the larger garden apartments have announced an open occupancy rental policy. NVFH has a wide variety of individual homes available on an unrestricted basis. For most middle-income families, Virginia taxes are lower than either Maryland or the District of Columbia.

2. How can I buy or rent a home in northern Virginia?

Call the NVFH Housing Information Service (524-4452) if you desire a list of homes or apartments in the price range and locality you want. NVFH will be glad to arrange to have any you select shown to you. You may also want to talk about the neighborhood with a NVFH community relations person who lives there.

3. How are Negroes received in previously all-white communities?

Experience in both Virginia and Maryland indicates that Negro families who move to the suburbs can be received in friendly fashion and take up perfectly normal lives as members of the community. More than 150 Negro families, many with the help of fair housing associations, have settled in previously all-white Virginia and Maryland suburbs without serious difficulties of any kind. Where there has been coolness on the part of some neighbors, this has been vastly out-balanced by the friendly support of the majority of neighbors. At last report, all the Negro families involved felt that the moves had been highly successful, and that they had been well received by their white neighbors. Some have been living in their "new" communities for as much as eight years, enjoy it greatly, and would never consider returning to segregated living.

4. Are Northern Virginia's schools, restaurants, and theaters integrated?

Arlington, Alexandria, Falls Church and Fairfax County have integrated restaurants and theaters. Most areas have integrated schools. In short, the situation, overall, is promising. Check with NVFH about particular neighborhoods and facilities.

WHAT YOU CAN DO

If you believe that a family's color should not bar it from having the home it wants, there are several things you can do:

- Let your friends and neighbors know how you feel. Where the changing of a well-ingrained social pattern is involved, never underestimate the power of your expressed opinions.

- Know the facts. Much of the uneasiness about open housing is based on misinformation—or lack of information. Write to NVFH, INC., 6308 N. 22nd Street, Arlington, Va. 22205, for fair housing literature which answers questions about property values, community relations and many other things.

- When you sell or rent your property, insist on its being offered without reference to race or religion. Register your property with the NVFH Housing Information Service (Phone: 524-4452, 9:30 to 1:00, Mon. thru Fri.).

- When other homes in your neighborhood are being sold or rented tell the owner of your willingness to welcome a Negro family. Suggest they list their property with NVFH.

- Let your Negro friends know about NVFH. If they are looking for a home in Northern Virginia, find out what they want (price range, number of rooms, etc.) and ask them to list with NVFH.

- If there is an opportunity for a Negro family to settle in your neighborhood, call NVFH for guidance in handling community relations, or for a person experienced in community relations to come to talk to you and your neighbors.

- Encourage builders, real estate brokers, developers, and apartment owners to accept the principles of fair housing. They have a moral and social responsibility to do so. It is in the economic interest of the industry and the nation that the housing market be broadened.

- And by all means—JOIN NORTHERN VIRGINIA FAIR HOUSING, INC.

Metropolitan Washington Housing Program

BACKGROUND

The Metropolitan Washington Housing Program of the American Friends Service Committee seeks to provide Negroes and other minority group members the same housing choices now enjoyed by their white neighbors. Its purpose is to reduce barriers which deny minorities free and equal access to housing of their choice and to establish their right to equal opportunity in this field. The Program seeks to change both the climate of opinion and the patterns of residence.

MWHP was developed to meet an expressed need and desire for a coordinated fair housing effort in the Washington area. The AFSC, as part of its National Housing Program, initiated the Washington effort in the fall of 1962.

During its early period, the Program explored housing problems and opportunities in Washington with various governmental agencies, private organizations in related work, members of the clergy, and other interested and knowledgeable individuals. MWHP established relationships and contacts with individuals and organizations in the Negro community and assisted in the organization of local fair housing groups in the predominantly all-white suburbs.

The population of Washington, D. C. as of the U. S. Census for 1960 was 54% non-white, 46% white. However, the non-white proportion of the population of *Metropolitan* Washington, which includes its suburbs in Maryland and Virginia, has remained nearly constant at between 25% and 30% since 1860.

Even if some 4,000 Negro families were to settle in the suburbs each year, with the area's rapid growth this would merely continue the present ratio with the District. Only a truly open housing market with genuine freedom of choice can resolve the segregated housing impasse, which will reduce the existing disparity between the central city and the suburbs.

THE PROGRAM

. . . supports, encourages, and supplies professional staff services to fair housing groups in the entire metropolitan area.

. . . offers community relations services to fair housing groups and individual families on a temporary or long-range basis so that integration of these areas will proceed smoothly.

. . . puts prospective buyers or renters in contact with fair housing groups active in the area in which they wish to live.

. . . maintains a free listing of houses and apartments that are available for sale or rent in the Metropolitan Washington area on a non-discriminatory basis.

. . . offers assistance to those attempting to purchase a home in new housing developments covered by the President's Executive Order on Housing issued in November, 1962.

. . . provides speakers, presents programs, and prepares and distributes materials in both Negro and white communities to keep them informed of changing climate of opinion, the increasing housing opportunities for non-white families, and to explain fair housing in factual terms.

. . . works directly with real estate brokers and builders (Negro and white), apartment house owners and managers, and others selling or renting homes and apartments to encourage and assist them in ending racial discrimination.

. . . seeks the cooperation of various government and private agencies in promoting equality of opportunity in housing.

. . . fosters and coordinates research into related subjects such as property values.

SOME ACHIEVEMENTS

- A constantly increasing number of people of good will are joining organizations that effectively promote equal opportunity in housing. They recognize neighborhood integration as both desirable and inevitable for their own communities.

- An ever-growing number of non-white families have moved into previously all-white neighborhoods without fuss. Although not yet statistically significant, they are symbolically important as precedent-setting moves.

- While in some few cases there have been minor neighborhood concerns and individual expressions of discontent, tensions have disappeared when individuals and leaders of the community stood firm on moral issues.

YOU CAN . . .

. . . join and support the Fair Housing group active in your area.

. . . become informed on housing—needs, fact, myths.

. . . tell your neighbors and friends about the services available through MWHP and your local Fair Housing organization.

. . . encourage your church, club, or civic association to present a program on Fair Housing.

. . . contact MWHP if you need help in finding a home.

. . . contact MWHP if you are planning to sell or rent your home.

. . . encourage your friends and neighbors to offer their homes on a non-discriminatory basis when they plan to sell or rent.

. . . urge your business acquaintances and those companies which you patronize to do business without discrimination.

YOUR HELP IS ESSENTIAL

LOCAL FAIR HOUSING GROUPS

As a result of the Program's support and encouragement, all of those portions of Metropolitan Washington previously closed to Negroes have organized local fair housing groups. Each group is autonomous and carries on a fair housing program in its own geographic area. The programs vary in details but are closely parallel to the program carried on by MWHP, which supplies professional services to these groups.

The American Friends Service Committee is a Quaker organization which attempts to relieve human suffering and find creative solutions to tensions between individuals, groups, and nations. Through its programs, the AFSC seeks to act on its belief in the equality of all men in the sight of God and of each other. It adds its efforts to those of other groups to build a society where free men may live together in mutual acceptance and with respect for differences.

The Metropolitan Washington Housing Program, like its counterparts in other areas of the country, is part of the AFSC's National Housing Program which seeks to create and maintain inclusive communities. AFSC housing work is currently being carried on in a number of other major metropolitan areas across the country, including New York, Boston, Chicago, and Pasadena.

Students at Paul Junior High School attend a political coffee hour with Congressman Carlton Sickles — himself a graduate of Paul.

How Good are the PUBLIC SCHOOLS in the Neighbors Area ? ?

About our Schools . . .

Public schools in the Neighbors' area rank with the best in the District and suburbs. They consistently place well above national averages on both intelligence and achievement tests.

A majority of the children in NI's schools come from professional, embassy or government families. These youngsters have the background to respond to the intellectual challenge their schools provide.

Thus it is not surprising that situations requiring disciplinary action are infrequent. When incidents do occur, they are handled expeditiously with equal regard for the welfare of the student and the community.

Washington's unique opportunities are utilized through such programs as "American Democracy in Action" at Paul Junior High School, where city-wide resources combine with parent interest to provide a rare learning experience.

Advisory committee members for the Paul' program include two Cabinet members, four Supreme Court Justices, and five Senators—a dramatic indication of top-level support for imaginative educational opportunities in the Neighbors' area.

Working together, home, school and community prepare our students realistically at each level for life in a democracy.

They Say . . .

"Democracy in action was what I found at that admirable school (Paul). Continuation and expansion of such efforts toward true neighborhood democracy are desperately necessary if our metropolitan capital is to be a city of which we can be proud."

Hon. Stewart Udall
Secretary of the Interior

"The maturity and interest of the students was impressive . . . The fact that the question and answer period was so animated and conducted at a high level is positive evidence of the ground work at Paul."

Hon. Charles Mathias, Jr.
U.S. House of Representatives

"I was greatly impressed by my visit to Paul Junior High School—by the liveliness of the students, by the devotion of the teachers, by the concern of the parents and most of all, by the sense of a vital educational community produced by students, teachers and parents working together in a common undertaking."

Arthur Schlesinger, Jr.
Special Assistant to
President Kennedy

About Neighbors, Inc. . . .

Neighbors is a non-profit organization supported by individual memberships and contributions, supplemented by fountion grants.

We stand for freedom of residence-choice limited only by the financial circumstances of the individual.

We believe that no "ghetto" can ever truly fill the needs of a democratic society. Therefore we work to maintain a stable, integrated, friendly and cosmopolitan neighborhood.

We provide a channel for the efforts of interested citizens to improve all community facilities—schools, city services, businesses.

We provide, free of charge, information on available housing.

We would like to hear from you!

living the challenge

Housing opportunities for Negro and white families in the National Capital Area

"We like our house and our location. The fact that the neighborhood is racially integrated is a big plus for us. In this period of social change, we find it much more comfortable to be 'living the challenge,' rather than standing on the outside with our ideals."

where to turn

"Freedom of Choice in housing is an essential part of equal employment opportunity to which Federal agencies are dedicated. I urge Federal officials to cooperate fully with the Fair Housing Groups to assure that all Federal employees have equal access to housing of their choice."

John W. Macy, Jr.

John W Macy Jr

Chairman, United States
Civil Service Commission

As a homeseeker do you believe

- that racially inclusive, reasonably balanced patterns in neighborhoods, schools, cultural and religious institutions are desirable?
- that massive racial concentration and segregation (white or Negro) is unhealthy and unfair for those who are segregated, as well as for our total society?

Here is a way to give your family the opportunity to live in a democratic neighborhood.

THE CITY

There is a fair housing ordinance in the District of Columbia. In addition, the services of the Northwest Washington Fair Housing Association are available for Negro families who desire to live in the far Northwest area of the city.

A free housing information service registers houses that are for rent or sale on an open occupancy basis.

Negro and White Homeseekers

You may want to live in an integrated area of Metropolitan Washington where you and your children will have opportunities to meet people of different races, religions and national origins. If so, you will want to move into a community where high standards are maintained in education, where public facilities and services are good, where housing codes are enforced, where property values and standards are stable, and where there is a true sense of neighborliness. Complete freedom in selecting a house still does not exist everywhere, but there are organizations to help you locate the housing of your choice.

Metropolitan Washington Housing Program – AFSC

The Metropolitan Washington Housing Program (MWHP) of the American Friends Service Committee seeks to establish an open housing market in which members of any group may freely purchase or rent in the neighborhood in which they want to live.

MWHP offers support and encouragement, and supplies professional staff services to the four Fair Housing groups in Metropolitan Washington.

Families who meet discrimination in purchasing a home covered by the President's Executive Order on Equal Opportunity in Housing of November 1962, or by the District of Columbia Fair Housing Ordinance are helped in filing complaints.

MWHP presents programs, prepares and distributes materials on equal housing opportunities in both the white and Negro communities.

In order to encourage and offer assistance in ending racial discrimination, MWHP works directly with real estate brokers and builders (Negro and white), apartment house owners and managers, and others selling or renting homes and apartments to encourage and assist them in ending discrimination.

The Program provides direct assistance to and seeks the cooperation of various government and private agencies in promoting equal housing opportunity.

W MA

We have everything in West Mt. Airy . . .

. . . between Germantown Ave. and Fairmount Park, and between Johnson St. and Cresheim Park.

Our neighborhood is a unique community. We have a fine "mix" of economic groups, racial groups, cultural groups, religious groups. We have $100,000 homes and $10,000 homes, $300 apartments and $50 apartments. We have fine schools, good transportation, convenient shopping.

But changes are taking place . . .

. . . Americans are the moving-est people. We move on an average of once every five years. So all kinds of Americans are moving out of our neighborhood, and all kinds of Americans are moving into our neighborhood.

Moving is change. Change has helped make this country strong. But it's important that changes be planned and understood. We know that in personal lives, we don't like to make changes until we've thought them out. With a constantly changing neighborhood, it's important that these changes, too, be thought out.

That's why . . .

. . . We who live in West Mt. Airy have joined together to think and act on changes in our neighborhood. That's why we've formed the . . . *West Mt. Airy Neighbors* — dedicated

to seeking solutions to our neighborhood problems and to encouraging changes that will lead to an even better place to live.

What are the West Mt. Airy Neighbors Doing? . . .

. . . The West Mt. Airy Neighbors is a going concern. We have a wealth of talents on our committees, an Executive Secretary, and a treasury . . . all of which make for a strong, permanent, effective organization.

We have set up a number of committees to work for us.

The Real Estate Practices Committee is working with real estate brokers to eliminate the sort of selling and buying practices that tend to reduce values rather than enhance them.

The Zoning Committee is keeping a watchful eye on all proposed zoning changes so that the public interest of all of us is not injured by the special interests of a few.

The Schools Committee is cooperating closely with local schools in support of programs which best meet the educational and social needs of our children.

The City Services Committee is working with City departments to keep our neighborhood clean, safe, healthy — a pleasant place to live.

The Youth Employment Bureau is promoting job opportunities for teen-

agers, and is strengthening understanding and communication between young people and adults in the community.

The Community Relations Committee is working to relieve the inevitable misunderstandings which arise when almost 5000 families live near one another.

Other committees work on other neighborhood problems as they arise. And, of course, still others are working to make the West Mt. Airy Neighbors ever more effective.

How can we work better together as neighbors? . . .

. . . To make any group work, it takes money and people — people who have a real concern for the sort of neighborhood they live in — people such as you.

What does this mean to you? . . .

. . . You've picked West Mt. Airy as your neighborhood. You have an investment in money and happiness here. Naturally you want to see this neighborhood thrive as a wonderful place in which you can live enjoyably. You can assure this by joining the West Mt. Airy Neighbors and offering your abilities and support.

ANDERSON

Overall, it seems to me, Mr. Holmgren's article is a good narrative outline for an expanded paper or special report. But I don't read it with any sense of the great urgency of the problem and much of what is said would probably be obvious stuff for our readership.

At the outset, I would like to get the reader involved by putting the problem in human perspective. A breif, narrative look at the neighborhood, a white family seeing their life long home being threatened by external forces over which they seem to have no control, the myth of what happens when Negroes move into their neighborhood. This family--or group of families, resolve to do something positive, creative about it not only for themselves but the whole community. This is passed over in three words in the article "The residents organized." How did they organize? What obstacles stood in their way? How did they overcome them? In other words--the day to day mechanics of it--so easy to say --it just happened--but requiring so much patience, determination and outright dedication to achieve.

I think some attention should be directed toward the National Real Estate Board's role in establishing the system--along with some hard examples of behind-the-scenes manipulation--not just the disreputable "blockbusting", universally condemned by real estate men just as respectable segregationists condemn the KKK, i.e. the difficulty in getting loans, buffer zoning by citycouncils, etc.

What of the Greater Baltimore Committee "which acknowledged the importance of neighborhood stablity?" What did the residents do (1) to get such a committee off the ground? (2) to impress upon the city the need for such a committee? All of this is skimmed over, too lightly, it seems to me. Also, what factors were needed to make such an impression--the political climate, the make-up of the community, white collar, professional, persons of humanitarian bent, etc.?

Also, what are some of the "massive education" techniques he speaks of in dealing with church and community improvement associations? How do you get the whole community involved--or what do you <u>try</u> to do to get it involved? Full page ads in newspapers, radio spots, direct mailing, discussion groups?

Basically, I think, my chief objection is that the points he makes aren't developed enough , or aren't made vital enough.

some small criticisms of Holmgren's artiele
on Baltimore....

1. Its style is slow, tedious and sleep-inducing.

2. Baltimore has done some important things in the area of housing - what are they? They are in the article but buried beneath the same monatone which covers the whole seven pages. If the "points" of an article were graphed as peaks on a chart with background material leading up to them and transitional passages falling from them then reading this article is like reading a straight line with no humps at all.

3. Holmgren says too much; he says so much, in fact, he says nothing at all. He passively relates a number of accomplishments one after another and ignores the explanations which make the accomplishments of value. A prime example of this and its effect on the diminished importance of the "fact," is on page 3, paragraph continued from preceding page:

   ".q.Thus, Baltimore Neighborhoods, Inc. was founded in 1959. (The early attempts to secure funds and support with which to launch a program is the story of most pioneer efforts in cities where something untried is being attempted for the first time.)..."

4. Holmgren does not even outline the really hard problems which are the basis of the difficulties of his work. For instance he mentions the passage of a fair housing bill by one house of the state legislature - he does not mention, however, the big liberal-urban vs. conservative-(and segregationist) rural split in the state, nor (if this is still true) Maryland's peculiar system whereby laws passed by the legislature, if believed to be against the interest of a county, may be nullified by that county at the time of passage.

5. Perhaps Holmgren has his reasons for giving this surface, non-commital treatment, and perhaps the article is of reasonable value as it is. It is disappointing.

RECOMMENDATION

NEGRO HOUSING DEMAND IN THE URBANIZED PORTION OF THE BALTIMORE AREA

The Research Advisory Committee of Baltimore Neighborhoods, Inc. estimates that for the five years 1963 through 1967 the Negro housing market will require an average of approximately 5,000 additional units per year, or 25,000 units over the five year period, which are not now occupied by Negroes. This demand can be filled by:

(a) housing units now occupied by whites which will be taken over by Negroes;

(b) subdivision of housing units now occupied by Negroes or to be occupied by them in the five-year period; and

(c) new housing units available for sale or rent to Negroes.

With reference to the last of these, it should be noted that hitherto virtually none of the 10,000 or more new units built each year in the Baltimore area has been available to Negroes, except for public housing.

This estimate is based on the following components.

1. Net addition to family formation of 2500 per year. There are 3500 Negro marriages per year in Baltimore City, whose boundaries include practically all of the Negroes living in the urbanized portion of the Metropolitan area. While every marriage does not immediately result in acquisition of a new dwelling unit, it is assumed that virtually all do so eventually through the process of undoubling, and so the two rates are taken to be the same.

The creation of additional households resulting from divorce, separation, or economic self-sufficiency of single family members increases this demand by several hundred, making a total of about 4,000. At the same time, demand is reduced because of the 3,400 annual Negro deaths. For purposes of estimating death of married and widowed individuals may be assumed to decrease the demand at a 50% rate--that is, every two such deaths subtract one unit from the demand. The total decline is estimated at 1,500 annually. Hence, the net addition to family formation is estimated at 3,500 plus 500 minus 1,500, or 2,500 per year for the next five years.

2. Demolition of 1,700 units per year resulting from:

(a) Renewal and other public improvement projects now planned (not including the East-West Expressway), which are estimated by BURHA to account for the displacement of nearly 2,000 households per year, of which two-thirds are Negro.

RACIAL CHANGES IN RESIDENTIAL COMMUNITIES

Recommendations for action, by Baltimore Neighborhoods, Inc.

Recently one of your neighbors contacted Baltimore Neighborhoods, Inc. regarding a situation which has developed in your community. As you probably know, a Negro family has moved in nearby and these neighbors have expressed concern for the future stability of the area.

In some past instances, when a Negro moved into an area, homeowners panicked, "for sale" signs appeared, and the surplus of housing in a relatively small area caused a glut on the market and sometimes also the temporary depreciation of market values. In the mad rush to flee from the area, sellers were willing to take big financial losses, thus playing into the hands of speculators and blockbusters. Some residents had real reasons for moving - departure from town, need for more space, etc. But they were the exceptions. For the most part, homeowners fled an imaginary enemy or became the victims of their own prejudices.

In point of fact it makes no sense to desert, and thereby help to overturn the neighborhood in which presumably you have made a good home and have found cordial and pleasant relationships with your neighbors. Only the hasty departure of the white families makes possible the successful activity of blockbusters and the rapid change-over of occupancy from white to Negro. If you and your neighbors refuse to sell and determined to accept the one or few Negro families who have come, then stability can be achieved and property values maintained. It is up to you to resist falling prey to real estate pressures, rumors and the prejudices of others.

The most effective resistance can be made if like-minded residents organize a neighborhood association, or support your existing association, to fight blockbusting, reject as a group the lures of speculating brokers, and plan a program of disseminating information to all the residents in the community. These people must be alerted to the kinds of real estate techniques to beware of. They must be disabused of some of the myths about changing neighborhoods - for instance the myths that property values always fall in changing neighborhoods and that any Negro will overcrowd and mistreat his property. Through organized action it is possible to stabilize your neighborhood, just as many other neighborhoods in Baltimore have been stabilized in the last decade.

Eventually all sections of the city and the surrounding counties will be integrated. There are already Negro families living in the county communities of Glen Burnie, Dundalk, Reisterstown, Towson, Pikesville, Milford Mill, Odenton, Gwynn Oak and Woodmoor. It is useless to try to outrun the inevitable. Panic and flight can only result in inestimable damage to your own pocketbook and your peace of mind, as well as to the financial and social soundness of Baltimore City as a whole.

Please notify Baltimore Neighborhoods, Inc. at SAratoga 7-3194 or by writing to Room 312, One Charles Center of any evidence of panic among your neighbors or of real estate activity in violation of the enclosed real estate ordinance. (#502) Also, if you would be interested in working with your neighborhood association for the continued stability of the area, please notify, _____

_____.

If there is no association, we will be happy to give you information on how to form one.

Baltimore Neighborhoods, Inc.
One Charles Center, Baltimore 1, Maryland

RACIAL CHANGES IN RESIDENTIAL COMMUNITIES

Recommendations for Action

Recently one of your neighbors contacted Baltimore Neighborhoods, Inc. expressing concern for the future stability of your neighborhood as a result of the recent movement of Negro families into your community.

In the past, when this occurred, homeowners often panicked, "for sale" signs appeared and the surplus of housing in a relatively small area sometimes resulted in a temporary decline of market values. In the rush to flee from the area, sellers were willing to take big financial losses, thus playing into the hands of speculators and blockbusters. Some residents had real reasons for moving - departure from town, need for more space, etc. But they were the exceptions. For the most part, homeowners fled from an imaginary threat or became the victims of their own prejudices.

In point of fact it makes no sense to give in to the pressures that may be set in motion in so-called "changing neighborhoods." Presumably you have in the past found this neighborhood a pleasant place in which to live. There is no reason why this should not continue to be true in the future if you and your neighbors work together to bring about stability. Only the hasty departure of the white families makes possible the successful activity of blockbusters and the rapid change-over of occupancy from white to Negro. If residents refuse to succumb to the persuasions of blockbusters to sell and agree to accept the Negro families who have come, then stability can be achieved and values maintained.

The most effective resistence to real estate pressures, rumors and prejudice can be made if residents organize a neighborhood association, or support an existing association, to fight these ills through a program of education of all the residents. All residents must be alerted to the kinds of real estate techniques to beware of. They must be disabused of some of the myths of changing neighborhoods - for instance the myths that property values always fall in changing neighborhoods and that any Negro will overcrowd and mistreat his property. They must learn to spurn solicitors who phone or call on them and to refuse to accept from the postman letters from persistent brokers which urge them to "sell now, before it's too late."

Ordinance #502, which makes it illegal for any person or firm dealing in real estate to misrepresent facts concerning the present or future value, occupancy, or other aspect of properties in a community, gives protection against the most blatant of blockbusting techniques. However, as you are possibly aware, pressure tactics from brokers often only imply hardship and financial loss if you fail to sell (through them, of course) immediately. The ordinance unfortunately does not prevent this kind of solicitation. Hence the residents must unanimously reject their overtures, in effect putting them out of business by making their activities unprofitable in your neighborhood.

It must be remembered that eventually all sections of the city and the surrounding counties will be integrated. There are already Negro families living in the county communities of Glen Burnie, Dundalk, Reisterstown, Towson, Pikesville, Milford Mill, Odenton, Liberty Road, and others. It is useless to try to run from the inevitable. Panic and flight can only result in inestimable damage to your pocketbook and peace of mind, as well as to the financial and social soundness of the Baltimore area.

Please notify Baltimore Neighborhoods, Inc. by telephoning SAratoga 7-3194 or by writing us of any evidences of panic among your neighbors or real estate activity in violation of Ordinance #502. Also, if you would be interested in working with your neighborhood association for the continued stability of the area, please notify _____. If there is no association, we will be happy to give you information on how to form one.

ORIGIN OF BALTIMORE NEIGHBORHOODS, INC.

Early Efforts of Two Improvement Associations

Early in 1958 the problem of blockbusting[1] and changing neighborhoods struck the northwest section of Baltimore with particular force. In two neighborhoods, Ashburton and Windsor Hills, immediate steps were taken by enterprising and courageous citizens to discourage the flight of white families from the area. These two improvement associations were re-organized on a bi-racial basis, and an agreement reached by white and Negro residents alike that a major effort to stabilize the neighborhood should be directed toward persuading the present white residents to remain and to attracting new white buyers for homes placed, through natural housing turnover, on the market.

Steps taken by the Ashburton Area Association included a house-to house canvass and the distribution of a brochure telling of the association's aim to stabilize the area. As part of the association's efforts a flyer containing the names of new white buyers in the area was published, and residents who had put up " For Sale " signs were contacted and asked not to discriminate against a prospective white buyer in favor of a Negro buyer. These residents were also warned against dealing with unscrupulous speculators who would only ask a nominal fee from the owner and then charge a high fee to a Negro buyer. Letters were written to the personnel

1. Blockbusting has been defined by the Baltimore Commission on Human Relations as "the deliberate creation or exploitation by a real estate broker, dealer, speculator, or owner of prejudice, fear, ignorance or panic designed to induce a rapid change of a block's population from white to colored."

chiefs in key local industries to ask them to recommend the Ashburton Area to employees and not to consider the section "off limits." Finally a letter was directed to the Real Estate Board of Greater Baltimore asking them to encourage realtors to show homes in the area to prospective buyers and not to "quarantine" the entire section.

Windsor Hills, a nearby section in northwest Baltimore, tried to achieve stability by slightly different tactics. The bi-racial improvement association started by publishing and distributing a brochure outlining the assets of the area including the solidly constructed older houses, with wide lawns and stately trees, good schools, recreational facilities, and proximity to the center of the city. Finding that this measure was inadequate, the association appointed one of its own members a resident agent to promote sales and rentals. Through painstaking efforts and at considerable personal sacrefice, the agent succeeded in bringing over thirty white buyers to Windsor Hills. The association notes, with regret, that the average "outside" agent is unwilling either to recommend the area to white buyers or risk his time on an obviously difficult, lengthy sale.

While the pioneering efforts of these two improvement associations helped to stem the tide of panic and flight, they were not sufficient to solve the problem. It was early recognized that no neighborhood association could successfully tackle the situation alone. The basic problem - they felt was that of attitudes: the attitude of the present homeowner, the

attitudes of banks and mortgage lenders, the attitude of real estate salesmen, and most importantly, the attitude of potential white purchasers. To change these attitudes and to perform the educational job necessary to reverse tradition and prejudice were beyond the scope of individual improvement associations.

Appeal to the Business Community - the Greater Baltimore Committee

Accordingly, in July of 1958, the two improvement associations, joined by several others, and by the Citizens' Planning and Housing Association, the Baltimore Urban League, and the Maryland Commission on Interracial Problems and Relations, set out to enlist the aid of the business community. An organization representative of this business leadership - the Greater Baltimore Committee - was considered both forceful enough to take action toward a meaningful solution and the logical organization to approach by virtue of its sponsership of an imaginative non-federally aided $ 127,000,000 redevelopment project for downtown Baltimore. The aforementioned civic groups petitioned the Greater Baltimore Committee for help, pointing out that the future of such projects as the Charles Center and the proposed new Civic Center - projects for which the Greater Baltimore Committee has fought hard - would be jeopardized if ringed by miles of deteriorated neighborhoods inhabited by low-income Negro and white residents.

The approach stressed not only the effect of neighborhood change on the city's cultural, educational, and social life but also

the need for higher income families to support downtown rehabilitation and renewal. Consideration of the opening up of additional areas of new and old housing to Negro residents, a stimulation of public awareness of the practices that cause disorderly change, and the enlisting of cooperation of real estate brokers in the preservation of the city - these were the requests made of the Greater Baltimore Committee.

Greater Baltimore Committee Reaction

While sceptics had warned that the Greater Baltimore Committee's hardheaded businessmen would never become involved in a problem as controversial, complex, and seemingly insoluble as that of changing neighborhoods, the civic groups found that the reaction to their petition was both prompt and encouraging. At a membership meeting in September 1958, the Greater Baltimore Committee adopted a report that recognized the serious economic consequences of changing neighborhoods and referred the matter to its Urban Renewal Subcommittee with the following charge:

"that the problem be considered with specific emphasis on its challenge to the economic stability of the city;

"that a solution to the problem be studied in conjunction with other city-wide organizations - civic, business, and governmental.

"that at the end of a thorough study, the Urban Renewal Subcommittee recommend what role, if any, the Greater Baltimore Committee should play in solving the problem of changing neighborhoods".

Subsequently, the membership moved to eliminate "if any" from the charge and finally recommended that a city-wide agency be formed in which the Greater Baltimore Committee would participate.

City-Wide Conference Held

In November, 1958, a conference sponsored by the Greater Baltimore

City-Wide Conference Held (continued)

Committee was held and attended by responsible business and community leaders throughout the city. Realtors, bankers, lawyers, city planners, educators, members of improvement associations and appropriate city agencies participated in panel discussions centered on such questions as:

1. How do we stop block-busting?

2. New housing for Negroes - how do we get it?

3. How neighborhood resources can be used.

4. How do we make older city housing competitive with new housing in the suburbs?

The chairman of the meeting, Mr. James W. Rouse, prominent mortgage banker, chairman of ACTION, and urban renewal expert said at the conclusion of the meeting:

> "We find that the rapid conversion of neighborhoods from all-white to all-Negro occupancy presents Baltimore with one of its most serious economic crisis in recent years. The flight of the medium and upper income families from the city limits and their replacement by persons of both races of the lowest income levels is a threat not only to our municipal solvency but to the economic stability of the entire metropolitan area. It is therefore recommended that there be formed a city-wide organization composed of representatives of civic and labor organizations, improvement associations, the Real Estate Board of Greater Baltimore, the Greater Baltimore Committe, the Association of Commerce, the homebuilders, and the city and state governments. During the preliminary stages and until the city-wide group is well established the Greater Baltimore Committee will provide clerical and professional staff assistance."

The formation of Baltimore Neighborhoods, Inc. followed closely on the heels of this all-day conference. By-Laws and Articles of Incorporation were drawn and approved by the member groups and ratified on March 20, 1959.

PURPOSES OF THE ORGANIZATION

1. To conduct a continuing program to stress and promote the advantages of urban living and the purchase of homes in residential neighborhoods.
2. To maintain the stability and quality of residential neighborhoods in the Baltimore Metropolitan Area.
3. To develop and implement means of financing older homes in the established residential neighborhoods of Baltimore City on a basis permitting these neighborhoods to compete from a financing viewpoint with the newer developments.
4. To remove the barriers which block the operation of a free market and thus to increase the availability of housing sale and rental to all people in the community; to stimulate construction of new housing units within Baltimore City; and to prevent the practice of steering" Negroes to and whites from residential areas known as "changing neighborhoods."
5. To stem panic or wholesale flight from existing neighborhoods and to process and help follow through with complaints relating to real estate practices and similar matters affecting neighborhoods.
6. To protect residential neighborhoods against the deliberate creation or exploitation of prejudice, fear, ignorance, or panic, whether by real estate brokers, dealers, speculators or others desiring to induce a rapid change in the character of population; by encouraging action against persons who use illegal tactics in the furtherance of such techniques; and by education and other appropriate means.

. . . .

Purposes of the organization (continued)

7. To work with neighborhood associations, builders, real estate brokers and agents, lending institutions, church and civic groups, labor organizations, the Negro community, appropriate state and municipal agencies, and the general public to coordinate efforts in behalf of the fulfillment of the objectives stated above.

8. To exercise such other functions as may be necessary to maintain the quality of the residential areas of the Baltimore Metropolitan Area.

THE BALTIMORE AREA INTER-RELIGIOUS CAMPAIGN
FOR
THE GOOD NEIGHBOR PLEDGE

I believe that every person is endowed with the inalienable right to purchase or rent a home anywhere without limitations based upon race, religion, or national origin.

I believe that discrimination on the basis of race, religion, or national origin is evil, and that obedience to God compels me to love my brother in word and deed.

I believe that it is imperative within our Baltimore metropolitan area for all persons of good will to take an active role in helping to achieve freedom of opportunity in housing.

Therefore, I will welcome into my neighborhood responsible persons of any race, religion, or national origin, and I will work with them and other neighbors to maintain a desirable community for all.

GUIDELINES FOR HOMESEEKERS

Buying a house is perhaps the most costly purchase ever made by most people. The first question to be faced is whether to buy at all. For some people it is clearly better to rent than to buy. For some, paying rent helps budgeting.

After weighing the advantages and disadvantages of renting and buying and you decide to buy a home, you must then ask yourself this question, "what price can I afford?" In the majority of cases this question can be answered by looking at your savings and, even more important at your earnings. Some people buy houses with little or no savings. A steady income is far more important. Over 98% of all houses are bought with mortgages and over 80% of all homes are bought by people who make a small down payment. The rest of the payments are extended over many years.

There is no fool-proof rule to tell exactly how much a home buyer should earn to be able to repay a mortgage loan of a given amount. There are many rough guides. Some experts say your "take-home" pay in one week should be enough to make your monthly payment. Others say your gross weekly pay (your earnings before deductions) in one week. A long established "rule-of-thumb" is that the price you pay for a house should not be over two and one-half times your yearly take-home pay. On the back of this sheet you will find a budget form which you can use to decide how much you can pay for a house.

To buy even a modestly-priced house it may be necessary for one to borrow money. In most cases this means getting a long-term loan, or a mortgage, from a lending institution. A mortgage enables you to buy the house and repay the loan in monthly payments over a long period. The house is the security for the loan. Like any other loan, a mortgage costs money. Loans made for buying homes are of three types: Federal Housing Administration insured loans, Veterans Administration (VA) guaranteed loans, and conventional loans. FHA and VA loans are made by private lenders with the VA or FHA insuring the loan against possible loss to the lender. Conventional loans are usually made by savings and loan associations, mutual savings banks, etc. The down payment, as well as the interest rate are usually higher than with a VA or FHA mortgage.

Generally it is desirable for home buyers to get an FHA insured or VA guaranteed loan. There are many reasons some buyers do not get FHA insured loans. To name a few: A bad credit rating; getting a FHA insured loan takes time; the applicant does not have the required down payment; the applicant is not able to pay the closing costs; the applicant's income is too low to meet the mortgage payments. A rejection by VA and/or FHA may also be a warning that the purchase you have in mind is too risky. Getting a conventional loan will not reduce the risk.

There is one major expense that some persons overlook when thinking of buying a house. This is the closing cost. This is made on the day of settlement, the day you receive a deed showing you are the property owner. At this time you must pay certain standard local fees, plus repay the previous owner for certain prepaid expenses he has made. The total amount of the closing cost depends on the price of the property, on taxes and on expenses already paid. The amount varies from about $400 to $1,000.

Over your lifetime the payment you make on the interest on your mortgage will be almost as large as the price of the house itself. If you are able and willing there are ways of saving over $11,000 on interest payments alone when purchasing a $10,000 house.

There are many ways to reduce your house purchase expense. The larger your bankroll, the higher and more stable your income, or the greater your willingness to economize on other expenditures, the better will be your ability to take advantage of the following elementary principles.

1. Buy a house at the best price;
2. Pay off your mortgage in as few years as possible;
3. Make the largest down payment you can afford;
4. Double up on your monthly payments when possible;
5. Pay the lowest interest rate possible;
6. Bargain for the lowest ground rent;
7. Protest against unfair assessment of your property;
8. Shop for low fire insurance premiums;
9. Get mortgage life insurance to protect your family in case something happens to you and payments cannot be maintained;
10. Consider a GI or FHA repossessed home if it meets your needs;
11. Compare savings on a dollar invested in housing with the earnings of that dollar invested elsewhere.

AN IMPORTANT MEMO TO OUR NEIGHBORS

During the past few years Negro families have been buying and renting homes in this neighborhood. They have been seeking a better place to live—just as most of us who came here to live several years ago. This movement has resulted in panic and flight among some of our former neighbors and is beginning to develop into a problem which could have serious consequences for this community if we let rumor and other evils prevail.

Truth and freedom go hand-in-hand—truth and the freedom from needless anxiety, truth and the freedom to act within the limits of our individual and social responsibilities.

Truth and rumor seldom go hand-in-hand. It is human nature to hear the worst when one expects the worst, even though the facts are different. It is human nature to exaggerate when one is speaking emotionally about an emotion arousing situation. It is human nature to fit persons and situations into categories, rather than to make the painstaking effort of getting all of the facts and getting them in proper perspective.

There are many bad things that can happen to all of us, and among them is to allow ourselves to become the slaves of rumor. Even worse is to allow ourselves to be the agents of rumor.

There can be no question that in our day we are called upon to face a variety of complex, important, and disturbing problems. We must prefer to have it otherwise. But we have it the way it is, and we will either face the problems and do our best to find solutions or we will be delinquents, adult delinquents.

During the last World War two men were talking. One said that he was fighting to make the world a better place for himself to live in. The other said that he was fighting to make the world a better place for his children to live in. We have pretty much the same choice. We can make our little world better, perhaps, by not facing the big problems. We can panic in the face of rumor. We can, perhaps, get out and leave the problems to those people who are left. We may be lucky enough to die before we have to run away again. Or, on the other hand, we can decide that we are going to do whatever God allows us to do to solve some of the problems. We can face the fact that it will cost us some time, involvement, some emotional turmoil, some misunderstanding, and possible risk. So does surgery when we are ill. So do many things in this life.

It is no disgrace to be confused in our day. It is no disgrace to be upset and anxious. It is no disgrace to think at this moment that the only solution to neighborhood integration is the no-solution of panic and flight. It is a disgrace to desert one another, to refuse to talk openly, to peddle rumors—to walk the same old road of failure.

Our community needs a vigorous neighborhood association. It needs it now. It needs you. There must be a clearing house for accurate information. There must be men and women who will work to present facts to their neighbors and help calm troubled spirits. There must be action, and truth, and involvement. We ask for your name, for some of your time, for your good will, for the effort of your mind. We do not ask this for ourselves, but for our children and yours. Can we give them so much and then let them inherit the problems that are now ours?

Accordingly, we are inviting all homeowners and tenants who share our concern to a meeting to discuss a plan for neighborhood organization and action. We do this in the conviction that ours is not a hopeless situation and that a concerted effort by all will help us to maintain this community as a desirable place to live for all.

OPEN FORUM MEETING

St. Matthew's Hall — Sunday, October 9, 1966 — 7:30 P.M.

Speakers, Question & Answer Period.

This meeting is open to *all* residents of the area bounded by Cold Spring Lane, The Alameda, Woodbourne Avenue and Perring Parkway.

This notice is being distributed with the knowledge and support of the three clergymen of the community:

Rev. Raymond Gribbin—St. Matthew's Parish
Rev. Clarence L. Fossett—Northwood-Appold Methodist Church
Rev. J. Calvin Jackson—Faith Presbyterian Church

BALTIMORE - Notes for the File

1. Has your Good Neighbor Pledge Campaign been tried this year? If so, how successful was it? If not, what preparations are being made to get the 10,000 signatures?

   The Good Neighbor Pledge Campaign has not been tried again. Mr. Holmgren will follow the lead of a successful campaign in Boston which was a religious organization oriented campaign. He expects to conduct Baltimore's campaign in the fall of 1966.

2. Why did the business leadership respond favorably to the facts and implications of the housing problems for Negroes? How did you gain their sympathy and understanding?

   This was purely a matter of leadership. Mr. Holmgren feels that good leadership is almost a "cure-all." In Baltimore's case it was Mr. Jim Rouse, a promoter and developer of "Columbia." It was done purely for business reasons to try to stabilize the tax base.

3. Did the conference which led to the creation of Baltimore Neighborhoods, Inc. succeed because of the strong "respectable" backing; i.e., Greater Baltimore Committee, business and community leaders?

   Definitely. The reason for Greater Baltimore's success was the leadership of Greater Baltimore's committee which was composed of a hundred highly selected leaders, and this was developed basically because of default in leadership by the Baltimore Chamber of Commerce.

4. The Conference on Equal Opportunity in Housing, November, 1964: what were the preparations for it, the program, financing, speakers or leaders, results?

   BNI had help from the President's Committee on Equal Opportunity in Housing, help financially as well as otherwise. The President's Committee on Equal Opportunity in Housing first had a conference in Boston; the second one was held in Baltimore. Baltimore's had a committee composed of 20 people to develop the program, background papers, and approximately 600 people attended a luncheon. The conference was held for a complete day.

5. How did Baltimore obtain the cooperation of the Real Estate Board? Was this Conference on Equal Opportunity in Housing the deciding factor? Is the organization, the Real Estate Board, integrated?

   Through the leadership of Jim Rouse. Yes. Yes; it happened as a fluke. The Real Estate Board sent out a letter soliciting memberships indiscriminately to all newly licensed real estate brokers. Through a little opportunistic politicing they took in six Negro brokers at one time. The multiple-listing bureau now has a Negro on the Board of Directors. Mr. Holmgren came to Baltimore in 1961; the Real Estate Board integrated in 1963.

6. What sort of staff (number and training) and services does the Baltimore Neighborhoods, Inc. have?

   BNI has two professionals: Mr. Holmgren, a University of Chicago graduate in political science who worked with the Chicago Housing Authority, American Friends and Urban League, and his assistant,

a graduate of Vassar in history who came from the Baltimore Housing Authority. They have one intern from NAIRO.

7. Baltimore Public Schools: How integrated? Does the situation reflect the housing pattern? Or are the children bussed from their neighborhoods to achieve some sort of racial balance? Are many children in private schools, parochial schools?

   Baltimore population is 42% non-white; the school population is 75% non-white. School follows housing patterns. Schools have open enrollment; there is bussing only to overcome overcrowding, but this does help, of course, in the integration pattern. The new superintendent from New Haven is very good and has a positive program for the future. Again Mr. Holmgren emphasized the importance of leadership. Mr. Holmgren feels that schools are the single most sensitive problem for BNI. This is where he finds more parental resistance. Although Mr. Holmgren did not say so, I believe he would case the city and move out in the matter where he found good leadership response because his successes and failures have been so highly tied to the leadership he was able to obtain - whether it was the Real Estate Board or the schools. It is rather interesting to note that the pattern of integration in Baltimore does not follow that of Washington, D. C. In Baltimore the elementary school is poorly integrated, junior high fairly integrated and high school well integrated. The tutorial project instigated by Fellowship House and conducted by high school students as tutors has been most helpful for a remedial program.

8. What progress has been made with the Apartment House Owners Association regarding open occupancy?

   BNI serves on a retainer basis to AHOA. The breakthrough with AHOA came when Hopkins University open listings or listing only by those who would agree to open occupancy. Again, it was a matter of leadership within AHOA.

9. Has the Real Estate Board's question on "open occupancy: yes or no" increased the availability of housing to non-whites? Have people been inclined to say no when confronted with this question for personal prejudice or neighborhood pressure?

   There hasn't been long enough opportunity to take a reasonable sampling. This is what they must find out. Mr. Holmgren knows that the result will depend entirely on how the AHOA interviewers ask the question. BNI hopes to conduct the training procedure.

10. Do you have the results of the survey of owners' attitudes on open occupancy which was conducted by AHOA and BNI? If so, may I have a copy?

    Mr. Holmgren will furnish us this. The 1966 president of AHOA first accepted then declined a BNI Board position, evidently because of pressure.

11. What has been the outcome of the impetus for a fair housing law? If it has passed, does this reflect the present support of the business community (Greater Baltimore Committee)?

Progress has increased each year but directly in ratio to leadership in officers - with the Greater Baltimore Committee, Baltimore Real Estate Board and Apartment House Owners Association. Unless anti-blockbusting laws are geared to fair housing legislation Mr. Holmgren is not enthusiastic about them.

12. Is there much hope for open housing in the suburbs, in Baltimore and Anne Arundel counties? How do you go about trying to gain cooperation here?

BNI is making progress in the suburbs. One problem here is getting information across to the Negro community about what they can do. BNI is getting assistance from activist groups plus Negro church groups, social clubs, etc. The NAIRO intern is meeting with these people.

13. I would like any other completed studies along with copies of questionnaires used, if available. (These studies are: 3-phase survey of 17 Negro families who have bought in white neighborhoods, of their neighborhoods and of business and community leaders in the areas; survey of practices of Realtors operating in Baltimore County with respect to Negro homeseekers; survey of apartment house owners with respect to policies on renting to Negroes; survey to examine the outcome of the good neighbor pledge campaign; updating of 1963 study of Negro housing demand; analysis of the distribution of racially labeled classified apartment rental advertising.)

Mr. Holmgren will forward this information to us.

14. What is BNI's opinion on the single class neighborhood vs. the multiple-class neighborhood? (To spot low rental housing or spot rent subsidy?)

Mr. Holmgren believes it has merits.

15. Other civic or religious groups?

"Other civic" does not mean Kiwanas or Rotary-type organization. Religious groups included all denominations and all sexes.

16. Could we have a copy of the 1960 BNI anti_blockbusting ordinance?

Mr. Holmgren will send us a copy.

17. Has the Woodberry neighborhood been integrated since the experience of violence? Is there any plan (note in appendix)?

No, there is very poor organization in Woodberry.

18. Has there been any progress in communications with the Maryland Homebuilders Association?

This has been worked on, there has been some success, but again this depends on who the officers are.

19. Do you know of Mr. Jack Tallent, U. S. Chamber of Commerce's Community Development Program, and his work toward metro-economic stabilization?

No.

20. Is there any further result of the FHA complaint mentioned on page 5? What would you think of the possibility of getting FHA to take the initiative aggressively rather than put the burden on the applicant (as in freedom of choice for schools)?

    The FHA complaint is still in process. There is poor FHA leadership in Baltimore.

21. Is there anything further on the first paragraph, page 6?

    This is being furthered by utilization of NAIRO intern.

22. What is the status of fair housing legislation before the County Council?

    The County Council has passed a fair housing statute.

23. Over what period were the 54 talks listed in the appendix of the 1965 Annual Report made?

    Didn't receive an answer.

HOUSING AND THE NEGRO MARKET IN METROPOLITAN BALTIMORE

A Report by Baltimore Neighborhoods, Inc.

In the February 1963 Newsletter of Baltimore Neighborhoods, Inc. it was reported that an annual need of 5,000 additional housing units for Negroes had been estimated for the following five years. The geographical area included in the estimate, which was made by BNI's Research Advisory Committee, is the urbanized portion of metropolitan Baltimore.

Some of the housing to fill this need will be supplied by new construction, some by the creation of additional units through conversion of one-family to multi-family homes. The most important source to fill the need, however, will be units now occupied by white families that may be expected to pass to Negro occupancy.

The program of neighborhood stabilization in which BNI has engaged for the last five years has included encouraging resident white families not to leave "changing" neighborhoods and other white families to purchase or rent in these same neighborhoods. Although this activity has helped to create stability and prevent new ghettos from being formed, it has also somewhat limited the Negro market.

A necessary corrolary to neighborhood stabilization, therefore, is to find homes for Negroes outside the traditional ghettos. It is inevitable that some of the Negro housing needs will have to be met not only in predominently white areas adjacent to Negro communities but in the surrounding counties as well.

That the movement of Negroes out of the center city and into previously all-white suburbs is happening and will continue to happen is evidenced by non-white movement into Glen Burnie, Milford Mill, Pikesville, Fern Park, Loch Raven Village, Mt. Washington, Idlewood, Odenton, Norwood Heights, Gwynn Oak, Pimlico, Northwood and Woodbourne. The non-discriminatory policy in FHA and VA foreclosure sales, the President's Executive Order prohibiting discrimination in housing under federally insured mortgages, and the rising standard of living of many Negro families are all factors influencing the probability of further suburban sales to Negroes.

A very postive aspect of these developments, even for white people who are apprehensive about integration, is that when Negroes are permitted a freer choice of neighborhoods they need not concentrate in certain limited areas. Hence, whites will not need to fear that the arrival of one Negro family will be followed by an "invasion." Moreover, if white families in the city can observe that the suburbs are no longer a "place to hide" from integration it is probable that they will think twice before taking flight.

BNI acknowledges a responsibility to assist presently-white neighborhoods in making adjustments to the arrival of Negroes. Its role in helping to find sensible answers to neighborhood change is known to its members and friends. Recent fruitful meetings have taken place with neighborhood associations in Chinquapin Park, Leith Walk, Liberty Road, Woodbourne, Park Lane, Woodmoor, Idlewood, Blossom Hills, and elsewhere, and we continue to keep in close touch with our twelve member associations.

Baltimore Neighborhoods' contacts with a growing number of civic interest groups serve to increase the number of individuals and organizations committed to the aims of our program. Several Realtors and a few homebuilders have also either committed themselves or expressed concern, and the Real Estate Board of Greater Baltimore has urged the removal of race labels in real estate advertising. As of April 1964, twelve hundred residents in metropolitan Baltimore had signed Good Neighbor Pledge cards indicating their willingness to welcome neighbors regardless of race.

Meanwhile our sale-rent program, pursued with the cooperation of several brokers, includes both the listing of houses and assistance to home-seekers in integrated neighborhoods, including Baltimore County neighborhoods where more opportunities are becoming available.

Some Suggestions About Neighborhood Meetings

In Racially Changing Areas

What Kind of a Meeting?

There are three kinds of meetings that have been held successful to deal with problems in racially changing areas:

1. Block Meeting - which includes residents of a single block of a street. This type of meeting is usually small, very informal. Any block resident is eligible to participate. This meeting has the advantage of real grass roots contact and a very democratic basis. On the other hand, it may be hard to find leadership on a single block. If blocks federate, the resulting group may become top heavy with organization since every block in a neighborhood would be represented.

2. Neighborhood Leadership Meeting - includes the key persons, opinion makers and most informed residents of an area. Very often this kind of meeting is called by some institution (church, synagogue, etc.) and representatives may be from other institutions. This group can bring strong, intelligent influence to bear on problems, but may not have adequate knowledge of the feelings and tendencies of the residents of particular blocks.

3. Simple Membership Meeting - includes anyone in the entire neighborhood who is committed personally to working on the changing neighborhood problem. Participation can be drawn from many areas of the neighborhood. These groups are usually most efficient and are composed of reliable people. As disadvantages, these groups have to contend with the danger of becoming isolated elites or personalized cliques instead of networks for neighborhood education.

Any of these meeting types or combinations of them may be used depending upon the needs of your area. Certain other factors about such meetings should be stressed.

1. The meeting should be small (25 people top limit). To discuss racial change, a question that is emotionally loaded for many people, in a large group is usually a mistake. The meeting should be called or chaired by someone from the area who is: a. known, b. respected, c. not unacceptable to residents because he is highly controversial.

2. Although the meeting should be open to all residents, some care should be taken to insure that the clear majority of those attending are stable and reasonable people. Extremists should be in the minority.

Same as Philadelphia's suggestion

3. The meeting should be held on "neutral" ground, that is, a place that people will feel free to come to without feeling that they are under the auspices of any specific religious, political, ethnic etc. group.

4. It is preferable to hold block meetings in a home. This is an informal atmosphere that sets a tone of neighborliness. Evening meetings are best, but shopping nights and those on which important or popular TV shows are scheduled should be avoided. The meeting time should be late enough so that parents can put children to bed before attending.

5. The meeting should preferably be held shortly before the first Negro family moves in. People want to talk about this subject then.

6. Be sure that the purpose of the meeting is clear. Take care to avoid any rumor or suggestion that the meeting is being held to keep non-whites out of the area. The meeting must be clearly designated as one at which the question of neighborhood change will be discussed.

7. Be sure that leadership is firm enough to set an informal friendly tone for the meeting. Opposing points of view should be freely accepted, but conflicts should not be violently expressed. The tone of controversy should not dominate. The tone of reasonable, practical discussion should.

8. Set specific goals for the meeting. Responsibility should be fixed and some provision should be made for people to report back.

9. Keep track of time. Having some coffee and tea on hand for the session adds a note of relaxation and friendliness.

A RESUMÉ OF THE PROGRAM AND ACHIEVEMENTS OF BALTIMORE NEIGHBORHOODS, INC.

The goals of Baltimore Neighborhoods, Inc. are to stabilize racially changing neighborhoods within the city, to create new opportunities for Negroes and other minorities throughout the metropolitan area and to achieve a single housing market for all citizens. Launched in 1959, its program has been effectively carried out by a highly qualified professional staff, ably supported and directed by an interracial Board of Directors representing the interests of varied segments of the Baltimore metropolitan community. Among its past achievements and continuing activities are:

Encouraging and assisting white buyers in the purchase of homes in racially mixed neighborhoods;

Preventing panic and flight following the first move-in of Negro families in many metropolitan Baltimore communities, thus averting both the temporary depression of prices and the rapid formation of new ghettos;

Continuing educational and planning meetings with neighborhood groups and religious institutions on neighborhood stabilization, including the frustration of block-busting tactics and the formulation of long-range plans for maintaining the high quality of communities;

Drafting and obtaining passage and enforcement of an anti-block-busting ordinance;

Helping a number of Negro families find homes outside the traditional ghettos;

Securing the support of the Real Estate Board and the newspapers to eliminate racial designations in classified real estate advertising in sales housing, which tended to accelerate racial turnover in changing neighborhoods;

Continuing communications with builders and real estate brokers on finding ways to open the housing market to all citizens. (A tangible result of this has been recent Real Estate Board action to change by-laws to require its members to sell homes to any qualified buyer without regard to color if the owner is willing, and also to include a question on the multiple listing contract as to the seller's willingness to sell on an open occupancy basis. It is also noteworthy that in February 1965 the Real Estate Board of Greater Baltimore became the nation's first real estate board to request the expansion of the coverage of Presidential Executive Order #11063 to prohibit discrimination in the sale of most new housing.);

11063

Participating with representative religious groups in cooperative education and action programs to promote fair housing goals in the religious community;

Launching a good neighbor pledge campaign to indicate the willingness of residents to welcome neighbors regardless of race;

Cooperating and consulting with the human relations commissions of Baltimore City and Baltimore and Anne Arundel Counties in studying housing needs, conducting hearings on the nature and scope of discriminatory practices and recommending remedial programs;

Assisting in the peaceful and calm acceptance of Negro families who have move into several Baltimore County and Anne Arundel County communities;

Initiating and coordinating a Conference on Equal Opportunity in Housing in November 1964, attended by 600 persons, which did much to advance the education of the real estate and building industries and the community to the need for - and growing insistence on - fair housing practices;

Coordinating the efforts of groups throughout the city to support fair housing legislation, and assisting in the drafting of that legislation;

Encouraging the formation of indigenous fair housing groups in several suburban communities;

And, finally, helping to stimulate communications between the apartment house owners and the civil rights groups which are demonstrating for voluntary desegregation.

We believe that the climate in Baltimore would today be substantially less favorable if Baltimore Neighborhoods, Inc. had not been active in these programs, and we believe too that during the next critical months our continued efforts will be of the utmost importance in determining the direction of change and the rapidity with which it takes place. Baltimore will inevitably be a community in which racial justice is reflected in housing. Baltimore Neighborhoods is determined to work for the early and harmonious achievement of that goal.

REAL ESTATE BOARD POLICY STATEMENT ON CHANGING NEIGHBORHOODS

The racial characteristics of many Baltimore neighborhoods have radically, and in many cases, abruptly, changed during the last decade. Migration to the suburbs and surrounding counties has followed.

Panic followed by flight has resulted in the deliberate sale of properties, in many instances, through an unprincipled broker, to persons clearly ill-qualified to meet mortgage payments and usually disinterested in the maintenance of their property and community.

This process will eventually erode the tax base of many residential communities which, nevertheless, will continue to require all normal City services, including fire and police protection.

The Real Estate Board of Greater Baltimore is determined that definite action must be taken to halt this serious deterioration of our residential areas and to bring stability to affected neighborhoods. While we acknowledge that there is no immediate remedy for all problems confronting our neighborhoods, we feel the following policy statement might effectively combat the pressure exerted against many neighborhoods and substantially dimish flight and resultant panic.

Frequently, real estate advertising, either by design or unintentionally, misrepresents the true character of a neighborhood and implies a great degree of racial change when actually there has been little or none. Therefore, the Real Estate Board of Greater Baltimore urges Realtors to abstain from the use of racial characterizations in all advertising. It is our hope that this initial effort will result in a prohibition against the use of racial designations in real estate advertising by our daily and Sunday newspapers. However, the Realtor should fully inform prospective buyers of all neighborhood charateristics and, as required by the Realtors' Code of Ethics, withhold no pertinent information from either the buyer or seller.

Occasionally, Realtors have relinquished properties listed with them due to a change in the character of a neighborhood and, because of this, owners have been forced to sell their properties without Realtor representation. Throughout the period of a listing in such changing neighborhoods, Realtors should extend every effort to obtain a buyer, regardless of race, creed, color or national origin.

As Realtor, we reaffirm our pledge to represent owners to the best of our ability, mindful that the ultimate decision as to whom the property shall be sold rests solely with the owner.

The foregoing is the full text of a recently adopted policy statement on changing neighborhoods. This action was taken by the Real Estate Board of Greater Baltimore.

ORDINANCE NO. 502

...making unlawful certain practices by real estate dealers, brokers, agents and salesmen in connection with real property, defining the said offenses and defining the penalties thereof.

By the City Council of Baltimore, April 4, 1960.

Section 1. Be it ordained by the Mayor and City Council of Baltimore, That a new section, Section 69A, be and the same is hereby added to the Baltimore city code (1950 edition), title "police" to follow immediately after Section 69 thereof, and to be under a new sub-title, "Real Estate Practices," and to read as follows:

REAL ESTATE PRACTICES

69A. (a) (1) This ordinance shall apply to real estate dealers as herein defined. Real estate brokers shall mean any person, association, co-partnership, or corporation, foreign or domestic, who for another and for a fee, commission, or any other valuable consideration sells, purchases, exchanges, leases, rents, or collects rent, for the use of real estate or who attempts or who offers by verbal solicitation, advertisement or otherwise to perform any such function or who is engaged in the business of sub-dividing and selling land in building lots or sites. Real estate salesmen shall mean any person who performs on behalf of any real estate broker, any act or acts authorized by the real estate licensing law of Maryland, Code Article 56, Section 212, etc. (1957 Edition), as amended

from time to time, to be performed by a real estate broker. Real estate dealer shall mean one who is regularly engaged in the business of dealing and trading in real estate or leases and options thereof. Real estate shall include leaseholds and all other interests in real property.

(2) Any person, partnership, association, or corporation who for another in consideration of compensation by fee, commission, salary or otherwise or with the intention or in the expectation or upon the promise of receiving or collecting a fee, does, offers, or attempts, or agrees to do, engages in or offers, or attempts, or agrees to engage in, either directly or indirectly, any single act or transaction contained in definition of real estate broker or real estate salesman in this section, whether said act be an incidental part of a transaction or the entire transaction, shall be deemed a real estate broker or real estate salesman within the meaning of this ordinance.

(3) Notwithstanding the foregoing definitions the terms real estate broker and real estate salesman shall not include; receivers, trustees, administrators, executors, guardians, or other persons appointed by or acting under the judgment of or order of any court; public officers while performing their official duties as such; any bank, trust company, or mortgage loan institution organized under the laws of this state or the United States with respect to the management or sale of any property acquired through or in connection with mortgage foreclosures; investment

homebuilders with respect to the sales of rental of housing constructed by them; attorneys-at-law who are not regularly engaged in the real estate business and who do not hold themselves out by sign, advertisement; or otherwise as offerring to the general public the services authorized to be performed by real estate brokers and persuant to the real estate licensing law of Maryland, Code 1957 edition, Article 56, Section 212, etc.; and any person holding in good faith a duly executed power of attorney from the actual owner authorizing the sale and conveyance or leasing of any real estate where only one such transaction is involved or any duly licensed auctioneer with respect to sale of real estate at public auction.

(b) No real estate broker or salesman shall, or shall attempt to:

(1) Use any contract form for the listing of property for sale, rent or exchange or any contract form for sale, rent, or exchange of property or advertising matter which includes the name of any association or organization of which the broker or salesman is not a member.

(2) Retain the services of any person as a salesman on a purely temporary or single transaction basis as a means of evading the law regarding the payment of commissions to non-licensed persons on some contemplated transaction.

(3) Act for more than one party in a transaction without the prior knowledge and consent of all parties for whom he acts.

(4) Refuse, or fail within thirty days after demand to account for, or to remit any monies coming into his possession which belong to others, or refuse or fail to promptly furnish a duplicate copy of all listing contracts to sell or rent property or of any lease or contract or sale when prepared by a real estate broker to all parties to any such contracts or leases, or fail to retain a copy of such contract. Noting in this subsection shall be construed to authorize any such broker or salesman personally to prepare any such legal paper in his practice.

(5) Fail to disclose to any person with whom the broker or salesman is dealing any material fact or information within the knowledge of the broker or salesman concerning or relating to the property with which the broker or salesman is dealing.

(6) Make any untrue or misleading statement in any attempt to obtain a listing of real property for sale, knowing such statement to be false or misleading, or knowing that the broker or salesman making the statement has insufficent knowledge of its truth, or falsity to warrant making the statement.

(7) Accept a listing contract to sell property unless such contract provides for a definite termination date without

notice from either party, or accept any listing contract which provides for a net return to the vendor leaving the broker or salesman free to sell property and retain any excess over the price named by the vendor.

(8) Pay or receive any rebate, compensation or commission from any person whatever except the seller of the real estate without the prior knowledge and consent of all parties to the transaction.

(9) Have any interest, directly or indirectly, in the purchase of any real estate which he or his organization has listed for sale, where such purchase is made during, or within six months after the termination of, such listing.

Provided, however, that this paragraph shall not apply in cases in which a broker enters into a listing contract and a simultaneous "trade in" agreement, whereby the broker or any interest, either directly or indirectly, offers a guaranteed price for the listed property within a certain period in order for the seller to purchase another residence, either new or existing housing.

(10) Disregard or violate any of the provisions of the Maryland Real Estate Licensing Law (Code, 1957 Edition) Article 56, Section 212-232, as amended from time to time.

(c) No real estate broker, salesman, or dealer shall, or shall attempt to:

(1) Pursue a continued flagrant course of misrepresentation or make any false promises directly or through agents or salesmen or advertising or otherwise.

(2) Make any misleading or untrue statements in advertising real property including advertising for sale or rent as an agent or broker without disclosing in such advertising the name of the advertiser or the fact that the agent or broker or where any such advertising is published over the name of a licensed real estate salesman failing to disclose in such advertising the name of the broker for whom such salesman is licensed to represent.

(3) Solicit or induce any party to a contract lease or agreement to break such contract for the purpose of substituting a new contract lease or agreement when such soliciting, or inducing is motivated by anticipated personal gain.

(4) Guarantee or authorize or permit any person to guarantee future profits which may result from the sale of real property.

(5) Solicit or offer for sale real property by offering "free lots" or conducting lotteries or contests, or offering prizes for the purpose of influencing a purchase or prospective purchaser of real property, or advertising or offering "Free appraisals" unless the advertiser is equipped and stands ready to appraise real estate to any person requesting such an appraisal free of charge regardless of the purpose for which such an appraisal is requested.

(6) Make any untrue or misleading statement to induce the sale of real property, whether to the person making the representation or to any other person, knowing such statements to be false or misleading or knowing that the maker of the statement has insufficient knowledge of its truth or falsity to warrant making the statement.

(d) No real estate salesman shall:

(1) Accept a commission or valuable consideration as a real estate salesman for the performance of any act as a real estate salesman without the knowledge and consent of the broker named in his license.

(e) A violation of the provisions of this section shall be a misdemeanor and any person convicted thereof shall be subject to a fine of $100 and not more than $500 or to imprisonment of not more than 60 days or to both such fine and imprisonment at the discretion of the court. Where an offense is committed by one or more individuals acting for a corporation, it shall be deemed to be the offense of the corporation and the individual. Where the offense is committed by one or more individuals acting in behalf of a partnership or association, it shall be deemed to be the offense of the partnership or association and the individual, and also the personal offense of any partner or associate who aids, abets, directs, counsels and/or knowingly participates therein.

Section 2. And be it further ordained, That if any section, provision, or clause or word of this ordinance is found by a court of competent jurisdiction to be unconstitutional or invalid for any reason, such unconstitutionality or invalidity shall be restricted to the particular provision, section, clause or word found to be unconstitutional or invalid, it being the legislative intent that the provisions of this ordinance are severable.

Section 3. And be it further ordained, That this ordinance shall take effect from the date of its passage.

Approved.....

Mayor of Baltimore City

President of the City Council of Baltimore

AMENDMENT ADOPTED MARCH 1966

Solicit properties for purchase or sale by door-to-door solicitation in person, by telephone or by the mass distribution of circulars.

HOW TO DEAL WITH REAL ESTATE PRESSURE TACTICS
WHEN A NONWHITE FAMILY MOVES INTO YOUR NEIGHBORHOOD

A. When you receive postal cards or advertising from real estate brokers:

1. Note date, name of broker, address of houses cited as sold.

2. Check to make certain that the house has actually been sold as claimed; if not, report the misrepresentation to Baltimore Neighborhoods, Inc.

3. Mark face of card "REFUSED - return to sender," and mail.

B. When you receive phone calls or personal visits from brokers:

1. Before you listen to the solicitation, ask, "Who is this speaking? Are you a licensed "real estate salesman?" If the reply is "No," say, "Then let me speak with a licensed broker of this firm. I do business only with licensed brokers."

2. This may end the conversation, but note date, name of firm, name of person calling, any evidence received as to where a telephone call was made from (an office or a home).

3. If you do talk with a licensed salesman or broker, you might explain:

a. That you object to this kind of solicitation and ask him to see that his firm does not trouble you this way again.

b. That if you have occasion to sell, you will not use a firm that uses these tactics of impersonal solicitation.

c. That you belong to the _____(Neighborhood Association) which opposes these panic-creating pressures.

d. (For repeaters) That your records show (give history of calls from this firm) and that you propose to report this to the appropriate agency, Baltimore Neighborhoods, Inc. and your neighborhood association.

4. Important: Note any misrepresentation of fact and report it immediately to Baltimore Neighborhoods, Inc.

C. Use of signs:

1. A number of "for sale" signs displayed at one time on one block may increase panic selling. If there is any likelihood of this, urge neighbors who have legitimate reasons for selling to work through brokers and other forms of advertising instead of using signs.

2. In some neighborhoods under pressure of much soliciting, people have displayed signs in windows or on lawns, saying "THIS HOUSE IS NOT FOR SALE" or some similar wording.

GUIDE TO NEIGHBORHOOD SERVICES

Blockbusting -

Baltimore City Ordinance #502 gives limited protection against blockbusting techniques of real estate operators who take advantage of the prejudices of white residents to persuade them to sell their homes when Negroes move into a neighborhood. The Ordinance makes it unlawful for any person or firm dealing in real estate to misrepresent facts concerning the present or future occupancy, value or other aspect of properties in the community.

Residents whose neighborhoods are being harrassed by solicitations from blockbusters should gather and substantiate evidence of such misrepresentations so that the offenders may be prosecuted. If the broker tells the neighbors they "must sell right away before property values fall" (when in fact solicitations plus panic are the causes of any decrease in sale prices that may occur),if he says that he has "4 or 6 houses listed for sale on this block" (when in fact he does not), if he lies about sale prices or about his own activities, etc., he is violating Ordinance #502. If his illegal activities are not stopped they can achieve a complete turnover of neighborhood occupancy from white to Negro in a short time. This is his intention, for it stimulates his business and brings large profits.

Persons or neighborhood groups with evidence of misrepresentations should bring information to Baltimore Neighborhoods, Inc., One Charles Center, #1, SAratoga 7-3194 for assistance in the preparation of cases against blockbusters.

In addition to legal action, concerted neighborhood resistance to blockbusting and soliciting can be effective. (See Baltimore Neighborhoods' publication, "Racial Changes in Residential Communities."

Neglect of Properties -

In cases of failure of owners or landlords to make necessary repairs on residential structures, complaints should be made to the Housing Division of the Bureau of Building Inspection, 10 Municipal Building, #2, PLaza 2-2000 - extension 2506.

Sanitation -

In cases of littering and unsanitary conditions in yards (within lot lines) call the Police Sanitarian at your district police headquarters or the headquarters of the Police Sanitarians (MUlberry 5-1600 - extension 231) if the district police sanitarian cannot be reached.

Collection of Garbage and Trash -

If refuse is not collected or if special collections are needed call the Bureau of Sanitation, PLaza 2-2000 - extension 456, or write to 416 City Hall.

Sewer Problems -

Blocked neighborhood sewer inlets should be reported to the Bureau of Sewers, Room 312, Municipal Building, PLaza 2-2000 - extension 2162. Within limitations, blocked house sewers are opened and flooded cellars pumped out at nominal cost.

Sidewalk and Alley Maintenance -

Requests for repair of crumbling alley and sidewalk paving should be made to the Bureau of Highways, 303 Municipal Building, PLaza 2-2000 - extension 2377.

Flooded Cellars -

The Bureau of Highways also performs emergency work such as pumping water from cellars.

Street Lighting and Street Name Signs -

The Bureau of Mechanical-Electrical Services, 320 Municipal Building, PLaza 2-2000 - extension 553, repairs broken or burnt out street lights and replaces missing street signs on request.

Destructive Youth and Gang Activities -

The Street Club Project of the Bureau of Recreation (contact Harry E. Smith, 1129 N. Calvert Street, MUlberry 5-5826) works to channel gang activities of youths into constructive pursuits.

Housing of Families on Welfare -

The Home Management Service of the Department of Public Welfare, 1500 Greenmount Avenue, #2, MUlberry 5-3600, helps its families to improve present housing or to secure public housing or other dwellings.

Bars and Taverns -

Citizens may make formal protest against the granting or renewing of liquor licenses in their neighborhoods to the Board of Liquor License Commissioners. For information on procedures call PLaza 2-2000 - extension 340. The National Association for the Advancement of Colored People, LAfayette 3-8503, also cooperates with neighborhood groups in resisting influx of taverns.

Displacement by Urban Renewal -

The Bureau of Urban Renewal and Housing Agency has a relocation service for all persons who must move as a result of urban renewal projects. Call SAratoga 7-3400 and ask for relocation information.

Unsolved Problems Related to City Services -

If results are not obtained from requests for aid to city departments,write to the Mayor's Bureau of Complaints, City Hall, #2.

Legal Aid -

The Legal Aid Bureau (LExington 9-5340) offers legal assistance to persons in landlord-tenant disputes and other problems involving real property.

Information and Referral Service -

The Health & Welfare Council operates a Community Information and Referral Service (MUlberry 5-0525) which offers guidance to persons on the use of a great variety of available community services.

Neighborhood Problems -

A variety of neighborhood problems can be solved by an active neighborhood association. Minor acts of vandalism and rowdyism by children, not sufficiently serious to warrant calling on the Police Department, may best be handled by meetings between representatives of the neighborhood association and the children's parents. Residents' meetings may bring solutions to problems arising from lack of mutual consideration between neighbors. (An example of this would be excessive noise created by activities in one house which disturbs the nearby residents.)

If you do not know whether there is an association in your neighborhood please call Baltimore Neighborhoods, Inc., SAratoga 7-3194.

Zoning -

If properties in a residential area are being used for purposes which are offensive and inharmonious with the neighborhood it may be that the use violates zoning regulations. The Citizens Planning and Housing

Association (330 N. Charles Street, LExington 9-1369) can determine how your neighborhood is zoned and can advise you on dealing with non-conforming uses. It also offers a zoning alerting service to neighborhood associations that are CPHA members, keeping them posted on all proposed zoning changes affecting their area.

Education and Consultation on Residential Problems -

Baltimore Neighborhoods, Inc. assists neighborhoods of any size to stabilize when residents react to the anticipated arrival or presence of Negro families. (Call SAratoga 7-3194.) The Citizens Planning and Housing Association helps neighborhoods to achieve high standards of property use and maintenance and land use planning, to eliminate blight and prevent decay. (Call LExington 9-1369.) Both organizations assist in making contact with public agencies.

HOUSING CONFERENCE HAILED

OVER 600 TAKE PART IN EXCHANGE OF IDEAS
BNI PLAYS MAJOR ROLE

The urgency of achieving equal housing opportunity for all was unanimously acknowledged by more than 600 participants in the Greater Baltimore Conference on Equal Opportunity in Housing, on November 24th at the Sheraton-Belvedere Hotel.

Opinions, of course, differed as to how to arrive at this goal, but some frank discussion at four concurrent workshops seemed to bring divergent opinions closer together. The Conference chairman, Hans Froelicher, Jr., best characterized the spirit of the occasion when he described it as "a day for honesty."

Deemed an outstanding success by observers, the Conference sparked the concern of representatives of business, real estate, banking, homebuilding, social work, civic, governmental, educational and religious organizations. The result was a determination to seek answers to discrimination in housing and to unify the dual housing market.

Highlights of the day-long Conference included a luncheon address by Nicholas Katzenbach, Acting Attorney General of the United States, the keynote speech by Mayor McKeldin, and greetings from Governor David L. Lawrence, Chairman of the President's Committee on Equal Opportunity in Housing. Although no specific proposals for action were made at the day's end, participants heard from unexpected sources including homebuilders and real estate brokers - of the need for strong national fair housing legislation and for voluntary support of residential integration. Real estate representatives expressed the conviction that all white neighborhoods could not and should not persist. From these and other sources participants heard vigorous support expressed for local legislation as a first step toward broader legislative coverage.

Each of the four workshops was assigned a different subject. They were: the role of government in enlarging housing opportunities; the myths of housing integration; Negro and white attitudes toward the housing crisis; and the relation of housing to civil rights. But although the central themes differed, each touched at some point on the pattern of residential change, including panic selling, blockbusting, the formation of new ghettos and the expansion of the large Negro ghetto in the central city ringed by white suburbia. And the concensus of each workshop was that residents of every corner of the Baltimore metropolitan area would pay a heavy price if this pattern was not altered.

Baltimore Neighborhoods, Inc. received recognition at the Conference as the local agency most actively working for the stabilization of changing neighborhoods and the enlargement of housing opportunities for minorities. The agency's contribution to the Conference was extensive. The Board of Directors initially proposed to the President's Committee on Equal Opportunity in Housing that Baltimore should be the place for the third of such meetings in the nation. (The first, in Boston, occurred last May; the second took place in Cincinnati a week prior to Baltimore's Conference). BNI's Board, staff, members and friends did most of the program planning and contributed extensively of their time and talents to make possible this important event.

NEGRO FAMILIES IN 25 NEW NEIGHBORHOODS

BNI's Executive Director recently met with neighborhood association spokesmen, ministers, developers and other community representatives to smooth the introduction of first Negro families into Reisterstown and Laurel. In the meanwhile BNI's Research Advisory Committee has been conducting a survey to discover experiences of some 25 Negro families as the only non-whites in as many metropolitan neighborhoods. The experiences of the survey families as well as the recent arrivals at Reisterstown and Laurel have been, for the most part, heartening. In only one case (a move-in that occurred three years ago) was there violence, and in only three others were there minor acts of vandalism or threats of vandalism.

REAL ESTATE BOARD JOINS BNI

In June the Real Estate Board of Greater Baltimore became an organizational member of BNI. This recognition of our work is gratifying, especially in view of reluctance of other real estate boards throughout the country to acknowledge the importance and inevitability of breaking down racial barriers in urban communities.

BNI has worked with the Neighborhoods Committee and with individual members and officers of the Real Estate Board for several years. Four of its members are directors of BNI, William B. Guy, Jr. (a recent president of the REB), Catherine Byrne, Guy T.O. Hollyday and Roger Johnson; and three - George Carroll, Edgar Levi and Mal Sherman - are BNI Advisory Board members. The two organizations have cooperated in a number of endeavors, including the elimination of racial designations in newspapers "For Sale" Ads. During the life of BNI, the Board has admitted seven Negro brokers to membership, two of whom are now also members of the Multiple Listing Bureau.

BNI NO LONGER BROKE, BUT NEEDS YOUR SUPPORT TO EXPAND PROGRAM.

Now more than ever BNI services are being requested by the community. It has an important role to play in achieving the goals set by the recent Conference. HELP to extend the life and usefulness of BNI by RENEWING your membership or making a CONTRIBUTION now.

Individual membership - $5.00 *Contribution:* _____
Organization membership $50.

NEIGHBORHOOD ASSOCIATION BUYS OUT NEGRO PURCHASER

A Negro family recently negotiated the purchase of a home in a small middle class white community in the northern part of the city. News of the sale spread in the neighborhood when conscientious seller and buyer agreed that the improvement association should be notified of the event in advance. The association met and decided to try to buy out the family and also to establish a fund to buy out any future Negro purchasers. In this instance the Negro family, who consulted with BNI over a period of several weeks, finally concluded that they should sell to the association. They had previously had a bad experience in a predominantly white neighborhood which had seriously upset one of their three small children and they were reluctant to risk again their children's well being.

BNI was in communication with officers of the association and had a continuing contact with several residents of the area during the crucial period. We attempted to warn the association of the dangers of a commitment to buy out future Negro purchasers, since it exposes the neighborhood to a kind of blackmail by making it possible for any eager seller to threaten to sell to Negroes in order to force the association to take his house off his hands.

Since the events took place we have continued to work with the Negro family to find other housing. The house they have been living in is seriously dilapidated, and in spite of pressure from the Bureau of Building Inspection the landlord has not made necessary repairs.

PLEDGE CAMPAIGN

Signers of BNI's fair housing Pledge Campaign now number about 1700. These metropolitan Baltimore residents have declared their belief in the right of all persons, regardless of race, to have equal access to the housing market. They have also asserted their willingness to welcome responsible persons of any race, religion, or national origin into their neighborhoods.

A new drive for signatures was launched in November by the Baltimore Area Inter-Religious Campaign for the Good Neighbor Pledge. This organization, formed with the single aim of committing members of all faiths to the concept of equal housing opportunity, is sponsored by the Baltimore Board of Rabbis, the Maryland Council of Churches, the Baltimore Archdiocesan Women's Committee for Civil Rights and the Catholic Interracial Council. The pledge card that will be distributed through churches and synagogues in the metropolitan area is worded only slightly differently from BNI's pledge. It includes a paragraph tying the signer's commitment to religious concepts, which reads "I believe that discrimination on the basis of race, religion, or national origin is evil and that obedience to God compels me to love my brother in word and deed."

While the BNI pledge card states that signers' names will be published only after 2000 names are secured, the Inter-Religious Pledge sets a goal of 10,000 signatures to be obtained before publication. Directors of the Campaign are confident that the religious community will achieve this goal.

BNI staff have attended all meetings of the Campaign Committee and have contributed substantially to its planning. Our office is the headquarters for the Campaign.

BUILDER IN VIOLATION OF EXECUTIVE ORDER

A few months ago an unsuccessful attempt was made by two young Negro families to buy homes in a new housing development off Liberty Road. Because the development was insured by FHA, it was covered by the Executive Order of November 1962 prohibiting discrimination, but it soon became clear that the builder had no intention of living up to this commitment. When the two families proposed to purchase homes they were told no houses were available, although white couples were simultaneously being given opportunities to buy. They then brought the matter to the attention of the FHA District Director. That agency instituted an investigation which ended with the cancellation of FHA benefits for any project throughout the nation in which this builder has financial interest.

In all the stages of their search for housing BNI has acted as consultant to the two families. There were repeated contacts with FHA, both in Baltimore and Washington, and BNI staff members attended the hearing between builder, would-be buyers and the FHA. One of the two families has since bought a house elsewhere and the other is still looking, with BNI's help.

FAR FLUNG PUBLICITY FOR BNI

On August 7th an AP story about BNI appeared in local and at least seven other large metropolitan newspapers, including The New York Times. On September 24th The London Daily Telegraph carried an article about us by Mabel Elliott, its New York correspondent, who made a trip to Baltimore and toured the city with our executive director in order to write her story. Both of these write ups discussed BNI history, achievements and aims as a unique organization in a community whose problems are not quite like those of any other city.

ANNUAL MEETING

At the annual meeting of the BNI the new officers and directors for 1965 were elected. The officers are Sidney Hollander, Jr., president, Frank T. Gray and Henry G. Parks, Jr., vice presidents, Robert J. Martineau, secretary, and Miss Catherine Byrne, treasurer. New board members are: Rev. Anthony Dziwulski, Marshall Jones, Frank Kaufman, Stanley Panitz, Donald Rothman and Revo James C. Thomson. Continuing to serve are Rev. Herbert O. Edwards, Richard L. Cover, William B. Guy, Jr., Guy T.O. Hollyday, Francis N. Iglehart, Jr., Roger J. Johnson, Mrs. John B. Ramsey, Dr. Alfred B. Starratt, Melvin J. Sykes and Rev. Fred Webber.

NEIGHBORS, INC., an association of citizens, invites you to live with Neighbors, in Northwest Washington EAST of Rock Creek Park.

THE

*In established, residential neighborhoods near good schools, express buses, stores and parks.

*On tree-shaded, city-served streets of homes in almost any style and any price range you choose.

*In one of Washington's finest family neighborhoods, enriched by the diversity of its ethnic, religious, racial and cultural groups.

A VITAL AND LOVELY PLACE TO LIVE

FOR INFORMATION ABOUT HOUSING, CALL RA 3-3311 / TA 9-0298

Neighbors Inc.

WHAT WE ARE --

NEIGHBORS INC. is a non-profit organization of residents in the Shepherd Park, Takoma, Brightwood, and Manor Park Areas, who are successfully demonstrating that stable property values and a cosmopolitan atmosphere can be maintained in integrated neighborhoods, enriched by the diversity of ethnic, religious, racial and cultural groups.

WHAT WE DO --

NI maintains a free Housing Information Service, helping both buyers and sellers. This encourages a normal housing market rather than panic selling.

NI cooperates with other groups seeking freedom of residence in the entire Washington metropolitan area.

NI works with other members of the community to see that area schools maintain their high academic standards and expand their curricula. The elementary, junior high and high schools in the Neighbors' area are among the finest in the district. NI was instrumental in helping to develop Paul Jr. High School's new "Democracy in Action" program with its blue-ribbon advisory committee of top-ranking Government leaders. This year, Takoma elementary school will be the Nation's pilot school for a Science curriculum introduced in the lower grades.

NI organizes constructive community activity for young people—Junior Neighbors, Community Singers, pre-school play groups.

NI organizes and conducts an annual Beautification Campaign with awards for lawns and gardens.

NI works to see that housing and health codes are enforced, that street repairs are made and traffic hazards eliminated.

Officers of Neighbors Inc., 1963-1964:

President	Dr. Robert C. Good
Vice President	Warren K. Van Hook
Treasurer	Charles M. Rodgers
Secretary	Mrs. S. J. Simmons

WHY NEIGHBORS INC. NEEDS YOUR MEMBERSHIP

All of us who live in the Neighbors Inc. area have benefitted from its work. We have seen our community turn into one that commands the attention of the President of the United States as a fine example of democracy in action. We are proud of our excellent schools, happy that property values are stable, comfortable in the general atmosphere of amicability and good will that has given our community a reputation for being the most interesting and vital place to live in the Nation's Capital.

But none of these things happened by themselves. Neighbors Inc. maintains an office with a paid staff—2 secretaries and 2 experts in community organization. Scores of dedicated volunteers run the Housing Service, the Book and Art Festival, the young people's groups, community forums. Our expenses include salaries, rent, postage, printing, publication of a monthly newsletter, publicity materials. And there is much more we would like to do.

Our yearly budget must be raised partly from special activities like the Book and Art Festival, partly by contributions from foundations. But mostly our existence depends on dues and contributions from our members. In addition, the foundations have indicated that their financial contribution depends on evidence of community support—measured in paid memberships. Your dues thus play a dual role—to support the work of Neighbors, Inc. and to gain additional support for our work from interested foundations.

A $2 family membership pays for putting your name on the mailing list, for printing and mailing you the monthly newsletter. Only 50 cents is left over for the work of the organization. Though Neighbors Inc. values a $2 membership as highly as it does a $100 membership, we urge you to think carefully about what this organization has meant and will mean to you and your children, and then to give as much as you can to insure its continued existence and to broaden the scope of its work. It's the cheapest "full coverage" housing insurance you can buy.

ALBERT BOUTWELL
MAYOR

FROM THE OFFICE OF
W. C. HAMILTON
EXEC. SECTY. TO THE MAYOR
DIRECTOR OF PUBLIC RELATIONS

July 19, 1966

Miss Susan Bresler
Urban Planner
Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta 3, Georgia

Dear Miss Bresler:

Thank you for your letter of July 15th, addressed to Honorable Albert Boutwell, Mayor of the City of Birmingham, Alabama, and your kindness in addressing copies to me and Mr. James Wright, Chief Planner for the City of Birmingham.

In your letter to the Mayor you made reference to the enclosure of a pamphlet descriptive of the organization and purpose of Southern Regional Council. This enclosure appears to have been omitted and we will appreciate, therefore, your forwarding a copy to my attention, since it is quite material that in municipal government, of a necessity, know with whom it is dealing in any given area of urban activity.

Since your project appears to deal fundamentally with public housing and urban renewal, should the occasion arise for a visit by you to the City of Birmingham, we believe that Mr. Wright will give you the fullest cooperation in obtaining pertinent information you desire. We are pleased to report that we enjoy the most harmonious and cooperative relationships with the agencies of the Federal Government at both regional and national levels, and that this situation has prevailed since the succession to authority of the present mayor-council system. Since most of the projects discussed in your letter, as well as intergovernmental relations, is a responsibility assigned to me as Public Relations Director of the City of Birmingham, your original letter to the Mayor has also been forwarded to my desk for

response which will account to you for any lack of response from the Mayor personally, or, at this stage, from Mr. Wright in his capacity as Chief Planner.

Sincerely yours,

W. C. Hamilton

W. C. Hamilton
Executive Secretary to Mayor
Public Relations Director

SOUTHERN REGIONAL COUNCIL, INC.
5 FORSYTH STREET, N.W., ATLANTA 3, GEORGIA

July 15, 1966

Hon. Albert Boutwell, Mayor
City Hall
Birmingham, Ala.

Dear Mayor Boutwell:

Birmingham is one of six Southern Cities that the Southern Regional Council is studying in its Urban Planning Project. The project is possible through a grant from the Ford Foundation. The purpose of the Urban Planning Project is to study the progress of urban planning, housing, and renewal in the South.

The resluts of the Urban Planning Project will go to Federal agencies, legislative committees, and any other agencies that can help you provide better homes and neighborhoods in Birmingham.

Your city has problems:slum housing, little money, and racial tensions.

You're trying to do something about your problems: such programs as public housing, urban renewal, and anti-poverty.

We hope to help you: a favorable report that could mean more Federal funds for your city in the future.

Who are we? Southern Regional Council, a human relations research organization (please see enclosed pamphlet).

Until I can arrange to meet with you personally, please send me information about Birmingham. Also, who else would you suggest I contact to learn about your urban planning, housing, and renewal programs?

I look forward to visiting your city at your earliest convenience. And I hope to hear from you soon.

Sincerely yours,

(Miss) Susan Bresler
Urban Planner
Urban Planning Project

Birmingham, Ala.:

Hon. Albert Boutwell, Mayor
City Hall
Birmingham, Ala.

Mr. William Hamilton
(same as above)

Mr. Hugh Denman, Exec. Dir.

Impressions-Birmingham-January 22-25, 1967

Background-Birmingham

I have as little background as anyone on the unhappy history of Birmingham. But even the newcomer couldn't miss the rows of small crowded shacks edging the city's industrial areas. And from any high place, see the puffing chimneys and smoky skies. Industries own vast tracts of land in and around the city.

Business must be good: Six new skyscrapers are going up, one of them a construction company, one a gas company. I sometimes think skyscrapers tend to make a city conscious (or guilty) of its image. At any rate, I heard someone here in the office saying Birmingham is now hiring a public relations firm to improve its image.

The mayor's assistant, who doubles as a public relations director, W.C. Hamilton, boasted that Birmingham has no suit with the Department of Justice on Title VII or Title II of the 1964 Civil Rights Act. He says before the act was signed, the city had distributed explanatory pamphlets to 6000 businessmen.

Hamilton complained that Negroes are not meeting up to their responsibilities because, when job training schools were suddenly opened to Negroes, they didn't come flocking to the doors. "Negro leaders have a responsibility to get the children to train for the newly open jobs and go after them."

Hamilton boasted of a 10 day seminar held in Birmingham for labor unions, employers, and Negro leaders. The rate of Negro improvement in income and education is faster than the whites'. "The root of the problem," Hamilton feels, "is the economic competition of unskilled white and Negro laborers." Later he says, "Income has very little to do with acceptibility," and, "You'd have trouble in hgiher priced apartments if Negroes moved in." That sounds inconsistent to me, I don't know about you.

Hamilton says the Negro community doesn't want integrated housing, only a place to live. Later, he mentioned neighborhoods in the city that were integrated. He mentioned that, under the freedom of choice plan, schoolchildren didn't apply to other schools, that they had merely wanted the right. Was there intimidation, I asked? Oh, no we didn't have any intimidation here.

Finally, I was to be taught that A.G. Gaston, Negro millionaire, based his business on segregation because he never sold insurance to whites.

Oh, yes, and just to cap things off, we have an explanation from Mr. Hamilton on why the public housing is still completely segregated. The problem, of course, comes from no demands by Negroes to move into white public housing or white neighborhoods. How about that!

Organization of the Negro community

What Negro community? What organization? That is not to say that neither exists, but I had trouble putting my finger on anything.

Vincent Mazzara, a white man who builds predominantly for Negroes, felt that A.G. Gaston, the millionaire, and John Drew, in real estate, would emerge as the rightful leaders of the Negro community in Birmingham. These two organized the Park West

urban renewal project, which I'll mention later.

Dr. John Nixon, head of NAACP in Birmingham and Alabama, says he's preparing to launch demonstrations against segregated public housing and against discrimination in urban renewal relocation practices. Wilbur Hollins, newly employed in relocation, devotes his free time, in the face of failing health, to voter registration. Birmingham is 35-40% Negro, but Negroes comprise only 20-25% of the voters. He says everytime he gets some Negroes registered, the whites try to register more. The Jefferson County Democratic Party is integrated. With the last elections of precinct committeemen, Hollins says, young people are in control.

Availability of mortgage financing evidently hasn't been a problem in the past ten years. Negroes were able to interest the Masons, with their assets of 8 to 10 million dollars, to make some investment in mortgage lending. Then, once the Negro insurance company got into the act, the white lenders took note of the market and made their mortgage money available to Negroes.

Wilbur Hollins became the first Negro on a Birmingham commission two years ago, when he was appointed to the planning commission. The only other Negro on a commission is Arthur Shores, who is on the public housing and urban renewal (one) commission. The mayor's advisory committee on relocation includes three Negroes.

Public housing and urban renewal

Of 5527 public housing units in Birmingham, 2270 are white, the remaining Negro. There are no integrated units; there have been no applicants of whites for Negro projects or Negro applicants for white projects. If there were? "We won't break any Federal law," says deputy director George Davis, once a tenant of public housing himself many, many years ago.

The smallest project in Birmingham is 200 units, the largest 910. One application office is entirely Negro-staffed. The other office is white except for the printer and a Neighborhood Youth Corps enrollee.

Community services for public housing tenants appear all-inclusive: kinderkarten for all the children (none is offered in city schools); day care; recreation; classes in sewing, ceramics, Bible, adult literacy, nutrition and kitchen care (in model kitchens), planned parenthood, and health and safety. There is a mobile library that makes the rounds of the 9 projects. Also, public health nurses and a visiting teacher. The community buildings for each project are leased to and run by the Park Board, YWCA, Methodist Board of Missions, Birmingham Baptist Association, and Community Chest.

The medical center and civic center urban renewal projects are presently involved with relocation. "Attitudes of separate housing prevail," says Wilbur Hollins, relocation director. Whites are still relocated into white neighborhoods; Negroes, into Negro neighborhoods. Standard relocation housing is supposed to be offered. But minimal standards are used and these may be liberally interpreted, which means people are perhaps being moved to other slums, which would be nothing new in Birmingham.

A.G. Gaston and John Drew formed the Park West committee, took their total clearance proposal to the mayor, and got their project moved from number 50+ to number 3. The goal of the project, I think is to build new moderate cost housing on low cost land.

"Operation Pride" is a code enforcement project, Federally-

aided. It's supposed to be the first of its kind, providing low cost loans and grants for building repairs. But there is a problem with state legislation preventing the city from turning over Federal relocation money (to move people from condemned buildings) to the city health department to dispense the money. The project is just starting. No loans have been made yet.

Code enforcement elsewhere in the city focuses on about 14 areas, 10 of them the city's worst areas (rental) and 4 areas that are about to decline. Real estate agents have been cooperative, says Dale Richards, Chief Housing Inspector. Where there is no agent, the city can condemn and vacate the property. The biggest problem is that retired and other people on fixed incomes can't afford the repairs. In such cases, Richards says, he extends their time limits for meeting the city codes.

A Federal requirement now puts relocation site offices in urban renewal areas a year before property acquisition begins. The local community action agency (War on Poverty), which is 50-50 white and Negro in Jefferson County, is supposed to coordinate its programs with the relocation site offices, also a Federal requirement. They have been in contact, by mail.

Much in the news and on the lips of Birmingham citizens have been the recent elections in 16 neighborhoods of advisory councils, which, in turn, choose representatives to the Jefferson County community action agency, called the Committee for Economic Opportunity. The 16 neighborhoods are target areas of disadvantaged people. Their representatives will make up the required 1/3 representation of the poor on the anti-poverty board. Jim Wright, Birmingham's Planning Director, called the neighborhood elections "the blind leading blind." He was equally unperceptive of local matters relating to the poor and to Negroes. Aaugh!

Biracial participation in anti-poverty meetings was the first interracial contact for citizens from such communities as Adamsville, Leeds, Warrior, Trussville, and Bessemer. So says the anti-poverty director, a Mr. Carr, graduate of N.Y.U. School of Social Work and formerly the Duane Beck of Birmingham.

Last year the school board wouldn't let Head Start children go to integrated or to white schools. So, Negro schools and churches were used. But the faculty and teacher's aides, for the first time were more than 1/3 white. The archbishop has given permission for the use of Catholic schools for the coming year.

There are 500 out-of-school Neighborhood Youth Corps enrollees, 75% of them Negro, working in biracial teams for city departments.

At the day care center in a Negro area, high income white children are brought from across town, since low income white parents won't send their children there.

Carr says his is probably the most integrated office in the city. (It is.)

Most of the city's vacant land is owned by industry. The housing authority has difficulty finding sites to build on. Land in more outlying areas is more difficult to build on, topographically, not to mention its inaccessibility. And the city doesn't seem interested in writing down the cost of renewal sites for builders of moderate cost housing.

Presently, the housing authority wants to build 1000 new units to help meet future relocation needs. The homebuilders are opposed, saying they could build housing just as durable, cheaper, and more

attractive if the city would just provide the low priced land.

Vincent Mazzara is among these homebuilders. He says he knows of sponsors who are interested in 221(d)(3) using rent supplements. He said the 16th St. Baptist Church (the one that was bombed) is interested sponsoring 300 units.

Mazzara feels that Negroes in the Birmingham area need their jobs upgraded. He says slum dwellers need training in how to keep up housing. He thinks big plants should be sold on the idea that better housing can mean better employees. The plants, after all, have the money and the land to put up housing.

He says there have been a few tests by Negroes of moving into white neighborhoods, but that, otherwise, Negroes prefer Negro neighborhoods.

Went to see Orzell Billingsley. He told me how he helped a group of people in Huntsville get $1000 and more increase on the offers for their homes in an urban renewal area. His share of the increase was 1/2 to 1/3.

Conclusions

There is a cycle of attitudes in Birmingham that feeds back on itself to the assured detriment of ever providing good housing eqally available to all. This despite the mayor and council's stated goal of "a decent, safe and sanitary home for every citizen." The cycle begins with a lack of commitment, a tokenism in the attitudes of city officials: Housing authority administrators still point to all Negro projects when suggesting possible choices for Negro applicants. W.C. Hamilton has produced a booklet on the government of the city of Birmingham that is to be distributed to school libraries and made available for purchase. And possibly the school board will offer a course, using the booklet. But the booklet is mechanical, slanted, verbose, and dull. A token effort in the face of a critical need.

Code enforcement is understaffed and underfunded. Code enforcement officials take no interest related programs or the related needs of families living in substandard housing. Relocation is an afterthought program, not geared to first providing the housing, but rather, geared to first getting the urban renewal land. Low cost housing programs outside of public housing haven't even been investigated by the city.

The result of this lack of commitment is most assuredly a lack of information on housing issues. And with this lack of information, the taxpayer feels he doesn't want to subsidize somebody else with a housing program. And with this lack of understanding, we get right back to a lack of commitment all over again.

The role of the Federal government can be seen very clearly in Birmingham. Were it not for the Workable Program requirement, the city's code enforcement program that began in 1958 would probably not exist. The absence of Federal policy can also be seen. It explains why the public housing is still segregated.

Finally, better housing, neighborhoods, and communities require so much education that the average citizen, much less the average school student, never gets. Who understands zoning? Who's ever heard of many of the Federal programs, much less knows how

they work?

You don't pick up these things on your own any more than you pick up good driver training, except by sheer luck. Most of us live in cities these days and pay taxes to support the city services we depend on. Yet, we so little understand how our city operates. Is it any wonder we have slums, traffic problems, and smog, when most of our ideas and information about city living come from tv commercials and magazine ads!

The Why of Pensions and Security

We have a public welfare program in our democratic society because of human need and problems, conditions that do not correct themselves. Alabama's public welfare program is administered by the Department of Pensions and Security. There is a State office in Montgomery with 67 county departments to reach people in their home communities.

It has been demonstrated that want and dependency are often due to factors beyond individual control—involuntary unemployment, old age, disability, widowhood, desertion, etc. When the Federal Social Security Act was first passed in 1935, provision was made for an insurance program against such predictable hazards as some of those cited above, and for an assistance program to bridge some of the gaps when unmet need remained.

During the past fiscal year new social security programs—among them OASI medical care of the aged—were established. These will affect some of the persons served by the Department of Pensions and Security when they begin operation. Also some changes may be made in present public assistance programs.

Over-all, however, the Department of Pensions and Security continues, within existing law, policy, and funds, to meet economic need, to provide essential social services, to participate in community activities to prevent need and promote human betterment, and to carry forward a broad range of specific public and child welfare functions. The county department, under supervision of the State Department, administers the program locally. Operation must conform to Federal and State laws and policies.

On the following pages are summarized various areas of responsibility, with an effort made to clarify points not easily understood by the general public. If you have other questions, call, write, or visit your county department. Your comments are invited.

WHY: Human Need and Problems

Old Age Pensions and Medical Assistance for the Aged

Other than age 65, a major requirement for an old age pension is financial need according to agency standards. By standards is meant the amount the agency can allow for such items as food, clothing, shelter, etc. All of an old person's income must be considered, including social security. When need exceeds "income", the person may be eligible for a pension if he meets other requirements. There is a limit on the value of a homestead and resources. Each case is considered on an individual basis, so the amount of the pension received varies from the $10 minimum to the $75 maximum money payment except in personal care homes.

Additional amounts are allowed pensioners in personal care homes and vendor payments can be made to licensed nursing homes for pensioners when physicians determine such care is needed and the Department has helped plan for care. Again, there are limits and rules governing use of the pensioner's own resources. It is sometimes possible for an old person to qualify for a pension if he requires nursing home care when otherwise he would not be eligible.

Pensioners and certain other needy aged eligible for Medical Assistance to the Aged may receive hospital care for acute illness or major injury up to 30 days per year. Certain post-hospital physicians services are allowed as well as quarterly visits of physicians to pensioners in nursing homes. These are vendor payments.

Aid to the Permanently and Totally Disabled and Aid to the Blind

Adults in economic need by agency standards may qualify for aid to the permanently and totally disabled if they have a permanent impairment that is totally disabling and for aid to blind if blind. Many persons who are disabled for their usual occupation cannot qualify for aid to the disabled. Needy blind persons are allowed an exemption for income earned from a current job but not for such income as social security.

Aid to Dependent Children

Aid to dependent children is designed to preserve family life through assistance to children who have lost parental support by reason of death, disability or absence. There are never two able-bodied parents in such homes and a single able-bodied parent is expected to work if suitable plans can be made for the children and a job found. Furthermore, a parent-substitute in the home is expected to support the children if he has the privileges of a husband regardless of whether they are his children or whether he is married to their mother.

Policies emphasizing support from parents and increased social services and rehabilitative efforts for those families have led to a substantial reduction in the caseload. Disability of the father represents the reason for need in more than one-fourth of the ADC families.

Specific plans of service in ADC are developed with an analysis of needs and guides for meeting them. Here lies the highest potential for rehabilitation. (See other services below.) Other people, however, are also offered services (within limits of large caseloads and available staff) as the need arises for such services.

Social Services to Families and Children

The county department of pensions and security is, among other things, the largest single referral agency in the county. A part of the broad program of social services is locating resources and directing people to them. It is the responsibility of the county department to know what is available and how the individual should proceed to benefit from it.

By law the Department must provide service to any child in need of care and protection, including those in their own homes and those who must be removed from their homes. The agency counsels with parents concerning children who have behavior and health problems; helps young unmarried mothers with plans for themselves and the child; arranges for day care in a licensed facility for the child whose parent must work or seeks work, providing in some cases payment for the cost of such care; receives and investigates complaints of neglect and

suspected child abuse, working toward rehabilitation of the home and providing care for the child outside the home.

Children are cared for by the Department in licensed boarding foster homes and plans made for children in licensed child-caring institutions when a parent cannot provide a home or the court removes custody from parents. The county department investigates applications to adopt children and works with the State Department in placing children in adoptive homes. The county department also investigates adoption petitions filed in the probate courts.

The county department works with the juvenile court to serve delinquent children. The agency participates in community planning in behalf of children to carry out the objective of a fair opportunity in life for every child.

Emergency Welfare Services in Civil Defense

The county department has primary responsibility in this area in cooperation with Civil Defense authorities. Lodging plans are generally developed first. Other facets of this task, which follow, include food, clothing, registration and inquiry, and social services. Volunteers are needed to help with lodging surveys and to become trained for emergency welfare assignments.

Summary

The county department is the center of public social welfare services in the county. It is supported by tax dollars and its doors are open to every citizen, especially those in need or in trouble. It is important for the general public to know what the department can and cannot do, what supplementary services are needed, and how public support can strengthen the public welfare program of the Department of Pensions and Security. Ways must be found to bridge existing gaps and meet needs now unserved.

JEFFERSON COUNTY

1964-65 PENSIONS AND SECURITY EXPENDITURES

		State and Federal Funds	Local Funds	Total

FOOD STAMP PROGRAM

Jefferson County participated in the Food Stamp Program during 1964-65. Assistance recipients and other needy purchased stamps in an amount about equal to their normal food purchases and received bonus stamps free. The local governing body pays the cost of operation with some Federal reimbursement. Participants in the county last year totaled 12,997 of whom 5,170 were assistance recipients. Free stamps were valued at $1,076,210.00 and the total at $1,845,124.00

JEFFERSON COUNTY

***Includes vendor payments from State and Federal funds of $9,815.97 for 20 recipients for hospital care.

Council OK On Housing Funds Asked

$92,500 Sought For Low-Rent Project Study

City Council has been asked to approve a request by the Housing Authority of the Birmingham District for an allocation for 1000 units of low-cost housing.

In a letter to Mayor Albert Boutwell and members of the Council, Hugh Denman, executive director of the HABD, said $92,500 is being sought for surveys and planning on the public housing project.

Need for the housing, Denman said, is brought on by the dislocation of persons caused by the planned expansion of the University of Alabama Medical Center, the proposed Park West project.

Denman said dislocation that would be caused by the proposed Civic Center can probably be taken care of by existing housing.

Serious Problems

But, he said, the Housing and Urban Development Regional Office has informed him that "any further urban renewal projects would appear to present serious problems of relocation of low-income families."

Medical Center expansion would displace an estimated 996 families and 700 individuals, Denman said.

"According to our survey, 661 of the families appear to be eligible for public housing," he added.

In Park West, the future displacement of families is estimated to be 500 to 600, he said.

Of the 1000 units the HABD feels it needs for the two projects, 200 will be for the elderly, Denman said.

Adopted Resolution

Denman said the HABD's Board of Governors adopted a resolution approving the request.

"It is necessary for the City Council to pass a similar resolution in order to have an allocation of these units set aside for our future use when needed," Denman said.

"This request for an allocation does not mean that we will start building these units until the city and our Board of Governors give further approval," he said. "In other words, it will be necessary to come back to the city for specific permission to build units in a specific location."

The council's public housing and urban renewal committee will study the HABD recommendation.

1,000 LOW-COST HOMES

Council approval bid for housing units

BY LOU ISAACSON
News staff writer

Housing Authority of the Birmingham District has asked city officials to support efforts to obtain an additional 1,000 low-cost public housing units in connection with three urban renewal projects now under study.

The projects include urban renewal plans for the Civic Center development on northside, Park West just west of City Hall and the proposed expansion program for University of Alabama Medical Center in Birmingham.

REQUESTS FOR approval by the city came in a letter from Hugh Denman, Housing Authority secretary-executive director, to Mayor Albert Boutwell.

The mayor's office sent copies of Denman's request to City Council members who today referred the matter to the Council's committee on public housing and urban renewal.

Denman is asking City Council to adopt a resolution approving an application for the low-rent housing and a preliminary loan application of $92,500 from the local authority to the Housing Assistance Administration.

Denman said the preliminary loan would be used for surveys and planning in connection with low-rent housing projects not to exceed 1,000 dwelling units.

DENMAN TOLD city officials that the allocation for the 1,000 housing units would include 200 for the elderly.

He said that a current survey of the Civic Center urban renewal area shows that 109 families living in sub-standard housing would be eligible for public housing.

He said the Medical Center expansion program planning indicates a displacement of 996 families plus 700 individuals and further shows that 661 of the families involved appear to be eligible for public housing.

Denman said the feasibility survey being conducted in the Park West area shows an estimated future displacement of some 500 to 600 families.

DENMAN SAID the Housing Authority's five-member Board of Commissioners already has passed a resolution approving the filing of an application for an allocation of the 1,000 units and the preliminary loan.

He emphasized that City Council approval is necessary in order to have an allocation of the units set aside for future needs.

Denman pointed out that construction of the units could not start until the city and board gets further approval and the city okays specific locations for the units.

COMPLAINTS ABOUT URBAN RENEWAL PROJECT
(University Park Project, Ark-R 51)

August 14 to October 15, 1964

1. On August 14, 1964 the following letter was sent to the regional and national offices of Urban Renewal:

August 14, 1964

Mr. Pete T. Hinojosa
Intergroup Relations Officer
Urban Renewal Administration
300 W. Vickery Blvd.
Fort Worth, Texas 76104

Dear Mr. Hinojosa:

This is to bring to your attention the attached clipping from the Arkansas Democrat, Tuesday, August 11. It describes a proposed elementary school "to relieve overcrowded conditions at Washington, Rightsell and Capitol Hill elementary schools." All three schools mentioned are all-Negro schools with an all-Negro student body and faculty. This means that the proposed school will be an all-Negro school.

This same all-Negro school is being used as a non-cash grant-in-aid credit for the Coliseum Urban Renewal Project.

It is my understanding that federal regulations prohibit discrimination in any public facility in or outside of a project area, if it is to be credited as a non-cash grant-in-aid to help pay for the project cost. Further, it is my understanding that an all-Negro school is a violation of the non-discriminatory policy of the Urban Renewal Administration. If this is not true I should like to have you state in writing what the non-discriminatory requirements are.

You should also know there is considerable dissatisfaction with the University Park Project, the net result of which will be the almost total removal of Negroes still remaining in the western part of Little Rock. A school which will then have practically no Negroes living in its attendance area is also being planned as a non-cash grant-in-aid for this project. This school will have no Negro teachers and a handful, if any, Negro students. Does this meet the non-discriminatory requirements of the Urban Renewal Administration? The attached clipping from the Arkansas Gazette would indicate the local Urban Renewal Agency requires nothing more than a resolution by the School Board saying the school would be operated "without racial discrimination." "Without racial discrimination" is defined by the Little Rock School Board in quite a different way than it is defined by the minority elements in Little Rock, or for that matter by the Federal Government.

A check with two of the members of the Citizens Advisory Committee, which presumably is required to be active in order to gain approval of the Workable Program, reveals they have not had a meeting since last September, have never felt they "advised," and spent their meetings trying to decide what their role is or merely listening to the Urban Renewal staff members outline complicated and technical plans.

In sum, it is important that Negroes affected by Urban Renewal

programs understand what their rights are in all aspects of a project and that the regional and federal offices of the Urban Renewal Administration be more diligent in seeing that these rights of Negroes are protected by the local agencies receiving federal funds.

I hope to hear from you soon.

Sincerely,

Harold B. Anderson, Attorney at Law
(Cooperating attorney, Legal Defense and Educational Fund, NAACP)

HBA:bal
Encl.

cc: J. Lawrence Duncan
Assistant to the Commissioner for Intergroup Relations
Urban Renewal Administration
Lafayette Building, Room 663
Washington, D.C. 20410

U.S. Commission on Civil Rights
Washington, D.C. 20425

Response:

To date Mr. Anderson has received no reply. By phone Mr. Griswold of the Arkansas Council on Human Relations asked Mr. Hinojosa about the reply. He apologized for the delay and promised to answer. October 1, in another telphone conversation with Mr. Griswold, he said Mr. Anderson's letter would be mailed that day.

2. On September 15 the following letters were sent by the Executive Committee of the Council on Community Affairs, an organization of representatives and leaders of all major groups in the Negro community:

September 15, 1964

Mr. Robert Weaver, Administrator
Housing and Home Finance Agency
1626 "K" Street, N.W.
Washington, D.C. 20410

Dear Mr. Weaver:

We feel deeply that the University Park Project (Ark. R-51) of the Little Rock Housing Authority should not receive final funds until it is investigated by your office. News reports indicate the project has been approved.

The project is for clearance although some 80% of the houses are resident-owned. A staff member of the Little Rock Housing Authority said in committee: "The percentage of substandard structures is not as high as normal." We are convinced it should be a rehabilitation project.

Clearance is grossly unfair to owners of modest means, white and colored. It is patently discriminatory to Negro owners whom this project will move out of the western area of the city, which in the minds of officials is a white preserve. We have evidence that the staff of the Housing Authority expects whites to occupy the new residences. This simplifies other decisions such as keeping schools and parks segregated!

We know residents in the area who do protest clearance. They did not understand their rights in this regard earlier. We can put your investigator in touch with them.

Our conviction is so strong that we petition you to withhold final funds for the project until your office can send someone to investigate anew the project. If you need additional authority to do this, it seems to be given in Section 601 of the Civil Rights Law of 1964.

Sincerely,

William H. Townsend, O.D.
President

WHT:w

P.S. We enclose a copy of a letter sent to the Intergroup Relations Officers at Fort Worth and Washington by the local NAACP attorney on August 14. No reply has been received.

cc: Housing and Home Finance Regional Administrator
2075 Federal Center
300 West Vickery Boulevard
Fort Worth, Texas 76104

September 11, 1964

Mr. Robert Weaver, Administrator
Housing and Home Finance Agency
1626 K Street, N.W.
Washington, D.C. 20410

Dear Mr. Weaver:

We are giving this letter of introduction to Dr. Townsend for enclosure with his letter to you.

The Council on Community Affairs is a broadly representative group of Negro leaders - ministers, doctors, lawyers, social workers, business men - very responsible in their judgements and actions.

My inquiry leads me to believe their position on the matter at issue is sound. I hope you act affirmatively on their request.

Sincerely,

NRG:ra

Nat R. Griswold

cc: HHFA Regional Administrator

Response:

Mr. Lawrence Duncan, Assistant to the Commissioner for Urban Renewal in Washington, phonedMr. L. C. Bates, Field Secretary of the NAACP, asking him to witness to the character of the Council on Community Affairs and to send detailed evidence of discrimination in the project. (The Field Secretary has been the least cooperative and the least effective of the members of the Council on Community Affairs.) Mr. Bates sent a letter to Mr. Duncan supporting Dr. Townsend's complaint. Dr. Townsend accidentally learned of Mr. Duncan's call to Mr. Bates, the first evidence that Washington was giving attention to his letter.

Informed of the above developments, Nat Griswold of the Arkansas Council on Human Relations called Paul Rilling of D. C. Commissioners' Council on Human Relations asking that he communicate with HHFA to vouch for the integrity of Dr. Townsend and his associates.

3. On September 25 Dr. Townsend wired Mr. Weaver requesting a reply to his letter of September 15.

(On September 28-30 Mr. "Pat" Alves of the national office of the Urban League at the request of the local Secretary was in Little Rock to confer. He visited with Mr. Duncan in Washington on his way to and from Little Rock.)

Responses:

(a) On September 30 Mr. Weaver sent the following letter to Dr. Townsend:

September 30, 1964

Dr. William H. Townsend
President, The Council on Community
Affairs of Greater Little Rock
1304 Wright Avenue
Little Rock, Arkansas

Dear Dr. Townsend:

This is in reply to your letter of September 15 and telegram of September 25 concerning urban renewal activities in Little Rock, Arkansas.

I can appreciate your concern and have asked the Urban Renewal Commissioner, William L. Slayton, to look into the matters referred to in your letter. Mr. Slayton tells me that representatives from Washington and the Ft. Worth Regional Office will be in Little Rock about the middle of October to look into this situation and that they will get in touch with you.

You can be sure we will do everything we can to be helpful.

Sincerely yours,

Robert C. Weaver
Administrator

cc: Nat. R. Griswold

(b) Before Mr. Weaver's letter arrived Mr. Hinojosa of the Regional office called Mr. Griswold to report that he would come to Little Rock in response to the complaints on September 6 and would meet Mr. Duncan on September 7. Rooms were reserved at the hotel for both men. He also said Mr. Church, Regional Administrator of Urban Renewal at Fort Worth, would be in Little Rock on October 2. In reply to a direct question he said that Mr. Church would not see Mr. Griswold or Dr. Townsend.

On Monday, September 5, Mr. Hinojosa called to change the date of arrival of himself and Mr. Duncan to October 13,14. This led to the following exchange of letters:

October 6, 1964

Mr. Pete T. Hinojosa
Intergroup Relations Officer
Urban Renewal Administration
300 West Vickery Boulevard
Fort Worth, Texas 76104

Dear Mr. Hinojosa:

We are greatly pleased that you and Mr. Duncan are coming to Little Rock. We will be as helpful in your inquiry as we know how.

However, your new dates give us a little concern. I assume you know that Mr. Hudson and Mr. Wagner Jackson are spending the day here on October 14 for a conference. This has been planned since last summer. A number of other persons concerned with your visit will be involved in the conference with Mr. Wagner and Mr. Hudson. So, on Wednesday, the 14th, time will be at a premium. If you both could be here on Tuesday we would be freer.

Of course this assumes your inquiry is much more focussed on one urban renewal project. This might make it undesirable to unite the two parties into a foursome!

However it works out, we will do our best for you all.

Sincerely,

NRG:ra

Nat R. Griswold

cc: Mr. Duncan
Mr. Hudson

(c) On Saturday, October 10, Dr. Townsend, Mr. Henry, Mr. Bates, Mr. Griswold received the following letter from Mr. Duncan:

October 5, 1964

Mr. Nat R. Griswold
Arkansas Council on Human Relations
1220 West Capitol
Little Rock, Arkansas

Dear Mr. Griswold:

This is to inform you that I will be in Little Rock, Arkansas on Wednesday and Thursday morning, October 14 and 15, 1964.

You may expect a telephone call from me around noon on Wednesday. At that time I wish to confer with you and other persons about the local situation there in Little Rock.

Sincerely yours,

J. Lawrence Duncan
Assistant to the Commissioner
for Intergroup Relations

4. On Monday, October 12, Dr. Townsend, Messrs. Bates, Henry, Griswold met at the Urban League office to plan the best way of acquainting Mr. Duncan with the facts, agreeing to wait until Mr. Duncan could express his wishes and to let Mr. Henry make out and duplicate particulars of the complaints and the changes sought.

Responses:

(a) On Tuesday, October 13, Mr. Hinojosa of the Fort Worth Urban Renewal office unannounced came to Mr. Griswold's office and visited informally for an hour ranging over many topics in and out of Little Rock. In the conversation Mr. Hinojosa disclosed Mr. Church of the Fort Worth Urban Renewal office would come also. He indicated that we would have to wait for Mr. Duncan to learn what his plans were. Mr. Griswold drove him to his

hotel. He has not been seen or heard from since.

(b) On Wednesday, October 14, the date for Mr. Duncan's arrival and for the program for Mr. Wagner Jackson and Mr. Samuel Hudson, Dr. Townsend remained by his phone through the noon hour because Mr. Duncan said he would call. Before the luncheon for Messrs. Jackson and Hudson, Mr. Griswold phoned the hotels to see if Mr. Duncan had registered. That afternoon two calls to Mr. Hinojosa's room received no answer. A newsman and an interested doctor reported that they had heard some one was touring University Park Project. The day ended in mystery as to Mr. Duncan's whereabouts.

(c) On Thursday, October 15, at 10 a.m. Mr. Wagner Jackson, our Philadelphia guest, called Mr. Griswold, indicated Mr. Duncan was present and wanted a meeting with six of the interested party at 11 a.m. At considerable personal sacrifice the six hurried to the conference in the Urban League office.

(d) Mr. Duncan proceded to tell the group the decision that had been reached with Mr. Naylor: (1) That Edward Moore, owner of the $35,000 house in the project, could remain by accepting the conditions of the Housing Authority or, if these proved too inconvenient, he could sell his home and build an equivalent house in the project; (2) That Mr. Naylor, Director of Little Rock Housing Authority, had been shaken by the complaints to the point that he was seeking a conference with these representatives; the way was open for genuine citizen participation which he, Mr. Duncan, was aware had not existed before.

Mr. Henry of the Urban League had in hand the details of the "case" for the complainants, these were never looked at or considered.

Mr. Duncan asked the group to meet with Mr. Naylor at 2 p.m. to seal his new agreement to confer. It was 12:45 p.m. already.

At 2:20 the group gathered at Mr. Naylor's office. Since Mr. Duncan had to leave at 3:00 p.m., a total of 30 minutes were available for pleasantries, report on the world series, and reiterating with slight variations the agreements already reported by Mr. Duncan. At the suggestion of Mr. Henry it was agreed another meeting would occur October 30, 2 p.m.

<u>In Summary</u>:

Mr. Duncan, the Washington representative of the national office of Urban Renewal, sent here "to look into this matter" raised by Dr. Townsend and others was in Little Rock 14 hours before any of the parties expecting him could locate him. He spent 24 hours in Little Rock. He was with the aggrieved parties a total of two hours in two hurriedly called and self-directed meetings. Grievances of local citizens were never heard, much less discussed on their merits.

Mr. Hinojosa, the intergroup official of the regional office, appeared suddenly and disappeared as suddendly.

Mr. Church, Regional Administrator of Urban Renewal, was in Little Rock twice during October but made no contact with citizens concerned with the local project.

Controversy Brews Over University Park Urban Renewal

By ROY REED
Of the Gazette Staff

A group has protested that the Little Rock Housing Authority is using federal Urban Renewal money to force Negroes out of the Univesity Park Urban Renewal project and turn western Little Rock into "a white preserve."

The protest brought a federal investigator from Washington this week. He spent Wednesday afternoon and part of Thursday in Little Rock talking with Housing Authority officials and those protesting.

The complainants were not too satisfied with his investigation. One said his mission seemed to be to mollify rather than investigate.

The investigator was Lawrence Duncan, assistant to the Urban Renewal commissioner in the Housing and Home Finance Agency. Duncan's specialty is inter-group relations.

Nat Griswold, director of the Arkansas Council on Human Relations, said he and others were fearful of Little Rock's growing trend toward concentrating its population in one-race communities. Some people believe that Urban Renewal is being used to hasten the trend, he said.

Dowell Naylor Jr., executive director of the Little Rock Housing Authority, disagreed. As for University Park, he said, the Housing Authority is and has been willing to work with the residents of the area to solve their problems.

University Park is the name the Housing Authority gives to an area it proposes to clean up and improve in the vicinity of University Avenue. Most of it is west of University, south of Seventh Street, north of Sixteenth Street and east of Bryan Street. Some parts bulge beyond those boundaries. One tract about seven blocks square lies east of University between Eighth and Tenth Streets. Another lies between Sixteenth and Twentieth Streets bounded on the east by University and on the west by McKinley Street. Another is between Clary, Vogler, Twelfth and Sixteenth Streets.

The Housing Authority plan, approved by Washington, is to clear the area of all houses and most businesses. When new drainage, streets, curbs, gutters, sewers and utilities have been installed, the land will be resold for new development. This is called total clearance.

The protest began to gather strength a few weeks ago. After several minority group leaders agreed that something should be done, Dr. William H. Townsend, a Negro optometrist who heads the Council on Community Affairs (COCA), wrote to Robert C. Weaver, administrator of the federal Housing and Home Finance Agency.

Townsend asked Weaver, a Negro, to send someone to investigate before allowing the Housing Authority to continue. An official in the Washington Agency telephoned L. C. Bates of Little Rock, field secretary for the National Association for the Advancement of Colored People. Bates supported Dr. Townsend's request.

Dr. Townsend told Weaver that the University Park project was unfair to all home owners of modest means, white and Negro.

He said, "It is patently discriminatory to Negro owners whom this project will move out of the western area of the city, which in the minds of officials is a white preserve. We have evidence that the staff of the Little Rock Housing Authority expects whites to occupy the new residences. This simplifies other decisions such as keeping schools and parks segregated!"

Dr. Townsend said the area had been scheduled for total clearance even though 80 per cent of the residents owned their own homes. He quoted an unidentified member of the Housing Authority staff as saying, "The percentage of substandard structures is not as high as normal."

Dr. Townsend and his colleagues believe that University Park should be a rehabilitation project, not total clearance. He told Weaver that.

Duncan, the investigator, met with leaders of both sides together Thursday. He left for Washington without seeing reporters. Naylor said the idea of changing the project from clearance to rehabilitation never came up. Griswold said the reason it didn't was that the complainants never had a chance to bring it up.

Griswold was dissatisfied with Duncan's handling of the matter. He said none of the people who got him here heard a word from him until 10 a. m. Thursday, almost a day after he arrived. At 10 a. m., Griswold said, he was asked to get the leaders of the protest group together for a meeting at 11 a. m., and he did. Duncan then met with both sides in the afternoon.

Griswold and Naylor agreed on the main results of the afternoon session. The protesters wanted assurance that families wanting to stay in their homes could do so, even though the Housing Authority might have the power to raze their houses.

They were told that some families might be able to stay, provided they met certain conditions. An owner would have to move out for several months —maybe eight or 10, Naylor said—while the Urban Renewal work was going on. He would have to agree to pay a pro rata share of the cost of the neighborhood improvements — new sewers, streets, curbs and gutters, etc. He also would have to agree to make whatever improvements might be necessary to raise his house to certain standards, probably the standards set in the city building code.

One house is the cause of special contention. The Edward Moore family lives at 1600 Garfield Street in a brick and frame house appraised at $35,000. The house has nine rooms, air conditioning and several expensive touches — such as a tiled entrance hall — not usually found in what the government calls "substandard housing." The Moores don't want to leave and they find it incredible that anyone should suggest tearing down their house.

Naylor said after the meeting that it was possible the Moores wouldn't have to leave. "There's no question that he has a standard house," Naylor said.

But the family may have to move out for several months and they may have to put up with having no street access, no utilities and other inconveniences, he said. The Moores' being allowed to remain apparently hinges on their willingness to agree to these conditions.

Moore, a Negro, has roots in the neighborhood. He was born across the street. A close relative lives diagonally across the intersection. His mother-in-law's grandfather once owned the property on which his house is located.

Naylor said there were 231 white families and 100 Negro families in the University Park area. He denied any attempt by the Housing Authority to force Negroes out of western Little Rock. The 1960 census showed 2,300 Negroes west of Elm Street, he said. He conceded that most Negroes west of University live in the area slated for renewal.

Griswold said he was equally concerned about the low-income white families. This would be a good chance to develop a moderately priced housing area for low-income groups of both race who already live there, he said. That could be done with a rehabilitation project, in which the Housing Authority foots the bill for public improvements while the home owners repair their property, he said. Little Rock has three such projects.

The people now living there won't be able to afford to move back when the area is totally cleared and put up for resale, Griswold said.

Naylor said the Authority anticipates that the new houses will cost $16,000 to $20,000. Naylor said there would be no discrimination against anyone, white or Negro, in reselling the land. Federal law prohibits it, he said.

As a practical matter,, he said, most families moving out of an Urgan Renewal project go ahead and find a permanent relocation elsewhere to avoid living in "limbo" two or three years awaiting for the clearance. He predicted that the residents of University Park would follow the usual pattern and resettle all over the city.

Griswold predicted that the Negroes would resettle in the eastern part of town where Negroes already are concentrating in what he sees as a developing ghetto.

Naylor said he saw no danger of a ghetto caused by Urban Renewal. He said the Housing Authority in 13 years had relocated about 1,800 Negro families, only a small percentage of the total Negro population of Little Rock.

A larger menace, he said, is the modern subdivision. With mass-built houses, a neighborhood no longer sees a fine home next to a moderately priced one, he said. One result is that the people in subdivisions tend to be all alike, he said.

It is likely that University Park, when cleared, will end up a subdivision. Naylor himself envisions it blending with the surrounding subdivisions, Briarwood, Broadmoor, Shannon Hills and Point of Woods.

Griswold sees little chance that any Negroes or low-income white people are likely to end up in such a place.

In fact, most of the residents who would like to stick it out through all the renewal work probably won't be able to because of the stringent conditions of the Housing Authority, he said.

Naylor said there were several reasons why University Park was designated for clearance instead of rehabilitation. Vast parts were not usable for residences because of steep grades, inadequate or non-existent drainage and no streets, he said. A whole new street pattern will be devised, along with all other public improvements, he said. "Rehabilitation really would not have been possible," he said.

Naylor said the Housing Authority already was taking options to buy property in the area.

CONFRONTING THE LITTLE ROCK HOUSING PROBLEM

--By Greater Little Rock Conference on Religion and Race

An Alarming Trend

> "....almost all relocated families (in Urban Renewal) upgraded the quality of their shelter, but relocation frequently contributed to the creation of new ghettos."
>
> "Residential segregation in the urban South, however, increased, so that by 1960 it was more pronounced in Southern cities than in those of any other region."
>
> -Weaver, The Urban Complex, pp. 128, 249.

Much properly has been and can be written about the contributions of the federal programs of urban renewal and housing since 1949. These contributions are acknowledged and assumed herein.

But most serious evaluations of these programs say something like this: Slums have been unslummed but racial ghettos have been increased.

Slums vs Ghettos

Mr. Wagner Jackson, Assistant Administrator of Housing and Home Finance Agency in Philadelphia, in a speech at Little Rock, October 14, 1964, said, "It has been reliably estimated that without a change in present housing trends, by the 1980's at least a half-dozen of our largest cities will be predominantly non-white. And a further continuation would eventually see whole cities become racial ghettos, each surrounded by a ring of white suburbs. That alarming possibility is entirely too real. Those who see the danger clearly must, like watchmen in the night, sound the alarm to waken those who sleep."

Startlingly, the evidence indicates an advanced

trend toward complete racial segregation in housing. On the night of Mr. Jackson's speech, a member of the audience asked Mr. Dowell Naylor, the Little Rock Housing Director: "Is development in housing in Little Rock drawing racial groups closer together or silently drawing them apart?" His answer: "Drawing them apart."

Some simple observations of the apparent convince us that Mr. Naylor is correct.

For example, here in Little Rock, as in other cities, high and middle income white families have been on the move northwest and west to the suburbs. They have left older substantial houses in the city proper which became available to lower and moderate income families, especially Negro families. This transformation continues.

whites move out

Meanwhile, areas to the east, south by southeast increasingly become the preserve of low income families, mostly non-whites.

Negroes stay and move in

Another evidence of this segregation trend is the pattern of schools which has developed especially since 1950. (Schools unquestionably are a cause and effect of the segregated housing pattern; but this need not be argued here.) Since 1950 white schools east of High Street have decreased from six to two elementary schools. In the same area schools for Negroes have increased from four to twelve, including one junior and one senior high school. West of High Street, on the other hand, white schools have increased from 14 to 24, including three junior and one senior high school. In this whole area there is but one elementary school for Negro children.

schools separate east-west

(The number of Negro children in formerly white schools are negligible for the purpose at hand.)

So, even with this limited evidence, one seems justified in being perturbed over the trend toward racial-economic bifurcation of Little Rock. White upper and middle class gather on the periphery to the west, northwest, leaving the east, southeast and central residential city to non-white and low income white families. The schools are strikingly separated by High Street. In Mr. Jackson's figure, watchmen might well sound the alarm.

Some Forces at Work

> "More than 2,000,000 whites deserted central cities in the same time that some 1,300,000 non-whites moved in."
>
> -Weaver, op.cit. p.223

> "The early governmental policy of segregation in public housing subsequently served to accentuate color consciousness in low cost housing at the same time it reflected the strategic role of authority in establishing racial Patterns."
>
> -op.cit. p.59

> "In the first place, many Southern cities started from a position of much more residential racial mixture. Secondly, from the beginning they have insisted that publicly assisted shelter be racially separate.
>
> "Thirdly, because in most cities Negroes had relatively little political influence, the colored population had but slight voice in the planning and operation of local governmental agencies which set policy and administered programs.
>
> "Finally, the inevitability of school desegregation in Southern cities gave impetus to a new and expanded program for residential segregation. Obviously, if during the period of resistance to the Supreme Court decisions on this matter and of token compliance in some of the communities, housing patterns could be manipulated so that colored residents were concentrated in well-defined areas, there could be school desegregation with little or no mixture of the races in the public schools.

"Urban renewal offered new and undreamed of possibilities in this direction."

-op.cit. p.241

Seeking the forces making the trend, one is impressed even more with the fact of separation.

appeal of space, status, better schools

The usual appeals of space, status and better schools magnified by the real estate broker's art moved people to the open spaces, the sub-divisions west, northwest. Residences left in the older city provided for the first time a better quality of housing for Negro families with growing economic security. So there is now a mixed situation between Broadway and High and south of Wright Avenue, especially along State, Gaines, Izard, Chester, Ringo, and Cross. Rightsell Elementary School, 20th and Chester, was transformed from white to Negro over protests of both white and Negro patrons.

housing programs speed the trend

As suggested above, the programs of the Little Rock Housing Authority have made a major contribution to the separation trend. (This is a statement of fact, not a moral judgment.)

Prior to Presidential Executive Order 11063, November 20, 1962, housing projects were racially segregated without apology. In Little Rock the projects have been low-rent housing which followed the pattern, "Negroes to the east, whites to the west." Furthermore, these projects here as elsewhere intensified and multiplied social problems of occupants even while improving the shelter.

A cursory review of local projects illustrates the character of the trend toward separation and toward multiplying social ills. First, recall the projects for Negro occupants:

Booker Homes, located out southeast on old Highway 65, concentrates 400 destitute Negro families, many with mothers as the heads, and with a total of 1388 children.

Hollingsworth Homes north of the municipal airport brings together 200 problem Negro families with 718 children.

Amelia Ives Homes, between Scott and Cumberland, south of Roosevelt, puts in proximity 150 poor Negro families with social ills and with 300 children.

The projects for whites, Highland and Sunset Terrace, reflect this same picture of a collection of socially maladjusted families, both located west of High Street but within the older city area.

Regretfully one must say that urban renewal in Little Rock too has abetted the trend to residential ghettos.

urban renewal and housing patterns

Dunbar Urban Renewal Project was one of total clearance. It cleared out a pepper and salt residential area. In the foreseeable future it will be occupied by Negroes with only a token of white renters.

Granite Heights, a clearance project across from Booker Homes, has been developed as individual homes and sold exclusively to Negro families for $10,000 to $27,000 each.

Westrock Project along Cantrell Road in the valley between affluent white residences removed all the Negro families from the 54 acres and developed the area into homes valued from $20,000 to $35,000 and two high-rise apartment buildings. Accurately, the 1962 report of the Housing Authority proclaims, "Westrock joins its neighbors!"

University Park Project now being programmed calls for clearance of some 300 low and moderate income families including some 94 Negro families. This will remove practically all Negro families residing west of University.

Mr. Bernard Weissbourd, the President of Metropolitan Structures, Inc., speaking in general terms, seems to describe our plight in Little Rock:

"...public housing has also contributed to the condition of our cities... By rejecting all those whose income exceeded the prescribed limits, public housing has developed a concentration of those members of society who are not able to support themselves. Coupled with the fact that most cities have followed a deliberate program of segregation in public housing, the result has been to create in many places an environment lacking in all the positive attributes of urban life. The second generation of many public housing occupants is now coming to maturity and it is already clear that many of them will never become viable members of society."

-Paper published by the center for Study of Democratic Institutions.

Possible Directions

"Cities seriously concerned with urban renewal are being made to appreciate that, both in terms of human potential and dollars and cents, there are sound grounds for public programs designed to accelerate the participation of those who are now rejected from the mainstream of modern life."

"No doubt we will have to do much experimentation in this area, but once there is commitment to meet the issue productive techniques can and will be developed."

-Weaver, op.cit. p.265

Obviously this widespread malady of cities -- increase of social ghettos -- has become a challenge to the creative work of experts and local authorities. The forces behind the trend are powerful and complex. Part-time voluntary associations rightly cannot be expected to prescribe with scientific exactness. Professionals, "doctors", must be involved at every level in finding remedies and applying them.

role of persons of decision and power

More specifically, in Little Rock persons who have power of decision and execution in the Housing Authority, in the schools, among realtors, city officials and commissioners, must become convinced of the dangers to the point of planning and acting. These persons with the resources -- political, economic, program -- will have to devise the remedies and apply them. Lay citizens at best can help to stimulate such persons and support their purposeful efforts.

Such persons must be committed to halt the trend toward ghettoizing. They must accept this as a primary goal. As a primary goal it will drastically affect immediate economic ends. Such commitment means the courage to recognize conflict of interests and to adjust them or overpower some.

new methods are available

Of course, the professionals in the area of city planning know that they do not have to start de novo. Public and private funds are at work in many places probing for answers and experimenting. New legislation is being proposed by the Housing and Home Finance Agency and the President to improve housing programs. Some of the suggestions presented here are drawn from some of these newer methods and proposals. They are meant to suggest possible directions, not to be a blue print. While addressed to a specific group or agency each group of suggestions may be the concern of a number of others.

A. To Churches and Synagogues:

1. Encourage inclusiveness of church fellowship by non-discrimination in both worship and membership.
2. Keep members aware of, and sympathetic to, the housing needs of Negroes in the community, and alert to pertinent legislation regarding housing.
3. Encourage the awakening self-respect that urges the poorly-housed to break out of their environmental housing trap.
4. Bring influence to bear upon those who plan for the community's housing problems to approach with a realistic and enlightened attitude the housing of Negroes in Greater Little Rock.

B. To Metroplan Commission and City Planning Commission

> "Thus, planning is no longer an esoteric concept of interest only to academicians. Planning is now part of the vocabulary of elected officials at the federal, state, and local levels of government in the United States. ....it will become increasingly important in the years ahead."
> -Weaver op.cit. p.139

planning is basic

The "workable program" prescribed by the Urban Renewal Agency includes "A comprehensive plan for the community's future development." Planning now is done in terms of fifty years. So surveys, analyses, and plans, which are the specialty of your agencies have priority in all programs for purposeful change. We suggest, therefore:

1. Carry through the proposed population study with the question of social ghettos uppermost in mind.
2. Evaluate and adapt to the local situation the more fruitful projects in other places aimed at diversity in housing.
3. Especially, consider development of "new communities" centered around industries outside the city.
4. Persistently feed information and ideas to governmental and economic leaders as well as to the public.

C. To business leaders, county and city officials:

1. Put the problem of social ghettos on your permanent agenda. In reviewing all plans, all projects, always put this question: What effect does it have on the pattern of residential housing?
2. Place solid representatives of minorities, especially Negroes, on all planning and policy making boards and commissions.
3. As occasions arise, exercise governmental powers, taxation and eminent domain, to encourage the development of a "suitable living environment for every American family" which was the original goal of the Housing Act of 1949.

D. To private real estate developers:

In large developments, include in plans at least one neighborhood of moderate-priced homes for occupancy by all citizens.

E. To school officials:

1. Take comprehensive affirmative action without additional court orders to establish a unitary school system in Little Rock. This will hasten public preference for heterogenous schools and will discourage present migration of families because of schools.

2. Cooperate with housing plans to make an "excellent school" one of the inducements for residential renewal in the older parts of the city.

F. To the Little Rock Housing Authority:

> "Already Urban Renewal, once identified as 'Negro removal' has in many localities become an effective instrument for facilitating non-segregated patterns of living....To realize urban renewal's full potential in this regard, local agencies and the Federal Government will have to be more sensitive to site selection and its implication for racial residential patterns."
>
> - Weaver, op.cit. p.134

> "The original concept of urban renewal did not face up to these (human) problems. It was conceived primarily in terms of land values, tax revenues, and slum clearance."
>
> "Concern for the human aspect of urban renewal indicates the need for new and expanded approaches to moderate and low income housing. ....We propose:
>
> 1. ...
> 2. Programs for utilizing, through purchase and leasing, existing housing for occupancy of low-income families."
>
> - op.cit. p.110 f

"In addition we shall propose use of section 221 (d) (3) for rehabilitation of one-unit and duplex houses owned by low and moderate income senior citizen families in rehabilitation and conservation areas with deferred principal payment."

- op.cit. p.111

"The new community like St. Francis Redevelopment, will be a stable racially integrated neighborhood, ... But it will have an additional feature: it will be composed of low as well as moderate income occupants, and, perhaps, a few higher income households and individuals."

- op.cit. p.136

1. Develop projects to provide neighborhoods of families of moderate incomes in larger communities of middle and upper families.
2. Develop new communities in the central city for the residence of the employees downtown, using the inducements now used for sub-urbanites - space, good schools, recreation, status.
3. Plan the use of section 221 (d) (3) for the restoration of one-unit houses for occupancy by moderate income families, especially in conservation areas.
4. Locate new housing or urban renewal projects so as to counter the trend toward economic and racial apartheid.
5. In every program be influenced by the answer to this question: How does it affect racial separation in housing?

SUMMARY

The constant growth and the acceleration of racial separation in housing in Little Rock alarms us.

The evidence convinces us we are moving from a city of tolerable diversity in housing to the dangerous conditions prevailing in eastern and northern cities -- the condition of racial ghettos and of economic ghettos.

The forces pushing this trend toward residential apartheid are powerful and entrenched, appealing to basic anti-democratic human desires and prejudices.

They cannot be countered or deflected by voluntary associations of citizens alone. Officials and leaders of decision and power must become alarmed and counter the trend.

Strong affirmative resolution to change the trend will be required. Given this, ways can be found. Funds for research and planning can be had. Recommendations from the highest authorities are available. New empowering legislation is in process.

This is an emergency. Unless action is taken during the process of change, it will be too late. What has happened to other cities need not happen in this Southern city.

22 November 1965

Mr. Morland Smith
Department of Urban Planning
Southern Regional Council
5 Forsyth Street, N.W.
Atlanta 3, Georgia

Dear Mr. Smith:

This letter accompanies some materials in re housing in Little Rock. This is to acquaint you with our situation and to encourage you to come to help.

During this year the Housing Authority at Little Rock has named a Negro member, a merchant and realtor beyond seventy years of age. Also three Negroes have been named to a committee of Metroplan Commission, which committee is serving the Housing Authority as its citizens participation committee. In naming all these Negro citizens officials studiedly avoided individuals recommended to them by Negro leaders and by the Steering Committee of the Conference on Religion and Race.

There is no evidence of change in policy or program of the Housing Authority to say nothing of the realtors.

We are greatly concerned about continued trends toward solid segregation. We are watching the implementation of the new housing legislation by Congress to see if it changes things.

We are in the early stages of forming a city-wide Citizens' Committee for Fair Housing in cooperation with the Catholic Interracial Council and the Conference on Religion and Race. Do you have suggestions about such a committee?

Sincerely,

Nat Griswold

Nat R. Griswold
Executive Director

A Council to attain equal opportunity for all people

December 23, 1965

Mr. Bruce R. Anderson
Wallace Building
Little Rock, Arkansas

Dear Bruce:

I am terribly sorry that my compacted schedule prevented us getting together for an old time bull session. Perhaps next time my luck will be better!

With all of the best wishes for a wonderful Christmas Season and a Prosperous New Years, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Fred Arnold
Whittenberg Delong & Davidson, Architects
510 Center Street
Little Rock, Arkansas

Dear Mr. Arnold:

I was terribly sorry that time prevented us from getting together. I would like to have had an opportunity of chatting about mutual interests. Per haps on my next visit we can make the opportunity.

The report by the Greater Little Rock Conference on Religion and Race on Housing Porblems interested me very much. I hope these efforts will continue.

With all of the best wishes for a wonderful Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mrs. Frank N. Gordon
5208 Edgewood
Little Rock, Arkansas

Dear Mrs. Gordon:

I appreciate so much the opportunity of visiting with you at dinner on the 17 of December. It is wonderful to see the leadership you are giving in these momentous times. I hope that I may have the pleasure of working with you further in the Little Rock Planning projection.

May you have a wonderful Christmas Season and looking forward to seeing you again, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Hugh B. Patterson, Jr.
Arkansas Gazette
Gazette Building
Little Rock, Arkansas

Dear Mr. Patterson:

My sincere appreciation to you for your hospitality and constructive bringing together so many effective people for lunch on the 16 of December. It is most challenging and encouraging to see the effective leadership you are accomplishing in Little Rock. If at any time you have any suggestion, I would particularly like to have the benefit of them.

Hoping you and your family have a marvelous Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Frank N. Gordon
Pyramid Life Building
Little Rock, Arkansas

Dear Mr. Gordon:

It was good to be with you at dinner the 17 of December and project the possibilities of Urban Planning as it affects the disadvantaged. To me you people are doing a grand job in Human Relations and my only hope is that I may be helpful in the Plan analysis matter. Hoping to be working with you or this, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Rabbi E.E. Palnick
B'nai Israel
421 Broadway
Little Rock, Arkansas

Dear Rabbi Palnick:

I was very glad to have met you on December 16 and discuss with you the potentials of Urban Planning. Your penetrating and constructive participation was wonderful. I do appreciate it. Hoping that we may have further contacts and that you and yours will have a wonderful New Years, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

The Rev. Mr. Rhodez Thompson
Pulaski Heights Christmas Church
4724 Hill Crest
Little Rock, Arkansas

Dear Mr. Thompson:

It was wonderful to have the chance of meeting you and having the discussion on the impact of Urban Planning on the disadvantaged. I hope we will be able to work together on this important matter.

The report on "Confronting the Little Rock Housing Problem" by Greater Little Rock Conference on Religion and Race was most interesting and I commend you on what you are doing. Very often we can accomplish a great deal by just bringing to light factual data to the attention of the public.

Hoping to have the privilege of working with you further, and that you have a Glorious Christmas, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Dan Cowling, Architect
1515 West Seventh
Little Rock, Arkansas

Dear Dan:

It certainly was good to see you on the 17 of December and to chat during lunch! To me, contacts with you are always stimulating.

I found most interesting what is being done by the Little Rock Metroplan. I hope it continues to produce.

With all of the best wishes to you and Carol for a Glorious Christmas Season, I am,

Sincerely your,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Guy W. Swaim, Architect
215 Louisiana Street
Little Rock, Arkansas

Dear Guy:

It was good to have a chance to chat with you for a few minutes and I trust next time my schedule will not be so full and that we may have more time together!

With all of the best wishes to you and Jim for a wonderful Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 23, 1965

Mr. Stuart Eurman, Director
Metroplan
Court House
Little Rock, Arkansas

Dear Mr. Eurman:

Thank you so much for all of your time spent with me on December 16th. I am most impressed with what you are doing and it is hoped that we will be able to work out a projection on the IBM card system you have on the analysis of ethnic group facilities use.

Your projection for having an overall co-ordinating group is most interesting. I believe it could well get over the present proliferation of authority and lead to a unified projection. I shall watch it with interest.

With all of the best wishes for a marvelous Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:rh

December 23, 1965

Mr. James Binder
2400 West Seventh Street
Little Rock, Arkansas

Dear Mr. Binder:

Thank you so much for your time so generously given and the perceptive interest shown in the Urban analysis. I hope I shall have the pleasure of working with you further.

It is a "small world" when one realizes you knew my late father-in-law and Berney Steinhardt. I will take pleasure in remembering you to Berney when I go to Montgomery Christmas.

With all of the best wishes for the New Year, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:rh

December 23, 1965

Mr. Donald Naylor, Executive Director
Little Rock Housing Authority
201 East Roosevelt Road
Little Rock, Arkansas

Dear Mr. Naylor:

Thank you so much for your time and assistance as well as documentation of the work of your Housing Authority. This is most impressive! I hope we may have further contacts.

Hoping you have a wonderful Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:rh

December 23, 1965

Mr. Finley Vinson
First National Bank
Third and Louisiana Streets
Little Rock, Arkansas

Dear Mr. Vinson:

It was good to meet you and chat during lunch on the 16th of December. I look forward to working with you further. I believe your thoughts constructive and practical. It is my opinion that because I have a background in investments, as well as planning, that I might be able to be helpful in ameliorating differences which sometime take on exaggerated value because of emotional rather than intellectual approach. If at any time you have any suggestions I would be delighted to have them and I assure you I will keep them in the utmost confidence.

Looking forward to seeing you again and that you have a very fine Christmas Season, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:rh

December 23, 1965

Mr. John W. Walker
1304-B Wright Avenue
Little Rock, Arkansas

Dear Mr. Walker:

It was good to meet you and discuss the impact of Urban Planning. Your penetrating questions and comments were most appreciated. I hope we shall be able to work together further on this most important matter.

Hoping you have a wonderful Christmas Season and looking forward to seeing you again, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS:rh

December 23, 1965

Mr. Howard Eichenbaum, FAIA
201 Chester Street
Little Rock, Arkansas

Dear Howard:

I was delighted to have the opportunity of seeing you again! Your effective participation in the luncheon dialogue December the 16th is greatly appreciated. As I pull together my thinking on this Project I hope I may have the benefit of your further thinking.

With all of the best wishes for a wonderful Christmas Season and looking forward to seeing you again, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

Old Athens May Get A New Heart

By Andrew Sparks

In the redesigned center of Athens, College Avenue would be a major, tree-lined access to downtown. Clayton Street, the main shopping thoroughfare, would be a pedestrian mall for two blocks east of College and would have trees and 30-foot-wide sidewalks in the opposite direction. Thomas Street would be moved east over the railroad tracks and the present location made part of the new plaza and park. A second new park would surround the proposed city auditorium and exhibition hall.

1. City Hall
2. Proposed Public Library (old post office)
3. Clarke County Courthouse
4. University Administration Building
5. Suggested University Club
6. Suggested City Government Offices
7. Suggested County Government Offices
8. New Post Office, Federal Courts and Offices
9. Suggested City Auditorium
10. Suggested City Exhibition Hall
11. Suggested New Retail Shops
12. Suggested New Office Buildings
13. Suggested New City Park

"DOWNTOWN Athens has problems," says Allen Stephenson, speaking with rare candor for a Chamber of Commerce man. He is executive director of the Athens chamber.

"What has happened to downtown Athens is taking place in cities and towns all over the country," he continued. "Automobiles haven't enough room to park. Stores in the central city are vacant. Business is moving to the suburbs. Shopping centers are growing and new commercial streets are developing away from the original city.

"Downtown we have one parking garage which the city built and two metered city-owned parking lots, one small and one somewhat larger. But these do not provide the necessary parking. Besides that, certain sections of the downtown district are in need of remodeling, rejuvenation or renovation, from the standpoint of physical attraction.

"As the downtown goes, so goes the rest of the city because the health of the over-all community is related to the central business district."

Like a man with a bad heart, Athens asked for the doctor's advice. The town now has the prescription for a cure and it may remodel its entire central area.

Aware of what would happen if the downtown continued to deterioriate, Mr. Stephenson approached the town's only architect, C. Wilmer Heery, and asked what could be done. Mr. Heery, the father in the father-and-son architectural firm of Heery and Heery, with offices in Athens and Atlanta,

Two blocks of Clayton Street would become a pedestrian mall. Thousands of underground parking spaces would help downtown stores like Davison's, at right.

The University would have a dramatic approach with trees and 30-foot-wide sidewalks along College Avenue, which would be main access to downtown.

offered to investigate and to recommend some solutions. This week the chamber announces the results of the study and the recommended changes which would make downtown Athens into the kind of place people would love and would go to—home folks, college students and out-of-town visitors.

Diagrams, maps and drawings, which the chamber has reproduced in a brochure titled "The Classic City?" show the new Athens, a beautiful and exciting place with tree-lined shopping streets, plazas, green parks and pedestrian malls. On-street parking would be banned, but the automobile would be rewarded with thousands of parking spaces. They would be hidden, underground and out of sight, beneath the plaza and parks and new commercial buildings erected downtown.

The designer-planner whom the Heerys assigned to the project in their Atlanta office was Howard Melton. He is well fitted for the job. After four years at Georgia Tech, three in the Marine Corps and a year and a half at MIT for his professional degree, the young Mississippian went to work for a British architect and town planner in London. When he came back to Columbia to get his masters, his thesis project was redesigning his home town, Greenville, Miss., which is about the size of Athens. Currently he is on a three-month leave of absence and has a traveling fellowship to study pre-Columbian civilizations in Mexico and Peru. When he returns to Heery and Heery in the spring, he will have learned how some ancient architects and town *(Continued on Next Page)*

Athens Would Have 3,800 Parking Spaces

(Continued From Page 11)

planners who didn't have to worry about automobiles solved their problems.

He began his study of Athens on foot, interviewing merchants.

George Heery, the partner in charge of the downtown Athens study, said: "One thing we are trying to do in Athens is bring people into the center of town, unfold the city to them as they approach and make it visually satisfying. We also plan to make it easy and pleasant to walk in the downtown area, with trees, beds of flowers, sparkling fountains, covered walkways for hot or wet weather and open areas for enjoying the pleasures of outdoors."

At the last census, the population of Athens and Clarke County was just over 45,000. In 15 years, by conservative estimates, this will have increased to 75,000 or 80,000, not counting University of Georgia students, who are expected to number 20,000 just five years from now. By 1990, the area will have close to 100,000 people. By 1980, Athens can expect a $54,000,000 increase in retail trade.

"We hope a lot of it will happen in the center of town," said Mr. Melton. "This increase indicates that a million square feet of additional floor space would be needed."

The architects say that most people who go to Athens know that the university is there even if they aren't conscious of seeing it. In redesigning the town, one thing they tried to do is make people see it. Mr. Melton said he hopes to "visually affirm the presence of the university to a person as he comes into the center of town, to force him to see it and to make seeing it a more meaningful experience." To do this, the architects gave the town a dramatic new entrance, with the university arch at the end of it.

THIS main access to Athens would be College Avenue, which would be connected by Prince and Dougherty to the new by-pass being built around town. Trees lining the street would extend to the university arch on Broad Street, and with no street parking, the sidewalks would be widened to 30 feet.

Clayton, which is only five blocks long, would remain the chief shopping street, as it is now. It would be turned into a mall for pedestrians from College Avenue two blocks east to Thomas. In the other direction, it would have 30-foot-wide sidewalks and would dead end a block sooner than now, at Hull.

The city, which has rather disconnected public areas, would have three civic centers under the new plan. Motorists on College Avenue would pass through one of them as they drive between the city hall and the old post office. The city can probably obtain the old post office free to use as a public library when the new federal building is built. The old structure faces the city hall and the two buildings can be landscaped into a handsome unit. For some time the city government has needed more office space, and there has been talk of tearing down the city hall to build a bigger one. The architects would save this, a handsome link with the past, and add new offices in a connecting administration wing built in the rear.

A second public area to be developed in the new plan consists of the courthouse, which could be enlarged with a wing like the city hall if necessary, and the post office, court and federal building soon to be constructed on urban renewal land on Dougherty Street. This would be connected by a new plaza to the mall on Clayton Street. Parking under the plaza would be convenient for shopping or for business at the courthouse or post office.

The third public area is at the opposite end of Clayton, in a block now occupied by the bus station and a few other buildings, but not thickly built up. Here the architects propose a park with an exhibition hall and a city auditorium for concerts and plays. Parking on this side of town would also serve two purposes and be in use night and day.

Underground garages in the plan provide 3,800 spaces, in contrast to only 700 or 800 available now on downtown streets. The only other downtown parking is the tall parking garage built by the city and the two small city parking lots. All the new parking would be built under the plaza and the parks and in the basements of new buildings added by the master plan.

The new downtown Athens would have variety and contrast—quiet parks, the exciting expanse of a plaza, the physically intense area of the mall with shoppers, plants, kiosks, even flags flying to give it the gaiety of a bazaar.

How can all this be brought about? The architects answer that question, or at least give some of the possibilities.

First, there's urban renewal, which is already taking place just outside the area. Some towns, New Haven, Conn., for instance, are doing a tremendous amount of civic remodeling through this means. It is much easier than formerly because spot urban renewal is now possible, renewing as little as a single block rather than a vast area.

Second, the city could create a public redevelopment authority, like the Savannah Port Authority or the Atlanta Municipal Stadium Authority, which would require an act of the legislature. The authority would coordinate the redevelopment and might undertake some phases that are not feasible for private enterprise.

Third, private property owners could form individual development corporations—for financial gain—so that several adjacent smaller property owners could undertake a joint redevelopment of their property.

Possibly the project could be accomplished by a combination of all three.

However it is done, curing Athens' heart trouble is worth the energy and the investment.

"Happy Birthday to me, Happy Birthday to me. . . ."

Journal-Constitution 6-5-66

Athens Makes 14-Month Gain On Renewal

ATHENS, June 4—The City of Athens, with the assistance of a $3.5 million federal grant, plunged into a five-year, $5.5 million urban renewal project just north of the downtown section of the city in April 1965.

The project covers about 128 acres. Within this area were located some 300 families, about 350 buildings of various types, and approximately 50 businesses. More than hlaf the residents were Negroes, and housing ranged from large rambling frame homes to falling - down slums.

Now, 14 months later, though day-to-day progress on the project is hardly perceptible, even to the casual observer it is apparent that striking changes have been made.

Paul Hodgson, director of Urban Renewal in Athens, cited some of these changes. So far, he says, the city has acquired 141 pieces of land in the area and has signed options on 23 more. In the entire area there are about 300 separate pieces of land.

Of the 50 businesses, 26 have already been relocated; and others, such as the Athens Banner-Herald, are in the process of moving into new quarters.

ONE HUNDRED ninety - two families are involved in the land already acquired; and of these 131 have been relocated, and so far 55 buildings are being demolished, and 33 have already been razed and the ground cleared.

No property has yet been re-

ONE HUNDRED ninety - two families are involved in the land already acquired; and of these 131 have been relocated, and so far 55 buildings are being demolished, and 33 have already been razed and the ground cleared.

No property has yet been resold, Mr. Hodgson stated. However, a portion has been promised to the federal government for a new federal building. And listed as "second priority" is a nonprofit apartment project sponsored by the AME Church to be built in an area west of College Avenue.

As for progress on the five-year project, Mr. Hodgson noted that "in acquisition we are about where we expected to be. But in moving people we are behind schedule because there is just no place for them to go."

Mrs. Elner Vaughan, who is in charge of relocation, explained that Urban Renewal cannot move people from the area into substandard housing, though if residents choose to move to a substandard dwelling nothing can be done to prevent their doing so.

Because many dwellings in the city have been condemned by the city inspector, there is just not enough low-cost housing to take care of the people displaced by urban renewal, many of whom subsist on welfare or Social Security checks.

"THE HOMEOWNERS have been easiest to place," Mrs. Vaughan stated. "They are able either to buy or build another home. But the renters must pay at least $60 a month for a house large enough for a family, and most of these people can't afford over $50. Some can't afford that much.

"Then there are many elderly people who have always lived within walking distance of town. It's very hard to find a place they can afford near a shopping area."

Some families have been located in public housing, and completion of another public housing project on Hawthorne Avenue will provide many other apartments.

HOUSING THE MILLION

The above title, while specifically inexact inasmuch as this report deals with housing problems inside Atlanta's city limits, is appropriate in the larger sense that solutions to Atlanta's housing problems can only be achieved through the resources of the entire Atlanta Metropolitan Region -- the abode of "the Million."

Dear Cecil:

This transmits the written report covering the assignment you tendered me on behalf of a group of Atlanta businessmen. I have enjoyed this opportunity to study Atlanta's housing problems and hope the product will be of some help in reaching solutions.

Kindest regards and best wishes,

Sincerely,

Hamilton Douglas Jr

FOREWORD

This report was prepared for a group of business leaders interested in finding answers to Atlanta's housing shortage. The assignment was three-fold:

1. To investigate the nature and extent of the housing shortage in Atlanta and determine its cause or causes.

2. To investigate methods being used in Cleveland, Pittsburgh, Baltimore and any other cities which have had experience in dealing with housing shortages through the medium of private agencies.

3. To determine desirability of setting up in Atlanta a privately-financed, non-profit revolving fund to spur increases in the supply of standard housing.

This report is based on field trips to inspect the operations of housing programs in Cleveland, Pittsburgh and Baltimore; study of reports and other materials from these and other cities; housing and population statistics prepared by staff members of the Atlanta Region Metropolitan Planning Commission; interviews with builders, developers, mortgage bankers, public agency officials, real estate brokers, and others active in various phases of renting, building and rehabilitating housing in Atlanta; and on the writer's experiences in the Atlanta Urban Renewal Program.

HAMILTON DOUGLAS, JR.
Atlanta, Georgia

TABLE OF CONTENTS

		Page
Section I.	Summary	1
Section II.	Problem: Housing Shortage	4
Section III.	Solution: Atlanta Development Fund	17

I. SUMMARY

In 1960, one-third of Atlanta's families were without housing conforming to minimum standards of the Atlanta Housing Code, a total shortage of:

52,660	standard housing units
-25,109	substandard units that can be rehabilitated
27,551	new units needed
+19,600	new units to take care of population increases by 1970
47,151	Atlanta's rock-bottom need for new housing units by 1970
-15,790	white and Negro families who can afford new units
31,361	
-19,442	Negro families who cannot afford standard housing outside public housing projects
11,919	lower-middle income Negro families, not eligible for public housing and unable to pay for standard private housing under present conditions of Atlanta's housing market
Unknown number	lower-middle income white families who are leaving Atlanta in search of standard housing within their means.

These are the heart of Atlanta's housing problem.

However, to these must be added the needs of 750 families unable to rehabilitate their homes for lack of ability to finance required repairs, and

The shortage of Negro residential land which forces up the price of new dwelling units and forces transition of white neighborhoods to Negro occupancy,

And you have the fundamental elements of Atlanta's housing problem for the next decade.

A Proposed Solution

A privately-financed, non-profit revolving fund could furnish answers to those housing problems which are within the scope of private enterprise.

Such an Atlanta development fund could lend intermediate equity capital, where not otherwise available, to enable developers to "put together a housing package." Such loans, secured out of "first profits" of the development, would be useful in implementing apartment projects, financed by long-term FHA-guaranteed 90 percent loans.

The Development Fund, by taking risks unacceptable to the private investor, could thus supplement the builder's venture capital to make possible housing which otherwise could not be built within the means of the lower-middle income white and Negro families who constitute the bulk of the housing problem which lies within the scope of private enterprise.

Atlanta Development Fund could also use its resources in many other ways within its basic concept that whatever increases the supply of standard housing in the Atlanta Metropolitan Region is within the scope of its activities:

1. By building cooperative apartments which require non-profit sponsorship to qualify for 100 percent, 40-year FHA loans;

2. By sponsoring Negro "satellite cities" to relieve pressures on the Negro residential land market and to relieve population pressures within the City of Atlanta;

3. By purchasing large tracts of land for development by builders in scheduled phases according to overall plans designed by the Development Fund;

4. By making rehabilitation loans to "hardship" cases unable to obtain financing through standard channels;

5. By sponsoring single-house demonstrations and other programs for encouraging citizen cooperation in neighborhood rehabilitation and conservation programs;

6. By purchasing and rehabilitating key buildings in run-down neighborhoods to reverse trends of neighborhood deterioration or to preserve harmony in a transition area;

7. By purchasing tracts of land to be held until the land becomes "politically usable" for Negro residential housing;

8. By removing artificial barriers to use of land otherwise available for Negro residential use; and

9. By sponsoring housing projects to demonstrate the possibilities of cutting costs by use of new materials, design, technology and production.

II. PROBLEM: HOUSING SHORTAGE

The size of Atlanta's housing problem depends on definitions. If any structure in which people live is accepted as adequate for the purpose, regardless of condition of structure and regardless of number of persons per room, there is no shortage. However, if Atlanta continues to insist, as it is now insisting through the recently-adopted Atlanta Housing Code, on minimum standards of condition and occupancy, there is a very real shortage:

One of every three families
is without adequate housing.

As of April 1, 1960, 105,340 standard housing units (units meeting minimum standards of the Atlanta Housing Code) were available to house 158,000 families then living in the City of Atlanta, indicating a shortage of 52,660 housing units for adequately housing today's population. Since 25,109 of the substandard units are estimated to be in sound enough condition to be repairable, the rock-bottom shortage which can only be met by new construction currently totals 27,551 units.

In addition, forecasts indicate that 19,600 additional units will be required by 1970 to house the expected population increase and to replace units lost through fire,

conversion to business and similar causes. Thus in the next decade a total of 47,151 new units must be built and 25,109 existing units must be rehabilitated if Atlanta's anticipated 1970 population is to be adequately housed. This total is on the conservative side and does not include factors for which no estimates are available, such as the number of today's standard or repairable units that will become unrepairable before 1970, and the number of standard houses that will be torn down to make way for expressways, parks, schools and other uses in condemnation programs not now contemplated.

This rock-bottom need for 47,151 new housing units by 1970, requiring a building rate of 4,715 units per year, is well within the demonstrated capacity of the local building industry. During the years 1952-1959, building permits were issued for an average of 3,472 units per year, including 5,540 permits in the peak year, 1959.

Why, then, the current shortage of 27,551 units?

HOUSING UNITS NEEDED, 1960-1970

	Total	White	Non-White
To meet new growth	14,400	1,300	13,100
To replace units lost through conversion to business, fire, etc.	5,000	4,000	1,000
To house families now living in dilapidated units	20,551	3,811	16,740
To house families "doubled up" in 1960	7,000	3,000	4,000
To provide a normal vacancy rate	4,500	3,000	1,500
Sub-total	(51,451)	(15,111)	(36,340)
Less standard vacant units in 1960	4,300	4,300	---
TOTAL NEW CONSTRUCTION REQUIRED, 1960-1970	47,151	10,811	36,340

New Construction for Whites

Despite massive condemnation programs, large-scale transitions of white neighborhoods to Negro occupancy and population increases, the white housing market during the "50's" has been relatively stable. There was no apparent unsatisfiable demand for rental or sales housing during the period. A higher-than-normal rate of vacancies was maintained. Public housing projects for whites were operated with small or non-existent waiting lists.

From this experience of the past decade, it is apparent that the need by 1970 for 10,811 new housing units for whites will present no serious problem, as such, since more than 14,000 units for whites were constructed during the years 1952-1959 alone.

However, this experience is warning
of serious trouble of another kind.

Population explosion as a fact of contemporary American urban life has been experienced in Atlanta as elsewhere, and is composed of a double movement of people. One movement is from farm and small city to large urban region and this more than any other factor caused the population of the five-county Atlanta Metropolitan Region to increase by 290,203 during the "50's."

The second movement, from large city to unincorporated suburbs, a movement

within the large urban region, has been a major cause of the surprising distribution of the Atlanta Region's growth: only 49,670 in the City of Atlanta (11.3 percent increase), compared with 240,533 for the rest of the Region (83.2 percent increase).

Analysis by Race

This comparison becomes significant for this discussion when the figures are analyzed for racial distinctions: in Atlanta, whites increased by only 3,187, Negroes by 46,483; in the rest of the Region, whites increased by 238,697, while Negroes increased by only 1,836. In other words, the double movement of people applied in Atlanta during the "50's" to the white population only; the Negro, meanwhile, has moved from the country to the city but has not yet joined the "flight to the suburbs."

A large number of whites who are leaving the city are those who can afford to live in the city but are seeking the amenities of suburban life. Another large number, however, are leaving the city because they are unable to afford to stay. This applies particularly to the lower-middle income families who once lived in areas since yielded to Negro occupancy or to government clearance programs.

> As a result of these pressures, the slums of Atlanta are now occupied almost exclusively by Negroes.

The displaced whites, having mobility generally superior to that of the Negro,

have left the city for cheaper land and lower building standards in other parts of the Region, and in many places are creating new shell-house and tar-paper rural slums. Their Negro counterparts, unable to exist apart from mass transportation systems, have doubled up in their slums or have taken over slums and other generally substandard areas once occupied by whites.

One of the most reliable indicators of this movement of whites out of the city, noted by Atlanta Urban Renewal officials, is the steady "disappearance" of the dislocated whites from the lists of former slum dwellers entitled to relocation advice and service. It is believe that such "missing persons" have left the city seeking accommodations in other areas of the Region more suitable to their budgets.

This phenomenon of the disappearance of large numbers of lower-middle class whites from the city, while caused by shortage of housing, is not itself a shortage. The shortage is actually being relieved by the migration, and to that limited extent, the migration is useful.

> If, however, there is any overall civic desirability in keeping this particular group within the city, the apparent solution is to take necessary steps to provide adequate housing for this group where it is not now being provided.

New Construction For Negroes

While there is no foreseeable shortage of standard housing for Atlanta's white population during the next decade, experience indicates that a large proportion of the 36,340 new housing units needed for Negroes by 1970 will not be built unless the factors which in the past have held back construction of housing for Negroes can be identified and eliminated.

During the "50's," Atlanta's Negro population increased from 136,416 to 182,899 (23.8 percent increased compared with 1.0 percent for whites), resulting in an additional 13,100 families. During the same period, the housing supply for Negroes was increased by 14,000 units (mostly new) as a result of construction of 13,000 new units, "transition" of 7,000 units (most substandard) from white occupancy, and loss of 6,000 units (mostly substandard) to fire, condemnation and like causes.

> Thus building programs greater than any previously undertaken in Atlanta were only able to keep pace with the Negro population increase, without making any substantial dent in the backlog of substandard housing inherited from the past.

Answers to the question: "Why hasn't the building industry met the need for Negro housing?" seem to be in two fields: 1) inability of the Negro to pay; and 2) shortage of land on which to build Negro housing.

Inability of the Negro to Pay

Part of the failure of the building industry to meet the need for standard Negro housing in Atlanta has been caused by inability of many Negro families to afford the purchase price or rental required for standard housing. This lack of ability to pay an "economic rent" is graphically illustrated when the estimated 1970 shortage of 36,340 new standard Negro housing units is analyzed according to estimated income and rent-paying ability of families expected to occupy such housing.

COMPARISON OF NEGRO DWELLING UNIT RENTS AND FAMILY INCOME, APRIL 1, 1957

Families	Percent of Total	Annual Income	Monthly Rent-Paying Ability
19,442	53.5%	Under - $3,000	Under - $40
11,919	32.8	$3,000 - $4,999	$40 - $60
4,979	13.7	$5,000 - Up	$60 - Up
36,340	100.0%		

Note: This analysis is based upon income levels as of April 1, 1957. Any substantial relative increase in Negro income levels after that date would probably decrease the number of Negro families in the lowest income group, while increasing the number in the "lower-middle" and highest income groups.

The great majority of those 19,442 families with annual incomes under $3,000 will be eligible for public housing, though it is questionable whether the city government would

agree to such drastic expansion of Atlanta's public housing facilities. For those families in this income bracket who are unable to enter public housing there seems no immediate answer except substandard housing.

There is no present possibility, and indeed no reasonable prospect, that even one-bedroom standard dwelling units can be built in Atlanta to rent for as little as most of these families can afford, or that such a unit can be built to sell for a price within the limited purchasing power of most families in this income category, as illustrated by the following analysis of current rentals and purchase prices of Negro dwelling units in the City of Atlanta.

ANALYSIS OF STANDARD NEGRO DWELLING UNITS
BY MONTHLY RENTAL AND PURCHASE PRICE

Type	Size	Minimum Monthly Rental	Minimum Purchase Price	Minimum Monthly Payment
Apartment or duplex	2 BR	$60		
Apartment or duplex	1 BR	$47		
House	3 BR	$85		
"221" house	3 BR		$10,000	$70
"221" house (proposed design)	3 BR		$ 8,700	$59
"221" house (proposed design)	2 BR		$ 8,000	$54

Note: New houses with 40-year mortgages insured under FHA Section 221. The "minimum monthly payment," which includes principal, interest, taxes and insurance, is for 100 percent loans, and would be reduced in proportion to the amount of any down payment. No examples of the "proposed design" houses have yet been built.

Those 4,979 families in the highest ($5,000-up) income bracket should not have any financial difficulty in finding standard housing of one type or another, if land is available upon which to build.

The Lower-Middle Group

Those 11,919 families in the lower-middle ($3,000-$4,999) income bracket, however, will find extreme difficulty in affording standard housing under present conditions. Families at the top of the range can rent a two-bedroom apartment or duplex or buy a three-bedroom "221" house. Families in the middle range can rent a one-bedroom apartment or duplex or conceivably buy a two-bedroom "221" house. Families at the bottom of this income category, however, have even less possibility of having standard housing than do their more fortunate poorer neighbors who can at least look forward to the possibility of public housing. To summarize:

1. 19,442 lowest-income families seem beyond the possibility of housing assistance from private enterprise unless the next decade brings sizable increases in their income levels.

2. 4,979 highest-income families can be expected to solve their housing problems under the existing price structure, if land for Negro housing is available.

3. 11,919 lower-middle income families are within the possibility of housing help from private enterprise, but only if current conditions can be so altered as to make standard housing available at lower prices.

Shortage of Land

In 1960, Negroes comprised 37.5 percent of Atlanta's population and occupied 16.5 percent of the developed residential land. Whites, who comprised 62.5 percent of the population occupied the remaining 83.5 percent of developed residential land. No specific figures are available, but it is clear most of the additional vacant acreage within the city which is zoned for residential use is "politically unavailable" for Negro use.

These conditions cause artificial scarcity of land available for Negro housing, in a community in which there are no natural barriers to geographic expansion and in which the white community has effective possession of considerable residential acreage which is vacant or very thinly occupied.

The problem is intensified by the locations of the white and Negro residential areas relative to each other. The Negro typically occupies the belt of older residential land surrounding the downtown heart of the city, which belt is in turn ringed by wide bands of residential areas occupied by whites. Very few Negro residential areas are

adjacent to low-density areas of potential expansion.

Result: Such expansion of Negro residential space as occurs is usually by way of transition of the confining white neighborhoods.

Regardless of cause, the fact is that land for Negro residential construction is extremely limited in the City of Atlanta. This scarcity has a doubly inhibiting effect on the ability of private enterprise to fill the shortage of housing for Negroes.

1. The first effect is obvious: no land, no buildings.

2. The second effect is equally inhibiting, if more subtle: the shortage of land artificially increases the cost of what land is available, so that the cost of sales houses and rental units to the Negro is similarly increased.

Though no estimates are available, there can be no doubt that if the Negro housing problem could be faced in a land market without artificial limitations, the availability of housing would be increased at the same time that the cost was lowered.

A part of the Negro's problem in this connection is his relative lack of mobility which ties him closely to mass transportation systems and thereby effectively prevents him from skipping over the white residential ring and moving to vacant land on the outskirts. We have previously mentioned the typical lower-middle income white family which solves its inability to afford standard housing within the city by moving to other parts of the Metropolitan Region where housing is cheaper and where housing standards are not so high.

It is the lower-middle income Negro's inability thus to escape which doubles him up in his already overcrowded residential space and helps create the new slums of tomorrow.

Rehabilitation

In addition to the housing problems and needs already discussed, there remains a total of 25,109 substandard but repairable dwelling units, divided almost equally between the races, which can only be considered as a part of Atlanta's standard housing supply if necessary repairs are made.

> It is only to the extent these units can be rehabilitated that the number of new units required can be held to the already high totals indicated above.

Rehabilitation involves the making of whatever repairs are required to bring a substandard dwelling unit into conformance with the minimum standards of the Atlanta Housing Code. Some required repairs are minor and inexpensive and create no insurmountable problem for the owner. Other repairs are of such nature as to involve substantial construction and such cost that some owners are not able to finance the required work.

Atlanta Urban Renewal housing inspectors have found that owners of approximately three percent of salvable substandard units (whether whites or Negroes) are unable to make necessary repairs, because of inability to obtain loans for this purpose. This percentage figure applied to the total rehabilitation problem in Atlanta indicates that some

means must be found to assist some 750 such "hardship" cases if their homes are to be salvaged.

> Failure to find some such assistance will not only increase the new construction load by 750 units, but will in many instances seriously delay the removal of a "blight spot" from an area which is in process of controlling the spread of slum conditions in its neighborhood.

The rehabilitation problem is additionally complicated by the fact that the process of pin-pointing sub-standard units by city-wide housing inspections cannot hope to be completed for existing housing, with the present number of city inspectors, before 1968. The rate of rehabilitation can be stepped up tremendously, however, by neighborhood improvement drives which not only inspire voluntary compliance but initiate whatever enforcement activity is necessary to obtain complete compliance within the neighborhood.

III. SOLUTION: ATLANTA DEVELOPMENT FUND

Atlanta's housing problem for the next decade thus has at least five faces:

1. Lower-Middle Income Whites. Standard housing for lower-middle income white families can be supplied within the city by private enterprise only if new housing is made available at lower prices.

2. Lower-Middle Income Negroes. Standard housing for 11,919 lower-middle income Negro families can be supplied by private industry only if new housing is made available at lower prices.

3. Rehabilitation. Standard housing for 25,109 white and Negro families can be supplied without increasing the demand for new construction only if ways are developed to finance rehabilitation of the substandard units they now occupy.

4. Shortage of Negro Residential Land. More standard housing can be built for Negroes at lower prices if additional land, inside or outside the city, is made available for Negro residential use.

5. Lowest-Income Negroes. Standard housing for 19,442 lowest-income Negro families can only be supplied by public housing.

An Atlanta Development Fund could furnish practical solutions to those aspects of Atlanta's housing problems that lie within the scope of private enterprise, including the first four items set out above. Such a fund, set up along lines successfully used in other cities, would be:

A privately-financed, non-profit, revolving fund to supply money for use in any manner calculated to overcome Atlanta's housing shortage.

The initial size of the Atlanta Development Fund might be set at $1,500,000, an arbitrary suggestion based on Atlanta's population and housing needs relative to those of Cleveland and Pittsburgh, cities which initially set $2,000,000 goals for similar purposes.

The fund could be raised, as in Cleveland and Pittsburgh, by a combination of: 1) outright gifts from foundations and corporations; and 2) long-term (7 to 10 years) development loans from business organizations bearing 4 percent interest, if earned, with possible addition, as in Cleveland, of $500 non-recurring membership fees from business organizations.

The fund could be administered, as in Cleveland, by a professional staff and a board of directors elected by the fund membership, with expenses raised by annual grants from foundations and corporation members; or, as in Pittsburgh, administered by an operating corporation (Action Housing, Inc.) with operating expenses raised as a part of the annual United Fund Appeal.

In any event, experience in these two cities indicates it is not reasonable to expect the fund to earn enough on its loans to pay its operating expenses, and some other methods of meeting the annual operating budget must be provided.

How the Fund Would Work

A primary function of the fund would be to lend money as a catalytic agent to stimulate private investment in new housing construction. Such money, variously described as "trigger money," "seed money," and "linking funds" would provide the intermediate equity, when not otherwise available, necessary to put together a housing "package."

> Construction of standard housing at prices within the means of lower-middle income families -- the heart of the housing problem in Atlanta, as elsewhere -- is virtually beyond the capacity of private enterprise except as assisted by federal lending programs.

The plain arithmetic of land cost, land development cost, and construction cost, when undertaken on a conventional basis, adds up to a total which cannot be amortized out of monthly payments of lower-middle income families. Unfortunately, participation in federally-assisted programs frequently involves such thin return and so much red tape that investors have been reluctant to tie up even the minimum amount of equity capital required.

> Here the Development Fund would step in: With better housing as a primary motive rather than the necessity of an economic return on investment, the Development Fund could take risks unacceptable to the private investor.

It could supplement the builder's venture capital to make possible additions to the housing supply which would otherwise not be built. The Development Fund would thus supply the legendary horseshoe nail, for lack of which the housing battle has all too frequently been lost.

Little need for such supplementary equity capital has been indicated to date in Atlanta's highly-successful "221" building program. These single-family homes are built to sell for as much as $10,000, with 100 percent loans up to that amount guaranteed by FHA. The demand for these houses has been such that builders have been able to tie up very little capital for a very brief time in order to take their profit and move on to other projects.

"221" Houses No Panacea

The only drawback to this program as a panacea for Atlanta's housing ills lies in the fact that these houses, even when priced to sell for as little as $8,000 ($54 monthly payment, including taxes and insurance) will still be beyond the rent-paying ability of most of those lower-middle income families which must be served if Atlanta's housing problem is to be licked.

> Apartments appear to be the only type of construction which can conceivably be built inside the city within the income range of this group, which type of construction has the added virtue of making better use of Atlanta's rapidly shrinking supply of available land.

The shortage of equity capital in the apartment field is best demonstrated by the fact that there is not, to date, a single apartment unit built or under construction in Atlanta utilizing the FHA long-term loans available for that purpose under the urban renewal program. Some projects are being talked about, it is true, although the difficulty of "putting the package together" has delayed for a period approaching three years, several proposals for construction of cooperative apartments under the provisions of FHA Section 221, which allow 100 percent loans for up to 40 years where the project is under sponsorship of a non-profit corporation.

> Part of this difficulty is the fact that the 100 percent loan is based on 100 percent appraisal of the market value of a building not yet built, and a conservative appraisal or unanticipated large construction costs can throw the entire financing scheme out of balance.
>
> Part of the difficulty is the "non-profit sponsorship" requirement.

Other FHA apartment-building possibilities, under either Section 220 or 221, call for 90 percent loan guarantees, which brings the prospective developer face to face with the need for the kind of support that would be available from the Development Fund.

Suppose the developer contemplated building an apartment project on urban renewal project land at a total cost of $1,000,000. He would be required to put up $100,000 of the total, which, unlike the "quick turn-around" involvement in 221 houses, would be at least a semi-permanent investment.

If our developer is a very large, adequately financed builder, he will have no need for help from the Development Fund or anyone else.

However, builders of this type are not characteristic of the building industry generally or of the Atlanta building industry in particular. Our developer will more likely be the typically good, but underfinanced, builder who cannot be expected to find $100,000 at anything short of prohibitive rates, if at all. He might be able and willing, however, to put up three percent, or $30,000, on his agreement to repay the Fund's loan of $70,000 over a five-year period out of his first "profits" from the venture, a feasible repayment plan in light of FHA experience showing a cash throwoff on actual cash equity of approximately 15 percent per year.

Security for Loan

The Development Fund's loan, bearing six percent interest, would be secured by deposit in escrow of all the stock of the developer's rental housing corporation, in a financial transaction which might be described as being on a non-profit but economic basis, not without risk, but also not without reasonable prospect of fairly prompt return of capital for reinvestment in other housing projects. The developer, having put his package together with aid of the Development Fund and thus insured Atlanta of a substantial addition to its supply of standard housing, might pay out in a shorter period by selling all or a part of his package to other investors.

The significant role of the Development Fund, let it be noted, would not be to compete with private venture capital, but to supply the "missing link" without which needed housing construction would not, and could not, be built.

While this example is typical of results which might be achieved by the use of such a fund in the role of "catalytic agent," it is certainly not exhaustive of its possible uses in this field, which would be limited only by the opportunities presented and the collective financial imagination of its directors. One can envision many other possibilities:

1. Sponsorship of a cooperative apartment project, requiring as it does the incentive and financial ability to hold a non-profit program together during the period required to sell the units to individual owners.

2. Sponsorship of Negro "satellite cities" in parts of the Metropolitan Region outside Atlanta to relieve the pressures on the Atlanta Negro residential market and to relieve population pressures in the center of Atlanta, where unassisted developers would not be able to undertake the risks required in establishing facilities, including mass transportation, necessary to attract Negroes to leave their settled (even if overcrowded) neighborhoods and pioneer such a break with their traditional mode of life.

3. Purchase of large tracts of land for development in scheduled phases by private builders, all of whom would be committed to build according to an overall design sponsored by the Development Fund.

Such a fund could be used for purposes other than furnishing equity capital, limited only by its basic concept that whatever will increase the supply of standard

housing is within the scope of the fund's activity.

Other fields where the Development Fund might be used:

1. Rehabilitation. The least expensive way to obtain a standard housing unit is to repair a substandard unit. Unfortunately, the house-by-house approach required by rehabilitation does not lend itself to production-line solutions, nor does it have the appeal to the imagination inherent in massive new construction programs. Nevertheless, the challenge of 25,109 repairable housing units which must be replaced by new construction if they are not repaired, should be inspiring enough to produce necessary solutions.

The first requirement of an effective rehabilitation program is a system of inspections to pinpoint those units requiring repairs, a function being supplied by the Atlanta housing inspectors.

The second requirement, money to effect required repairs, is an insurmountable obstacle to owners of some of the units thus far inspected. Though loans are readily available, about three percent of the total rehabilitation load (some 750 owners) will be "hardship" cases for whom no financial help can be expected from any conventional sources.

> The Development Fund could be used to cure this problem by setting up an amount from which to make rehabilitation loans where not otherwise available.

In Baltimore, the Fight-Blight Fund was set up to assist hardship cases comply with requirements of housing code enforcement. Operating on $43,000 of contributed capital, the fund was able to assist 240 cases to completion by advisory service only. Of 76 loans actually made, only 11 have had to be written off as uncollectable, while 34 have been repaid in full. The Fight-Blight Fund is now seeking gifts to build its assets to $100,000 in order "to measure up to its future obligations."

> The Atlanta Development Fund might also assist the rehabilitation program by sponsoring single-house demonstrations of rehabilitation techniques.

Such demonstrations and other fund-sponsored programs for encouraging citizen interest in the rehabilitation and preservation of residential neighborhoods have been a standard part of the activities of the development funds in Cleveland and Pittsburgh.

2. Selective Purchase. Another use to which the Development Fund might be put is purchase of key buildings or blocks of buildings in run-down neighborhoods for rehabilitation and resale, or conversion to another use by demolition and new construction, for the purpose of reversing trends of neighborhood deterioration.

> For example, selective purchase of particular houses in the area between Ponce de Leon Avenue and Piedmont Park for conversion to apartment houses (either by the Development Fund alone or in conjunction with private capital) might be the means by which the entire area could be saved.

The alternative to such a program will in many instances be loss to the city of a substantial supply of white dwelling units, by transition to Negro residential uses or to commercial uses, and the simultaneous departure from the city of a substantial number of white citizens. Such a program of selective purchase, impossible under government sponsorship but well within the province of a private corporation, might also be used as a means for preserving racial harmony in a transition area, either by halting a trend or by assisting in an orderly transition.

3. Residential Land for Negroes. This again, is a field in which governmental agencies have limited usefulness but where discreet activity by a private agency could have significant effect in meeting Atlanta's housing shortage. Such activity could work in two ways:

-- By making available additional residential land for Negroes within the city limits, and

-- By encouraging Negroes to move into standard housing outside the city.

The latter objective has already been mentioned in connection with creation of "satellite cities" entirely for Negroes which could take advantage of lower land costs to reduce cost to the occupants. Such cities would have all of the amenities of their white-occupied counterparts (such as Forest Park) and would provide adequate, regular and inexpensive mass transportation to the city. Such a project, to be financially

feasible, would require government-guaranteed loans, which in turn would necessitate approval by FHA, the City of Atlanta and the government of the area in which the new "satellite city" would be built. Approval of a subdivision of this kind (as distinguished from a "satellite city") was actually obtained from Atlanta and the other government involved, but was turned down by FHA.

> Obviously, such a project must be undertaken on a scale large enough to satisfy FHA that the project would attract Negro purchasers, which in turn indicates the necessity of such a sponsor as the Development Fund.

The objective of making additional land for Negro use available within the city could be served by purchasing tracts of land to be held until such time as the land becomes politically usable for Negro residential purposes. There exist numerous tracts lying in the path of Negro residential expansion which are serving as "buffers" to the white residential areas next adjacent. In many cases, these buffers are only temporary and when the inevitable surge of transition overtakes the buffered white neighborhood, the buffer itself has already been put to some irretrievably non-residential use.

> The Egleston Hospital property might have ultimately been used for Negro residential units if it could have been bought and held until its ultimate best use could have been determined on the basis of future events.

Additional Negro residential acreage could also be obtained by using the Development Fund to remove artificial barriers to use of otherwise available land. (For

example, construction of a bridge over Proctor Creek south of Perry Homes would make land now lying vacant south of the creek politically available for Negroes by providing access to it through areas now occupied by Negroes. The land is now only approachable through the all-white Grove Park Community.)

4. New Housing Design and Technology. One of the four objectives of the Pittsburgh Development Fund is to "provide large-scale demonstrations of new housing materials, design, technology and production." This objective is in process of realization in PDF's first project -- "East Hills"--in which it is providing 1,680 new dwelling units by utilization of some of the techniques already discussed:

1. Purchase of a 140-acre landsite,
2. To be planned as a whole and parcelled out for phased construction by builders,
3. Who will be assisted in their financing by intermediate equity loans from the fund.

In this project are to be demonstrated the feasibility of a variety of plans, designs, technological advances in production methods, materials, and innovations in financing and management. From this demonstration, in addition to dwelling units at reduced cost, is expected to come better understanding by builders of the possibilities for reducing costs by adoption of new building techniques.

Such a demonstration project in Atlanta, perhaps in connection with a "satellite city" development for Negores, might serve to stimulate not only new low-cost building techniques and the building of large numbers of new housing units, but might also create a new, imagination-challenging means by which the racial "road-block" that now seems to lie in the path of Atlanta's progress can be effectively broken.

Conclusion

Urban Renewal is offering America's cities a marvelous opportunity to make massive attacks on their housing problems. It will be a tragedy of the first magnitude if Atlanta loses its opportunity "for want of a horseshoe nail."

I. PREFACE

As one phase of its work in community relations, the American Friends Service Committee conducts housing opportunity programs throughout the country. The Metropolitan Washington Housing Program was one such program. It functioned in the Washington area for a period of four years, (1963-1967). In this time the program helped to establish and provided coordinative staff services to the four fair housing groups in the area, undertook educational and informational programs aimed at both the white and Negro communities, and assisted Negro families seeking housing in areas previously closed to them.

The following statement contained in the original program proposal remained the basic definition of goals throughout the life of the program:

> The purposes of the AFSC program will be to reduce the barriers which deny minorities free and equal access to housing of their choice and to establish their right to equal opportunity in this field. The program will seek to change both the <u>climate</u> of opinion and the <u>patterns</u> of residence. Even more basically it willseek to <u>create community</u>, moving beyond the temporary tensions caused by change to a recognition of the positive values that flow from the practice of democracy.

Miss Lella Smith was hired by the Metropolitan Washington Housing Program to conduct the attached study in January, 1967. Miss Smith is a graduate of Goucher College and has studied at Oxford University in England. She has carried out a number of other studies and surveys in the field of urban problems.

The survey was conducted under the guidance of Mrs. Marian Gray Secundy, the Director of MWHP and the MWHP staff.

II. SUMMARY

"The most startling thing about integration of apartment buildings," said one apartment owner, "is that there's nothing startling about it." In most respects this survey corroborates his words. The effects of admitting Negro tenants to suburban Washington apartments were generally minimal. According to the owners' reports, a large majority of the apartments encountered:

1. No negative effects following integration.
2. Little increase in the number of Negro applicants.
3. No decrease in the number of white applicants.
4. No unusual turnover.
5. A remarkable stability in vacancy rates.
6. Almost no short or long range economic effects.

Only three of the 17 apartments surveyed reported a somewhat negative effect. The owner of one of these apartments reported a "mixed" ("partly negative, partly positive") tenant reaction to Negro neighbors but no other repercussions. In the second case the owner noted a "mixed tenant response" and a steadily rising vacancy rate following integration. But, because his apartment had experienced increased vacancies and other problems prior to integration, he hesitated to link vacancies with admission of Negro tenants. And a third apartment, located in a predominately Negro neighborhood, was transformed from an all-white apartment to one with 58% Negro occupancy.

The apartments studies fall into three categories of varying degrees of integration: (1) twelve apartments with token integration, or 5% or less Negro occupancy; (2) four apartments with limited integration, or 7% to 19% Negro occupancy; and (3) one apartment integrated with a Negro majority. While it is true that a majority of apartments have undergone only token integration, the integration experience was similar in both those apartments with larger proportions of Negroes and those with token percentages. The apartment which experienced a severe vacancy problem had integrated only in a token fashion. Of the four apartments which had undergone limited integration, (7-19% Negro occupancy) only one reported a minor problem, a "mixed" tenant reaction to Negro tenants with no other repercussions. These four, along with a majority of the 17 apartments, reported:

1. Little change in the number of white and Negro applicants.
2. No unusual turnover.
3. Stability in vacancy rates.
4. Almost no economic effects.

Where these four apartments reported a variation from the norm, the variation was slight and no more negative than the cases of apartments with token percentages of Negro tenants. One of these apartments was large,

another was medium in size and two were small. All were located in all-white, high-priced neighborhoods.

The 17th apartment, with a Negro majority of tenants was once all-white and within six months developed a 58% Negro occupancy. It followed the standard pattern for transforming an all-white apartment house into a predominately or wholly Negro one. A small apartment built 20 years ago and located in a predominately Negro neighborhood, it was bought and re-decorated somewhat, after which its rents were raised. Negro tenants were then admitted at two week intervals and as more and more whites left, Negro tenants were admitted until at the time of the survey, Negroes occupied 58% of the building units. Although its rents had been raised, this apartment charged the lowest rent of the 17 apartments studied.

In discussions of fair housing, there is often mention of the "tipping point" in integration, that is, where Negro occupancy reaches 30% - 40%. Because only one apartment had more than 30% Negro tenants, no conclusions on the "tipping point" can be made.

According to the owners' reports, the effects of renting to Negro tenants were not modified by such factors as apartment size, age, location, rental range and facilities. The effects of integration were negligible whether the apartments were large or small, new or old, expensive or moderately-priced, townhouse or garden type, or with or without expensive facilities. Even in the case of apartment swimming pools, considered the most sensitive aspect of apartment integration, rentals to Negro tenants with one exception, presented no problems.

In terms of location, rentals to Negro tenants proceeded smoothly whether the apartments were located in areas of private housing, of mixed private and apartment housing or of private and/or commercial properties. Only one significant finding is apparent: that in 16 of 17 cases the apartments were located in all-white or predominately white areas.

Nor did the time factor modify the effects of integration. Those apartments which admitted Negro tenants four or five years ago experienced no more difficulties following integration than those integrating more recently. And even those apartments which integrated recently and built up 5% or more Negro tenants swiftly, encountered no ill effects.

II. CONCLUSIONS

The negligible effects of even token integration in housing may seem surprising since the apartments surveyed were located in Virginia and Maryland. The lack of ill effects following integration in suburban Washington should be explored. The ease with which integration took place may be explained by a number of factors although these have not been extensively studied in this or other surveys. It may be that the majority of apartment dwellers in suburban Washington are young couples, or families from other, non-southern sections of the country who-unlike local, older southerners--do not object to Negro tenants. It is possible that apartment tenants, unlike homeowners, do not object to Negro neighbors since they have no large financial investment in the apartment property. Perhaps as other surveys and polls on fair housing have shown, less housing prejudice exists--at least concerning a small number of Negro neighbors--than the real estate industry believes.

The strongest explanation of the ease with which token integration took place, however, may lie in the policies of the owners and the location of the apartments. The owners (and managers) in 16 of 17 cases owned apartments in white or predominantly white areas. Their policies did not include rental increases at the time of integration except in two cases. And in these two instances, substantial and bona fide improvements were made. Apartment house services were maintained following integration in these apartments. The owners and managers of the apartments implemented the open occupancy policy along firm, quiet lines without publicity or prior consultation with tenants or neighboring apartments. These procedures and the lack of opposition from resident managers and management firms also may have prevented tensions and problems.

The importance of apartment location and the owners' policies in averting negative effects in integration is underscored by the case of the 17th apartment. In this apartment, the combination of increased rents, location in a predominantly Negro area and steadily increasing Negro occupancy led to "white flight". This is often the case if the building is old (as this one was) and if services and maintenance in the apartment building are decreased at the time of integration.

Two unexpected conclusions can be drawn from the data. First, it is surprising that a number of small apartment houses have not only admitted Negro tenants but have rented 5% or more of their apartment units to Negroes. Rentals to Negroes on a limited scale (5% to 19%) took place in the cases of five of the seven small apartments, without difficulty.

Secondly, the low number of Negro applicants for apartments in integrated units proved unexpected. This held true in the several cases where substantial publicity had highlighted the fact that certain apartments rented to non-whites. However, many years of housing segregation, countless rejections of prospective Negro tenants in suburban Washington and the unwillingness of Negro parents to subject their children to tension readily explains the lack of Negro applicants. It is clear that the commonly held fear of most landlords of hoards of Negroes flocking to the suburbs as soon as a crack is opened is unfounded. This corresponds to the experience of the fair housing groups in dealing with home sales.

The positive results of this survey of apartment buildings in suburban Washington are especially significant in view of the substantial growth of apartment buildings in the Washington metropolitan area. It appears that the integration of apartment housing might become an increasingly important element in the fair housing efforts in the metropolitan area.

In conclusion, two obvious limitations of this survey should be noted. Because of the extremely small number of integrated apartments in suburban Washington at the time of the survey, the interview sample precludes definitive conclusions. And secondly, the degree of "integration" of these 17 apartments may be so limited that the "effects" or "success" of integrating apartments are impossible to measure. Since only five of the 17 apartments have more than five percent Negro tenants, all that can be said is that the first hurdle of integration--rental to a limited number of Negro tenants--was accomplished with a minimum of difficulty.

IV. BACKGROUND OF THE STUDY

In the Metropolitan Washington area in 1966, the Negro population of the District of Columbia was 62%, while the suburbs were almost exclusively white. Despite great growth in apartment and home building in the Metropolitan area and a general flight to the suburbs, Negroes for the most part have been forced to remain in the District. The lack of fair housing laws in Maryland 1/ and Virginia and the limited supply of moderately priced suburban homes largely account for this segregation pattern.

The rental of suburban apartments to Negroes, however, might relieve this situation. This could occur because apartments exist in the Washington suburban area in growing numbers and apartment prices are within reach of the young Negro couples who are most likely to move to the suburbs. The growth in Metropolitan apartment building is illustrated by the 40,500 new units built in 1965 (28,000 new units in 1966) compared to 9,000 new units in 1960. 2/

As in other suburban housing, apartment housing remains largely segregated in suburban Maryland and Virginia, despite the efforts of fair housing groups and other interested religious and civic organizations. In the absence of a fair housing law in Maryland 1/ and Virginia, it is necessary for owners and managers to open their doors to all on a voluntary basis, in order to accomplish any degree of integration. As far as the surveyor was able to determine, only 22 such owners and managers have done so in the entire Metropolitan area, outside the boundaries of the District (as of June, 1967). And in most of these apartments, the number of Negro tenants is very small. Information about those apartments which have adopted an open occupancy policy was obtained from fair housing groups and apartment owners and managers.

Efforts to convince other suburban apartment owners to implement an open occupancy policy have been singularly ineffective. A few tenant organizations have been formed in various apartment units to promote open occupancy but their attempts to become strong viable groups have failed. With few exceptions, apartment industry people have shunned the efforts of fair housing groups to initiate open and frank discussion of the problem. The Federal Housing Administration and the President's Committee on Equal Opportunity in Housing also has been unable to obtain the cooperation of the industry even to discuss the problem.

Where discussion has been possible, its scope has been quite limited due to the minimal participation of industry representatives and/or to their unwavering contention that opening their apartments would mean economic suicide. The apartment owners have maintained that they are businessmen concerned with profit who cannot take the economic risk involved in fair housing. Fair housing groups have been unable to respond effectively to this position primarily because of a lack of concrete, documented evidence to the contrary.

Confronted with the impasse described above, the Metropolitan Washington Housing Program of the American Friends Service Committee undertook early in 1967 a survey of apartments in the Washington Metropolitan

---

1/ On either State or local levels. In April 1967, however, the Maryland legislature passed a limited fair housing law.
2/ For further data on growth in apartment building see Appendix A.

area, outside the District of Columbia, which had admitted one or more Negro tenants. The primary purpose of the survey was to determine the effects of admitting Negro tenants, specifically in terms of tenant reaction, subsequent number of white and Negro applicants, turnover rates, vacancy rates and the economic effects.

Secondarily, the survey's purpose was to provide concrete documentation on the social and economic feasibility of suburban apartment integration as an increasingly important avenue to fair housing.

To obtain data on the effects of admitting Negro tenants, 17 suburban apartment house owners (or managers) who had admitted Negro tenants were interviewed. In order to determine the effects of integration, in their proper context, it was necessary to collect data on the apartment house itself, its facilities and services, the surrounding neighborhood, the apartment's open occupancy policy and the method and process of integration.

Approximately 34 apartments in the Metropolitan area which the Metropolitan Washington Housing Program, civil rights groups and some apartment management people believed had one or more Negro tenants received an introductory letter from the Metropolitan Washington Housing Program (appendix) requesting their cooperation in the survey. 1/ In most cases the apartment house owners were contacted although the management company was approached in nine instances when the owner was unknown or unavailable. Seventeen owners or managers agreed to cooperate. Out-of-state owners of three properties delayed past the time allotted for the survey, and two owners were unavailable despite numerous phone calls. According to general knowledge, four of the five apartments which did not cooperate have Negro tenants. The remaining 11 apartment house owners reported no Negro tenants. This survey of 17 of the 22 apartments renting to Negroes therefore represents 80% of the apartments known to have Negro tenants.

Owners or managers of apartments were interviewed personally by the survey consultant. Locating and contacting the respondents proved difficult and protracted. Each apartment contact required from five to 15 phone calls. Difficulty in reaching owners and in setting up appointments stemmed, apparently, from the heavy schedules of the owners, their frequent absence from their offices, and a fear of publicity.

Respondents were asked approximately 60 questions in the course of an average 40 minute interview. Owners of apartments were interviewed in eight cases, property managers in four instances, corporation officials in three cases and resident managers in two instances.

The owners and officials appeared to be candid and objective in their answers to survey questions. The confidential aspect of the survey perhaps promoted candor. In a number of cases what one owner reported was verified through comments offered by other owners. The question as to why an open occupancy policy had been adopted, consistently elicited generalized, unprecise answers.

1/ In this letter owners were informed that confidentiality would be maintained throughout the survey, and that no names of owners, firms or apartments would be used in the survey report. (See Appendix B.)

V. MAJOR FINDINGS: Characteristics of the Apartments Studied

There were wide ranges in size, age, rentals, types and locations of apartments. The majority (12) however, were medium-sized and small (less than 400 units), garden apartments (10), built in the 1960's (10), with air conditioning (14) and swimming pools (10), and were located in all-white residential areas where homes cost between $20,000 and $30,000, or more (10).

Five percent or more of Negro tenants are found in both large and small apartment houses, in both old and new apartments, in garden, duplex and other apartment types, in the cheaper and more expensive apartments and in apartments with and without swimming pools.

Proportions of Negro Tenants. In the 17 apartments studied, the proportions of Negro tenants ranged from 58% to less than 1%. If the apartment with 58% Negro occupancy, which is in a predominately Negro neighborhood and is steadily increasing in its Negro tenants, is discounted, the highest proportion would be 19%. The chart below illustrates the proportions of Negro tenants in the 17 apartments.

Apartments with over 50% Negro occupancy	1
Apartments with 10-20% Negro occupancy	2
Apartments with 5-10% Negro occupancy	5
Apartments with 1-4% Negro occupancy	4
Apartments with less than 1% Negro occupancy	5

The apartment house with 58% Negro occupancy will be considered throughout the survey somewhat as a separate entity, since it is rapidly and consistently increasing its Negro occupancy.

Size of Apartment Houses. The size of the apartments studied varied from one huge complex with over 1,000 units, to six apartments with less than 100 units. The following chart describes the sizes:

Over 1,000 units	1
Large (400-999 units)	4
Medium (100-399 units)	6
Small (less than 100 units)	6

Proportions of more than 5% Negro tenants were found in three of the four categories of apartments, the exception being the huge (over 1,000 units) apartment. Looked at by category, one of the large apartments, two of the medium-sized and five of the small apartments had over 5% Negro tenants.

Age of Apartment Houses. The majority of apartments (10) were built during 1960's. Five apartments were built in the 1950's and two in the 1940's. Nine of the owners were the original owners of these apartments. Apartments with as many as 5% or more of Negro tenants and those with as few as 1% or less were found in all three time categories.

Rental Ranges. Rentals in these apartments ranged widely from moderate to expensive. Rentals for efficiencies and one bedroom units varied from $78-$100 in five apartments to $115-$135 in 12 apartments. For two and three bedroom apartments, rentals ranged from $119-$285. Proportions of 5% or more of Negro tenants were found in both the lower and the higher priced apartments; proportions of 5% or more Negroes were also found in three of the four apartments with the highest rents.

In discussing rental ranges prior to and following rentals to Negro tenants, a majority of the apartments (9) reported no increase in rents following admission of Negro tenants. Four apartments indicated increases of a minor, routine type and one apartment gave no answer. Three apartments (with relatively high proportions of Negro tenants), reported an increase in rents following purchase, redecoration and integration of the buildings.

One might deduce that these three apartments were following one of the standard patterns for transforming apartments from white to predominately Negro occupancy--admitting Negroes, raising the rents after minor improvements and,once whites begin to leave, admitting increasing numbers of Negro tenants. If admission of Negroes and an increase in rent are accompanied by a decrease in services (trash collection, et al) and take place in an apartment in a changing or predominately Negro neighborhood, a "white flight" is generally inevitable.

In the apartment with 58% Negro occupancy in a predominately Negro neighborhood, a changeover to Negro tenants may have been inevitable. White tenants who would not have moved because of the neighborhood or because of a nominal number of Negro tenants, probably felt the situation was untenable once the rents were also raised.

In the cases of two other apartments (one large and one small) which were bought as investments in fair-housing, the situation differed. The owners made substantial, bona fide improvements once they bought the apartments, and maintained or improved the services. Since the apartments were in all-white residential neighborhoods, the race ratio remained stable and the vacancy rates in these apartment houses have been consistently low (1% or less) in one case and normal for the area in the other.

Type of Apartment Units. The majority of the apartments (10) were garden apartments and the remaining types of apartments are illustrated in the table below.

Garden apartments	10
Combination garden and townhouse apartments	2
Duplex apartments	2
Garden and high-rise apartments	1
High-rise apartments	1
Medium-rise (4 stories) apartments	1

Five percent or more of Negro tenants are found in four of the six apartment categories. The exceptions are the high-rise and medium-rise categories.

Facilities and services. A majority of the apartments reported a variety of facilities and services and noted use of these by Negro tenants. A large majority (14) of the apartments covered in the survey reported air-conditioning as a facility. Ten apartments have swimming pools. Two apartments reported day care or nursery services, two reported secretarial services and one apartment house provides a security guard. In regard to planned recreation, four apartment complexes have recreation centers, dances and parties, tennis courts or bridge clubs. In the cases of the apartments with services and planned recreation other than swimming, all reported 5% or more of Negro tenants, with one exception. These apartments reported Negro participation in their bridge clubs, dances, sitters clubs, etc.

Of the ten apartments with swimming pools, four have relatively large proportions of Negro tenants. Eight of these apartments reported that Negroes utilize the swimming pool, while one owner did not know and another reported that the Negro tenants were older and slightly handicapped. Two apartment officials reported a phone call inquiring if Negroes were using the pool. With one exception apartment officials reported no negative reaction to Negro use of pools. One apartment, the single exception, indicated that one tenant left because of the swimming pool integration. One owner of an apartment with a swimming pool verified these general reports, stating that according to his discussions with other owners, the swimming pools had posed "no problems".

Surrounding Neighborhood.

General. All the apartments were located at some distance from the center of Washington. Four were located in Virginia and 13 in Maryland. Nine of the Maryland apartments were in Montgomery County and four were in Prince Georges. Six apartment houses were located on a main thoroughfare, two were near a Negro area, eight near a shopping center, and six near a large employer, (a Federal employer in four cases). The surrounding neighborhoods in ten instances were all-white, predominately white in six cases and predominately Negro in one case.

Type of Housing and Area.

Approximately half the apartments were located in areas where private housing predominated (8), while six apartments were in areas with a mixture of private homes and apartments, and three were located in areas where apartments predominated. A large majority of the apartments (13) were found in residential areas and only four were located in areas of mixed residential and commercial properties. All the four apartments in the latter category had low proportions of Negro tenants.

According to the estimates of the owners and managers, the majority of the apartments (10), were located in areas where homes cost $20,000-$30,000 or more. Four owners reported apartments in areas where homes cost between $15,000-$20,000. Two apartment owners did not know the cost of houses in the area and one owner reported that apartments, exclusively, existed in the area of his apartment. The eight apartments which maintained a higher proportion of Negro tenants, with two exceptions, were found in areas with higher priced homes.

VI. MAJOR FINDINGS: The Process of Integration

The implementation of the open occupancy policy by all the apartments proceeded along very similar lines within a three year period. And the response of agents, managers, resident managers and tenants were similarly positive or indifferent, with only a few exceptions. Where variations in this pattern occurred, they were both minor and minimal in impact.

The implementation progressed along quiet, firm lines, without publicity. There was no prior consultation with tenants, other neighboring apartments, religious, civic or civil rights groups.

Date of Open Occupancy Policy

All the apartments admitted Negro tenants during the period 1963-66. Eight apartment houses established an open occupancy policy and admitted Negro tenants in the period 1963-64, while nine apartments did so in the period 1965-66. While most of the apartments with 5% or more of Negroes admitted Negroes in the early period, three apartments did so in the 1965-66 period. These three apartments were able to build up relatively high proportions of Negroes, up to 20 families in two cases in relatively short periods (less than a year) without incident.

The time factor in integration of apartments did not figure importantly in the effects of integration. Those apartments which integrated four or five years ago experienced no more difficulty than those integrating more recently. And even those apartments which integrated more recently and built up the number of Negro tenants more swiftly encountered no problems.

Reasons for Open Occupancy Policy

When asked why an open occupancy policy had been established, a majority of apartments (11) reported that the owners thought such a policy was for the best and initiated it. Three other apartments reported that an application from a qualified Negro started the policy. Two apartments noted that the management company had taken the initiative and persuaded the owners to adopt the policy. 1/ In one apartment the tenants, armed with an open occupancy petition, worked the matter through with the management company.

Although owners were responsible for the apartment open occupancy policy in a majority of cases, their reasons for the policy, and also managements' reasons for initiating a policy, differed and no clear, strong factor or reason for admitting Negroes could be detected. Apparently a number of factors figured in establishing the new policies: the example of four apartments which were bought as investments in fair

---

1/ This management company had previously admitted Negro tenants in its District of Columbia properties.

housing, the increasing integration of the District of Columbia apartments, and the President's Executive Order on housing and the civil rights laws. All may have provided a background conducive to open occupancy policies in the suburban apartments. Although picketing of some apartments in the suburban areas by a fair housing group took place in 1966, this occurred after the integration of the apartments surveyed and played no apparent part in policies to admit Negro tenants.

The eight apartments with the largest proportions of Negro tenants were, with two exceptions, found in apartments where owners took the initiative. In answer to the questions why the policy had been established, owners generally said, "Why not?", and occasionally replied, "It's something we believe in." Owners of four apartments noted that they had purchased apartments specifically as an investment in fair housing with the view of proving the feasibility of open occupancy. These four owners persuaded another owner to integrate his apartment. The remaining owners gave a variety of responses. One owner explained he "wished to go along with the situation on a limited basis", and another replied, "Oh, I just felt like it." Another owner reported admission of Negro tenants in his suburban property following a lawsuit concerning rentals to Negroes in a District of Columbia property.

Implementing the Open Occupancy Policy

In cases where the owners initiated the policy, rental agents and resident managers were notified, in almost all cases. Most apartment owners and managers (14) did not notify their tenants of the new policy because they felt that it was a management decision. In the case of three apartments which were among the earliest to admit Negroes, letters concerning the policy were written to the tenants. In four cases, meetings with the staff were held to discuss the new policy. None of the 17 apartments reported discussions with other neighboring apartments prior to the new policy. Civic, fair housing, religious and other groups were notified of the new policy by the management of the four apartments which were among the earliest to admit Negroes.

Responses of Agents and Apartment Managers

In three cases agents or property managers took the initiative in developing the policy. In seven cases the owners managed the property themselves. In the cases of the remaining seven apartments, the attitudes of the agents or property managers regarding open occupancy were positive (5) or presented no problems (1). One owner gave no answer to this question.

A large majority of the apartments (13) reported no changes in management personnel following integration. Two owners reported a change in that the owners took over the management (because they wished to) and in one apartment, an inefficient management company was dispensed with. One apartment gave no reason for a management change. However, Negro tenants have been admitted to this apartment since the change. One owner gave no answer to the question.

The response of the majority of resident managers to the new policy was generally positive, though three owners reported respectively that their managers were "positive but fearful", "a little leary, initially",

or "unenthusiastic but took it gracefully." In the case of two apartments, the resident manager reacted negatively but with patient, careful handling of the situation on the part of the owner, the open occupancy policy worked out. In only one apartment of these seventeen did the manager leave.

Admission of Negro Tenants and White Tenant Response

In all but one apartment, more than one Negro tenant or family has been admitted since the new policy was established. There seems to be a consistent practice of renting to Negroes on a continuing basis though admittedly in small numbers. Nine owners or managers reported that the aggregate number of Negro tenants since the policy was established was larger than the current number of Negro tenants. In the other eight cases, the apartment houses, with few exceptions, had only recently been built or had only recently established their policies.

The numbers of Negro tenants in the apartments studied (as of early 1967) is shown in the chart below.

Number of Negro Tenants	Number of Apartment Houses
1	3
2 - 5	8
6 - 10	2
20	2
30 - 40	2

In five cases, the Negro tenants represented less than one percent of the total number of tenants. At the other end of the spectrum, in two small apartments, three or four Negro tenants represented approximately 15 or 20 percent of the total tenants. Excluding the apartment with 58% Negro occupancy, the median percentage of Negro tenants for 16 apartments was approximately 5%.

In describing white tenant response to Negro families, a majority of owners and managers (14) reported responses ranging from positive to indifferent. Only three owners reported a mixed reaction, partly positive and partly negative. Four owners reported a "positive response" without qualifications. One owner noted that when Negro tenants moved in, six people in his small apartment house wrote approving letters. Another reported his tenants "overwhelmingly in favor" and another owner reported visits from tenants to compliment the owners on the new policy.

Three owners answered that their tenants were generally positive in their response with a few exceptions. These exceptions were: "a couple of tenants moved out", (2) "six whites, or approximately one percent, objected and left within a year", and (3) two white tenants were rumored to have said that "some Negroes are all right, but we'll move if there are too many."

Seven owners reported that their tenants' response had been indifferent, "no reaction, no problems," or "live and let live." One of these owners reported a few phone calls of inquiry. Another owner reported that one person phoned and threatened to move, but then phoned to apologize a few days later and did not leave. One owner reported only one white tenant response, a query as to who the new Negro tenant was. When the owner replied that the new tenant was a former U.S. Ambassador, the white tenant answered, jovially, "getting fancy, aren't we?"

Only three owners responded that their tenants' response had been mixed, "some favorable, some negative." Two of these apartments had 4% and 7% proportions of Negro tenants respectively. 1/

There is no correlation between positive tenant response to Negroes and a low proportion of Negro tenants. In most of the apartments (5 of 7) where tenants responded positively, the proportions of Negro tenants were 5% or more and in seven apartments where the tenants responded indifferently, with one exception, the proportions of Negro tenants were low, (less than 5%).

One owner quoted, to the survey consultant, a statement by a nationwide apartment builder to the effect that most people don't move away after integration, as moving is too expensive. He noted, however, that perhaps fewer whites might apply, once the integration policy was known. A second owner reported that most of his tenants were from out-of-town and really didn't care whether or not an apartment house was integrated.

Another owner mentioned a Gallup Poll (Look Magazine, June 29, 1965) which reported that eight of ten white Americans would not move if a Negro family moved next door. And most surprisingly only 23% of the Southerners said they would move.

1/ The large apartment with 7% Negro tenants reported a stable vacancy rate, while the apartment with a 4% proportion (and a history of difficulties prior to integration) is the single apartment of the 17 to report a substantial vacancy rate following rentals to Negroes.

VII. MAJOR FINDINGS: The Effects of Renting to Negro Tenants

Since so little "hard" information is available as to the effects of renting to Negroes, and often only conjectures on this subject exist, special efforts were made during the survey to collect data on certain key questions, e.g., (1) following rentals to Negroes, did large numbers of Negroes apply? (2) did the number of white applicants decrease? (3) did turnover and vacancy rates increase?

The side effects of renting to Negroes appear to be minimal. A large majority of apartment owners and managers reported:

1. little increase in the number of Negro applicants.
2. no decrease in the number of white applicants.
3. few tenants who left because of Negro tenants.
4. no unusual turnover.
5. a remarkable stability in vacancy rates.
6. almost no problems or short or long range economic effects as a result of rentals to Negroes.

Number of Negro Applicants Following Integration

A majority of apartments (12) reported very few or virtually no Negro applicants once Negroes were admitted as tenants. Nine owners or managers reported that "very few" Negroes applied to their apartment houses. Three owners noted that while approximately 15 Negro "lookers" had visited during the several years following integration, only three or four had applied. Most of the other owners reported three or four Negro "lookers" in the course of a year. Another reported that Negro applicants came in cycles. According to one owner, the six or seven Negro applicant families who were approved in the course of a year or two, did not move in but, apparently, rented elsewhere.

Three owners responded that they had had virtually no Negro applicants, perhaps one "looker" but no applicants. In the case of four apartments, three of which had high but not the highest proportions of Negro tenants, a reasonable number of Negro applicants were reported. 1/ Two of these owners mentioned that perhaps 30% of their "lookers" were Negroes but less than one percent moved in. The apartment house with a majority of Negro tenants reported that 60% of its applicants were Negro.

Again and again owners expressed surprise that so few Negroes applied for apartments. One owner said, "As a result of publicity on my apartment, everyone in Washington and the county knows my apartment is integrated, but still few Negroes apply." Another owner reported that even when a major Negro magazine carried a large

1/ Two large, one medium and one small apartment.

feature article on his apartment, only three or four Negroes applied in the ensuing four months. Another owner noted that even after he ran a rental ad in the Afro-American, a Negro-oriented newspaper, no response came from Negroes.

Disposition of Applications from Negroes

According to six owners, the applications of almost all the Negro applicants had been accepted. Six other owners reported that they accepted some, and rejected some Negroes as unqualified. In the latter instances, owners added that there were sometimes too many children; that whites and Negroes were unqualified in equal number; or that more Negroes than whites were unqualified. In the cases of these six apartments, some have relatively high and some relatively low proportions of Negro tenants.

Three owners reported that most of the Negroes had dropped their applications because there were no immediate vacancies, or appropriately sized vacancies. It is interesting to note that only two apartments reported that most of their Negro applicants had been turned down as undesirable (such as three Negro medical students), or unqualified (persons unable to meet the credit standards).

Screening of Applicants

When asked if Negro and white applicants were screened in different ways, 16 owners responded negatively. One owner noted he screened Negroes perhaps somewhat more carefully, "to protect the prospective applicant and the principle of fair housing."

Qualifications for Applicants

When asked what qualifications tenants needed to have, 11 owners noted that good employee references were necessary, and eight owners further specified that one week of the applicant's salary must equal one month's rent. Eight owners required good landlord references, nine required good bank or credit references.

The general thrust of the owners' answers to this question was that qualifications were high. Some owners did not detail all the requirements, but rather considered the question in light of possible Negro applicants. Others noted that the requirements were high and that Negro applicants had no problems meeting these requirements.

Number of White Applicants Following Integration

When asked the number of white applicants since integration and whether this number had decreased, ten owners provided percentages and reported that the number of white applicants had remained normal. In six apartments, owners or managers could not provide precise percentages, but since their vacancy rates remained normal following Negro rentals in the cases of five of six apartments, one can assume that the number of white applicants remained generally normal. One official (of the apartment with 58% Negro occupancy) reported that white applications had fallen off 40%.

In only two instances did owners or managers advise white applicants that an open occupancy policy operates in their apartment houses. Both these apartments which were bought as investments in fair housing have limited proportions of Negro tenants (5% and 19% respectively). When asked whether whites inquire if Negroes live in the apartments, eight owners reported that a few whites, "two or three" had asked. Four owners noted that "some" whites ask, (approximately 10 or 15 whites). One owner who reported that "some" such questions were asked, explained that these applicants did not want to live in a segregated community, and had inquired to ascertain that Negroes did live there. Three owners reported that no such questions had been asked. Two owners did not know if whites had inquired about possible Negro tenants.

The owners or managers were asked if whites failed to follow through on applications once they found Negroes lived in the apartments. Eight owners reported that no applicants had dropped their applications; four owners reported that a few had failed to follow through. Four owners did not know whether this had occurred. In each of three categories of answers, are found apartments with both high and low proportions of Negro applicants. One apartment official, in the apartment with 58% Negro occupancy, never gave a direct answer to this question.

Tenants' Reasons for Leaving an Apartment

Owners were questioned whether tenants were asked why they were leaving as a further attempt to explore tenant reaction to Negro occupants.

In the 16 apartments where tenants were specifically asked, or generally stated their reasons for leaving , only three reported that a few tenants left because of the open occupancy policy. Eleven owners reported that tenants were specifically asked their reasons for leaving. Seven of these 11 owners replied that no tenant had ever given the open occupancy policy as his reason for leaving. Three other owners felt whites had left because of the policy. One reported six whites (or 1%) had left, another reported "a few", and a third (in the case of the apartment where 58% of the tenants were Negro) noted that quite a few left. One owner did not know if race had been given as a reason.

Of the six apartments which did not specifically ask tenants their reasons for leaving, five of these noted that their tenants generally stated a reason and that racial policy had never been given as the reason.

Turnover Rates

When asked if any unusual turnover had taken place after rentals to Negroes, 16 owners or managers replied, "no ". One manager, of the apartment which now has a majority of Negro tenants, noted substantial turnover. This owner was not altogether sure as to the reasons, but he felt the apartment's location in a predominately Negro area might be one answer. The owner of a small apartment house in Maryland, the first to admit Negroes in Montgomery County, reported no turnover at all during the first nine months following rental to the Negro tenant.

Vacancy Rates

When asked if vacancy rates had risen after rentals to Negroes, a majority of owners (12) reported that these rates had remained stable. Six of these owners reported a consistent 0% to 1% vacancy, while the remaining owners noted vacancies up to 4%.

Three other owners noted some increase in apartment vacancy rates, but no more than was standard for the Metropolitan area. One of these apartments had over 5% of Negro tenants, and two had very low proportions. These three were somewhat older than the majority of the apartments, and two were large in size and one small. One of the three owners reported a 3% increase in vacancies (to 4%), during the four years following rentals to Negroes. Another owner, while noting a 4% increase, declared himself very reluctant to tie this increase to a racial issue. The third owner stated a rate which was average for the Metropolitan area but pointed out that a good, all-white apartment house next door had a vacancy rate twice the area average.

Only one apartment house of 16 reported a steadily rising vacancy rate following rentals to Negroes. Its proportion of Negro tenants was 4%. Because this large apartment, less than five years old, had had problems before it was sold to and integrated by its present owner, this owner was also reluctant to link the vacancy rate to Negro tenants.

This owner noted that after integrating the new apartment, when it was 90% filled (1965), there was no unusual turnover, but rentals were slow and vacancy rates steadily increased. He reported, however, that apartment vacancies increased all over suburban Washington at this time, and that the area around his apartment and throughout the metropolitan area was "over-built." He further stated that his apartments in the District and in Virginia which had Negro tenants had encountered no problems. In this survey his apartment is located in a mixed commercial and residential area and offers various facilities and services for a medium-range rent. This apartment was one of the two which reported a mixed tenant reaction to Negro tenants.

Special Problems Affecting the Vacancy Rates

Sixteen of the owners, when asked if there were any special problems affecting the vacancy rate, replied negatively. One owner, who had experienced a slightly increased vacancy rate, reported that his raising of standards had increased the rate in that short term leasing and other techniques were discontinued when he bought and integrated the apartment.

In answer to the question of whether any basic changes had been made at the time or soon after their apartments were rented to Negroes, the majority of owners (14) responded negatively. Three owners, who responded affirmatively, raised standards or redecorated following their purchase and integration. In the case of two apartments, rents were raised, (see page 4).

Advertising

In advertising, three apartments use the services of special advertising agencies which serve the apartment industry, ten use newspaper advertising to various degrees, one uses the radio, while the others use little or no advertising.

Seven apartments are registered with Federal employers in the area. All these apartments, with two exceptions, have more than 5% Negro tenants. Four apartments maintain contact with fair housing groups.

Only two apartments reported a change in methods of advertising or of obtaining rental prospects. One apartment increased its advertising by 300% and another apartment initiated contacts with fair housing and civil rights groups to increase Negro applicants.

None of the apartments surveyed made reference to open occupancy in their advertising. When apartment owners seek Negro tenants, they generally turn to fair housing groups for prospective applicants.

Greatest Problems Encountered in Integration

When asked what were the greatest problems encountered in admitting Negro tenants, a majority of the owners (10) answered, "none." Three further owners reported that there had been no problems directly concerning Negroes, and that their greatest problem related to staff, i.e., some difficulties with the resident managers. Three other owners stated the greatest problems as (1) "stereotyped thinking and fear on the part of owners", (2) "how to measure the impact on tenants", and (3) a vague rumor that two tenants would leave if too many Negroes were admitted.

Only one official mentioned a problem directly or closely related to Negro tenants or their admission to the apartment. The official in this apartment (with 58% Negro occupancy) mentioned renting to a couple with two children only to discover the couple actually had five children. He did not detail how often this had happened with either Negro or white families. He also noted that vandalism and trash problems had increased somewhat following integration although he pointed out there were no problems regarding untidy or dirty apartments, or excessive turnover, among Negro tenants. This apartment house had the lowest of all apartment rental rates, was the only apartment located in a predominately Negro area, and was situated in an area having cheaper homes than most of the other apartments.

Although the survey did not ask owners how Negro tenants compared to white tenants, only the problem mentioned above touched on any negative qualities of Negro tenants. And this official noted that the Negro apartments were kept cleaner than the white apartments. A number of owners pointed out in the course of the interviews that the Negro tenants had proved to be clean, neat and reliable tenants.

In response to the question of whether the problems were more or less than anticipated prior to admission of Negro tenants, a majority of owners (12) replied "less". Three additional owners

replied that they had anticipated no problems and had experienced none. One owner, who had over 5% of Negro tenants, and who had gone to great efforts to integrate a newly purchased property, replied that the problems were approximately as he had anticipated them. 1/

Short Range Economic Effects

Thirteen owners or managers reported that there had been no short range negative economic effects following the admission of Negro tenants. One other owner replied that six months after rentals to Negroes was too early to tell and another replied that it was hard to measure the effects. 1/ He felt that his apartment might have had a lower vacancy rate with no Negro tenants, although his rate was, he pointed out, no worse than that of other (all-white) apartments in the area. Only one owner reported a short term loss, as a result of turnover and redecoration, and he was certain the losses would be recouped. This apartment was the one in a predominately Negro area that changed from 100% white occupancy to 58% Negro.

Long Range Economic Effects

When asked to report any long-range economic effects of the open occupancy policy, 14 apartment owners or managers replied that there were no effects. One of these owners, with 9% of Negro tenants added that he might have an edge on the market due to early integration. Two other owners (of recently integrated apartments) felt it was too early yet to judge the long-range effects. One owner, of the apartment with a steadily rising vacancy rate, reported that he did not know what the long-range economic effects would be.

Best Method of Assuring Open Occupancy

In answer to the question concerning the best method of assuring open occupancy, 11 owners replied that a law was the best way. Over half the owners added emphatically that without a law, open occupancy was impossible. One owner commented on the possibility of an agreement among real estate owners: "It's impossible for real estate owners to agree on anything, so there's no possibility of an agreement to adopt fair housing practices."

Responses to this question from other owners varied. One owner endorsed a law with some qualifications, "There is no answer to the problem, but without a law, fair housing is too risky." One owner urged an agreement among real estate owners. Two others urged the admitting of tenants according to qualifications only, since open occupancy would be accomplished if admissions were based on qualifications. One owner did not answer this question. A final owner felt that while a law was more swift and certain, it probably wouldn't be necessary. He felt that an agreement among high-rise real estate owners should be developed--since Negro demand is less in this area due to high rents--and that this agreement should then be extended to all owners of apartments.

1/ One owner gave no answer to this question.

VIII. RECOMMENDATIONS TO THOSE INTERESTED IN PROMOTING APARTMENT DESEGREGATION

1. Apartment units offer cheaper housing than single dwellings, and in the Washington metropolitan area apartment growth outstrips home building. Because of these factors and the survey results which document the minimal negative effects of apartment rentals to Negroes, strong efforts should be directed toward integrating apartment housing in the Washington suburbs.

2. Use the factual information presented in the survey in discussions with apartment owners and managers.

3. Offer assistance and encouragement to apartment owners and managers who adopt an open occupancy policy.

4. Use survey material as background for programs to foster desegregation of suburban apartments.

5. Use survey material in educational programs concerning fair housing activities.

6. Present survey to employers and solicit their support in efforts to get apartments to rent on a nondiscriminatory basis.

7. Use survey findings as a basis for discussion with real estate people.

Note: See Suggestions for Apartment House Owners and Managers (Appendix F, pgs. 31-32), prepared by the American Friends Service Committee's Community Relations Division.

APPENDIX A

GROWTH IN APARTMENT BUILDING IN THE WASHINGTON METROPOLITAN AREA

Between 1959 and 1964 the number of new units in apartments of three or more units more than doubled in the Washington Metropolitan area, according to the U.S. Bureau of the Census. Further, in 1965 and 1966 the number of authorized apartment units outnumbered the authorized single family dwellings by two and a half times in the Metropolitan Washington area.

In the United States as a whole between 1959 and 1964, the proportion of units in buildings with three or more units moved from 15% to 35% of the total housing units started. 1/

APPENDIX B

January 12, 1967

Mr. John Doe
ABC Company
Any Street
Washington, D.C.

Dear Mr. Doe:

The Metropolitan Washington Housing Program will undertake in January a confidential research survey in the Washington metropolitan area. This survey, endorsed by the Commission on Human Resources, a constituent agency of the Washington Center for Metropolitan Studies, and the Bureau of Social Science Research will seek the answers to a number of questions concerning multi-family housing. Does open housing affect bottom-line profits in multi-family housing? What were the difficulties encountered in implementing open housing? What were the reactions of tenants, management, and prospective tenants?

To our knowledge, there has never been a study on the effects of open housing in multi-family units made in the United States. We hope you can help us find some of the answers we are seeking.

The data collected will be absolutely confidential. According to standard research procedures, no company name, no official's name, and no identifiable company data will be printed. A copy of the final report will be sent to each company interviewed.

The survey, using a standardized questionnaire, will consist of interviews with owners of multi-family housing which have undergone some degree of integration in the Washington metropolitan area. The survey will be conducted by Miss Lella Smith, whose training in the research field will ensure the quality and objectivity of this study. A graduate of Goucher College, who has studied at Oxford University in England, Miss Smith has conducted a number of studies and surveys in the field of urban problems.

Miss Smith will plan to telephone you concerning an appointment for an interview regarding your apartment house. We would appreciate greatly your cooperation.

Sincerely,

Marian Gray Secundy
(Mrs.) Marian Gray Secundy

APPENDIX C

QUESTIONNAIRE

COVER SHEET

Description of Unit

1. Name of company_____

   a. Name of respondent_____

   b. Title_____

2. Address_____

3. County_____

4. General area (if project is not identified)

_____ On main thoroughfare_____

_____ Near Negro area_____

_____ Close in to D.C._____

Near shopping center_____

Near ($\frac{1}{4}$ mile) large employer_____

Federal installation_____

Private_____

NOTE: This Questionnaire was used by the interviewer as a basis for discussions with the 17 apartment owners and managers interviewed.

5a. When were apartments built?_____

5b. How long have apartments been owned by the present owners?_____

5c. How long have apartments been under present management?_____

6. Rental Range

(Pre-integration date)

least expensive_____

most expensive_____

(Current date)

least expensive_____

most expensive_____

7. Type Units

Garden_____

High Rise_____

Other_____

Walk up_____

Elevator_____

Describe_____

Surrounding Neighborhood

8. Racial Composition

All White_____

Predominantly white_____

Half Negro - half white_____

Predominantly Negro_____

All Negro_____

9. Type Housing

Private homes predominantly_____
(new, old, large, etc?)

Mixture of private homes and apartments_____

Apartments predominantly_____
(garden--high rise?)

10. Type of area

Predominantly residential_____

Mixture of commercial and residential_____

Predominantly commercial_____

11. Cost of private homes in area

Upper income category ($30,000 and above)_____

Moderate income category ($15,000 - $20,000)_____

Middle income ($20,000 - $30,000)_____

Lower income category (below $15,000)_____

12. Facilities offered by apartment

Pre-integration	Post Integration
Air conditioning_____	_____
Swimming pool_____	_____
Daycare nursery school_____	_____
Secretarial service_____	_____

NOTES

Vacancy rate

(1) 4% - same as others in the area.
(2) No problem.
(3) All-white apartments suffering vacancies too.
(4) 7-8%, about half of adjacent non-integrated apartment.

Type of apartment

(5) Garden and duplex.
(6) Garden and townhouses.
(7) Garden and hi-rise.

Use of pool

(8) Received several phone calls.
(9) Doesn't know - no complaints.

Who decided on policy change

(10) Manager asked, owners agreed.
(11) New owner bought apartment in order to integrate it.

Physical changes

(12) Usual increase in rents.
(13) Decrease in rents.
(14) Implemented at inception, not applicable.
(15) Put in $100,000 in improvements and increased service and staff.
(16) Increase in service and rents.

Advertising changes

(17) Increased radio and newspaper advertising 300%.
(18) Informed civil rights groups, advertised in Negro newspaper.

Reason for leaving asked

(19) No, tho they usually state why.
(20) Never stated reason was racial, assumed it was in some cases.

Change in white applicants

(21) Only 20% asked if integrated, and of those who did, about 80% did not follow thru.

(22) Within a 2-year period, 3 asked, one of whom walked out and two rented.
(23) Rentals slowed down but cause is questioned(see note #3).
(24) A few did not follow thru.

NOTES cont'd - page two

Responses

(25) Resident manager leary initially.
(26) Only manager's misgivings.
(27) Owners and manager positive.
(28) Positive, but fearful.
(29) Management company was changed.
(30) Resident manager hostile.
(31) Resident manager not enthusiastic but agreeable.
(32) A few phone calls from tenants.
(33) Generally positive reception by tenants, one couple moved out.
(34) One negative response by tenant who apologized within a few days, other tenants indifferent, owner positive.

(35) Tenants overwhelmingly positive.
(36) Six families objected and moved within the year.
(37) Vague talk from two tenants.

Special problems

(38) Agitation by civil rights groups.
(39) No complications, cannot measure impact.
(40) Owners took over management.
(41) 50% Negro applicants not qualified, 20% whites not qualified.
(42) Getting staff and manger that were in accord with policy.
(43) Vandalism, trash, falsification on one application.
(44) Did not anticipate any; none encountered.
(45) Problems seem greater now than when we first integrated because of militancy of civil rights movement.

Short range effects

(46) Too early to tell.
(47) Lost money due to redecorating (see also Note #49).

Long range effects

(48) Will probably be problems when low-income housing is built.
(49) Expects to recoup losses.

Best method to secure integration

(50) Law quickest, voluntary methods preferred.
(51) Law or coordination among real estate people.
(52) Law is more certain but agreement among owners would probably do.
(53) Law is not the answer. Should admit according to qualifications.
(54) If no other way, law may be answer. Wondered how law could be enforced.

(55) Federal laws on old and new buildings.

Prepared by Donald and Kay Watson

APPENDIX F

SUGGESTIONS FOR APARTMENT HOUSE OWNERS AND MANAGERS

In considering renting apartments on an open occupancy basis, the following suggestions are offered as helpful guides. The experiences of fair housing groups, human relations experts and the more limited experiences of those apartment owners and managers in the metropolitan Washington area surveyed recently by the American Friends Service Committee would seem to bear out their validity.

1. Make the decision to adopt an open occupancy policy. This is the function of management. It is not necessary to ask permission of tenants, staff or to gain approval from outside sources.

2. Seek information from apartments which have adopted an open occupancy policy. Learn of their experiences as to how the policy was implemented.

3. Seek assistance of human relations groups, fair housing groups and religious and civic leaders. These resources are available and prepared to be helpful.

4. The professional help of a consultant can be very useful.

5. Brief all staff members about the decision and inform them of their responsibilities for implementation. The proper attitude and performance of staff are important for smooth implementation.

6. It may or may not be advisable to notify current tenants at the time of implementation of the policy. If tenants are to be informed of the new policy, they should be notified in a matter of fact manner, as they are informed of other management policies.

7. Be prepared to properly handle any negative reactions and/or questions about the new policy. Responses from tenants may be in the form of telephone calls, letters, personal visits or empty threats to leave.

8. Be alert to any problems at an early stage. The new policy will need personal and direct supervision in most cases.

9. Deal honestly with Negro applicants and tenants regarding any problems. Process their applications using the same criteria as is used for white applicants.

10. Do not raise the rents at the time of adoption of the open occupancy policy. An immediate increase in rent could provide an excuse for white tenants to leave.

11. Do not decrease maintenance services at the time of adoption of the open occupancy policy. It is preferable to increase maintenance and other services at this point. Improved maintenance should be apparent or specifically made known to tenants.

12. Continue advertising. If possible increase advertising. It is generally advisable not to mention your new policy in advertisements.

13. Ascertain all facts before blaming any difficulties that may arise on the new policy.

14. Share your experiences--both positive and negative--with human relations groups, fair housing committees and religious and civic leaders.

15. Encourage other owners and managers to adopt an open occupancy policy.

CITY OF ATLANTA

IVAN ALLEN, JR.
MAYOR

July 3, 1967

Mr. Moreland Griffith Smith
Director, Urban Planning Project
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Smith:

Thank you for sending me the six copies of the map "Atlanta Residential Patterns."

With appreciation for your assistance, I am

Sincerely,

Ivan Allen, Jr.
Mayor

IAJr:eo

ROUGH DRAFT

The Honorable Ivan Allen

Mayor of Atlanta

Georgia

Dear Mayor Allen:

The Southern Regional Council, as you doubtless are aware, is deeply interested in finding means to relieve the housing problems of minority groups in the South. Recently I had occasion to read a working paper on Atlanta housing prepared by the Council's Urban Planning Project. Much of what is said is, of course, well known to both of us. The recent report submitted to you by Cannedub Fleissig, for instance, goes into far more detail. However, it seemed to me that in many ways the Council's paper serves as an extremely valuable complement to the Cannedub-Fleissig document. I believe you will agree, and submit it to you with the recommendation that you give most serious consideration to the program proposed.

Sincerely yours,

RECOMMENDATIONS

I. Public Education Regarding Housing Discrimination

Those of us directly involved in programs to improve relations between the races in Atlanta anticipate acute difficulties in the immediate future. These difficulties are rooted in the condition of living of a significant number of our citizens. This condition is largely a product of artificial restraints on the free access of minority group citizens to employment opportunities and to the housing market. These restraints have a reciprocal effect. They create an environment that greatly reduces the potential of many of these citizens to participate productively in the local economy; this lack of opportunity, in turn, blocks the efforts of these citizens to improve their environmental conditions. We offer the following facts as evidence of the continuing environmental deterioration that adversely affects a substantial portion of Atlanta's residents. These are the facts:

1. The ratio of Negroes to whites in Atlanta is rising sharply -- up from 38 to 43 per cent of total population in the past five years;

2. But, while the Negro population is rising, its share of available housing has dropped. We offer the following evidence that this is the case:

. . . Negro housing is overcrowded -- a Welfare Department report shows a 90 per cent increase in density of residents in one Negro sector during the past five years (Merritts Avenue, N. E.);

. . . Negro housing is expensive -- Negroes who can afford to buy their own homes find lot prices start at $3,000 and that building costs average 10 per cent higher than for equivalent housing in white neighborhoods;

. . . Negro rents are disproportionately high -- rental prices have more than doubled between 1950 and 1960 (from $23.72 to $52.00) -- which means that the average Negro family pays only 22 per cent less per unit of housing than the white family, though family income is 43 per cent less than the average for white families;

3. Not only are supplies of Negro housing limited, their quality is sub-standard; the 1960 census reported that 46 out of 100 Negro homes in Atlanta were "deteriorating, dilapidated, or lacked essential amenities."

4. Public housing alone is not the answer -- about 15,500 Negro families have been displaced by public clearance projects in the past nine-and-one-half years. Of these, some 9,000 to 12,000 families qualified for public housing, but only 4,000 public housing units have been provided to meet their needs, leaving a minimum net deficit <u>among public assistance eligibles only</u> of at least 5,000 housing units.

5. As the map entitled, "Atlanta Residential Patterns" shows, most of the Negro residential areas in Atlanta either coincide with or border on areas of the city that are transitional, areas where over 50 per cent of the houses need minor repair, or where over 50 per cent of the houses need major repair. The map further shows that the city's public housing, as located, clearly reinforces Atlanta's pattern of racial segregation in housing.

II. Policy Statement for Equal Housing Opportunity

Our proposal consists of two elements -- a second Mayor's Conference on Housing, and an Action Program on Housing Opportunity. The Mayor's Conference can serve to outline the Action Program on housing and set the city's effort in motion. Once the Conference has stated and given full recognition to the problems of discrimination in housing in Atlanta, it becomes imperative that the city make a public policy of its desire to promote equal housing opportunity by every means it has available. Without such a public statement, the city's efforts can only be fragmented, its intent circumscribed, and its image as a progressive leader confused or denied. When, however, the Mayor affirms that the City of Atlanta means to provide equal housing opportunities for all its citizens, then public and private groups and individuals can give the Mayor their support and join in the equal housing program with trust and enthusiasm.

III. Role of Governing Body - the "Beacon of Equal Opportunity"

The policy statement in the Mayor's Conference should be followed by an official resolution of the governing body. Study and preparation should follow to provide an anti-blockbusting ordinance and a fair housing ordinance to open the housing market on an equal basis for all seeking housing. The implementation of these ordinances should

~~not be directed~~ toward alleviating grievances alone. Rather, the city should launch the effort with a "Good Neighbor" campaign. In addition, the city should provide the equivalent of a Fair Housing Center to assist homeseekers and to handle complaints of housing discrimination and blockbusting. The Center could be a staff addition within the Commission on Human Relations.

For public agencies in the housing area, we visualize an expansion of the efforts of government in addition to the activities undertaken by private interests. In this connection, we urge that there be a full and careful investigation of some imaginative new approaches to the housing dilemma that have recently been proposed -- for example:

. . . dispersing housing for low income residents in various compatible neighborhoods;

. . . using FHA and VA repossession housing;

. . . providing "homestead" financing through a development foundation.

IV. Role of Commission on Human Relations - Resource and Clearing House

The Commission on Human Relations can assist the Mayor in providing information to the public on housing discrimination and can prepare the documents for adoption by the governing body. The Commission can also carry out the "Good Neighbor" campaign and coordinate community groups in the effort. And, as mentioned above, the Commission

can supervise the Fair Housing Center's function. The Commission can oversee an active Metropolitan Development Foundation, to be discussed subsequently. And the Commission can call upon business, real estate, financial groups, as well as church and civic groups, for their cooperation and sponsorship of equal housing programs.

A basic element in any program for expanding housing availabilities must be the broadest possible exposure of the general public -- and of certain specific "publics" -- to the economic and social implications of any program to expand housing opportunities. The content of such an education program by the Commission could include several elements, among them:

. . . The dimensions of the housing crisis affecting Atlanta's Negro citizens;

. . . The root causes of this crisis and projections of their probable future impact on the community;

. . . The myths that have built up around the housing issue;

. . . Alternative solutions to eliminating housing discrimination, citing specific strengths and weaknesses of the various approaches;

. . . The experience of other communities faced with similar housing discrimination problems;

. . . The economic benefits that could be realized through a program to relieve housing shortages.

We recognize that developing and analyzing information relating to Negro housing problems and possible solutions

is a major undertaking. The selection of priority points of attack and of appropriate media and of techniques for presentation of findings also requires talent and energy. Fortunately, Atlanta has among its resources well-developed sources of sound information and several public and private agencies fully capable of dealing with each element of the task.

Atlanta's organization resources are significant and diverse. Among them are church and church-affiliated organizations, civic associations, the special service units of business and industry, educational institutions, and various other agencies that deal more directly with the various problems of racial minorities. Typical organizations falling into these categories include the United Church Women, the American Friends Service Committee, the Anti-Defamation League, the Chamber of Commerce, the Real Estate Board, the Community Development Department of the Georgia Power Company, and the Office of Economic Opportunity.

V. The Role of Southern Regional Council - the Ready Assist

While we would expect all interested parties to assist in developing means of increasing the supply of housing available to Negroes, we consider that the Southern Regional Council has special credentials in this area. The Council has for years been a knowledgeable and energetic force in the field of inter-race relations. It is familiar with programs in other cities, and is close

to the leadership in both the Negro and the white communities. Its Urban Planning Project, actively at work across the South, is ably staffed and has available to it the consulting services of Adley Associates, Atlanta city planning firm. Not only can the Council assist in articulating program elements requiring further elaboration and analysis, it can also help develop content and plan strategies for dissemination of information. In brief, the Coucil can effectively carry out the support role required for an effective city-wide approach to problems of minority housing.

VI. The Role of the Private Sector - the Entrepreneur in a New Market

It seems clear that much of the relief for Negro residents from the crisis in housing must come from the private sector, as emphasized in the Mayor's first Conference on Housing. The Council recognizes that this alternative poses problems of public policy, yet granting the Negro the freedom of market place seems to us to be the choice most consistent with Atlanta's nationwide reputation for developing sound, pragmatic solutions to problems relating to its growth and development. We consider a thoughtful exploration of possible private sources of Negro housing to be an area of urgent priority for four reasons:

1. Use of private resources will permit greater flexibility in the development, construction, and use of land and buildings;

2. With the incentive of the profit motive, we could expect to generate considerable in-puts of imagination and energy and to substantially broaden our attack on problems of housing Negro citizens;

3. Stress on the private housing sector can help to relieve the present recession in the building trades and also will have a generally beneficial effect on the local economy (each new home consumes an average of $4,000 in supplementary equipment, supplies, and services);

4. Finally, the public considers the private developer to be rational and soundly motivated and, for this reason, is likely to look favorably upon his involvement in the quasi-social field of housing.

Under the city's sponsorship and with continuing assistance from the Commission on Human Relations, there should be established a Metropolitan Development Foundation. This would be a corporation of banking, real estate, minority and civic group members who would provide both the expertise and the money to launch needed housing projects, with or without federal aid.

Also under city sponsorship and Commission supervision should be the gathering of commitments for equal housing opportunity. Realtors should be called upon to pledge the sale and rental of all housing on an open occupancy basis. Religious groups should be called upon to educate their members on the moral necessity and on the economic benefit of open housing. As many civic groups as possible should be called upon to make their commitment and pledge their cooperation.

In summary, the Second Mayor's Conference on Housing would follow this suggested outline:

I. Public Education on Housing Discrimination

A. The housing crisis affecting Atlanta's Negro citizens;

B. The myths that have built up around the housing issue;

C. The economic benefits that could be realized through a program to relieve housing shortages.

II. Policy Statement for Equal Housing Opportunity

III. The Role of the Governing Body - the "Beacon of Equal Opportunity"

A. Fair housing legislation.

B. "Good Neighbor" campaign.

C. Fair Housing Center

D. City housing programs.

IV. The Role of Commission on Human Relations - the Resource and Clearing House

A. Public information.

B. Preparation of fair housing documents.

C. Supervision of "Good Neighbor" campaign and Fair Housing Center Function.

D. Supervision of Metropolitan Development Foundation.

E. Gathering of Commitments for Equal Housing Opportunity

V. The Role of the Private Sector - the Entrepreneur in a New Market

APPENDIX

ADDITIONAL SUB-TOPICS TO SUPPLEMENT THE SECOND MAYOR'S CONFERENCE ON HOUSING

1. The Contribution of the Private Sector

   Metropolitan Development Foundation
   Zoning and Code Enforcement in the Rehabilitation Process
   Amenities for Neighborhood Up-grading
   Equal Opportunity in Housing Legislation
   Rental Clearing House
   Role of Real Estate Boards in Promoting Equal Opportunity

2. The Contribution of the Public Sector

   Criteria for Public Housing Occupancy
   New Developments in Public Housing Policy
   The Relationship of Public Housing to Patterns of Public Transportation
   The Role of Rent Supplements in Public Housing Programming
   New Public Housing Policies:
   - Criteria for Occupancy
   - Relationship to Public Transportation
   - Use of Rent Supplement

   The Impact of New Federal Programs on Housing Supply

3. The Contribution of Housing-Related Service Activities

   The Neighborhood Center
   Educational Programs
   Recreational Activities to Meet Neighborhood Needs
   The Housing Complaint Office
   The Role of Communications Media in Dispelling Housing Myths
   The Relations of Housing Programs to OEO Activities.

UNITED STATES GOVERNMENT

Memorandum

TO : Selected Members, Georgia State Advisory Committee: Chairman Henderson, Mrs. Pauley, Mr. McCloud, Dr. Cothran

DATE: October 13, 1967

FROM : Jacques E. Wilmore, Director
Southern Field Office

JW

SUBJECT: First Draft, Atlanta Housing Report

Herewith, rather belatedly, is the first draft of the Atlanta Housing Report . The usual procedure with SAC reports is not to submit them to SAC members for approval until they have obtained all necessary Washington clearances (to avoid the necessity of submitting it to the SAC more than once). However, I am sending the first draft to the above named persons, because as a non -Atlantan, I need your advice early in the game.

I am asking each of you to read the draft carefully, make marginal notes, and let me have your suggestions, critical comments, amendments, etc.. Generally speaking, I would like you to concentrate on substance, rather than language - as the report will probably be rewritten at least once in Washington before going to the printer. I am asking that you get your comments to me in a week - by Monday, October 23rd. I would like to have your comments in writing, but if this is not possible, please telephone me and I will write them up for transmittal to Washington.

Even though there is a lot left out, the report is longer than I had anticipated. Believing that the shorter the report, the more chance that it will be read, I would like to have your suggestions for cutting (again I am talking about substantive items - Washington will take care of excess wordage).

In line with your comments at the last SAC meeting (and contrary to the above paragraph) concerning getting something out on schools, I have wondered about using some of Tillman Cothran's data in an additional section, or a postcript, which might be titled "Housing Segregation and Schools" - or something like that. What do you think?

After rereading the draft I have a number of questions:

1. What should be said about code enforcement and where in the report (there is nothing on this now)?

Buy U.S. Savings Bonds Regularly on the Payroll Savings Plan

2. There are too many quotes. In many places using "the other guy's language" makes for a more lively report. Where to cut?

3. The report touches on, but does not describe many of the new HUD programs for building low and middle income housing. I have suggested an appendix on this. Is this adequate?

4. Is my statement on page 16 concerning the original sites of public housing accurate?

5. Is my statement about Accord on page 34 accurate?

6. A slight question about the inclusion of the Human Relations Council of Greater Atlanta among the organizations on page 56. Mrs. Stanley did not say her group favored legislation, but she implied it.

7. I kind of ran out of steam by the time I got to "Suggestions for Local Action". I am sure you can come up with more.

Lastly, I hope you will be frank (brutal if necessary) in your comments. I am not thin skinned, and besides Washington will not spare the "red pencil", so get your licks in first.

PREFACE

The United States Commission on Civil Rights

The United States Commission on Civil Rights is an independent agency of the Executive Branch of the Federal Government created by the Civil Rights Act of 1957. By the terms of that Act, as amended by the Civil Rights Acts of 1960 and 1964, the Commission is charged with the following duties: investigation of individual discriminatory denials of the right to vote; study of legal developments with respect to denials of the equal protection of the law; maintenance of a national clearinghouse for information respecting denials of the equal protection of the law; and investigation of patterns or practices of fraud or discrimination in the conduct of Federal elections. The Commission is also required to submit reports to the President and the Congress at such times as the Commission, the Congress, or the President shall deem desirable.

The State Advisory Committees

An Advisory Committee to the United States Commission on Civil Rights has been established in each of the 50 States and the District of Columbia pursuant to section 105 (c) of the Civil Rights Act of 1957 as amended. The Committees are made up of responsible persons who serve without compensation. Their functions under their mandate from the Commission are to: advise the Commission of all relevant information concerning their respective States on matters within the jurisdiction of the Commission; advise the Commission upon matters of mutual concern in the preparation of reports of the Commission to the President and Congress; receive reports, suggestions, and recommendations from individuals, public and private organizations, and public officials upon matters pertinent to inquiries conducted by the State Committee; initiate and forward advice and recommendations to the Commission upon matters which the State Committee has studied; assist the Commission in matters in which the Commission shall request the assistance of the State Committee; and attend, as observers, any open hearing or conference which the Commission may hold within the State.

This report was submitted to the United States Commission on Civil Rights by the Georgia State Advisory Committee. The conclusions and recommendations are based upon the Advisory Committee's evaluation of information received at its open meeting held in ~~Macon~~ Atlanta on ~~May 7-8~~ April 7-8, 1967 and on staff reports. This report has been received by the Commission and will be considered by it in making its reports and recommendations to the President and the Congress.

I - INTRODUCTION

On April 7 and 8, 1967 the Georgia State Advisory Committee met in open session in the City of Atlanta to receive information on discrimination and segregation in housing in the metropolitan area. During its two days of sitting, the Committee heard a total of forty-eight persons. The witnesses consisted of Federal and local housing officials, human relations and civil rights leaders, bankers, brokers, home owners, and residents and workers in the ghettoes. In addition to the witnesses who were heard in open session of the Committee, builders, additional bankers, and knowledgeable citizens were interviewed by the Committee's staff prior to and subsequent to the April 7-8 meeting. Appendix A is a listing of persons interviewed or heard by the Committee.

While the Committee is concerned with the problems of slums and the provision of an adequate supply of decent housing for low and middle income families, its primary interest is in discrimination and segregation in housing, and more particularly, the role of the Federal government and Federally supported agencies in reducing or increasing such discrimination.

In the report which follows the Committee will consider slums and substandard housing; the housing shortage in Atlanta and the city's plans to meet it; the role of low rent public housing in meeting the needs of the most disadvantaged and in contributing

to a desegregated city; the extent and growth of residential segregation and discrimination; how the ghetto continues to grow through changing neighborhoods; and the role of the housing industry - the brokers, builders and bankers. All of this will be reviewed from the perspective of the policies and practices of Federal housing agencies. For the Committee believes, and Federal policy dictates, that Department of Housing and Urban Development is not and can not be an innocent bystander in the process of growth and development of our cities.

The President of the United States stated in Executive Order 11063, November 20, 1962, in part:

> "Whereas discriminatory policies and practices based upon race, color, creed, or national origin now operate to deny many Americans the benefits of housing financed through Federal assistance...
>
> "Whereas such discriminatory policies and practices result in segregated patterns of housing and necessarily produce other forms of discrimination and segregation which deprive many Americans of equal opportunity in the exercise of their unalienable rights to life, liberty, and the pursuit of happiness...
>
> "I hereby direct all departments and agencies in the executive branch of the Federal Government, insofar as their functions relate to the provision, rehabilitation, or operation of housing and related facilities, to take all action necessary and appropriate to prevent discrimination because of race, color, creed, or national origin..."

While the Committee's review of the housing problems of Atlanta touches on many aspects of the problem, it's primary concern is to determine the extent to which the President's mandate, "to take all action necessary and appropriate to prevent discrimination", is being carried out.

Needless to say, this report does not purport to be an exhaustive study of Atlanta's housing problems or of the practices of Federal housing agencies. It does represent, we believe, a careful review and survey of the problem by a citizen group (with some staff assistance). We hope that this report, and the findings and recommendations therein, will stimulate discussion and further study of the problem; and most important of all, will contribute to effective action on the part of the Federal government, state and local governments, and private citizens and organizations to eliminate those barriers in Atlanta to "a decent home and a suitable living environment for every American family".

II - Slums, Welfare and Housing Needs

Metropolitan Atlanta is the regional center of southeastern United States. In 1959 metropolitan Atlanta passed the one million population mark - making it the only really "big city" south of Washington, D. C. and east of Dallas and Houston. Atlanta, sometimes called "the New York of South", is proud of its growth, its vitality and its commercial and financial preeminence. But some Atlantans have not shared the good life of the city, for they have been confined to slums and substandard housing; their overcrowded families yearn for room for eating and sleeping and playing; they are unemployed or underemployed or exist on meagre welfare payments.

The Committee received testimony from four citizens of Atlanta who live and work in the city's ghetto. Hector Black, who has lived in Vine City for more than two years, described the deplorable conditions under which some citizens live:

> "I visited a house about five months ago where a mother was living with three children. It was in a basement. I asked where she cooked and heated and she pointed to a tin pail... a water pail, she punched holes in the bottom and set it up on bricks and she cooked and heated on that for herself and her three children." (Page 68)

> "On Mangum Street, not far from us, there was a woman... She was living in an indescribable building. I hardly dared to walk across the porch to get to her house." (Page 69)

> "Let's see - another woman who received an eviction notice about a month ago. She has nine children in her house.

> When I first knew them there were ten children, mother and father living in three rooms. One of those rooms was a kitchen." (Page 69)

Mrs. Helen Howard, a resident of the same section, corroborated Mr. Black's testimony. She said, "Its nowhere to live in Vine City. In Vine City people practically beg to live in houses. It's so terrible... People come to us all the time, they ask us to find them a place to live. There is no where to live". (Page 71).

Joseph Flannigan, Executive Secretary of the St. Vincent de Paul Society, talked about conditions in Buttermilk Bottom and the Bedford Pine areas. He described:

> "... a group of four houses jammed together in a line all the way down this block. This in an area of very poor people... they're living six to eight people in a three to four room apartment... many of them heat with a pail of coal and move it from room to room..." (Page 74)

Don Bender, a teacher in the Atlanta school system, talked of the multiplicity of problems facing slum dwellers. He described a woman whose roof leaks, whose plaster is falling off the walls, who has carboard over her windows, whose plumbing is inadequate, and he added, "her child is going to a school that is on double sessions". He told of another woman who lives with her six children and two parents in a three room house, next to a warehouse where litter is piled:

> "They have complained and when they complain its sometimes cleaned up but no consistent cleaning up over a long time. This, of course, is a great place for rats. ...one time when she was lying in bed with her baby in her arms she suddenly realized that there was a rat on the bed... The place is infested with this kind of thing and cockroaches as well". (Page 78)

A great number of the residents of slum dwellings are welfare recipients. Wellborn Ellis, Administrator of the Fulton County Department of Family and Children Services, and Mrs. _____ Bishop, a member of his staff, presented information to the Committee. As of March 1967 his Department had 16,644 recipients covering approximately 28,000 persons - two-thirds of whom are Negro. The largest volume of recipients rent private housing, 9,754 out of 16,644. 2,810 rent public housing and approximately 10 percent own their own homes. As to the condition of the housing occupied by welfare recipients, Mr. Ellis gave the following data:

Very good	- 11.55%
Good	- 33.00%
Fair	- 32.00%
Poor	- 15.00%
Very poor	- 6.00%

Approximately 55 percent of the housing occupied by welfare recipients fell in the categroy of fair to very poor. No explanation of criteria used in classifying housing was given.

The maximum grant, under state legislation, for a single individual is $75.00 a month and $144.00 for a family (mother and four children). These figures increased to $80.00 and $150.00 respectively on July 1, 1967. In figuring the family budget, a maximum of $38.00 a month is allocated for rent (for three or more persons). To this figure $10.00 to $12.00 per month is added for utilities, depending upon family size. When asked whether these amounts were adequate to obtain standard housing in Atlanta, Mrs. Bishop stated:

"I don't think it is possible to find standard

> housing at these amounts anywhere except in public housing and even when we allow this much in the budget for public housing, the recipient is paying a high percentage of his grant for housing..." (Page 52)

Mr. Ellis was asked whether his Department (and the Federal government through social security and other grants) were "a major subsidizer of slum landlords in Atlanta". He replied, "we probably take care of our share of subsidizing these (slum landlords)". He said he would recommend a state policy which would permit his Department to withhold payment to those who provide unsound and unsatisfactory housing.

Mrs. Bishop was asked if there were a differential in the condition of the housing occupied by Negro and white recipients, since they both have the same amount of money with which to bargain on the housing market. She replied:

> " I think that I would concur...that the most dilapidated housing in the slum areas is occupied by our Negro recipeints. There is very much poor housing occupied by white recipients but more of the dilapidated housing is occupied by Negroes... there is not as much difference as there has been in the past (in the amount paid for rent)... the white recipient and the Negro recipient are both paying far too much for their shelter... this gap is closing." (Page 55)

Collier Gladin, Director of the Atlanta Planning Department, told the Committee that a survey in 1965 reported that 17,179 or 10.5 percent of the city's 163,405 housing units were classified as deteriorated or dilapidated. With respect to the housing problems of Negroes in Atlanta, Mr. Gladin said:

> "1. One-third of the city's population is crowded into one-sixth of its residential areas. The overcrowded areas are predominantly Negro slums.

"2. A high incidence of substandard housing exists in Negro areas. The 1960 Census of housing classified only 52 percent of Negro rental housing in Atlanta as sound with all the usual plumbing facilities.

"3. Because of shortages in available housing, Negro rental housing usually costs more than comparable housing available to white families.

"4. Low incomes among Negroes further limit availability of suitable housing." (Exhibit No. 1)

Also, the Committee was told that there is - serious overcrowding in many Negro areas. In 1960, 33 percent of nonwhite households lived in housing units containing more than one person per room; only 8 percent of white households were this crowded. Thus, overcrowding was 4 times more frequent among nonwhite households than among white households.

III - Atlanta's Plans to Meet the Housing Shortage

(Note: Somewhere in this section there should be appropriate reference to Mayor Allen's reportedly excellent speech to the housing conference - Spring 1967?)

Atlanta's Community Renewal Program, which is known locally as the Community Improvement Program, based on a 1965 survey, reports that the following housing units are needed:

7,400 units in the 0-$55 per month range
4,708 units in the $55 - $80 per month range
642 units in the $80 - $115 per month range
12,750 total rental units needed, plus
4,250 low cost units for home ownership

The above figures represent a total need for 17,000 additional units of housing.

In _____ 1967 the Mayor of Atlanta appointed a Housing Resources Committee to plan to meet the city's housing shortage. It was reported that the Housing Resources Committee has aided in the planning of more than 10,100 units of low cost housing, including 1,300 units of public housing. Of the 10,100 units, 3,400 "are reasonably sure of being build", 4,200 "are probable" and 2,500 "are bing considered for construction".

Cecil Alexander, chairman of the Housing Resources Committee, reported to the Advisory Committee. He cited many of the obstacles to getting the necessary housing built—availability of land, zoning, construction costs, building codes, etc.. He said that

roadblocks encountered already indicate that estimates of the housing which will be built (the above figures) have to be reduced by 3,000 to 4,000 units.

Mr. Alexander commented on the problem of dispersion versus concentration:

> "There's been a great deal of comment about concentration of housing in the western section of Atlanta. First of all, this Committee's job is not to create housing per se or even to establish policy. We are here to get housing built." (Pages 58-59)

He added, however, that the social effects had to be taken into consideration when reviewing sites for housing. Pointing out that most of the vacant land is in the western portion of the city, he said, "It stands to reason that it (housing) is going to go where land is available". When asked whether he had any recommendations as to how to avoid increasing existing patterns of segregation, Mr. Alexander replied in the negative. He added:

> "One comment I would make about the integration of housing is that we absoultely are 100 percent adhering to the Federal laws in all these cases... All of this housing will be open and there's no question about that. The kind of segregation that comes about because of white neighborhoods - these things are built in..." (Pages 64-65)

Urban Renewal - The city's main tool for eliminating sub-standard housing is through urban renewal programs. In Atlanta, urban renewal is under the direction of the Housing Authority. Lester Persells, Director of Urban Renewal for the city, presented information to the Committee. There are eleven urban renewal

projects, in various stages of execution. Atlanta has a large program, with some 2,600 acres under redevelopment. This total is second only to Philadelphia in the nation.

The Planning Director for the City of Atlanta told the Committee of a new concept of urban renewal:

> "...in the past Atlanta's urban renewal program concentrated only on physical renewal. The city's new goal is to include human renewal as an important element of future projects. Social services will be provided in project areas. Neighborhood identity and pride will be developed. There will be as much rehabilitation as economically feasible in order to reinforce the stability of the original neighborhood. Redevelopment plans will be designed to enable residents to remain in their present neighborhoods whenever possible." (Exhibit No. 1)

The Committee's questions indicated an interest in three aspects of the Atlanta program - the extent to which minorities and site residents participated in planning; the displacement of minority groups and their relocation; and the total impact of urban renewal on achieving a desegregated city.

Mr. Persells told the Committee that most citizen advisory committees were integrated. Speaking of two such committees he said, "...in the Bedford Pine project area, I think there are three white people out of the committee of some 16 or 17 folks. In the West End committee there are no Negro people... There are almost no Negro residents in that whole area...". However, Joseph Flannigan, a worker in the Bedford Pine area told the Committee:

> "...in this particular area there are homeowners who may be on this committee that has been mentioned as being formed in this area and who were supposed to have

> been in on the planning sessions for this particular area in relocation planning, but they don't associate with the people down in this area. They are a little different ... and as a result do not communicate." (Page 74)

On the matter of displacement and relocation, Gilbert H. Boggs, Director of Housing for the Atlanta Housing Authority told the Committee:

> " The process of eliminating slum conditions frequently requires the reduction of residential land area for much needed community facilities such as schools, parks, community centers, etc., in addition to reducing the population density to a more healthful level. The people displaced in this process are mostly in the poverty level, who cannot afford standard housing on the private market; therefore, the first and most important step is to provide housing which will provide sufficient resource in the low-rent housing market to make satisfactory relocation possible. The greatest need exists among the Negro poor." (Page 130)

Mr. Persells told the Committee that to date a total of 4,716 non-white families and 245 white families have been displaced by urban renewal. He estimated that only 8 percent of the families relocate themselves into substandard housing. However, a large number of families "disappear", and it is not known what kind of housing they obtain. On the matter of net loss of housing units through urban renewal, Mr. Persells had this to say:

> "There have been 5,653 dwelling units demolished. There have been 1,066 dwelling units built, completed and in occupancy, and there are in the process of building... and additional 3,263 dwelling units. So that the net loss has been something just over 1,000 dwelling units. And we think this is quite a remarkable record... some of the areas cleared have been running up to 80 families per acre and that's pretty horrible." (Page 45)

No indication of the price range of the units demolished and the cost of the units built or proposed was given. Appendix ___

provides data on each of the eleven urban renewal projects, including proposed reuse.

Lastly, the Committee turned its attention to the impact of urban renewal on reducing or exacerbating patterns of residential segregation in the city. Having established that Negroes have accounted for 95 percent of the families displaced thus far, the Committee asked if these families were relocated in segregated or non-segregated housing. Mr. Persells replied, "I simply don't know, and then again, its pretty hard to tell where a segregated area is in some instances... There's no conscious effort made to move people into a segregated area I can assure you of that". (Pages 44-45) He added that housing built on urban renewal land is covered by Federal non-discrimination regulations, "it is open housing and it does get to be available and we have conducted follow-ups on housing built in urban renewal areas and they are staying open."

Mr. Amos Holmes presented a statement in behalf of the Atlanta Branch of the National Association for the Advancement of Colored People (NAACP) which said that urban renewal and other programs should seek the dispersal of minority groups. It said, "There is some danger that this relocation program may be used to rebuild the ghettos as ghettos... While the rebuilding process takes place, there must be assistance provided to encourage outward movement

among those who have heretofore been denied access to the general housing market." The statement continued:

> "Between January 1, 1956 and July 1, 1966, 21,000 families representing 67,000 people were forced to move due to urban renewal, expressway construction, code enforcement, over-income evictions from public housing and other governmental actions. Urban renewal and expressway contruction accounted for about 60 percent of the total displacement. The majority of the families and individuals affected by this change were Negro. Approximately 50 percent of these people had incomes under $3,000 a year." (Exhibit No. 9)

The NAACP statement added, "We must insist that the Federal and state governments have a responsibility to insure that local housing authorities and urban renewal agencies stop using public funds to entrench and extend segregation."

Public Housing - The Committee received information on the Atlanta public housing program, as well as several metropolitan area housing authorities. Appendix ____ is listing of occupancy patterns, by race, in Atlanta's public housing.

A staff report indicated that prior to Executive Order 11063, November 1962, all public housing in Atlanta was segregated. There were four white projects (Howell, Capitol, Harris, and Techwood Homes) with a total of 2,557 units. There were seven Negro projects (Hope, Grady, Eagon, Herdon, Carver Community, Perry, and University Homes) with a total of 4,950 units.

In April 1965 the Atlanta Housing Authority filed a compliance statement under Title VI of the Civil Rights Act of 1964 and elected the "freedom of choice" plan. Following the Executive

Order four additional projects were built, consisting of 1,360 units. In December 1966 the Authority operated a total of 15 projects with 8,867 units.

The seven original Negro projects have remained exclusively occupied by Negroes (except the Grady Homes has had one white tenant). Two of the original four white projects remain all-white; and two were integrated as of December 1966 - State Capital Homes, 11.3 percent Negro and Harris Homes, 32.8 percent Negro.

Of the four projects built since the Executive Order, two (Bowen and Graves) are Negro (with exception of one white tenant in Graves). One is all-white (Palmer House) and one is integrated (J. O. Chiles) - 5.5 percent Negro.

In summary as of December 31, 1966 of the 15 projects, 9 are Negro (including the two which have or have had one white tenant), 3 are all-white, and 3 are predominantly white, but integrated.

There was considerable discussion as to the extent to which public housing is concentrated on the west side of town. The NAACP in its statement cited the following distribution of 9,404 units (completed and under construction):

Quadrant	Units	Percent
Northwest	4,102	43.62
Southwest	3,681	39.14
Southeast	1,621	17.24
Northeast		
TOTAL	9,404	100.00

The NAACP said the above figures "reveal that nearly 83 percent of all public housing is located on the west side of Atlanta while there are none in existence in the Northeast section. This example of racial segregation is indeed appalling."

Mr. Gilbert H. Boggs, Director of Housing for the Atlanta Housing Authority, using a geographical division of the city, rather than the postal designations used by the NAACP above, came up with different figures. The geographical center line, dividing the city's land into equal portions, lies 1 3/4 miles west of the quadrant line. On this basis, working with a total of 10,154 units completed or in process (including leased housing), Mr. Boggs said that 7,794 units or 77 2/3 were in the east and 2,360 units or 22 1/3 were in the west!

The basic question involved in both the NAACP's and the Housing Authority's analyses is site selection - whether those projects which are predominantly Negro are built in Negro areas and those projects which are predominantly white are built in white areas. The Committee's analysis is that they are - regardless of whether one uses a geographical or a postal division of the city. Mr. Boggs was asked about site selection and the racial occupancy of the surrounding neighborhood. He replied:

> "Site Selection certainly has some bearing on the racial occupancy of the project. It is obvious that certain geographic areas are preferred by certain racial groups. Sites are selected after consideration of a variety of important factors... (land, cost, zoning,

> topography, transportation, community facilities, etc.) The racial character of surrounding neighborhoods is taken into consideration along with other factors." (Pages 127-128)

Committee members raised the question of small scattered sites versus large concentrations of public housing. The Reverend Andrew Young, Executive Director of the Southern Christian Leadership Conference (SCLC) cited Perry Homes, a project of nearly 1,000 units, as the kind of planning to which he objected. He said:

> "...as I see it at this point, because I have no evidence to the contrary that citizens will be moved to complexes like Perry Homes, which in my mind is another Sharpsville, a kind of relocation center on the outskirts of town, out of the way of public transportation and job opportunity and everything else, with a separate school system set up for the poor Negro ..." (Page 113)

Speaking of Perry Homes, a Committee member asked Mr. Boggs, "is this in the opinion of the Housing Authority the most desirable thing to do in terms of changing some of the patterns..?" Mr. Boggs replied that, "in this particular case the principal reason was we owned the land and it was needed for this particular purpose". He said the Authority favored smaller projects, "from a point of economical operation we favor a project of around 5 or 600 units". He added that the turnkey and leased housing programs will result in smaller sites.

A number of Committee members raised questions concerning the efficacy of "freedom of choice" in tenant assignment as a means of implementing the letter and the spirit of Title VI of the Civil Rights Act of 1964. Mr. Boggs defended the procedure and pointed

out that several previously all-white projects had been desegregated, "I feel that its the democratic thing, as I understand democracy, a person is offered a chance to live in any project he wants to". When asked about the new policy of the Federal Department of Housing and Urban Development (HUD) which replaces "freedom of choice" with a"first come, first served" tennant assignment policy, (Washington - give specific citation) Boggs said, "its not implemented here" and indicated that his authority had not been informed of the policy by the Federal officials.

The subject of tenant assignment policies were considered in the light of the fact that the Atlanta Housing Authority operates two application offices - one in the all-Negro University Homes (Fair Street) and one in the all-white Techwood homes. Mr. Boggs was asked why the Authority could not operate one, centrally located application office. He Said:

> "I think there's a very good reason for that. The point is one office would be very inconvenient to the public at large. These offices are located and cover different geographical areas of the city and we think it would be very unwise to combine the offices into one." (Page 140)

He said that the existence of two offices made no difference in dealing with applicants, that approximately fifty percent of the applicants at the Techwood office are Negroes. It was further established that de facto segregation exists with respect to the staffs of the offices. The Techwood office has an all-white staff and the Fair Street office an all-Negro staff.

Finally, the Committee reviewed briefly the situation in several metropolitan area housing authorities. Appendix _____ is a listing of occupany patterns, by race, in_____ communities in suburban Atlanta. Representatives of the Decatur, East Point, Fairburn and Marietta Housing Authorities presented information to the Committee. None of the authorities represented has any integration in their projects. All were operating under the "freedom of choice" tennant assignment policy. (NOTE: we should check Fairburn, as HAA report shows 14 W and 10 N in one project??)

Model Cities - The City of Atlanta has applied to the Federal Government for a grant to plan a "model neighborhood" under the Demonstration Cities and Metropolitan Development Act of 1966. The City has selected an area of some 3,000 acres. The program will affect approximately 10 percent of Atlanta's people. Data presented to the Committee indicated that the target area is about 60 percent Negro and 40 percent white. The area, which exceeds the total urban renewal project area, would be subject to overall planning and the use of a variety programs in the creation of a model neighborhood.

A number of witnesses expressed concern about the impact of this program on the Summerhill-Mechanicsville-Pittsgurgh area. Questions were raised about the extent and quality of citizen participation in planning for the area. The Reverend Andrew Young of SCLC said:

> "The city talks about citizens particpation, but as we've heard about citizens participation it means citizen participation at a distance. That in the

> policy making circles of the Model Cities program I don't see any signs of any citizens from the community where decisions about contractors and the jobs and the training programs that are going into the model city area... there is no citizen involvement. I would say that this is absolutely essential." (Page 212)

Rev. Young, and others said their concern was heightened because so little information about plans for the area is available. He said, "I think the thing that alarms us so is that nobody wants to tell us anything. And the minute concerned citizens can't find out anything about a multi-million dollar real estate development, I get suspicious". (Page 214)

Another witness, Mr. Edward Moody, a resident of the Model Neighborhood area, supports the idea of making his a model neighborhood, but expressed concern about several aspects of the project. He said, "community participation is involved in the Model Neighborhood (plan), but the application to the Federal government exagerates it". He stated that meetings were held and the people were asked what they wanted in the plan, "but when it came to the application itself, the bill was drawn up in City Hall and it excluded the people".

Committee members questioned whether the elimination of segregation was part of the city's plan for a model neighborhood. "I hope that this doesn't mean, when it is all redeveloped that there will be a Negro and a white area, but I hope that part of "model neighborhood" means developing new techniques for developing integrated neighborhoods, so that we can break down this pattern.

Is this kind of thinking... included in the model cities (plan)?"

Atlanta planner, Collier Gladin replied:

> "I think this could be incorporated into it. I don't know that this was the specific intent. ...we weren't thinking of pushing out one race out of a particular area or pulling them all back into a particular area." (Page 28)

Mr. Gladin added that the application is a request for planning funds and if the grant were received, it would take considerable time to develop the actual plan for the neighborhood.

Several witnesses were sharply critical of the model neighborhood plan for not specifically including desegregation or an "Open city" as an integral part of the plan. Edward Rutledge, Executive Director of the National Committee Against Discrimination in Housing (NCADH) said that all Federal planning grants should include planning for desegregation. He said:

> "...there isn't the will in Washington today to impose upon the metropolitian area of Atlanta or of any metorpolitan area the policy that says even when we give you that 701 or 2 money (planning grants), that money must be used only to plan so that the metropolitan area can be developed on an integrated basis." (Page 104)

Mr. Rutledge said, "... if we let things move as they are, and Model Cities goes through as the planners are thinking about it, it's a matter of fixing up the ghetto, taking care of people where they are...".

The Atlanta Branch of the NAACP in its statement to the Committee said:

> "Practically all recently announced large-scale slum rehabilitation or 'model city' programs are aimed at refurbishing the ghetto... Dispersing is essential, if eradication of the system is to be a reality... We consider city-wide planning important in the dissolution of many problems in housing school sites and the prevention of 'sophisticated ghettos.'" (Exhibit)

The NAACP statement continues, "we have requested Mr. Weaver, Secretary of Housing and Urban Development, to withhold all funds to public housing and urban renewal programs... (and) the Model Cities Program until Atlanta officially adopts an 'open occupancy' ordinance".

Of this kind of thinking, Mr. Rutledge said to the Committee, "they always put us so-called liberals on the spot... They say 'wouldn't we want housing for those people who are living in those terrible conditions?' My answer is that we conceded each time". He cited the days of the Powell Amendment (requiring non-discrimination in public housing) and the pressure to have the amendment removed "because you won't get public housing". He said, "we may be accused of killing off the Model Cities Program or the limited Rent Supplements Program because we're challenging the Federal government the way we're suppose to... With all the machinery and equipment we have, we could rebuild America on an open occupancy basis, (but) we're still talking and walking along lines of 30 years ago." (Page 107)

IV - Residential Segregation in Atlanta - Its Growth and Implications

The fundamental basis of the Committee's inquiry is to determine the extent of discrimination and segregation in housing in Atlanta. The existence of slums, overcrowding, the city's rehousing programs, were all considered in the light of a segregated city.

The Committee asked, how segregated is Atlanta, is the situation getting better or worse, how much of the present segregation can be attributed to economic factors, how much to discrimination in housing? A member of the Research Division staff of the Commission on Civil Rights in Washington (use name?) told the Committee that indeed Atlanta was a segregated city, and the segregation was increasing. In terms of numbers, it is estimated that there were almost 222,000 Negroes in the city in 1966, approximately 44 percent of the total population of the city. In 1960, Negroes accounted for a little over 38 percent of the population. Thus there has been an increase of six percentage points in six years. Data ~~was~~ were presented which indicated that in 1966 almost 9 out of every 10 nonwhite residents (89 percent) were located in 37 census tracts. Each of these tracts was between 75 and 100 percent nonwhite. In 23 tracts, 95 percent or more of the inhabitants were nonwhite. While nonwhites made up approximately 44 percent of the total population in 1966, they were concentrated in only about a third of the city's tracts. In most instances, the 37 tracts are adjacent to one another and extend in a wide band across the center of the city.

With respect to trends, the Commission staff member reported:

> "In 1940, there were only 17 census tracts out of a total of 75 in the city of Atlanta in which nonwhites made up more than three fourths of the total population. In 1950, there were 20 such tracts. Annexation of 92 square miles in 1952 increased the total number of tracts in the city to 106. But even with the addition of more than 171,000 persons, of whom more than a fourth were nonwhite, the pattern of concentration remained intact. By 1960, the number of tracts in which three-fourths or more of the total population was nonwhite had increased to 30; and in 1966, the number was 37, as mentioned earlier. In most cases, expansion has been to blocks located on the periphery of already existing Negro neighborhoods.
>
> "To further illustrate how racially segregated the city is, we find that in 1940, 43 census tracts in the city each contained less than 10 percent nonwhite population. By 1950, the number had decreased to 34, but in 1960, it had risen to 56. As of 1966, there were 53 census tracts in the city of Atlanta, each with less than 10 percent nonwhite residents. Twenty-five of these were virtually all white."

The Committee was told that Karl and Alma Taeuber, research scholars at the University of Wisconsin, had studied the patterns of residential segregation of Negroes in a number of American cities after the 1960 census. They developed an index of residential segregation in order to show the extent of racial separation in urban centers throughout the United States. The index shows how much population shifting would have to occur in order to achieve an evenly distributed, non-segregated city. In their study the Taeubers found that Atlanta had a very high degree of residential segregation. They found in 1960 that 94 out of every 100 Negro residents would have to move from their present locations in order

to eradicate segregation-i.e. for each block in the city to have the same proportion of Negroes as in the city as a whole.

In 1950 the figure was approximately 92 while in 1940 it was 87. Thus, over the years racial concentration has become more intense in the city of Atlanta. It is important to add that the index of residential segregation is used here only to show that the concentration of Negroes has increased and that in 1960 it was extremely intense. In no way does this mean that the achievement of a non-segregated city should involve only the movement of Negroes.

The Committee was told that thirty out of forty-five southern and border cities had lower segregation indexes than did Atlanta - among them Baltimore, Md., Birmingham, Ala., Charleston, S. C., New Orleans, La., San Antonio, Texas, and Washington, D. C. A number of northern cities had a lower segregation index than Atlanta, including Chicago, Cleveland, and Detroit.

In relating residential segregation to the income of nonwhite families, the Committee was told by the Commission staff person:

> "One might assume that residential segregation is caused by the depressed economic status of many Negro families. However, the study by Karl and Alma Taeuber indicates that economic factors do <u>not</u> account for a large proportion of the residential separation in Atlanta. Using statistical manipulations to control for differences in economic status between the white and nonwhite residents, the Taeubers found that in Atlanta over two thirds of the residential segregation in 1960 could not be explained by differences in Negro and white economic status.

> "In 1950 only 36.3 percent of the differential was unexplained by economic factors. Their results indicate that residential segregation not only increased during the decade of the fifties, but also that the 1960 pattern of residential segregation bears much less resemblance to pure economic segregation than did the segregation patterns ten years earlier. A look at the increased residential segregation in 1966 indicates that the trend has not been reversed."

Sociologist Dr. James Conyers of Atlanta University corroborated the above by pointing out the urgency of the situation in southern cities. He said that urban segregation in the south, based on the Taeuber index, was higher than in any other region of the country. He said:

> "...what some of the data actually suggest is that between 1940 and 1950, no region of the United States showed an average decrease in residential segregation. Between 1950 and 1960 cities in every northern and western division experienced average decreases in segregation, whereas cities in all southern divisions again experienced average increases in segregation." (Page 94)

Dr. Conyers addressing himself to the significance of the data said, residential segregation "occupies a key position in patterns of race relations in urban USA, affecting not only neighborly relations between races, but the clientele and quality of schools, hospitals, libraries, parks, and other services. It is not surprising then that proponents of segregation know that through the control of housing, they can accomplish de facto what can no longer be established de jure."

Evidence of discrimination in housing as a mechanism for creating and maintaining residential segregation was reported by several witnesses (some of which will be related in the sections which follow). Moreland Griffith Smith, Director of the Urban Planning Project of the Southern

Regional Council, placed in the record a study of discrimination in housing in Atlanta which had been completed for his agency by Samuel L. Adams. The Adams study listed four mechanisms, other than the activities of brokers and bankers, that have affected Negro patterns in Atlanta:

> "*Street closures and the planning of thoroughfares that do not facilitate easy travel between Negro and white residential areas.
>
> "*Placement of cemetaries, public housing projects and open green areas where they inhibit any spill-over of Negroes at the fringes of the crowded ghetto.
>
> "*Violence and intimidation, including some thirty bombings in recent years.
>
> "*Differential zoning and application of land clearance and condemnation regulations that combine to make Negro areas less desirable."

The Adams study states, "Explosives were planted near several newly purchased fringe area homes as Negro migration threatened the Edgewood and Bankhead area in the eastern and western portions of the city. The blasts came frequently in the first half of the 1950's, tapered off for several years and increased again in the early 1960's. Bombings have represented only part of the intimidation and harassment meted out to Negro families who jump racial barriers in Atlanta. Cross burnings and telephone threats have also been used to keep housing boundaries intact."

In the Southern Regional Council study, the author relates his own experiences in purchasing a home on an all-white street in Atlanta in the summer of 1965:

"I remember the first night -- the sound of gunshots fired above the house, the sight of cherry bombs and Molotov cocktails tossed on the lawn. I remember returning home with my wife and two children after a short trip to the city to find windows broken and streams of toilet paper decorating the front yard. I remember the sight of my trembling teenage daughter telling her mother and me of an attempt by a white motorist to run her down as she walked along the road from school. I remember the words of my six year old son telling us of being chased by larger white boys. 'I wish I was white so they wouldn't do it.' It is not possible to erase such memories."

Additional evidence of discrimination in housing came from William C. Watson, Jr., an official at the Public Health Service's Communicable Disease Center in Atlanta. Watson told of CDC's difficulty in finding housing in the all-white Emory University area for foreigners on temporary duty at the Center. His statement, though less dramatic than the Adams account, is perhaps more damning. He pointed out that finding housing for foreigners was eased by the fact that most wore their national dress. He said, "The really dark skinned people will usually turn up with his turban and that will solve his problem... it makes all the difference in the world sometimes." Mr. Watson said that American Negro staff members at CDC have not been able to find housing in the area. He said, "To my knowledge none are living in that immediate area... We have discussed what we can do and we feel that attempting this is beyond our official purview and that it would probably boomerang. All we can do, all we have attempted to do frankly is work with the individual problem as it arises and we have not been successful... frankly we have not officially made the attempt to find a house for an employee in that area." (Page 259 & 260-1)

Lastly, the Committee turned its attention to discrimination against Jews. Mrs. Marshall J. Mantler, Chairman of the Atlanta Chapter and Mr. Charles F. Wittenstein, Executive Director of the American Jewish Committee presented information to the Committee.

Mrs. Mantler, who is a licensed real estate agent, said that discrimination against Jews in the Atlanta Metropolitan area remains "a persistent problem". Basing her information on her own organization's studies and on those of the Atlanta Jewish Community Council and the Anti-Defamation League of B'nai B'rith, she said:

> "At the present time, there are six subdivisions in northwest Atlanta that completely exclude Jews. These subdivisions contain in excess of 400 homes. In addition, there are others which have been developed in recent years on an exclusionary basis but which have now partially opened up to Jewish purchasers through resale. Many more subdivisions have been developed on a quota basis. In these, it is customary to allow only 10 percent of the homes to be purchased by Jews, although the formula may vary. A similar pattern prevails in the northeast section of Atlanta and in other major cities of the state." (Pages 241-2)

Mrs. Mantler described four major devices, and several minor devices, which are used to discriminate against Jews:

1. The "gentlemen's agreement" or word-of-mouth instructions not to sell to Jews.

2. The "club system" under which the sale is tied to membership in a community swimming pool which is open to Christians only.

3. The "Quota system".

4. The "restrictive covenant".

She said that although restrictive covenants are no longer enforceable in the courts, they still served as a deterrant. Other techniques include

merely turning down the contract once it is determined that the prospective purchaser is Jewish. Another involves the use of the word "restricted" on real estate listing sheets, which can have many meanings, but also may mean "no Jews allowed to buy in that area".

It was reported that studies by the American Jewish Committee indicate that while most Jews would not like to live in neighborhoods where they are the only Jewish family, most prefer not to live in a ghetto. Yet, Mrs. Mantler said, "Jews continue to be stereotyped as clannish". She said that the practices complained of generally do not cause physical deprivation of housing, but there is great psychological effect as denial of equal opportunity imputes inferiority.

Mr. Wittenstein said that Federal and local Fair Housing Laws which would prohibit discrimination on the basis of race, creed, or national origin would help Jews as well as other minority groups, and the entire city.

V - How the Ghetto Grows--The Changing Neighborhood

The previous section documented the fact that Atlanta is a segregated city, and the segregation is increasing. The Committee was told that the Ghetto has grown as neighborhoods on the borders have changed from all-white to all-Negro. Clearly, if Atlanta is to become a desegregated city, not only must all areas of the city and suburbs be open to all, but the changing neighborhood must be stabilized on an interracial basis. In a report of discrimination in housing in Atlanta by the National Committee Against Discrimination in Housing, and placed in the record by its Executive Director, Edward Rutledge, the Advisory Committee was told:

> "This trend started about two decades ago when the Negro population began breaking out of a tight belt that cramped it in too little space in the central city. In the early years of expansion of the Negro community, the movement was mainly westward, the direction the city's political and financial determiners decreed. Negro and white real estate coalitions sometimes agreed on peripheral constructions such as cemetaries and public housing units which served as buffers to Negro expansion in undesired directions... It was clearly understood in the early 50's that Negroes were to have a corridor to the west for housing growth." (NCADH study, Page 1)

The NCADH study presented the following statistics on the change in Negro occupancy, by sections, over a five year period (the letters indicate west, east, south, northwest, southwest, north, and northeast sections of the city):

Year	Central	W	E	S	NW	SW	N	NE
1960	35,256	4,631	2,061	3,249	1,954	456	270	167
1965	34,738	9,760	4,136	3,315	2,420	987	267	170
Net Change	-518	5,129	2,075	65	466	531	-3	3

(NCADH Study, Page 10)

The above table indicates that the pattern of Negro migration has been lateral -- east and west. Three areas in the table increased over 100 percent - soutwest 116 percent, west 111 percent, and east 101 percent.

The American Friends Service Committee, Inc. has been operating an Housing Opportunities Program in Atlanta for _____ months. Its Director, Mrs. Xerona Clayton, told the ADivsory Committee of its efforts to stablize changing neighborhoods in the Cascade-Sewell area of Atlanta. Mrs. Clayton has organized Negro and white homeowners in an organization in an effort to prevent "panic selling", to stablize the neighborhood, and to maintain the level of community facilities and services.

She told the Committee that the main obstacles were two - the absence of a Fair Housing Law which would permit Negroes to buy anywhere in the metropolitan area and the activities of real estate brokers who encourage neighborhood change. Mrs. Clayton told the Committee that real estate brokers were exacerbating the problem by playing upon the fears of white residents and by their marketing policies in such neighborhoods. She said:

> "...one of the real estate men we're dealing with in Cascade area has been running for the last two

> weeks a very lengthy ad in one of the Negro papers for all the houses he has up for sale in the Cascade-Sewell area. And I have been watching the papers; none of these houses for sale have appeared at all in the metropolitan papers. ...You just don't run an ad in one market and omit it in another unless you're aiming and gearing your sale to one particular racial group." (Page 208)

Of another real estate broker, Mrs. Clayton said:

> "I had a man I was forced to see last week because he had just kind of come in and cleaned out the neighborhood, just put up signs all over and actually created the kind of panic you read about in other areas. So I took it as my responsibility to go to him. He's very sweet. And he said to me, 'oh, we're not block busting. We wrote a letter but its nothing to it.' ... the letter was very sweet (and) went something like this: 'As you well know, citizen, dear citizen, Negroes are coming in but don't let that worry you. Just in case you want to sell now or in the future we will be very happy... to help you with your sale.'" (Pages 225-6)

The AFSC Housing Director said that some white families were moving because they have been "laboring under the myths of property devaluation" when Negro families move in. The AFSC program attempts to educate these persons. Also, the program attempts to educate Negroes "to the increase in costs when they buy into a changing area that was previously white". She added that the passage of Federal and/or local Fair Housing legislation was essential to the success of the program.

The Committee discussed the problem of changing neighborhoods in the City of Decatur, a suburb of Atlanta, with Mrs. Phern

Stanley, Chairman of the Human Relations Council of Greater Atlanta. She said that Negroes in Decatur and DeKalb County were being displaced by urban renewal and other processes and new Negro families were facing obstacles in moving into the area. "we have done everything in that county, in the city of Decatur to drive Negroes out, and I mean drive them out, and we have just about driven them out," Mrs. Stanley said. When Negroes began to move into formerly white areas of Decatur, the city passed an ordinance making it illegal for any property owner to put up a "for sale" sign. Citizens of the area have formed an organization called "Accord" which, according to informants, seeks to stablize neighborhoods <u>before</u> Negroes move in.

The Committee heard a panel of Negro homeowners an a panel of white homeowners who live in changing neighborhoods. One of the Negro families was the first nonwhite person to purchase on the block. She told of minor harassments by the city's plumbing and building inspectors - both implying that the family was about to subdivide the house. The reaction of white neighbors in both cases has been mixed. One of the white families reported that his family decided to remain in the neighborhood after Negro families began moving in. The family is active in the organization designed to stablize the neighbor hood. The second white family made a conscious decision to move into an integrated neighborhood. He reported that the Negro broker found it "a source of embarassment" to take him to white

families who were moving out. The white families, when approached directly "were surprised because they were expecting a Negro... and they would call us inside and sort of whisper it, you know, this neighborhood is going colored...".

Both groups of families complained that real estate brokers hastened the change in their neighborhoods. A Negro family said, "we have had the ocassion of real estate dealers knocking on our (door) to see if our house was for sale... and then watch them go from door to door and measure and then all signs go up at the same time".

Several of the families complained of creeping changes in facilities and services once Negro families were firmly established in the changing neighborhood. It was reported the Little League organization had recently changed its boundaries and had excluded the neighborhood from participation. It was reported also that the YMCA had sought to exclude the school which serves the neighborhood from participation in the "Y" athletic program, but this move was forestalled by citizen action and action by the superintendent of schools. One witness said:

> "This is a pattern that is being set up... some white people are moving out and they want to take everything with them. People are still living there and those people have the same needs now that the white people had when they were living there and we intend to fight with everything in us to keep the same activities and (to) make our community attractive and continue to be attractive ." (pages 288 -9)

VI - The Role of the Housing Industry - Brokers, Builders, and Bankers

The real estate broker, the home builder, and the mortgage banker occupy key roles in the production and distribution of housing in the community. The Committee heard witnesses and staff reports on current practices of the housing industry as they relate to discrimination and segregation in housing.

Brokers - A Negro real estate broker, Edward Billingsley, a member of the largely Negro National Association of Real Estate Brokers, Inc. (not be confused with the largely white National Association of Real Estate Boards) presented information to the Advisory Committee. Mr. Billingsley was asked whether a much alluded to "gentlemen's agreement" exists between Negro and white brokers to restrict Negro sales in all-white neighborhoods. He said that there was no "gentlemen's agreement", but the manner in which the Negro broker operates tends to concentrate sales on the fringes of the Negro neighborhood:

> "It's difficult to sell a Negro a house in a predominantly white area. We find that its a lot easier to sell houses adjacent to the Negro community... than (to) move out. It"s a standard pattern that we do this... Unless someone insist that we go over into the middle of a (white) community; and this is what has commonly been known as a gentlemen's agreement -- that we will pursue an orderly pattern insofar as possible." (Pages 283-4)

When asked, Mr. Billingsley said there was no such thing as block busting, it was all a matter of the seller's desires.

In reference to knocking on doors, Mr. Billingsley said:

> "It happens and it happens because we have a list of Negroes who are interested in houses that they cannot

> find and the only way that we can place a person... we have to go out and knock on doors until we find a house that is suitable... we will go to the owner and ask whether or not his house is for sale." (Page 285)

He added that it was difficult to dind Negro families that were willing to move into the heart of the white community.

With respect to property values, Mr. Billingsley said, "We have found most of the houses in transitional areas to be overpriced. We handled this by asking the seller to submit to an FHA or VA appraisal or to have a lending institution make an appraisal. In many instances, this is turned down."

Walter Scott a member of the DeKalb Real Estate Board, and a member of the National Association of Real Estate Boards offered testimony to the Committee. Making clear that he was speaking for himself and not the DeKalb Board of Realtors, Mr. Scott said that brokers represent sellers and they follow the sellers' wishes with respect to potential buyers.

Mr. Scott was asked, "is there a tendency then to ask the owners if they will sell to Negroes? Do you attempt to ascertain this in advance?" Mr. Scott's reply, "I would say there's no tendancy in all-white neighborhoods. It's pretty much of a predrawn conclusion (that they will not sell to a Negro)". (Page 312) He added that in transitional neighborhoods, "they all say it doesn't make any difference".

The DeKalb realtor stated that in his judgement some owners refused to sell to Negroes because they felt it would be unfair to their neighbors - some owners say, "all of these people I am leaving behind are my neighbors and I don't want to upset ten or twenty people that I've associated with for so long".

In response to questions, Mr. Scott said that a substantial percentage of the transfers in DeKalb County involved FHA or VA insured mortgages (at least 50 percent of his own business). When asked if he were familar with the nondiscrimination policies of the Federal Housing Administration (FHA), Mr. Scott said he was with respect to FHA repossessions (as were most of his fellow brokers). He said that he had forgotten over the years some of the aspects of FHA's nondiscrimination policies that he once knew.

Mr. C. D. LeBey, Jr., President of the Atlanta Real Estate Board was not present at the Committee's Open Meeting, but he was interviewed later by a member of the staff. Like Mr. Scott, Mr. LeBey said that the broker's job is to carry out the wishes of the seller.

He said that approximately 75 of the 147 firms that are affiliated with the Atlanta Real Estate Board deal with residential property. Approximately half of these, in practice, sell to both Negroes and whites. He added, however, that given a willing seller and buyer, "most of our members would sell to both Negro and white".

LeBey said that a realtor (i.e. member of the National Association of Real Estate Boards) is duty bound to present a Negro's offer to buy to a seller - assuming the seller has not specified race. When asked if member realtors would show a house to a Negro in an all-white neighborhood (when the seller had previously indicated a willingness to sell without regard to race), LeBey said, "most of our members would".

Both LeBey and Scott said there were no Negro members of their respective realty boards. Both said that they have had no Negro applicants. When asked their opinion of what would happen should a qualified Negro broker apply, both were uncertain and pointed out that candidates must be recommended by three member brokers and approved by the entire board.

LeBey said the parent body, the National Association of Real Estate Boards, had taken congnizance of the problem of racial discrimination and had a code of ethics dealing with many aspects of the problem. Among the points covered by the code are:

1. realtors have no right to determine the racial, creedal or ethnic composition of a neighborhood;

2. realtors should submit to their clients all written offers without assuming eligibility on race, creed or ethnic grounds;

3. each realtor should feel free to enter into a broker-client relationship with persons of any race, creed or ethnic group; and

4. realtors should continue to condemn any attempt by persons to solicit or procure the sale of property in residential areas b y conduct intended to implant fears in property owners based on the entry any racial, religious or ethnic group.

The full text of the NAREB Code is appended hereto as Appendix ___.

Contrary to the above Code (which applies to Realtors only) the Committee heard a series of reports concerning the activities of both Negro and white brokers which alleged discriminatory practices or practices which "implanted fear in property owners" of a racial group. Mrs. Henrietta Canty testifying before the Committee on her attempts to obtain housing in Atlanta said:

> "Most of the homes were listed by white realtors and they were wonderful over the phone. They were not able to detect race. I was given prices and appointments were established. Once identity was known the houses were not available and if available the price had increased from $2,000 to $4,000. (Page 269)

Also, see comments above under "The Changing Neighborhood" and "Residential Segregation in Atlanta" and below under "The Role of the Federal Government".

Bankers - Only two of six banks invited were represented at the meeting. However, staff interviews subsequent to the meeting obtained data from additional bankers.

John Station, Jr. of the National Bank of Georgia and James P. Brown of the Atlanta Federal Savings and Loan Association presented information to the Committee. Mr. Brown, an attorney for the bank, said he was representing William Wainwright, president

of the institution, who was out of the country. He was asked his bank's policy with reference to making mortgage loans to Negroes in white or controversial areas. Mr. Brown replied:

> "I think we'd be reluctant to do that due to it might-- and it has caused discord -- and reflect upon us in some way. We like to keep things pleasant and we like to keep our community more or less stable. I mean by that, all finance people feel like this. We have a nice, pretty neighborhood and everything's working fine, we want to keep everybody happy and keep it like that, and not antagonize them or stir them up...
>
> "We would not say no, but we would talk to the parties involved and probably tell them our feelings but we'd go on through with it". (Page 333)

Mr. Brown said that there were a number of factors to be considered in making a loan, "the stability of the neighborhood is one of the first things", he said. Chairman Henderson asked, in view of the witness' concern with peace and tranquility, "suppose the opposite were true that if you did not finance the house for Negroes, there'd be an upset in the community? What would your reaction be?" Mr. Brown replied, "I never thought of anybody asking me that question. I'd just go ahead and make them a loan right quick".

Mr. Staton of the National Bank of Georgia said his bank "does not follow any policy or have a policy of practice of any racial discrimination." When asked the same question concerning the financing of a purchase of a Negro in an all-white neighborhood,

Mr. Staton said, "I would say if the loan can be made on a business basis, if the credit is sufficient or the income... I would have to tell them... the policy and the practice of the law is that you just make the loan based on your business judgement".

Staff interviews were held w ith J. L. Phillips, Vice President of Fulton National Bank; George W. West, Jr., President and Ellis Kirk, Vice President, First Federal Savings and Loan Association; Edward D. Smith President, First National Bank of Atlanta; and Phillip S. Barrett, Vice President and Eugene Rackley, Assistant Vice President, Citizens and Southern National Bank.

For the most part, staff reports indicate that these institutions, while affirming a policy of compliance with the law and non-discrimination, are somewhat less clear about the details of their policies. First National Bank of Atlanta is not a major mortgage lender, and Citizens and Southern officially went into the home mortgage business in 1962. The two savings and loan institutions are primarily investors in home mortgages. Of the two, the president of First Federal Savings and Loan Association would not reply to several of the questions asked of other institutions. To the question of whether their institution would finance the purchase of a Negro in an all-white neighborhood, none of the banks replied in the negative, but several indicated that such a loan might be a liability - First Federal refused to comment.

Generally, the bankers did not feel that their institutions had any responsibility for encouraging equal opportunity in housing in Atlanta. On the other hand, they reported that they would not be affected one way or another by a Fair Housing Law.

Builders - The Home Builders Associaition of Metropolitan Atlanta was not represented at the Committee's sessions, but sent a written response to questions.

The Executive Secretary of the Home Builders Association stated that builders of FHA and VA insured housing were required to sign an "Equal Opportunity in Housing" form. However, when asked if any HBA members had sold or offered to sell a house to a Negro in an all-white subdvision, she replied, "We do not know of any sales to Negro families in all-white subdivisions. Very likely such a sale would result in an all-Negro subdivision."

In response to another question, the HBA Executive Secretary said:

> "If this question implies that a builder might, with economic safety, sell to a Negro family or construct for a Negro family in a location not otherwise being marketed to Negro families, we doubt very much whether such could be accomplished in Atlanta, Georgia at this time. We believe there are several distinct and separate housing markets in this community. There is a White housing market and a Negro housing market. Each of these markets exhibits identical fragmentation and discrimination with respect to economics and status within their separate markets. Both exhibit separately all the discrimination with respect to house sizes, lot sizes, and single family homes versus apartment houses. Whenever a builder tends to violate any of these prejudices and discriminations, either racial or economic, he is inviting business failure."

When asked how builders can help to create an open housing market in Atlanta, the reply was:

> "It does not appear to us that builders can help create an open housing market in any area where such a market differs from the emotions and attitudes of their customers. Racial discrimination in housing is not attributable to builders, since they can successfully sell or rent only under circumstances acceptable in the local market. When and as a community creates in practice (rather than by ordinance) an open housing market, builders can produce the structures and properties demanded by their customers."

VII - The Role of the Federal Government

As stated at the outset, the Committee's primary interest is that of the role of the Federal government in reducing segregation and discrimination in housing, and more particularly, in encouraging an open city. A number of witnesses, both Federal officials and private citizens, had a lot to say on the subject.

Edward Rutledge, Executive Director of the National Committee Against Discrimination, laid the major responsibility for segregated cities at the door step of the Federal government. He said:

> "I must tell you that local government is not altogether at fault. Local government goes along (with) the method of the lower ethic... There's no question in our mind that the Federal government from the 1930's on helped Atlanta build segregated housing projects just as it helped Newark, N. J. or San Franciso, Calif... that is to say that the Federal Government through FHA insured mortgages and VA guaranteed loans was in a position to impose at that time a policy of not only nondiscrimination but of integration, or non-segregation, while on the contrary it imposed a policy of homogeneity." (Pages 102 - 3)

The Committee received information from representatives of the regional offices of the major Federal housing agencies - the Housing Assistance Administration, the Federal Housing Administration, and the Renewal Assistance Administration (staff interview).

Public Housing -

John B. Sams, Chief of the Occupancy Branch and E. R. Williams, Director of the Development Division of the Regional Office of the Housing Assistance Administration (HAA) of the Department

of Housing and Urban Development (HUD) discussed Federal policies requiring nondiscrimination in public housing.

Following the passage of Title VI of the Civil Rights Act of 1964, HAA gave local authorities an option of choosing a "freedom of choice" or a "first come, first served" tenant assignment policy as a means of complying with the Act. The overwhelming number of authorities, including all of those in the Atlanta metropolitan area, chose freedom of choice. In response to a question as to whether freedom of choice has been an effective tool for desegregating public housing, Mr. Sams indicated that 144 projects in the region "had some degree of integration and primarily as a result of the freedom of choice plan". While the reply seemed to indicate the validity of freedom of choice, upon questioning it was determined that 144 out of 1,938 projects or 7.4 percent have <u>some degree</u> of integration. Stated another way, 92.6 percent of the projects in the region have no integration at all. Furthermore, it is assumed that "some degree of integration" would cover projects which are all-white, with the exception on one Negro family; or all-Negro, like Atlanta's Antoine Graves Homes, with the exception of one white family.

There were numerous questions from Committee members concerning the efficacy of freedom of choice as a tool for implementing the spirit and the letter of Title VI of the Civil Rights Act. However, much of this discussion is omitted from this report since the Department of Housing and Urban Development has replaced freedom of choice as an acceptable method of desegregation.

Appendix _____ is a summary (or the full text?) of the new HUD order which requires a "first come, first served" tenant assignment policy by all local housing authorities.

Committee members suggested that whether freedom of choice or first come, first served policies are used, HUD should adopt the language and the spirit of the HEW school desegregation guidelines - namely, that compliance with title VI should be measured by the extent to which the dual pattern of occupancy is eliminated.

Mr. Sams was asked whether local housing authorities were required to provide tenants with copies of the tenant assignment policy, compliant procedures and other Federal nondiscrimination requirements. Mr. Sams said that the tenant assignment policy must be posted in the authority's office, but there is no requirement that copies of such policies be transmitted in writing (or verbally through meetings) to tenants. Incidentally, Mr. Sams reported on April 8, as did Mr. Boggs of the Atlanta Housing Authority, that his office had not been informed officially of the HUD Secretary's statement of February 8 concerning the new tenant assignment policy.

Questions were raised concerning the audit of each local authority (which takes place every two years) and requirements of affirmative action by authorities to achieve actual desegregation. The Committee was told that the audit consists of a check of the files and a review of procedures to assure that the tenant assignment policy was being followed (and a check to see that the poster was posted), but no positive action was suggested to achieve desegregation. Apparently, any local authority which

follows it's freedom of choice procedures and posts its poster, is "in compliance" even though it may be totally segregated!

There was considerable discussion of Federal requirements related to the selection of sites for public housing units. Mr. Williams was asked whether the regional office in approving sites submitted by local authorities considered the racial composition of the surrounding neighborhood and its impact on the chances of achieving an integrated project. Mr. Williams replied that the racial composition of the neighborhood was one of a number of factors taken into consideration, and in his judgement fringe areas were most conducive to integration of projects. He seemingly ruled out all-white or all-Negro neighborhoods, "now you could have it sitting on the edge of a white neighborhood or a Negro neighborhood, but I think you'll find that each race would have no great feeling for going into a neighborhood of the opposite race."

Among the many factors in site selection, apparently the race of those expected to occupy the units is considered. Mr. Williams said:

> "...(if) we know this market is for 100 Negro units... we think that this should be so located that it would first provide an opportunity for anyone who wants to get into this, but it also should be located in such a location that it will in fact provide a market suitable location for these people that you would anticipate would be in occupancy...
>
> "Now I think it would be, for example, here in Atlanta... folly for us to select a site we'll say in the extreme northeast if the market were totally for 100 Negro units." (Page 182)

(Note: Washington - insert here a summary of HUD's new Site Selection Policy).

The Federal Housing Administration - Mr. William A. Hartman, Deputy Director of the Atlanta Field Office of FHA reported to the Committee. Numerous questions concerning the implementation of Executive Order 11063 were raised.

The Committee tried to ascertain how effective the Executive Order has been in facilitating desegregation of housing in the Atlanta area. Mr. Hartman was asked how much desegregation has occured in Atlanta since the order. He said:

> "This is a thing that's very hard for us to determine because there's no place in the application that indicates the race of the applicant. We find out at some time in the future--- but quite often we don't know." (Page 361)

He added that the agency had no machinery for keeping up with the amount of desegregation which occured as a result of the Executive Order.

On the matter of the sale of acquired properties (repossessions) Mr. Hartman said he believed that six houses had been sold to Negroes in white areas.

How is the Order implemented with respect to developers, the Committee asked. Developers are informed of the nondiscrimination policy at pre-analysis and pre-construction meetings, and they are required to certify that they will not discriminate,

Hartman said. There is no field review of practices or follow-up, and the receipt of a complaint is the only basis for action by the agency. Chairman Henderson said, "In other words, in the absence of a complaint, you do nothing?" Mr. Hartman replied, "In the absence of our knowledge that there has been any discriminatory act, we do nothing."

On the matter of complaints under the Executive Order, it was determined that there has been only one complaint in the state of Georgia since November 20, 1962, the date of the order.

Questions were raised as to how the contents of the Executive Order and the complaint procedure were communicated to the minority community. One Committee member said, "nobody seems to know about this Executive Order". Mr. Hartman said releases were sent to the Negro press and a series of tapes were made for a local radio station in the latter part of 1965. Reference was made to a recent FHA directive which states that listings of all housing covered by the Executive Order shall be available to the general public, in a binder labeled "Record of Housing Available on an Equal Opportunity Basis" in the public lobby of all FHA insuring offices. A staff member reported that he did not see such a binder on a recent visit to the Atlanta FHA office. Mr. Hartman said:

> "You would have had to ask for it because it's in the process of an updating and revision. Now it isn't right at the desk because it's being processed, but anyone who asks for it, we'll put it out on that desk immediately." (Page 367)

He accepted a Committee suggestion that a sign be placed on the desk indicating the availability of the listing at times when it was removed for processing.

Committee members asked about FHA management brokers. There are five such brokers in Atlanta, none of whom are Negroes. When asked why, Mr. Hartman said, "only becasue the Negro management broker has not bid on one of the contracts". In Savannah, where there is a Negro management broker, it was determined that he has handled property in Negro neighborhoods and white management brokers have handled property in white neighborhoods. Mr. Hartman said that the new contracts in that city would divide the community on a north - south basis, without regard to the racial occupancy of the neighborhoods.

Earlier, Mr. Albert Henry, a staff member of the Georgia Council on Human Relations, reported his experiences with housing covered by the Executive Order in the Atlanta area. Of 27 calls made to developers or agents of such housing, 19 real estate agents indicated that they would not sell to Negroes; 4 responded that they would sell to Negroes; and 4 said that they were not sure. Mr. Henry gave a verbatim report of several of the responses from real estate agents:

> "One (agent) responded, 'we don't handle colored property'.
>
> "Another responded to the question, 'will this neighborhood be open to colored?' He said, 'Not to my knowledge. This is the reason that this area is so popular as a residential neighborhood'.

" Then another realtor in East Point ... and these that I'm telling you about are housing that... would be insured by FHA, he said, 'I wouldn't sell to Negroes. I wouldn't. I know how to get around it'.

"Another realtor responded..., 'It would be unpleasant for you to live in this neighborhood. The neighbors wouldn't like it if I showed you the house, but I would like to show you some other houses in another neighborhood.'

"Another realtor responded, ' a nigger has never been out, but if he comes we will give him temporary receipt and send him to the home office who will then turn him down." (Pages 350 - 1)

In response to questions, Mr. Henry said he had been working from the FHA list of commitments granted and in a number of cases he had difficulty obtaining phone numbers of some of the developers. He indicated that the FHA list would present some difficulties for the average citizen who was attempting to locate housing covered by the Executive Order.

The Renewal Assistance Administration: A representative of the RAA was not invited to present information to the Committee in open session, but a staff interview was held with John T. Edmunds, Acting Assistant Regional Administrator and Clifford Hardy, Jr., Relocation Advisor.

Mr. Edmunds pointed out that urban renewal is a local program - locally conceived, planned and executed. He said the requirement of a workable program insured relocation of site residents and citizen participation, two of the points of concern to the Committee. RAA regulations require that all site residents be relocated in decent, safe, and sanitary housing at prices and rents within their means. However, apparently there are no requirements that a conscious effort be made to desegregate such residents, or that

efforts be made to relocate them in housing covered by existing Federal nondiscrimination regulations. Also, there was no evidence that RAA officials evaluate urban renewal projects in terms of their total impact on patterns of segregation within the city.

VIII - Proposals for Remedies

Throughout the two-day hearing the Committee received numerous suggestions for remedies. These ranged from new Federal legislation, changes in HUD regulations, and more affirmative action in the implementation of existing regulations; to proposals for state and local legislation and action, and acitivites on the part of private citizens and organizations. No attempt will be made here to present all of these proposals, for many of them have been adopted by the Committee and are listed hereafter as recommendations or suggestions for action.

A Fair Housing Law - One proposal stands out from among the many, it was discussed throughout the two-day hearing, and was endorsed by numerous public officials, professionals in the human relations field and private citizens -- A fair Housing or Open Occupancy Law. Most witnesses who supported this proposal called for both Federal and local action in this field -- that one should not wait for the other.

Moreland Griffith Smith, the Director of the Southern Regional Council's Urban Planning Project, told the Committee:

> "Open Occupancy legislation is inevitable, in spite of oppositions. Its passage is no more difficult locally than nationally. Atlanta could greatly enhance its reputation as a pace setter in the South and nation by promoting open occpancy before it is forced to do so by Federal laws." (Page 381-3)

Cecil Alexander, Chairman of the Housing Resources Committee, spoke in favor of a Federal law and expressed fears that a local law would hasten the flight to the suburbs. He said, "There will be an even greater movement of people out into the suburbs than we have now. I'm all for a Federal Law and I would give it all support that I could." (Page 62)

Committee Vice Chairman Sam Massell questioned planners Collier Gladin of the Atlanta Planning Commission and Glenn E. Bennett of the Metropolitan Planning Commission on the efficacy of Federal and local legislation. Mr. Bennett agreed that Federal legislation prohibiting discrimination in housing would help in the elimination of ghettos in Atlanta and the dispersal of citizens throughout the metropolitan area.

Mr. Bennett agreed that some barriers to integrated housing would be reduced if there were Federal legislation requiring open housing and prohibiting discrimination.

Mrs. Clayton, the Director of the American Friends Service Committee's housing program made the following comment on Federal versus local legislation:

> "There would be some discussion ... that Fair Housing just in Atlanta would not be sufficient because we have the other four counties encompassing greater metropolitan Atlanta... Well that is true, it would not solve all the problems, but it's such a marvelous point of beginning that it would have transfer effect on other communities." (Page 233)

Another representative of the Friends' Committee, Noyes Collinson, Program Director, said:

> "Our hope is that we would be able to have an open occupancy bill effective in the City of Atlanta. We can't wait for Federal legislation, there's too much politics involved. We're not going to get an effective bill for probably two or three years. In the meantime the ghetto is being extended in Atlanta and Negroes are being denied jobs merely because they can't get to them." (Pages 210-11)

Representatives of the NAACP, the Southern Christian Leadership Conference, the Greater Atlanta Human Relations Council (?), the Georgia Council on Human Relations, American Jewish Committee, and the National Association of Real Estate Brokers all supported Fair Housing legislation.

Other Proposals - The representative of the National Committee on Discrimination in Housing, Edward Rugledge, placed in the record his organization's study of Atlanta, titled, "A Program to Achieve Equal Opportunity Housing in Atlanta, Georgia ". The program calls for the organization of an Atlanta Center for Fair Housing, which would serve at lease three functions:

> "1. bring together homeseekers and suppliers of housing through discussions with government housing officials, landlords, realtors and home builders;
>
> "2. develop and disseminate information to acquaint the white and Negro community with techniques and experiences useful in easing tensions in newly integrated neighborhoods; and
>
> "3. stimulate the conservation and upgrading of the existing housing supply through participation in site selection and code enforcement programs."

Mr. Rutledge added that the proposed center would be an "amalgamation of all of the groups that are working in this field"...

to work on a problem of not just buyer-meeting-seller, but the problem of... where public housing is located, what kind of public housing ought to go into certain communities, affirmative action programs in regard to FHA, assisting-- insisting on the enforcement of (Executive Order 11063) outside the city of Atlanta, concerned with what is happening under urban renewal and the Model Cities Program... it would be a professionally staffed operation that would be moving on the fundamental issues that confront the rebuilding of the Metropolitan Atlanta area." (Page 390)

Mrs. Eliza Paschal, Executive Director of the Atlanta Community Relations Commission stated the need to communicate the problem to the white community, "to somehow expose white people both to the fact that there is a problem and to make them so obvious that you can't ignore it. You know, as obvious as the dogs in Birmingham". (Page 396) She said that many white Atlantans are not aware of the fact that a Negro can't buy a house anywhere that he can afford one.

Robert Thompson, Assistant to the Regional Administrator of HUD for Equal Opportunity, suggested that the Atlanta Federal Executive Board (composed of the heads of all Federal agencies in the area) had a role to play in stimulating useful programs and in combatting discrimination.

Cecil Alexander called for the organization of a "non-profit fund" to aid in the building of 221(d)3 housing and in obtaining

land for future development. He added that the problem of economic integration was a "tough one", but was as important as racial integration. He said there was resistance to this kind of integration in both the white and Negro communities.

A Commission staff member reported to the Committee on three proposals forwarded to the Georgia Committee by the Illinois Advisory Committee to the U. S. Commission on Civil Rights. They proposed:

1. A Metropolitan Housing Center funded by the Federal government to aid in the rehousing of those displaced by Federal and local programs. The Center would maintain an active inventory of non-ghetto housing, including all units covered by Federal non discrimination provisions.

2. A 221(d)3 Packaging and Management Training Office, funded by the Federal government, to encourage the development of lower income, non-ghetto housing by not-for-profit groups.

3. The designation of "Equal Opportunity Brokers" by FHA. Such brokers would certify that they would merchandize property in both Negro and white communities (rather than merely refraining from discrimination) and would submit a plan for affirmative bi-racial merchandizing. Only Equal Opportunity Brokers would be awarded contracts as FHA management or area brokers.

IX - Findings, Recommendations and Suggestions for Action

After a careful review of the data submitted to it, the Georgia State Advisory Committee makes the f ollowing Findings and Recommendations to the U. S. Commission on Civil Rights. Although its responsibility is limited to recommendations to the parent Commission with respect to Federal policies, the Georgia Advisory Committee, aware that the housing problems of the Atlanta area can be solved only by the cooperation of all levels of government and the action of private individuals and organizations, includes in this report a number of "Suggestions for Action" which are directed to other than Federal agencies.

Findings - The Georgia State Advisory Committee makes the following findings:

1. Large numbers of citizens of Atlanta are forced to live in substandard and deteriorating housing; and Negro citizens are the most disadvantaged of these - 48 percent of Negro rental housing in 1960 was substandard.

2. Overcrowding among Negroes in Atlanta is four times as great as among whites - more than one - third of the citizens (Negroes) are restricted to one-sixth of the land of the city.

3. Welfare, and similar programs, provide payments inadequate to obtain standard housing in Atlanta and therefore is one of the largest subsidizers of slum landlords.

4. The goal of the city's Housing Resources Committee to build 17,000 additional units is commendable and deserves the support of all, but the Advisory Committee finds no evidence that achieving a desegregated city is a part of the plans.

5. The Committee finds no evidence that the disperal of the ghetto is an integral part of urban renewal planning; or that an affirmative policy exists to relocate those who are displaced in non-segregated housing.

6. While the record of a net loss of just over 1,000 units through urban renewal may be "remarkable" as compared to other cities, when the price of the units replaced is compared with those demolished and the racial occupany of the site, before-and-after is considered, urban renewal has worked a serious hardship on that portion of the population which is already most disadvantaged.

7. Some progress has been made in desegregating public housing under "freedom of choice", but vigorous implementation of the new tenant assignment policy, creative site selection, extensive use of such programs as turnkey and leased housing, and affirmative policies to achieve more integration are urgently needed.

8. The existence of two de facto segregated application offices by the Atlanta Housing Authority projects a posture and symbolizes a philosophy which is inconsistent with the achieving a fully desegregated program.

9. More effective participation in planning in the urban renewal and Model Cities programs by those affected (including the lowest economic groups) is needed.

10. The Committee finds no evidence that planning for an open, desegregated city is an integral part of present or future plans for the development of a model neighborhood.

11. Atlanta is a very segregated city residentially (more so than such cities as Birmingham, New Orleans, Cleveland and Chicago); and less than one-third of the existing segregation can be explained by economic factors.

12. Over the past, and in the present, serious barriers, including violence, practices of the housing industry, public and private policy, have restricted Negroes to certain sections of the city and to growth on the fringes of the ghetto only.

13. Discrimination against Jews, though more subtle than that practiced against Negroes and less a factor in obtaining standard housing, remains a serious problem in the Atlanta area.

14. The process by which neighborhoods change from all-white to all-Negro is a major factor in the continued growth of the ghetto in Atlanta; the activities of some neighbors to stablize their neighborhoods on an interracial basis should be supported.

15. The Committee finds, however, that neighborhood stabilization can not be truly effective until the entire metropolitan area is open to all, and in the interim such activities tend to limit the already limited housing supply available to Negroes.

16. The activities of some brokers in such neighborhoods, when designed to implant fear of a racial group or to hasten change, is determental to the welfare of the entire community.

17. The Committee finds a need for the Real Estate Boards to insure that the articles of the NAREB Code of Ethics are being practiced by member brokers; and a need for the state licensing board to adopt similar, but more stringent, rules covering the activities of all brokers.

18. The overriding concern of some bankers with the peace and tranquility of the community, rather than with the development of policies to aid in obtaining an open, desegregated city, is regretable and points up the need for more effective Federal and local regulation of mortgage lending practices.

19. The attitude of builders that they can do nothing to aid in the creation of an open housing market until the community eliminates prejudice, seems to the Committee a negation of basic responsibility and further underscores the need for effective Federal and local guarantees against discrimination by the housing industry.

20. The Committee finds that existing Federal nondiscrimination regulations (Exectutive Order 11063 and Title VI of the Civil Rights Act) as implemented in the Atlanta area have almost no impact on continuing patterns of racial discrimination and segregation.

Recommendations - The Georgia State Advisory Committee makes the following recommendation to the Commission on Civil Rights and requests that they be forwarded to the appropriate Federal agencies:

1. That the Commission on Civil Rights again recommend to the President and to the Congress the passage of a Federal Fair Housing Law, with adequate sanctions and enforcement procedures.

2. That the Department of Housing and Urban Development issue a new set of regulations which are designed to make Executive Order 11063 the basis for vigorous and effective affirmative action by Federal housing agencies to eliminate discrimination and reduce segregation in Federally supported housing, including:

   a. the development of a reporting system to determine how many minority families obtain accommodations in housing subject to the order;

   b. procedures for field reviews of developers during the marketing period to insure compliance with the order;

   c. the regular publication of listings of all housing covered by the order, including precise information on location, price, and other details, which shall be mailed to real estate brokers, ministers, community leaders and others in the minority community;

   d. a vigorous campaign to publicize the order and the complaint procedures in the minority community, including regular meetings with leaders, use of the Negro press and other media, and the wide

circulation of literature;

e. require all developers of covered housing to post a notice in a conspicous place(s) containing a summary of the order and the complaint procedure; and require such developers to indicate "Equal Opportunity Housing" on all advertisement and on all literature; and

f. require developers of covered housing to adopt an affirmative action program with respect to the minority community in the marketing of such housing.

3. That the Federal Housing Administration add an additional person to the staff of each insuring office whose sole responsibility shall be the implementation of the Executive Order.

4. That the Housing Assistance Administration vigorously implement its new tenant assignment and site selection regulations, including the wide publication of these and other nondiscrimination regulations within the minority community (as suggested in 2 d. above).

5. That the Housing Assistance Administration adopt an entirely new civil rights audit procedure, which among other things, would include inspections more frequently than two-year intervals and which would require affirmative action by those authorities which do not show substantial progress in desegregating public housing.

6. That the Atlanta Regional Office of the Housing Assistance Administration direct the Atlanta Housing Authority to eliminate the de facto segregated application offices.

7. That the Department of Housing and Urban Development, with respect to the Executive Order and Title VI of the Civil Rights Act of 1964, adopt a posture and policy similar that enunicated in the school desegregation guidelines of the Department of Health, Education and Welfare -- namely, that the single most substantial indication of compliance is the presence of members of minority groups in covered housing and the elimination of dual occupancy patterns.

8. That the Renewal Assistance Administration require that local relocation agencies offer to relocatees available non-ghetto housing, including housing subjcet to Federal nondiscrimination regulations, prior to the offer of any other housing, and that certification be obtained in each case that the relocatee who is housed in ghetto housing refused such offer or that no such housing was available.

9. That the Department of Housing and Urban Development insure that all programs, including public housing, urban renewal and model cities, contribute to the disestablishment of the ghetto.

10. That the Department of Housing and Urban Development select Atlanta, Georgia as a pilot city for the establishment of a Federally funded "Housing Information and Service Center ", which would, among other functions:

    a. collect and disseminate information on all housing within the metropolitan area which is subject to Federal regulations requiring nondiscrimination;

    b. maintain contact with minority real estate brokers, community leaders, neighborhood groups, and home seekers in a continuing program to publicize and implement Federal policy; and

    c. operate a training and servicing program for not-for-profit groups who wish to develop non-ghetto, lower income housing (such as 221(d) 3), including the recruitment of such groups.

11. That the Federal Housing Administration adopt the designation "Equal Opportunity Broker" for those brokers who certify that they will merchandize housing in both the Negro and white communities (including the submission of a plan for affirmative bi-racial merchandizing), and that only such brokers would be accepted as management or area brokers.

12. That the Federal Housing Administration with respect to acquired housing (repossessions) accept contracts only

from those brokers who subscribe to a program of affirmative action (rather than merely refraining from discrimination) in marketing such properties.

(Note: It is assumed that the housing specialists in Washington will want to modify the above and perhaps offer additional recommendations.)

Suggestions for Non-Federal Action:

1. The passage of an enforceable Fair Housing or Open Occupancy Ordinance by the City of Atlanta. (and by suburban communities) would be a significant contribution to the development of an open city; and would be a clear and unmistakable indication to all Atlantans and to the nation that it is truly "a city too busy to hate", but not too busy to protect the rights of its citizens.

2. Welfare payments should be increased so that recipients can afford to rent standard housing.

3. State legislation should be adopted to permit direct payment of rent to landlords and to permit welfare agencies to withhold payments to landlords who do not provide standard housing.

4. The Atlanta Housing Authority should continue and expand its program for turn key and leased housing as a means of avoiding large concentrations and as a means of fostering desegregation.

5. The state licensing board should adopt regulations prohibiting real estate brokers from stimulating panic selling in changing neighborhoods, and from discriminating in any manner.

6. The dissolution of the ghetto and the development of an open city should be adopted as specific and integral parts of the plans of the Housing Resources Committee, the model neighborhood plan, and urban renewal.

7. Without waiting for Federal action, the Atlanta Housing Authority should see that all relocatees are offered available housing outside of the ghetto, when available (including all housing subject to FEderal nondiscrimination regulations).

8. The Atlanta and suburban Real Estate Boards should take steps to include qualified Negro brokers among their members, and adopt a program to insure compliance by all members with its Code of Ethics.

9. The Home Builders Association of Metropolitan Atlanta should establish a committee on fair housing, which as a first step, should study successful desegregated sub-divisions elsewhere in the country, and recommend a positive program to its members.

10. The mortgage bankers of the community should adopt an affirmative program to encourage an open city, including adoption of a public policy with respect to the availability of funds for the purchase and the construction of nonsegregated housing.

X - Appendices

(Note: It is expected that the Washington housing specialists and Research Division staff will propose additional items for the appendices.) The following, therefore, is a partial list only.)

A - List of witnesses and persons interviewed by staff.

B - Executive Order 11063 and Title VI (summarized).

C - HUD tenant assignment policy (summarized).

D - HUD site selection policy (summarized).

C - A list of states and cities with Fair Housing Laws.

D - The NAREB Code of Ethics and the NAHB open occupancy statement (if appropriate).

E - List and brief description of urban renewal projects in Atlanta.

F - Listing of public housing Projects and occupancy by race, Atlanta.

G - Listing of public housing projects and occupancy by race, suburban.

H - Latest relocation report, Atlanta Housing Authority.

I - Appropriate Tables, Census Tracts, 1966, demonstrating segregation in Atlanta

J - A listing, with brief summary of each, of the major Federal programs for lower income housing, i. e. 221d(3), 2221 (h) rent supplements, turn key, leased public housing, etc...

Excerpt from Institute for
Rapid Transit News Letter
of July 1, 1963

ATLANTA PLANS FOR RAPID TRANSIT

Introduction

In October of 1959, the Atlanta Metropolitan Region passed the one million mark in population, joining 23 other such metropolitan centers in the United States. This region consists of the five counties of Clayton, Cobb, DeKalb, Fulton and Gwinnett, plus the City of Atlanta. (See Fig. No. 1.) It covers an area of 1,724 miles containing 45 municipalities. The population of the region today is 1,115,000 which is more than 40% greater than in 1950. Projections indicate that the population will grow to 1,573,000 by 1975, and to 2,374,000 by 1990. Economic activity in the region is expected to grow at an even faster rate than the population.

Downtown Atlanta is the heart of the metropolitan area and to a large extent, the heart of southeastern United States. Although the central business district is squeezed into less than one-tenth of one per cent of the five County area, it provides nearly 20 per cent of Atlanta's tax digest and nearly 25 per cent of all employment in the metropolitan area. While much of the recent retail growth has shifted to suburban locations, downtown Atlanta remains a strong center of "depth" merchandising, not only for the area but also for the State of Georgia, and, to some extent, for the surrounding states. It also continues to grow as a place of employment for regional specialty functions, with many new buildings completed or under construction to handle these increased activities. Downtown employment has grown from 46,000 employees in 1941 to 64,400 in 1958. Conservative downtown employment estimates suggest 79,000 employees in 1970 and 92,000 in 1980.

After World War II, Atlanta, as did all other urban communities, turned to extensive highway planning as a means of overcoming traffic congestion resulting from the ever increasing volumes of vehicles attempting to use conventional surface streets.

In its report on rapid transit for Atlanta, the consulting engineering firm of Parsons, Brinckerhoff, Quade & Douglas said in

part:

"Much of this program has already been completed, and a substantial number of expressway sections are in operation. (See Fig. No. 2.) By 1970, a comprehensive net of six, limited-access, radial highways will converge upon Central Atlanta and, in addition, the Circumferential Highway will be completed. These expressways will progressively bring great benefits to the metropolitan area by making possible reasonably free-flowing express circulation for motor vehicles during off-peak travel times. (See Fig. No. 3.)

"But if it is important to understand the benefits of these limited-access highways, it is of equal importance to understand their limitations and the problems they create. During some four hours of each weekday - that is, during the periods referred to as commuting peaks, when citizens are traveling to and from their places of work - there is congestion on the approaches to, and on the streets within, Central Atlanta. This phenomenon will not be diminished but will be intensified by the completion of the limited-access highways. Patronage will be attracted away from existing mass transportation, and more cars will crowd into the regional center. The outlook is for intensification of congestion on the approaches and streets of Central Atlanta, and for an increased demand there for parking.

"The prospects of relief lie in an increase in the use of mass transportation, so that more people but fewer cars will be brought into Central Atlanta. However, this increase can be achieved only by improvements in mass transportation to a degree which will substantially alter the balance of attraction between mass transportation and the private automobile. The need is for a regional, express, public transportation system to bring about an improvement in public transportation comparable to the improvement afforded to the private automobile by providing regional expressways."

In other words, Atlanta, as do all progressive and growing metropolitan areas, needs a balanced approach to metropolitan transportation planning. The need for a balanced system grows out of

the fact that people have different travel requirements. Some people must drive to work. Some want and can afford to drive to work. Others are wholly dependent on public transportation. Many others will respond either way, depending upon the availability of a reasonable choice. Even now, 49 per cent of the people leaving downtown Atlanta during the evening rush hour travel by public transit despite the fact that scheduled speeds and regularity of service are seriously hampered by surface traffic congestion.

The Need for Rapid Transit Recognized

Fortunately, the need for rapid transit has been recognized for some time by a number of organizations interested in the economic growth and familiar with the transportation requirements of the Atlanta area. Much credit should go to the Atlanta Transit System, the privately owned local transit company, and the Atlanta Region Metropolitan Planning Commission, both of which presented rapid transit proposals for consideration by public authorities and the public itself. A third and the most recent proposal for rapid transit was made by the Metropolitan Atlanta Transit Study Commission in December, 1962.

Atlanta experienced a minor setback to its rapid transit plans at the polls in November, 1962. An amendment to the state constitution was placed before the voters on a state-wide basis which would have enabled the Georgia General Assembly to give counties taxing powers to build and operate public transportation systems. Counties would have been permitted to join cities and other counties for that purpose. The proposed amendment had been endorsed by top state and city officials, as well as by many civic groups. It was defeated in rural areas, presumably because of a lack of understanding of the issue.

Despite the defeat of the amendment, it is recognized that rapid transit will be a necessity in the future. For this reason, "The Rapid Transit Committee Of 100" was established to inform Georgia citizens of the importance of rapid transit. In addition, the Georgia State Study Commission on rapid transit has been established by the Legislature to study the problem.

Another enabling amendment is expected to be presented to the voters in 1964. However, it is anticipated that only the voters in the

five-county Atlanta metropolitan area would be required to vote upon the proposal. If the amendment is approved, the State Legislature then would create a rapid transit agency to be supported by the participating governments. Another prospect is the adoption of a new and simplified Constitution for the State since there is a strong movement for it with an Assembly Committee actually working on a draft. This agency would be responsible for designing and constructing the new system, as well as making provisions for its operation.

There is much interest in the various rapid transit proposals and the permanent or temporary agencies that have taken a position favoring rapid transit for Atlanta. However, interest in rapid transit developed so quickly that there is also much confusion about the various plans and the purposes, as well as the identity of the various agencies involved. For this reason, we are reviewing below in detail the various agencies and plans in their order of appearance:

PROPOSAL OF THE ATLANTA TRANSIT SYSTEM (ATS)

In August, 1960, the Atlanta Transit System presented a proposal for rapid transit entitled "Rapid Atlanta" which was prepared by the consulting engineering firm of Simpson & Curtin. The proposal called for construction of a $59 million system to serve the metropolitan area, with the cost apportioned as follows:

Rapid Transit Construction	-	$46.0 million
Operating Equipment	-	6.5 million
Downtown Distribution System	-	6.5 million
Total		$59.0 million

The plan provided for a trunk line operating from a downtown "Transportation Center" north and east to a point just east of Peachtree Road. Here, one line would operate northeast 6.2 miles to Oglethorpe University, and a second line southeast 4.6 miles to Emory University. This initial system would total 15.9 miles. Later, additional lines would operate east to Decatur, south to Hapeville, and northeast to Smyrna. (See Fig. No. 4.)

The "Transportation Center," on the western edge of the downtown area, would be erected near the present main railroad station, utilizing air-rights over rail trackage. It would combine rail terminal facilities with a suburban bus terminal, as well as provide

office and commercial space.

The most unusual feature of the system would be a "Carveyor" downtown distribution system from the "Transportation Center." (See Fig. No. 5.) This "Carveyor" feature was proposed by the Goodyear Tire and Rubber Company and the Stephens-Adamson Manufacturing Company. It would consist of a continuous moving belt on which are positioned small cars each seating 15 passengers. These cars would operate within a transparent plastic tube at a speed of 15 miles per hour, with speeds decreased to 1.5 miles per hour at stations by means of decelerating rollers. Accelerating rollers would speed the cars up to 15 miles per hour as they leave the stations. The system would have a capacity of 7,000 seated passengers per hour in each direction. Operating costs, exclusive of debt service, were estimated at $250,000 annually. In recommending this system of secondary distribution, Simpson & Curtin recently stated:

> "Using the Carveyor for distribution from a point a little out of the center will, nevertheless, effectuate delivery to central business district points as rapidly as from a more centrally located station, which would rely upon bus transportation for distribution."

The rail portion of the proposal was designed to make maximum use of existing railroad right-of-ways. At all outlying station locations, station buildings would be erected above the tracks for convenient access to feeder highways for bus and automobile traffic. Parking areas would total 4,500 at nine outlying stations. The parking areas would handle 300 to 700 cars with an average of 500. Parking spaces closest to the station would cost 25¢ daily. The other parking spaces - about three-fourths of the total - would be free.

PROPOSAL OF THE ATLANTA REGION METROPOLITAN PLANNING COMMISSION (ARMPC)

This agency, created in 1947, was originally known as the Atlanta Metropolitan Planning Commission. Initially, the planning district covered only two counties in addition to the City of Atlanta. In 1960, the district was renamed, and was expanded to embrace five counties and the city and given its present title. It is the primary agency for overall regional planning. Its many studies of regional activity and requirements, including rapid transit, provide an essential background in planning for future metropolitan

area transportation requirements.

The commission is presently composed of the following members:

Hamilton Douglas, Jr.	Chairman
Nelson Severinghaus	Vice Chairman
Harmon Born	Secretary-Treasurer

City of Atlanta	DeKalb County
Ivan Allen, Jr.	Charles S. Daley
Hamilton Douglas, Jr.	Charles O. Emmerich
Charles E. Thwaite, Jr.	Nelson Severinghaus

Clayton County	Fulton County
Harmon Born	Hugh C. Conley
Terrell A. Star	Archie Lindsey
	Robert H. White

Cobb County	Gwinnett County
Herbert C. McCollum	Uhland F. Freeman
Joe Mack Wilson	William A. Hartman

Mr. Glenn E. Bennett is the Executive Director and Mr. Thomas H. Roberts the Planning Director. Offices are at 900 Glenn Building, Atlanta, Georgia.

It is the function of the commission to give guidance and coordination to local governments. The legislation which created it reads in part:

> "It shall be the duty of the Planning Commission to make comprehensive surveys and studies of transportation facilities, land use, public utilities, governmental facilities and services, natural resources and other physical, social and economic factors, conditions and trends that are relevant to the probable future development of the district, and to make and from time to time, as it may deem proper, amend, extend or add to a masterplan for the orderly growth and development of the district as a whole."

As early as 1954, the commission stated that "Within a few years...

we will require some type of high-speed mass transportation to supplement the bus system and serve our fast-growing suburbs." In September of 1960, the commission published a booklet entitled "What You Should Know About Rapid Transit." This served as the first stage of a rapid transit plan and was intended to acquaint public officials and citizens with the nature, opportunities and need for this form of express transportation. It was used as a basis for more than 40 meetings throughout the five-county region in an effort to acquaint people with the commission's work.

In another step in planning for the development of the Atlanta region, the commission had previously prepared two companion expressway policy reports. One was called "Access to Central Atlanta" and the other "Crosstown and By-Pass Expressways." The first report dealt with the importance of the downtown area. It further indicated that the downtown streets were operating in 1958 at 11 per cent above practical capacity and that programmed capital improvements could not bring capacity above the rising demand curve, much less keep it there. There was a transportation bottleneck in downtown Atlanta even at that time.

The second report indicated that there was another bottleneck - this one on the radial highways. The North leg of the expressway system has six lanes, but in 1958 this section had sufficient traffic to justify 16 lanes; and by 1970, this need is estimated to be at least 36 lanes. Without rapid transit by 1970, it was projected Atlanta would need 120 expressway lanes radiating to and from the central area and a 28-lane Downtown Connector. This was considered a physical impossibility.

The next logical step in transportation planning was a study of rapid transit. A plan was released in July of 1961 which was not inconsistent with the one previously prepared by the Atlanta Transit System, but which was broader in scope and perspective. It called for an initial system consisting of about 60 miles of lines paralleling the existing railroad right-of-ways in four major directions, with 32 stations and a downtown transit center. (See Fig. No. 6.) Most of the stations were to be provided with parking facilities, "kiss-and-ride" loops, and feeder bus service. For the core area, it included a grade-separated, continuous-type secondary distribution system, perhaps on the order of the "Carveyor." The estimated cost of this system, including the downtown secondary distribution system, was $215 million, which is approximately the same cost as the circumferential expressway

on the Interstate system around the city. It was also about one-fourth of the cost of the proposed Interstate highway system in the metropolitan area.

The plan contains four basic concepts as follows:

1. Transportation serves the region. It ties the region together economically, physically, socially and in numerous other ways.

2. Transportation shapes the region. It is a tremendous developmental factor stimulating growth of the area. Good planning must recognize transportation as a tool for shaping the region.

3. A balanced transportation system is required. The fight against traffic congestion will not be won through excessive reliance on the expressways or buses or rapid transit alone. There must be a balance not only between mass and private transportation, but more particularly, between mass express-type facilities (rapid transit) and private express-type facilities (expressways).

4. Portal-to-portal service. Just as it is important to provide automobiles with adequate local streets, collector streets, major streets, expressways, ramps and parking facilities so also must transit facilities consist of a complete system. Rapid transit service must include: (a) a feed-in trip to a high capacity trunk line; (b) a high-speed express trip along the trunk line itself, and (c) a feed-out trip to the precise destination.

The plan was comprehensive, and it outlined the need for a rapid transit system as related to the overall balanced transportation requirements of the area. It further considered such related topics as land development patterns, population, and employment.

PROPOSAL OF THE METROPOLITAN ATLANTA TRANSIT STUDY COMMISSION (MATSC)

The Metropolitan Atlanta Transit Study Commission (MATSC) was formed April 6, 1962, in accordance with Georgia House Resolution #668-121. It was authorized to undertake a program to determine

the need, advisability, economic feasibility and various methods of providing rapid mass transportation of passengers within the five county metropolitan Atlanta area. Having accomplished its assignment, the commission was dissolved on March 31, 1963. The commission was composed of the following members:

Howard K. Menhinick	Chairman
George M. Kilpatrick	Vice Chairman
J. H. Cawthon	Treasurer

City of Atlanta	DeKalb County
J. Paul Austin	H. McKinley Conway
C. A. Scott	Howard K. Menhinick
John A. White	
Dom Wyant	

Clayton County	Fulton County
George M. Kilpatrick	J. H. Cawthon
	Howard B. Harmon, Sr.

Cobb County	Gwinnett County
William A. Ward, Jr.	Thomas Hughes

In July of 1962, the commission retained the consulting engineering firm of Parsons, Brinckerhoff, Quade & Douglas to prepare a plan for an area-wide rapid transit system. The final report was completed December 1, 1963.

The planning project was financed in part through funds granted by the Urban Renewal Administration of the Housing and Home Finance Agency. Such assistance was authorized under the provisions of Section 701 of the National Housing Act of 1954 as amended in 1961. The six local governments concerned pledged $100,000 in matching funds. The Atlanta Region Metropolitan Planning Commission was made the administrative agent of the Study Commission. The Executive Director of the Planning Commission, Mr. Glenn E. Bennett, was made the secretary of the Study Commission. Under these circumstances, the Planning Commission filed the initial application for planning assistance with the Federal Government stating in part:

> "The purpose of the proposed study is to formulate a comprehensive plan for regional rapid transit for the Atlanta metropolitan region, including a distribution system for downtown Atlanta, the terminal area, and to test its functional and economic desirability and its financial practicality. To do this will require selection of routes and stations in harmony with present or projected land use and freeways, a determination of the number of people who would use such a system were it in operation today, and as far into the future as 1980. It will require estimates of revenues and of operating costs, and of the capital costs of rolling stock, right-of-ways and fixed construction. The purpose of the proposed study is also to evaluate means of financing a proposed regional rapid transit system and to consider the best type of agency to construct and operate it."

A number of other groups contributed to the study. The Georgia State Highway Department, in conjunction with the Federal Bureau of Public Roads, conducted an "Atlanta Area Transportation Study" which supplied certain basic data, including essential information from an extensive origin and destination study.

The consulting engineering firm retained the Stanford Research Institute to study methods of financing and implementing a rapid transit system plan. The Budd Company, a nationally known builder of rapid transit cars, made preliminary designs of operating equipment to certain specified standards. Numerous other local Atlanta agencies also contributed to the study. The engineering firm also assisted the Planning Commission in preparing the initial Federal application for planning assistance.

THE PROPOSED MATSC SYSTEM

General

The plan recommends construction of a 66-mile system which would be developed in three stages between 1966 and 1980 at a total cost of $292 million. It would include 46 miles of construction on grade, 17 miles of aerial structure, and three miles of subway or tunnel construction. Forty-nine miles of the system would be in close

proximity and parallel to existing railroad lines. A total of 42 stations would be provided. Trackage would extend from Marietta in the northwest and Norcross in the northeast to a common junction at Tenth Street station, and then through central Atlanta to the south as far as Forest Park. A branch of this line would extend east into North Druid Hills. A separate line would extend from Hightower Road in the west through an intersection with the north-south line to Avondale Estates in the east. (See Fig. No. 7.)

At a point near the northern limits of central Atlanta, the two northern lines would combine and leave railroad right-of-ways to penetrate central Atlanta, partly on aerial structure in private right-of-way and partly in subway. The combined north-south operations would intersect the east-west operations at a point to be known as the "Transit Center." Other stations would give distribution in central Atlanta and provide service elsewhere along the routes. Consideration had been given to use of railroad right-of-ways through the downtown area. However, it was found that the railroad right-of-ways could not provide satisfactory passenger distribution and would be less satisfactory from the standpoint of train scheduling and economical operation.

Development Program

Operable portions of the new rapid transit system would be placed in use as soon as possible. Thus, sections could be providing service, earning revenue and contributing valuable operating experience. For this reason, the development program has been separated into three phases.

First Phase - This would be in operation by January 1, 1971, and would consist of 21.5 miles of line operating between Oglethorpe in the northeast, through central Atlanta and to Hapeville in the south. A short length of the northwest line from Tenth Street station to Cooks station would also be built. The estimated cost of this initial system is $131,509,000.

Second Phase - This would be in operation by January 1, 1975, and would consist of an additional 14.5 miles of line. Here the Marietta line would be pushed northwest from Cooks station to Moores Mill Road, and the entire east-west line constructed between Avondale Estates and Hightower Road. The estimated cost of this

phase is $72,871,000.

Third Phase - This would be in operation by January 1, 1980, and would consist of the final 30 miles of line. The Marietta line would be completed, as would be the extension of the northwest line to Norcross and the south line to Forest Park. An east branch out to Druid Hills Road would also be completed. The estimated cost of this phase is $87,345,000.

Thus, the total 66-mile system would be in operation by January 1, 1980, at an estimated total cost of $291,725,000, including a 15% allowance for contingencies, a 10% allowance for engineering and charges, and an allowance for pre-operating costs incurred for the initial 1971 operation.

Alignment

The heart of the proposed system, which is concluded in the first phase, consists of a Central Line within the commercial corridor of central Atlanta. The stations would deliver daily commuters to their jobs within the downtown, midtown, and uptown sectors of Atlanta. It would also serve passengers from apartment buildings and other residences in this area. The station at the Transit Center in the CBD would be the crossroads of the system, being the main transfer point and serving directly the downtown development with immediate access to all rapid transit lines. The line would be in a subway under city streets in the downtown area and generally on aerial structure elsewhere, except for a short underground section in the Pershing Point area.

The South Line to Forest Park would be an extension from the Central Line. Consisting partially of aerial structure and partially of on-grade construction, the line would be situated between the residential and industrial areas which lie between downtown Atlanta and East Point. Beyond East Point, the line would serve the Atlanta Municipal Airport through feeder connections, and Hapeville, terminating at Forest Park in Clayton County.

The Northwest Line would be the northern extension of the Central Line beyond Pershing Point. It would be constructed primarily on-grade, with four short sections of aerial structure. Close in portions would provide service to largely residential areas. The balance would serve industrial areas as well as local suburban

residential and commercial areas in Cobb County.

The Northeast Line would also be an extension of the Central Line, serving the highly populated northeast residential area and local shopping centers. It would also serve some industrial locations in DeKalb County and reach into Gwinnett County. Construction would be primarily on-grade, with four short sections of aerial structure.

The East-West Line would serve the DeKalb County communities of Avondale Estates west through a dense residential area east of downtown Atlanta, and continue west through other residential areas in Fulton County to Hightower Road. The line would be mostly on-grade, except for a short downtown subway and some aerial structure. It would intersect the Central Line at the "Transit Center".

The East Branch would operate over a portion of the Northeast Line and branch off to serve the DeKalb County areas of North Druid Hills and North Decatur. It would be mostly on-grade, with four short sections of aerial structure.

Equipment

The Budd Company, of Philadelphia, developed a preliminary design for rapid transit cars incorporating the latest improvements in design. The proposed design features include light-weight, high-speed, stainless steel or aluminum construction, automatic controls, and steel wheels running on continuous steel rails. Scheduled speed would be 40 to 50 miles per hour. Fifty-one cars would be needed initially. A total of 186 cars would be required for full operation at a total cost of $32,348,000.

Two types of fully air-conditioned cars would be used and designated as "A" and "B" units. One end of the "A" car would be of streamlined design. The other end of the "A" car, and both ends of the "B" car, would not be streamlined. The "B" cars would serve as intermediate cars in trains consisting of from three to six cars. "A" cars would seat 70 people, and "B" cars 72 persons. Each car would be approximately 68 feet long and approximately 10 feet wide.

All cars would be equipped with four motors capable of speeds of up to 75 mph. Type "A" cars would have automatic running and

brake control equipment. The "attendant's cab" would contain a lockable cabinet housing manual overriding controls, as well as car running and brake controls. Each car would also contain a motor-generator unit to convert DC voltage to AC for air-conditioning, lights, and the air compressor.

Power

The report recommended use of a conventional third rail DC power distribution system. Substations along the line would receive AC power at the distribution voltage of the local utility company. This would be stepped down through transformers and fed into rectifiers for conversion to 600 volts DC. The use of AC power is recognized as desirable although there are numerous technical problems yet to be resolved.

Train Control

Fully automated operation was recommended, with provision for operation by an on-train attendant, should the need arise. It was felt that technology is sufficiently advanced to be capable of producing an automatic system for normal control of high-speed, high-frequency rapid transit operations. Several well designed proposals for such systems have been made by highly reputable, nationally known companies. Voice communication between train and central control and stations could be provided, as well as automatic announcement of station stops over a public address system in the cars.

Fare Collection

The schedule of fares proposed for the system would be based on lengths of ride, resulting in a specific fare between each pair of stations. Modern technology can now meet the needs of such a system with respect to both capability and capacity. Under such a system it is necessary that record of payment be checked automatically as a passenger exits from a station. Several methods of accomplishing this are available through use of coded tokens or tickets. Prepaid fares for regular users, or even credit card systems, can be arranged.

Stations

There would be 42 stations, of which 29 would be at grade, nine on aerial structure and four in a subway, including the "Transit Center." Both sides and center type platforms would be used, depending on topographical and operating conditions. Platform length would be a nominal 400 feet to permit operation of six-car trains capable of handling projected peak traffic demands tested at 1983 level.

Most stations would be origin or "pick-up" stations, or destination or "delivery" stations. For example, a station in a predominantly residential area would be a pick-up station, while one downtown would be a delivery station. The former would require parking lots and would be the morning entrances to the system, while delivery stations would be within walking distance of most centers of business and would be the morning exits from the system.

At stations where parking lots are proposed, free parking on a paved surface would be provided. However, preferred stalls closest to a station would be metered, thus providing revenues for maintenance of the entire parking lot. The number of parking spaces for each line would be as follows:

Central Line	-	No spaces
West Line	-	1350 spaces
East Line	-	2600 spaces
East Branch	-	1400 spaces
South Line	-	4350 spaces
Northeast Line	-	3900 spaces
Northwest Line	-	5700 spaces
Total		19,300 spaces

Revenues and Operating Costs

In evaluating revenue prospects, it was recognized that some time elapses following opening of a line before patronage becomes seasoned. For this reason a maturing period of three years would be introduced between the start of operations and the year for which revenue forecasts are made.

Based on allowances for planning, design and construction, January 1, 1971, was selected as the probable date for beginning of operations of the first phase. In 1974, this phase should produce gross revenues of $4,348,000, with expenses of $3,600,000. It is estimated that in 1978, three years after the second stage is opened, $7,814,000 would be realized in gross revenue from fares and concessions. Operating expenses would be $5,340,000. In 1983, the full 1980 system should produce gross revenues of $12,036,000, as compared with operating expenses of $7,803,000. The surplus revenues derived would be used progressively to finance the purchase of rolling stock.

Rapid Transit Committee of 100 Formed

This Committee was formed on March 1, 1963, to present a public information campaign designed to take the need for rapid transit directly to the public and obtain approval for a constitutional amendment to provide for modern transportation in the area. The group is hopeful that a future rapid transit amendment can be limited to the immediate five-county area, and not have to be submitted to voters on a state-wide basis.

The Committee is composed of 100 prominent citizens apportioned throughout the five-county area as follows:

City of Atlanta	-	25 members
Clayton County	-	10 members
Cobb County	-	15 members
DeKalb County	-	20 members
Fulton County	-	20 members
Gwinnett County	-	10 members
Total	-	100 members

Former Governor Ernest Vandiver is Chairman of the Committee and Mr. Roy Blount of DeKalb County is Vice Chairman. Offices are located in the First National Bank Building, 615 Peachtree Street, Atlanta.

In naming the Atlanta members to the Committee, Atlanta Mayor Ivan Allen, Jr. stated:

"I cannot put too much stress on the importance of the work of this Committee for the future of our whole metropolitan area. To prevent galloping traffic congestion from choking our trade and commerce, we must find the means best suited to our area to move large numbers of people safely."

THE GEORGIA STATE STUDY COMMISSION ON RAPID TRANSIT FORMED

In March of 1963, the Georgia State Legislature passed a resolution providing for the establishment of this Commission for a two-year period. The Commission is composed of 12 members, of whom seven are State Senate members and five are private citizens, as follows:

State Senators	Private Citizens
Oby T. Brewer	*Ivan Allen, Jr.
Charles Brown	Edwin Harrison
Jack Fincher	Ben F. Johnson
Harold Harrison	Ernest Vandiver
Leroy R. Johnson	
Edward S. Kendrick	
** Joseph E. Loggins	

*Mayor of Atlanta
**Chairman

The Commission has the power to employ secretarial help and fix salaries. It is authorized to pay Commission members on a per diem basis and provide allowances "authorized for legislative members of interim legislative committees."

The Commission is studying the problems of rapid transit as they apply particularly to the Atlanta area. It is interesting to note the resolution creating the Commission reads in part as follows:

"One of the most pressing problems confronting the State of Georgia and in particular the rapidly expanding urban area...is the growing and complex subject of traffic...A definite possibility exists that certain areas of cities will deteriorate

> because of the inability of persons to travel freely to such areas."

The Commission is required to report its findings and recommendations on or before January, 1964, although it may continue to study and make further reports that it deems necessary. It must complete its work on or before January 15, 1965, at which date it is automatically dissolved.

COMPARISON OF THE RAPID TRANSIT PROPOSALS MADE BY ATLANTA TRANSIT SYSTEM (ATS), ATLANTA REGION METROPOLITAN PLANNING COMMISSION (ARMPC) AND METROPOLITAN ATLANTA TRANSIT STUDY COMMISSION (MATSC)

The similarities of the three rapid transit proposals for Atlanta are much more apparent than the dissimilarities. Actually, all plans call for routes serving essentially the same traffic corridors. Basic to these plans is a "Y" shaped north-south line running from the Forest Park area in the south to the Norcross area in the northeast and Marietta in the northwest, plus an east-west line. There are naturally variations in exact routings, as well as extent of the systems proposed. The lengths of the proposed systems vary from 15.9 miles in the first stage of the ATS proposal to 66 miles for the final stage of the MATSC proposal.

Of significant interest, however, is the fact that all three proposals recommend the use of modern vehicles employing the conventional steel wheel-steel rail principle. The ARMPC proposal commented on the possible use of monorails in Atlanta as follows: "Their one major advantage - that of creating right-of-way in the air - does not apply to the local situation, where it appears that ground operation can be provided to a large extent." All proposals recommend a 600 volt DC, third rail system, although the ATS proposal does not rule out the possibility of overhead catenary. All proposals call for a high degree of automation, not only in connection with operations, but also fare collection which would have to be of the multi-zone type.

The three proposals varied to some extent on the following:

(1) Downtown Distribution

The most outstanding difference in the proposals pertains to the method of providing a downtown distribution of passengers. The ATS proposal recommended the "Carveyor" system while the ARMPC suggested the three following possibilities:

1. Locate a Transit Center along the Georgia Railroad "Slot", which passes through the heart of downtown, extending southeasterly from Union Station.

2. Use buses over city streets in the downtown area which would connect with the Transit Center wherever it is to be located.

3. Use of the "Carveyor" system along the lines recommended in the ATS report.

The MATSC plan calls for a two-level Transit Center located in the heart of the downtown district. It would be located at the subway intersection of the north-south Central Line and the East-West Line. The latter tracks are in the "Gulch" at the elevation of the existing railroad tracks, while the former would be in a subway beneath Broad Street. Additional downtown distribution would be offered by locating other subway stations in the area.

MATSC anticipates the need for further secondary distribution facilities to the rapidly growing government center area in the southeast corner of central Atlanta and the Ponce de Leon strip east of Peachtree Street. The report finds that a grade-separated system is advisable, but rules out additional subways as too costly. Therefore, the "Carveyor" system is again evaluated, as well as an alternate suspended monorail system. While the difference in capital costs between the two was not found to be substantial, the "Carveyor" presented lower annual operating costs.

(2) System Management

The ATS proposed that the State of Georgia create a six-county Metropolitan Transit District administered by an authority with power to construct the rapid transit system, including related distribution facilities. The authority would be empowered to issue tax supported bonds to cover construction costs that could

not be met through revenues. The authority would have the power to negotiate with private corporations to operate the system at rates of fare established with the approval of the authority. The Atlanta Transit System offered to operate the system within this framework and integrate its surface bus lines with it.

Similarly, the ARMPC recommended formation of a multi-county transportation agency. Such an agency could construct, manage and operate the system itself, or contract with private organization for this purpose, except for construction. The ARMPC examined at some length the form of management used in operating transit systems in other cities, and outlined generally how an authority might be organized for the Atlanta Region.

The MATSC considered the many alternatives in creating a transit agency, but avoided detailing the many arguments centering around such evaluations to avoid confusing the issue. It clearly stated that capital costs must be met from public funds although it said that private operation was a possibility. However, as"a major part of the support of the transit system lies with the public," the report reached the conclusion that public operation for this and other reasons appeared inevitable.

In outlining the types of public agencies, the report considers three basic forms of ownership:

1. Direct ownership of the transit system by city or county government.

2. Region-wide system ownership by regular units of local government.

3. State ownership.

In the first instance, the report recognized that if the city owned and operated the facility, the county residents might feel their interests were being neglected. Conversely, county ownership might cause the city to raise the same objections. Region-wide ownership might fragment the operation, resulting in inefficient operation. Lastly, State ownership would "seem to violate a well established principle that there should be local responsibility for local functions of government."

The report, therefore, reached the conclusion that the State should create a regional transit agency which would not involve the State tax system or debt structure. This could be accomplished through creation of a transit district with taxing powers or through a transit authority without taxing powers. After investigating both forms of agencies, the MATSC recommended a transit authority in this particular case. However, it further recommended strengthening of the weak points of authority-type control, especially in respect to giving the authority bonds the standing they could enjoy by as direct a pledge of the credit of the counties covered by the agency as is possible and by providing for responsive, yet statesmanlike membership on the governing board.

(3) Methods of Financing

All three reports recognized that funds to meet capital requirements must come from other than user revenues. The ATS report states that "... fares must be adequate to pay all operating costs and to meet amortization charges on equipment. Excess revenues would be paid to the Authority to aid in meeting debt service and retirement charges on construction costs."

The ARMPC report echos this philosophy by stating that rapid transit fares must "be competitive with the out-of-pocket cost of driving an automobile (gas, oil, tires and parking)." Yet sufficient income should be realized to cover operating and maintenance costs and debt service on rolling stock. However, it questions whether the user should pay for initial rolling stock or only its eventual replacement. In any event, capital costs will have to come from "some combination of Federal, State and local tax sources." It finds precedents for this approach in roadway programs where the public provides the fixed facility and the user provides the vehicle and pays its operating costs. In addition, the public provides sewer trunks with the user paying for his local sewer line or tap. A similar comparison was drawn in the case of electric power utilities.

The MATSC report draws the same analogy regarding public roads. It finds the specific methods of financing are dependent on the type of agency selected to implement the system. Final determination in this regard, says the report, should be left to that agency.

S. R. No. 158 (AS PASSED HOUSE & SENATE)
BY: Senators Johnson of the 42nd, Conway of the 41st, McWhorter of the 43rd, Brewer of the 39th and others

A RESOLUTION

Proposing an amendment to the Constitution so as to declare the acquisition, establishment, operation and administration of the system of public transportation of passengers for hire in the metropolitan area of the City of Atlanta and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett to be an essential governmental function and a public purpose and to authorize the creation of a public corporation or authority for such purpose; to provide for the submission of this amendment for ratification or rejection; and for other purposes.

BE IT RESOLVED BY THE GENERAL ASSEMBLY OF GEORGIA:

Section 1. The Constitution is hereby amended by adding at the end thereof a new Article to read as follows:

"ARTICLE XVII

Public Transportation of Passengers for Hire

"Section I

Public Transportation of Passengers for Hire
in the Metropolitan Area of Atlanta

"Paragraph I. The acquisition, establishment, operation or administration of a system of public transportation of passengers for hire

within the metropolitan area of the City of Atlanta and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett, is an essential governmental function and a public purpose for which the powers of taxation and eminent domain may be exercised and public funds of said County and Municipality expended.

"Paragraph II. The General Assembly may create a public corporation or authority as an instrumentality of the City of Atlanta and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett, or any one or any combination thereof, to perform the aforesaid function, to have the power of eminent domain, the power to borrow money and issue obligations payable from its revenues, and such other powers as may be necessary or convenient for the accomplishment of the aforesaid function and purpose.

"Paragraph III. The General Assembly may provide that such public corporation or authority, as an instrumentality of the participating counties and municipality, its property, acts, activities, income and obligations and the interest thereon, shall be exempt from any tax obligations and from regulation by any agency or commission of the State.

"Paragraph IV. The General Assembly may authorize the City of Atlanta, and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett to contract with such public corporation or authority for the performance of the aforesaid function and purpose; to pay for the public transportation services and facilities contracted for, including the payment of the principal and interest on any obligations issued by such public corporation or authority in order to acquire the necessary facilities and property therefor and in connection therewith to establish and maintain reasonable reserves; to levy taxes to the extent necessary to fulfill the obligation incurred in such contracts; and to convey to such public corporation or authority property or facilities, or render services, which may be useful to the establishment, operation or administration of a public transportation system

within the aforesaid metropolitan area; provided that no county shall have the power to levy any tax on any subject of taxation situated within the territorial limits of any incorporated municipality which has a contract with said public corporation or authority and is itself levying a tax for that purpose.

"Paragraph V. The provisions of this Article shall be liberally construed to effectuate its purpose and shall not be limited or restricted by any existing provision of or amendment to this Constitution, or any general or special law heretofore enacted, and the authority granted by this Article to the General Assembly may be exercised by general, special or local laws without regard to uniformity."

Section 2

When the above proposed amendment to the Constitution shall have been agreed to by two-thirds of the members elected to each of the two branches of the General Assembly, and the same has been entered on their journals with the "Ayes" and "Nays" taken thereon, such proposed amendment shall be published and submitted as provided in Article XIII, Section I, Paragraph I of the Constitution of Georgia of 1945, as amended.

The ballot submitting the above proposed amendment shall have written or printed thereon the following:

> "For ratification of amendment to the Constitution so as to declare the acquisition, establishment, operation and administration of a system of public transportation of passengers for hire in the metropolitan area of the City of Atlanta and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett to be an essential governmental function and a public purpose and to authorize the creation of a public corporation or authority for such purpose.

"Against ratification of amendment to the Constitution so as to declare the acquisition, establishment, operation and administration of a system of public transportation of passengers for hire in the metropolitan area of the City of Atlanta and the Counties of Fulton, DeKalb, Cobb, Clayton and Gwinnett to be an essential governmental function and a public purpose and to authorize the creation of a public corporation or authority for such purpose."

All persons desiring to vote in favor of adopting the proposed amendment shall vote for ratification of the amendment, and all persons desiring to vote against the adoption of the proposed amendment shall vote against ratification.

If such amendment shall be ratified as provided in said Paragraph of the Constitution, it shall become a part of the Constitution of this State. The returns of the election shall be made in like manner as returns for elections for members of the General Assembly, and it shall be the duty of the Secretary of State to ascertain the result and certify the result to the Governor, who shall issue his proclamation thereon.

urban redevelopment in atlanta

prepared for

COUNCIL ON HUMAN RELATIONS

ATLANTA, GEORGIA

URBAN REDEVELOPMENT PROJECTS

THE SCOPE OF URBAN REDEVELOPMENT

I. General

The Urban Redevelopment program in Atlanta, Georgia, encompassed a total of eight projects in execution and three in planning.

The eight projects in execution cover a total of 1,572.4 acres of land of which 826 acres have been acquired or are to be acquired by the Authority. The three projects in planning cover an additional 1,000 acres which will bring Atlanta's total acreage under Urban Redevelopment to more than 2,500.

Tne projects in execution are:

1. Butler Street Urban Redevelopment Project
2. Rawson-Washington Street Urban Redevelopment Project
3. University Center Urban Redevelopment Project
4. Rockdale Urban Redevelopment Project
5. Thomasville Urban Redevelopment Project
6. Georgia State Urban Redevelopment Project
7. Howard High School Urban Redevelopment Project
8. Georgia Tech Urban Redevelopment Project

The projects in planning are:

9. West End Urban Redevelopment Area
10. Buttermilk Bottoms - North Avenue Urban Redevelopment Area
11. Bedford-Pine Urban Redevelopment Area

The first eight projects are being developed at a total net cost of nearly $39.5 million which means that the local share is 1/3 of this or approximately $13.2 million, while the Federal Government will share in the financing at a cost of $26.4 million.

Developments completed, under contract, or programmed for construction in the eight execution projects will bring about a large new public and private investment. Almost $80 million of this comes from private enterprise. More than $4 million will be invested in project improvements along with nearly $9 million worth of schools, parks, and other supporting facilities. The Georgia Tech Urban Redevelopment Project will be the site of construction over the next seven years of buildings and facilities costing an estimated $25 million. Georgia State will ultimately invest $30 million in new buildings and improvements on the land provided by the Georgia State Urban Redevelopment Project. A $26 million expenditure is being made in the construction of the new Civic Auditorium and the now completed sports stadium on land provided through Urban Redevelopment.

More than 4,000 families and individuals have been relocated from the first five projects as well as nearly 300 businesses. The projects in planning and the newly entered Georgia Tech Urban Redevelopment Project will bring about the relocation of an additional 1,400 families from properties to be acquired by the Authority over the next three to five years. Of those

already relocated, three out of four are now living in decent, safe, and sanitary housing. Eleven percent of the families relocated themselves and were lost from the record. Two percent moved out of town, nearly three percent were evicted after efforts to work with them failed, and less than five percent are known to have moved into sub-standard housing.

January 1, 1966

At the 1965 annual meeting of the Southeastern Regional Council of the National Association of Housing and Redevelopment Officials, the Atlanta Housing Authority was given the 1965 Urban Renewal award for outstanding achievement in the Butler Street Urban Redevelopment Project. The award read as follows:

"The Atlanta, Georgia, Butler Street Urban Renewal Project exemplifies outstanding achievement in project planning, activities programming, and effective land disposition and redevelopment. The area consisting of 249 acres of extreme slums and some 954 nonwhite families, is located two blocks east of the central business district of Atlanta. It encompassed a major interchange of the North-South expressway, as well as an extremely inadequate and obsolete street and utilities system. Outstanding was the programming of land acquisition, relocation, demolition and land disposition in a manner which minimized the time that the land was unproductive. Also outstanding is the varied and high quality types of redevelopment, which include moderate income housing, high rise luxury housing, modern motel facilities, and major commercial redevelopment. The adjustments in land use and transportation facilities patterns adjoining the expressway interchange is an outstanding example of coordinated planning and redevelopment. The relocation of almost 700 families and over 230 individuals, as well as some 100 businesses, is indeed a major accomplishment. The total program is exemplary."

The Butler Street Project, one of the three original Urban Redevelopment projects is located adjacent to the central business district. It has opened the door for expansion to the east. Improvements contemplated, under construction, and scheduled total more than $23,000,000 in the western segment of the project alone. These improvements include the 300 unit Holiday Inn and the 21 story Landmark Apartment building, the first two projects built on Urban Renewal land in the City of Atlanta. Added to the list of completed buildings are the 500 unit Marriott Motor Hotel, the 7 story Oxford Manufacturing Company, and the 7 story John Hancock Building. Contracts have been executed for purchase of 8 sites for the 12 story Citizen's Trust Building, a Ford Motor Company show room and service facility, a 12 story office building and a car-rental office.

In the eastern section of the project, construction has been completed on a 76 unit apartment complex and retail shopping center, a 210 unit high rise apartment for the elderly and the first stage of Wheat Street Gardens 520 unit apartment complex. Wheat Street Gardens, Inc. received the award at the Southeastern Regional Council of the National Association of Housing and Redevelopment Officials for moderate income housing (Section 221 (d)(3)) development under the guidance of the Atlanta Urban League and the auspices of the Wheat Street Baptist Church. The initial construction included 280 apartments. Six million dollars will be invested in new construction in the eastern section.

The local share of the cost of the project is to be handled through the cash grant-in-aid of $537,000 and the balance in non-cash credits which include a new school and resurfacing of streets, the relocation of a sewer, new street lights, traffic signals, the construction of a park, and the expansion of public housing.

January 1, 1966

RAWSON-WASHINGTON STREET URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 336.8 Acres				
FINANCING	Net Project Cost $7,687,878	Federal Share $5,106,829	Local Share $2,289,595	Cash --	Non-Cash $2,581,049
DISPOSITION	Total Area For Disposition 112.2 Acres	Total Area Sold Contracted or Committed 91.00 Acres	Percent Sold Contracted or Committed 81.2%		
ACQUISITION	Total Parcels 774	Area 112.2 Acres	Dwelling Units 1,484	Parcels Acquired To Date 764	Percent Complete 99%
RELOCATION	Families & Individuals 850	Commercial 75	Total 928	Relocated 928	Percent Complete 100%
TAXES	Tax Before 44,312	Estimated Tax After 4,326			

Originally planned for an office-residential complex and industrial park, the plan for the Rawson-Washington Project has changed completely. Located adjacent to the State Office Building complex and including the large portion of the interchange of three interstate highways, the project was an ideal site for the new Atlanta - Fulton County Athletic Stadium. Through an expansion of the project by amendment, 43.3 acres have been developed for Atlanta's $18 million municipal stadium. An additional parcel in the eastern sector is now being offered as a motel site.

January 1, 1966

Across the interchange from the stadium, land has been designated for additional parking and a city park. A parcel adjacent to a public housing project, Capitol Homes, has been sold for a food store. The western section of the project, originally scheduled for an industrial park, has been committed to the Atlanta Housing Authority for the construction of 650 units of low-rent public housing. A future amendment to the project will provide land for a school and park to serve the new housing project. An office-warehouse and a car wash facility have also been constructed on project land. The non-cash credits in the Rawson-Washington Project include new streets and side walks, sanitary and storm sewers, and traffic control facilities.

UNIVERSITY CENTER URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 356.2 Acres				
FINANCING	Net Project Cost $7,749,298	Federal-Share $5,166,198	Local Share $2,583,100	Cash $157,674	Non-Cash $2,425,426
DISPOSITION	Total Area For Disposition 102.1 Acres	Total Area Sold Contracted or Committed 57.53 Acres	Percent Sold Contracted or Committed 56.3%		
ACQUISITION	Total Parcels 908	Area 111.2 Acres	Dwelling Units 1,126	Parcels Acquired To Date 873	Percent Complete 96.1%
RELOCATION	Families &- Individuals 1,247	Commercial 79	Total 1,326	Relocated 1,320	Percent Complete 99.5%
REHABILITATION	Number Residential 1,114	Number Commercial 59	Mixed 19	Total 1,192	Percent Complete 78.7%
TAXES	Tax Before $32,818	Estimated Tax After $29,207			

January 1, 1966

The University Center Project receives its name from its location surrounding six colleges; Atlanta University, Morris Brown College, Clark University, Spelman College, Morehouse College, and the Interdenominational Theological Center. The General Character of the project as a residential area close to downtown Atlanta will not be changed but improved. The project will supply thirty acres of much needed expansion land to the six institutions of higher learning and provide for much needed residential development in a close-in location. Morehouse College has built a dormitory and dining hall on land provided by the Authority and Spelman College has constructed two buildings, a dormitory and a fine arts building, on an eight acre tract which they acquired from the Authority. All of the schools except Atlanta University and Interdenominational Theological Center will expand on land made available through this project.

Residential redevelopment is already under way with a modern luxury apartment complex now under construction. This 122 unit facility will include two round buildings, and circular recreation courts with swimming pool. The management will provide a day nursery, restaurant, maid service and laundry facilities on the premises. The City's one-third share will include nearly $2,500,000 in non-cash credits including two elementary schools, a city park, street widenings, traffic control facilities, and improvements to sanitary and storm sewers.

January 1, 1966

ROCKDALE URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 248.5				
FINANCING	Net Project Cost $3,718,536	Federal Share $2,479,024	Local Share $1,239,512	Cash $54,515	Non-Cash $1,184,997
DISPOSITION	Total Area For Disposition 224.1 Acres	Total Area Sold Contracted or Committed 52.57 Acres	Percent Sold Contracted or Committed 23.45%		
ACQUISITION	Total Parcels 997	Area 224.1	Dwelling Units 520	Parcels Acquired To Date 810	Percent Complete 81.2%
RELOCATION	Families & Individuals 418	Commercial 18	Total 436	Relocated 435	Percent Complete 99.7%

The project was conceived primarily as a residential development for the housing of people displaced as a result of governmental projects such as expressways, schools, Urban Redevelopment, and for normal expansion of Atlanta's population. It is located in the northwest area about five miles from the center of Atlanta, and before Urban Redevelopment, was a residential area. The streets had been laid out with no consideration for the topography of the area and, as a result, divided the rough terrain into virtually unusable building lots. The project will result in an entirely new residential area of both single-family and multi-family dwellings, schools, parks, churches, and commercial buildings appropriately located on streets designed to make maximum use of the land as the terrain will permit. The project will ultimately house 1,666 families.

THOMASVILLE URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 277.0 Acres				
FINANCING	Net Project Cost $4,227,420	Federal Share $2,818,280	Local Share $1,409,140	Cash $40,998	Non-Cost $1,368,152
DISPOSITION	Total Area For Disposition 220.9	Total Area Sold Contracted 117.43 Acres	Percent Sold Contracted 53.15%		
ACQUISITION	Total Parcels 482	Area 220.9 Acres	Dwelling Units 365	Parcels Acquired To Date 482	Percent Complete 100%
RELOCATION	Families & Individuals 309	Commercial 19	Total 328	Relocated 328	Percent Complete 100%
REHABILITATION	Number Residential 82	Number Commercial 10	Total 92	Percent Complete 90.2%	
TAXES	Tax Before $15,000	Estimated Tax After $22,000			

January 1, 1966

The Thomasville area was selected as a site for a predominately residential development for the resettlement of families displaced by governmental action. The project is located four miles southeast of downtown Atlanta. The project is fast becoming a new planned community.

One hundred seventy three single-family residences have been built and land has been committed for sale for 13 more. Scattered among these new homes are 84 older houses considered sound enough to save. Generally, home owners with old houses in the new subdivision have rehabilitated their buildings in order to make them more liveable and physically more attractive. A 36.4 acre tract is scheduled to be the site of 350 units of low-rent public housing.

The community will include not only residences but also a new elementary school, a well planned City park, shopping center, and expanded church facilities. A major thoroughfare, which originally bisected the project, has been deflected to reduce the dangers of through traffic in a residential area.

The City's one-third share of the net project cost will be met from cash and non-cash credits. These include the rearrangement of street patterns, new pavements, curbs, gutters, and side walks, new park and elementary school to serve the project area, storm and sanitary sewers and traffic control facilities.

January 1, 1966

GEORGIA STATE URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 24.9 Acres				
FINANCING	Net Project Cost $2,691,024	Federal Share $1,170,038	Local Share $897,008	Cash -0-	Non-Cash $1,170,038
ACQUISITION	Total Parcels 16	Area 4.2 Acres	Dwelling Units --	Parcels Acquired To Date 16	Percent Complete 100%
DISPOSITION	Total Area To Be Sold 4.2 Acres	Total Area Sold 4.2 Acres	Percent Sold 100%		

This project is for the purpose of expanding the campus of Georgia State College which is located in the Central Business District of Atlanta. As a result of the Urban Redevelopment Project, Georgia State College has employed consultants to prepare a comprehensive master plan for the development of the 18.3 acre tract in the project and an additional six acres east of the campus for which an amendment to the project plan is being prepared. While plans for the future development of the campus are not available, a class room - student activities building has been completed and the library building begun. A business administration building is scheduled for construction in the near future. The local share in cost of the Georgia State Project will be met through non-cash credits of Section 112 of the National Housing Act. An estimated $30,000,000 will be invested in the development of the new campus facilities.

January 1, 1966

HOWARD HIGH SCHOOL URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage				
	10.1 Acres				
FINANCING	Net Project Cost	Federal Share	Local Share	Cash	Non-Cash
	$271,661.08	$181,107.58	$90,553.70	$86,539.46	$4,014.24
ACQUISITION	Total Parcels	Area	Dwelling Units	Parcels Acquired To Date	Percent Complete
	31	4.2 Acres	86	31	100%
RELOCATION	Families & Individuals	Commercial	Total	Relocated	Percent Complete
	36	1	37	37	100%
DISPOSITION	To Be Sold	Sold	Percent		
	4.2 Acres	4.2 Acres	100%		

The Howard High Project was brought about in cooperation with the Board of Education to provide expansion land for overcrowded Howard High School. The project expanded the school site by 4.2 acres to provide land for the construction of new class rooms and the expansion of athletic facilities. The project has been completed and the land transfered to the Atlanta Board of Education.

GEORGIA TECH URBAN REDEVELOPMENT PROJECT

AREA	Gross Acreage 74.8 Acres				
FINANCING	Net Project Cost $7,639,069	Federal Share $5,092,712	Local Share $2,546,357	Cash $973,010	Non-Cash $1,573,347
ACQUISITION	Total Parcels 365	Area 60.5 Acres	Dwelling Units 419	Parcels Acquired To Date 33	Percent Complete 9%
RELOCATION	Families & Individuals 292	Commercial 64	Total 356	Relocated 5	Percent Complete 1.4%
DISPOSITION	Area To Be Sold 60.5	Area Sold 45.18	Percent 74.67%		

The first step in the implementation of a plan to develop a 400 acre campus for the Georgia Institute of Technology by 1985 is this 78 acre project. The project entered execution in mid 1965. The land will be used by Georgia Tech for the construction of new administration buildings, class room buildings, and expanded facilities for the experiment and research station at a cost of more than $25,000,000. The Board of Regents of the State of Georgia is meeting the entire local share of the cost of this project through cash and non-cash credits under Section 112 of the National Housing Act. This credit comes from the cost of land purchased for the expansion of the Institute over the past seven years and the construction of a relocated Hemphill Avenue to be named Tech Parkway.

January 1, 1966

III. Projects in Planning

1. West End Urban Redevelopment Area
2. Buttermilk Bottoms - North Avenue Urban Redevelopment Area
3. Bedford-Pine Urban Redevelopment Area

WEST END URBAN REDEVELOPMENT PROJECT

The largest project to be undertaken in the Atlanta area is the proposed 675 acre West End Project. The plans call for the acquisition of 112.5 acres of land with predominately deteriorated structures. This acquisition will result in the relocation of 509 families and individuals. The major portion of the project area will be subject to a concentrated rehabilitation program in the hope of stopping the creeping blight of housing deterioration.

The Land Utilization and Marketability Analysis calls for residential, commercial and industrial reuses of the land to be acquired. The plans include 820 garden-type apartments and 255 high density apartments and 5.9 acres of land devoted to single and two family residences.

The commercial reuses include a major new retail shopping center providing 1,600 parking spaces and 245,000 square feet of new retail space. The second major area of commercial use would be an increase of nearly 300,000 square feet of office space including both high rise office buildings and one story single tenant office structure.

The analysis also indicates a strong demand for industrial space at a close-in location. Thirteen and one-half acres are recommended for use in a planned industrial park.

January 1, 1966

BUTTERMILK BOTTOMS - NORTH AVENUE URBAN REDEVELOPMENT PROJECT

This 114 acre project area is already showing signs of redevelopment as construction has begun on the City Auditorium and a 78 inch relief sewer. Land for these developments has been acquired under an Early Land Acquisition Loan from the Urban Renewal Administration. The Auditorium, exhibit hall and parking to serve this new complex will cover 55 acres. The plan also provides for a 23 acre site north of the auditorium which will be devoted to an office - park. Another tract located south of the auditorium site has been designed for single tenant type development and a second for public use such as an adult education center, a science and technology center, or a multiple disability rehabilitation center.

BEDFORD-PINE URBAN REDEVELOPMENT AREA

An area of 205 acres east of the Buttermilk Bottoms-North Avenue Urban Redevelopment Area has been designated the Bedford-Pine Urban Redevelopment Area. This project will clear land for a new school, park and sites for 1,000 new dwelling units to replace those removed from the market by demolition. The Board of Education has already purchased the site for the school and the site is soon to be expanded to include the park through a Letter of Consent to Acquire land during the Planning Period.

STATEMENT

March 6, 1966
424 Markham St. S.W.

We, Willie Williams and Sam Martin, announce to the Markham St. Community, and all concerned, our decision to act against injustice by the city of Atlanta and the state of Georgia in evicting us, Sat., March 6, 1966.

We appealed for a temporary restraining order against eviction, simple justice, from the Georgia civil and criminal courts -- and were denied. The Georgia supreme court refused to hear our appeal. The federal court heard our appeal and also denied it. We now await a further decision from the federal court concerning our original case.

Further, we wish to protest the actions and attitudes of the city marshalls in carrying out our recent evictions. The marshalls handled our belongings roughly -- breaking dishes and damaging a bed by chopping it with an axe. When Mrs. Williams tried to remove some personal belongings, she was stopped. Mr. Williams, protesting his damaged belongings, interfered, and was arrested for "interfering with eviction officers."

We hereby charge the city of Atlanta with defending landlords like Joe Schaffer, while ruling against poor, honest citizens who protest robbery and slum-housing conditions. Our houses were condemned by the city as being "unfit" to live in. If our houses were "unfit" to live in, then it is <u>illegal</u> (against the law) for landlord Schaffer to collect rent from us; <u>and by defending Schaffer's attempts to collect rent, the city is breaking its own laws</u>!

Therefore, being out of money and unable to afford housing: we, Willie Williams and Sam Martin, announce that we have no other choice but to remain out here on Markham St. until the federal court reaches a decision on Thurs., March 10, 1966.

Urban Planning Project

CITIZENS INFORMATION ON HOUSING

General Information - Federal Programs

1. Except for a few exceptions,
Racial discrimination in any phase of any housing in which a federal agency.... is involved is against the law. For information on this and other regulations governing federal programs and advice as to the rights of citizens in these programs, contact the following offices of the U. S. Dept. of Housing & Urban Devlpmt, located in Atlanta, at the Peachtree & 7th Building:

2. Regional Administrator of the Dept. - 526-5585

3. Urban Renewal Administration - Regional Administrator - 526-5468

4. Federal Housing Administration - General Information - 526-6581

5. Federal National Mortgage Association - 526-6998

6. Public Housing Administration - Administrative Service and Information - 526-5330

In the City of Atlanta (Note): General pattern applies to other cities and counties in the metropolitan area.

7. Atlanta Housing Authority administers the public housing program and the urban renewal program. Members of the Authority are appointed by the mayor, for 10 year terms (written in the local law), meet on the 1st and 3rd Tuesdays, at 3:30 in the Hurt Bldg. M. B. Satterfield is the administrator. Phone is 523-6074.

8. City Departments administer the various regulations and programs enacted into law by the Board of Aldermen, who also appoint the department heads. The Board of Aldermen meets the 1st and 3rd Mondays at 2 p.m. at the City Hall. Contact each department for appropriate information. The major ones concerned with Housing are:

9. Inspection - housing code enforcement, including a regular inspection schedule.

10. Sanitary - trash and garbage collection, including a rrgular schedule

11. Construction - repairs and paving of sidewalks and streets

12. Traffic - lights, etc.

13. Planning - zoning and plans for various parts of the city

14. Community Improvement Program - developing general overall plan for whole city, for recommendation to the Board of Aldermen

15. Atlanta Better Housing Commission: appointed by the mayor, to consider general housing conditions in city, including enforcement of the housing code meets 3rd Tuesday at 2 p.m., city hall. For information contact Mr. Buchanan, City Hall.

16. Housing Court of the City: handles cases dealing with code violations. General Division of Municipal Court Judge A. W. Lyle.

17 . Citizens Advisory Committee on Urban Renewal: appointed by the mayor, to advise on urban renewal; Executive Committee meets 3rd Thursday, for time, place, or other information, call Mr. Howland at City Hall.

18. Specific Information

18. Public Housing: To qualify, you must meet certain requirements about income (must be able to pay the rent; must not earn more than a certain amount for the size of your family, etc,) and about family situation (for example, marital status, illegitimate children). To find out if you qualify, contact Atlanta Housing Authority at office given above or at the tenant selection offices at 521 Techwood Dr., NW (875-6416) or 668 Fair St., SW (523-6062). Anyone may go to either office and any discrimination because of race is prohibited. Office hours are: Techwood - 8:30 to 4:30 Monday through Friday; Fair St. 9 - 4:30, Monday through Friday.

19. You may apply for specific housing project or for any vacancy available. Apartments vary in size and generally are reserved for families of appropriate size.

20. If you occupy public housing and have questions, contact the Atlanta Housing Authority or the U. S. Public Housing Administration (see above).

21. Relocation: If you must move because of action on the part of the city, either through enforcement of the code or urban renewal, you may get help in finding a new home from the Relocation Office at the Atlanta Housing Authority.

22. Legal Advise: on your rights as a tenant or landlord, about leases, rec receipts, evictions, etc., contact the Legal Aid Society, Fulton County Courthouse, phone 524-5811, a community chest agency to provide legal assistance. If your income is too high for them to give y ou services, they can instruct you about finding a private lawyer.

b

23. Health Problems: Contact Health Department of Fulton or Dekalb County, depending on which county your part of the city lies in.

24. Who owns property: To find out who owns any property, contact Tax Commissioner's Office in the Courthouse.

25. If you want to buy a home: consult local real estate boards, real estate dealers, and the Federal Housing Administration, for a list of FHA properties. Regardless of income, if you live an area designated for urban renewal, you are eligible for a 3% loan, if your income is less than $3000. per year, you are eligible for a direct grant. For specific information, call Mrs. Ingram at the West End Project of the Atlanta Housing Authority, 758-1438.

26. If you own your home and want help in fixing it up, and if you live in an urban renewal area, contact Atlanta Housing Authority for information about loans and grants. If you have been living in a public housing project and your income has increased so that you are no longer eligible, or if you are being evicted because of code enforcement, urban renewal, etc., you will be eligible for application for "221 housing"- low-cost loan for certain houses.

27. Economic Opportunity Atlanta, Inc. has a Housing Coordinator, Mr. Dick Orton, 101 Marietta St., NW, 525-4262, and legal services available at some of the Neighborhood Centers at certain days of the week. Consult the Center closest to you.

28. If you are a veteran of the armed services, you are entitled to several special programs, so be sure to ask in each case if this makes any difference.

29. Good source of facts on Housing is the Atlanta Region Metropolitan Planning Commission, Glenn Bldg., Ja.2-7577.

30. Emergency Housing:c There is very little provision for emergency housing in metropolitan Atlanta. The Salvation Army provides some, but primarily for transients. Also the Union Mission. The Salvation Army, the Union Mission and the YMCA, particularly the Butler St. Branch are sources:
    The Salvation Army: Men's Transient Lodge - 339 Luckie St., NW 525-2878
    Women's Emergency Home - 242 Boulevard, NE 522-0388
    The Union Mission - 54 Ellis St., NE - 525-8662
    The YMCA - 22 Butler St., NE - 522-0426

31. Although there are no Fair Housing state or local laws, there are no state or local regulations requiring segregation. If you think there has been any racial discrimination in housing, report the details to the Council on Human Relations of Greater Atlanta, 5 Forsyth St., NW, 523-1581.

This material developed for the Citizens Information Service of the Council on Human Relations of Greater Atlanta, Inc., in cooperation with Radio Station WAOK Council of Women, and various neighborhood groups. For further information, contact the Council at 5 Forsyth St., NW, 523-1581.

	5:00	Adjournment

Atlanta

PROGRAM PARTICIPANTS

The Seminar's principal participants have experienced community development problems and have constructive recommendations for community action. They are nationally recognized professional advisors or they are leaders in successful community development projects.

They can answer the tough questions on how to get things done.

HARRY C. ADLEY - President, Adley Associates, Inc., Planning Consultants, Atlanta, Ga. #6

HENRY C. COLEMAN - Chairman of The Board, Commercial Bank, Daytona Beach, Fla.; and Director, Chamber of Commerce of the United States

A. L. FELDMAN - Chairman of The Board, Puritan Chemical and Affiliated Companies, Atlanta, Ga.

W. ELMER GEORGE - Executive Director, Georgia Municipal Association, Atlanta, Ga.

ROBERT P. GERHOLZ - President, Chamber of Commerce of the United States; and President, Gerholz Community Homes, Inc., Flint, Michigan. Former pres of NAREB Retch!

ALAN F. KIEPPER - County Manager, Fulton County, Atlanta, Ga.

JOHN MITOVICH - Consultant, Community Relations Program Development, General Electric Company, New York, New York #5

JAMES H. NUTTER, JR. - Executive Director, Department of Industry and Trade, State of Georgia, Atlanta, Ga.

THOMAS J. PENDERGRAST - Courts & Co., Investment Bankers, Atlanta, Ga.

JAMES F. STEINER - Manager, Construction and Community Development Department, Chamber of Commerce of the United States, Washington, D. C. - Parts 1, 2, 3, 4 narrator

JACK TALLENT - Community Development Specialist, Chamber of Commerce of the United States, Washington, D. C.

E. S. THARPE - President, Tharpe and Brooks, Inc., Mortgage Bankers, Atlanta, Ga.

PURPOSE OF THE SEMINAR:

Emphasis of the Seminar is on the Management of Community Development—

- How to Solve Community Development Problems
- Community Development Opportunities

THE SEMINAR IS FOR—

Community Leaders

Officers and committeemen of local and state chambers

Business, industrial, professional, and utility executives who are or want to be an effective part in determining the future of their communities

Local and state chamber personnel responsible for organizing, improving, or expanding a community development program

State, county, municipal, and school officials

Officers and committeemen of active associations interested in overall community development

Students of business, local government and community development

REGISTRATION:

Advance registrations are requested—to be received not later than April 1.

Registration fee pays for all materials needed for all sessions including workbook, kit of publications, and luncheon.

The Registration Desk will open at 8:00 a.m.—55 minutes before the Seminar begins.

THE METROPOLITAN PLANNING PROCESS IN ITS SECOND DECADE

By
Glenn E. Bennett
Executive Director
Atlanta Region Metropolitan Planning Commission

The Atlanta Region Metropolitan Planning Commission is the oldest area planning commission in the State of Georgia, and many of us believe it is the oldest public area planning agency of its kind in the United States. It was organized and staffed in 1948 after a state enabling act of 1947 made it possible for the Counties of Fulton and DeKalb to join with the City of Atlanta to study growth problems involving such subjects as land use and transportation in the several square miles around the Capital City of the State.

By 1959 the Atlanta Standard Metropolitan Statistical Area included the additional counties of Cobb, Clayton, and Gwinnett, and a new enabling act was passed in 1960 (Ga. Law #847) to expand the planning district to include the 1,724 square mile area of the five counties. Since 1960 we have had good support, more to work with, and an expanded planning program aimed at giving sensible guidance to metropolitan growth. Before long, as urban influence spreads, other counties will be added.

In this second decade of metropolitan planning the emphasis is on the planning process rather than on individual plans, reports, and studies, essential as these admittedly are. Day to day service to local governments must come first. The metropolitan district has become in many ways a common denominator for most of the local planning within it. It is becoming clear that coordination of planning efforts of various localities and jurisdictions is a key to the usefulness of the metropolitan planning

process. Planning is an established governmental function.

This involves research, data collecting, its analysis, and its use in the development and determination of goals or long-range plans. The Atlanta Region Metropolitan Planning Commission collects information about people, jobs, housing, retail sales, vehicles, and much more, by census tracts and travel zones located within the large five-county planning district. This tells us something about where to build roads, lay sewers, erect schools, locate parks, and put in shopping centers and industrial parks. It provides a basis for decisions on land use and public improvements.

Our district's population is growing at a rate of something over 3% per year. By 1983 the present million and a hundred fifty thousand will become two million, we believe. It seems safe to say that by the end of the century we'll have three million or more. We'll need urban services to match the population if we are to maintain a healthy economy and continue as the economic capital of the Southeast. To provide these services and meet the responsibilities will not be easy for any of our governments.

Area planning should be the expression of the collective purpose of people who live and work in the region. More and more we are concerned with getting the process of planning closer to decision-making. Both public decision-makers and private decision-makers are now gradually becoming aware of the significance of the metropolitan area as a community. It is a community of governments; it is a community of commerce and industry. Not many business firms of any size can ignore their neighbors when it comes to forward thinking. Not many governments can try for long to "go it alone" in a metropolitan area like Greater Atlanta. The healthy and sometimes noisy rivalry or competition among our communities belies the strong existing interdependence that

nearly all readily recognize.

The Atlanta Region Metropolitan Planning Commission is a common denominator; it is helping formulate collective purposes; and it is furthering the "community spirit" in the metropolitan area which it serves.

From local government contributions based on population and with some federal and state planning assistance, this Commission is able to give its people a sizable regional planning program at a very low cost per capita, about thirteen cents. Technical assistance contracts provide certain local communities with special services in addition to the regional program, which is the main object never to be lost sight of.

In 1930 only 16 per cent of Georgia's population lived in the five-county Atlanta Region. Now more than a fourth of the State's population is here, and before the end of the century it is likely to reach forty per cent. With urban growth comes urban problems and high on the list of them is transportation.

Much of the Commission's work program for years has been devoted to transportation study. The expressway network, the major thoroughfares, and all highways and byways are under consideration almost constantly as they relate to land use and urban development. Much of the present highway construction program was once nothing more than lines on a regional plan map in our office.

Now there is a rapid transit system on the plan map. This perhaps is the Commission's most glamorous project and certainly one that has brought to it much attention from people all over the State. Referendums have been held on constitutional amendments and the State government has been involved. The aim is, of course, to provide a balanced transportation system for the

metropolitan community. Transit for a city with Atlanta's size and potential is a necessity; it is only a matter of time until it will become a reality, and sleek, electric trains will zoom into and out of the Central City at high speeds, helping to keep the whole complicated economy of the region working efficiently.

Transportation planning in 1965 is becoming very sophisticated; it is concerned with procedures and research geared to a computerized method of determining future traffic loads and patterns. One staff member is a transportation coordinator for the metropolitan area; a transportation committee is being set up which will bring together representatives from local governments and the State Highway Department; and agreements among local governments, the Planning Commission, and the Highway Department have been signed to assure a continuing, comprehensive, and coordinated planning program. The Federal Highway Act of 1962 gave great impetus to area-wide transportation planning which already had a good start in the Atlanta region. The Commission is determined to organize the program for Greater Atlanta so no question can be raised as to its qualification for continued federal aid to highway construction. The deadline is July, 1965.

Regional open spaces, parks, and nature preserves have been planned and our 1964 major publication will serve as a good start for a statewide parks plan, a requirement for an amazing amount of federal aid under several new laws. Marginal agricultural land is being studied. Water and sewer services for future population have received attention. Flood plains throughout the district are under review.

A regional airport plan for 1980 is in the works, and will be completed in 1966; housing and building codes are being surveyed with the hope that they can eventually be standardized for the whole area; and the development plan for land use will be revised and brought up to date in 1965.

A good start has been made in the formation of a Metropolitan Atlanta Council of Local Governments, which is a voluntary organization to promote teamwork, harmonious action, and a strong community of independent governments. A community of independent governments can act and can implement regional plans.

I am enthusiastic over the prospects for good progress in area development all over the State of Georgia. The various planning and development commissions can do much for the future prosperity of our State. I look upon the money spent on planning and area development as seed money which will produce benefits for the people far in excess of the initial investment.

The metropolitan planning process in its second decade is making the prospects of tomorrow the challenges of today.

Thomas Roberts Planning Director

ATLANTA'S HOUSING AND SLUM CLEARANCE CODE

PROVIDING MINIMUM STANDARDS FOR DWELLING UNITS, ENVIRONMENTAL IMPROVEMENT OF NEIGHBORHOODS AND FOR SLUM CLEARANCE

WHAT IT MEANS TO YOU—

This Ordinance revises the Housing Code of the City of Atlanta, adopted January 6, 1958, effective dates of which still apply to this Ordinance. It also includes essential provisions of the Slum Clearance Ordinance, adopted August 1, 1949, which it replaces.

This Law was enacted by the Board of Aldermen on June 15, 1959, and sets up MINIMUM STANDARDS for every dwelling unit and for ENVIRONMENTAL IMPROVEMENT of other places in the City of Atlanta. To protect your health and safety it tells you what your house should contain in the way of equipment, facilities, space, sanitation, and many other features.

The Housing Code also tells you which of these standards are the responsibility of the landlord or owner, and which are the responsibility of the tenant or occupant.

Your house will be inspected by thoroughly trained Housing Inspectors to see if it meets these new standards. You will know, therefore, what your house must include to meet the MINIMUM requirements of the new housing regulations; and what duties are expected of you as landlord, tenant or owner-occupant.

Here, briefly, are the main points in the Housing Code. This is only a digest, not the complete and official Code itself. Use it as a check list to see if your house and/or premises meet these MINIMUM requirements of the new Law.

While every effort has been made to insure that this pamphlet conforms to the Code and the regulations, the City cannot guarantee its complete accuracy and/or adequacy. In the event of any conflict between this pamphlet and the Code or related regulations, the latter, of course, govern.

If you have any doubts or questions, please contact the Atlanta Housing Code Chief Inspector, phone JAckson 2-4463, Extension 259, or come to Room 203-A, City Hall. He will be happy to be of service to you.

FOR BETTER LIVING IN ATLANTA

CONSERVE AND IMPROVE NOW .... AVOID CLEARANCE AND REBUILDING LATER

UNDER THIS CODE, EVERY

1. IN YOUR BATHROOM

A flush toilet, a bathtub or shower, and a wash basin with hot and cold running water, in good working condition, properly connected to a water and sewer system or a septic tank.
These facilities must be in rooms which afford privacy to persons within such rooms.
The occupants of not more than two dwelling units may share a single bathroom if neither of the dwelling units contains more than three rooms; provided that, for the purpose of this sub-section, a kitchen or an efficiency kitchen with not more than 70 sq. ft. of floor area shall not be counted as a room and that the habitable area of each of such dwelling units shall equal not more than 300 sq. ft. of floor area. All such facilities shall be so located as to be accessible to both units at all times.

2. IN YOUR KITCHEN

A kitchen sink with taps connected to both hot and cold running water. A floor that is reasonably impervious to water and is kept in a clean and sanitary condition.

3. YOUR WINDOWS

Each room must contain at least one window or skylight, equal to 10% of the floor area, which can easily be opened to at least 50% of the minimum window area size, unless such rooms are air-conditioned or mechanically ventilated and adequately lighted as approved by the enforcement officer.

4. ELECTRICITY

All dwelling units within 300 ft. of a power line must have electricity and two separate electric wall outlets or one wall outlet and one ceiling-type light fixture in each habitable room. A ceiling or wall-type light fixture in each bath, laundry or furnace room and public hall.

5. HEATING

Every dwelling unit must be equipped with heating facilities capable of safely and adequately heating (70° F. 3 ft. above the floor in ordinary winter conditions) two-thirds of the habitable rooms and each bathroom or water closet compartment located therein. All chimneys and flue liners must be kept in good repair (such as raking joints, repointing, etc.).

6. PROTECTION FROM FIRE

Every dwelling unit shall have safe, unobstructed MEANS OF EGRESS leading to safe and open space at ground level, as required by the laws of the City of Atlanta or of this State. All areas must be kept free of all combustible rubbish, junk or waste.

7. MINIMUM SPACE, USE AND LOCATION REQUIREMENTS

(Sq. ft. is measured by multiplying the length of a room by the width.)
Habitable dwelling units, if one room only, must contain at least:
120 sq. ft. of floor space for the first one or two occupants;
70 sq. ft. of additional floor space for each additional occupant, for units consisting of more than one room. The floor space to be calculated on the basis of the total habitable room area, excluding toilets, closets and kitchens or kitchenettes and any room area that has a ceiling height of less than 6 ft.

Responsibilities of Owne

1. *IF YOU OWN YOUR OWN HOUSE, YOU ARE EXPECTED TO:*

Keep your house, yard and premises clean, sanitary and free from accumulation of weeds, litter, trash and debris.

Provide adequately covered garbage cans to dispose of or store all garbage, waste, etc.

Exterminate rats, insects, and other pests.

2. *IF YOU RENT YOUR HOUSE, OR APARTMENT, YOU ARE EXPECTED TO:*

Keep your share of the property, including premises, clean, sanitary and free from accumulations of weeds, litter, trash and debris.
Protect and not wilfully or carelessly damage the property.
Provide adequate, covered garbage cans to dispose of or store all garbage, waste, etc, in your own dwelling place.
Exterminate rats, insects, and other pests found in your rooms.

3. *IF YOU ARE A LANDLORD, YOU ARE EXPECTED TO:*

Keep the public parts of the house, yard and premises clean and free from accumulation of weeds, litter, trash and debris.

DWELLING MUST HAVE:

For new construction, the minimum requirements are:
150 sq. ft. and
80 sq. ft. respectively.

In every dwelling unit of two or more rooms, every ROOM occupied for sleeping purposes shall contain at least:
70 sq. ft. of floor space, and every room occupied for sleeping purposes by more than one occupant shall contain at least:
50 sq. ft. of floor space for each occupant thereof.

The floor area of any room or part thereof with a ceiling height of six (6) ft., or less, shall not be counted for the purpose of determining the maximum permissible occupancy thereof.

8. CELLARS AND BASEMENTS

No cellar shall be used as a habitable room.

No basement shall be used as a habitable room or dwelling unit unless:
(a) The floor and walls are impervious to leakage of underground and surface runoff water and are adequately insulated against dampness.
(b) The total of window area in each room shall equal to at least the minimum window area size as required in subsection 9.1 of this Ordinance.
(c) More than half of its clear floor-to-ceiling height is above the average grade of the adjoining ground.

9. SAFETY MEASURES & SANITATION (Dwelling Units, Premises and other places)

Foundations, outside walls, windows, roofs, and exterior doors must be:
Weathertight
Waterproof
Rodent-proof
Exposed wooden surfaces, impervious to moisture and elements by a suitable protective coating
In sound condition and good repair

Inside walls, ceilings and floors must be:
Rodent-proof
In safe condition and good repair
Clean and sanitary
Plumbing fixtures must be properly installed and maintained in accordance with the City's Plumbing Code.
All gutters and downspouts must be kept in good repair.
All accessory buildings and/or fences must be kept in good repair OR demolished and all debris resulting therefrom removed from premises.
All doors and windows that open directly to out-door space, must have removable screens, in good repair.
Premises must be kept free from accumulation of weeds, litter, trash, and debris.

10. NUISANCES AND ENVIRONMENT

Any building, structure, enclosure, place or premise, which, because of its condition, is unsafe, insanitary or dangerous to the health, morals, safety or general welfare of the people of the City, comes under the NUISANCE concept of this Code and must be remedied in interest of ENVIRONMENTAL IMPROVEMENT.

r, Landlords & Tenants

Maintain clean and sanitary common storage and disposal facilities.
Exterminate rats, insects, and other pests in shared parts of the house, in rental units where two or more are affected, and in the yard and general premises, where division of responsibilities cannot be fixed.
Supply adequate heat or heating facilities.
See that no services, equipment or facilities required by this Code are shut off, discontinued or removed, except for repairs, emergencies, etc.
Tell all tenants in writing how many people may live in any rental unit under the provisions of this Code.
Maintain all dwelling units which are to be RENTED OUT, in a clean, sanitary condition, FIT FOR HUMAN OCCUPANCY.

4. *FOR EVERYONE*

ALL ZONING LAWS MUST BE OBSERVED, and any VIOLATIONS MUST BE CORRECTED.
No contract between tenant and landlord, or owner and occupant with regard to compliance with this Housing Code can relieve any party of his DIRECT RESPONSIBILITY under this Code.

Responsibilities of the City under the Code

1. INSPECTIONS

The Housing Code Inspectors will inspect dwellings and dwelling units between 9:30 A.M. and 4:00 P.M. on weekdays.
Inspectors must properly identify themselves.
Contact the Chief Inspector for SPECIAL INSPECTIONS.

2. NOTICES

Written notices of violations of this Code will be sent or delivered to the owner, landlord or agent whose dwelling or property violates the provisions of the Code. These notices will specify the violations, and give a reasonable time within which to correct them.
They will also recommend remedial action.

3. ENFORCEMENT

Upon the failure of any person to correct the violations specified, within a reasonable time, the Enforcement Officer is required to summons the offender before the Municipal Court to answer the charge.

4. PENALTIES

Findings of the Court as to violations of the Code are punishable by fines of not less than $5.00 nor more than $500.00, and/or imprisonment for not less than two nor more than 100 days, or both.

SUGGESTIONS

1. PAINTING is the best conservation tool, and is the most economical insurance against deterioration of buildings and resulting blight. No City permit is required in order to paint.

2. A City permit IS REQUIRED for most building, plumbing and electrical work. See that your contractor has the required permits BEFORE he starts to work on your property.

3. Make a written contract with your contractor, giving the sizes, quality of materials to be used, number of coats and grade of paint, etc. Keep a copy of this contract.

4. If your improvements are to be financed, consult a local lending agency. They will be able to advise you regarding conventional financing, Title One F.H.A. loans, Section 221 F.H.A. loans, and Section 220 F.H.A. loans.

5. If the recipient of this pamphlet is a tenant, please read it and turn it over to the owner or agent of the property.

PRESENTATION BEFORE THE

ADVISORY COMMITTEE OF THE

U.S. CIVIL RIGHTS COMMISSION

April 8, 1967

Atlanta, Georgia

"URBAN CRISIS AND THE GHETTO SYSTEM"

Between January 1, 1956 and July 1, 1966, 21,000 families representing 67,000 people were forced to move due to urban renewal, expressway construction, code enforcement, over-income eviction from public housing and other governmental actions. Urban renewal and expressway construction accounted for about 60 percent of the total displacement.

The majority of the families and individuals affected by this change were Negro. Approximately 50 percent of these people had incomes under $3,000 a year. These people have to be rehoused. Sound housing in stable neighborhoods must be provided and at prices they can afford.

The Mayor says "Atlanta needs 16,800 housing units over the next five years to meet our relocation needs." He also stated that, "in order to solve the urgent problem we must have a crash low income housing program to provide 4,900 units per year for the next two years or a total of 9,800 housing units by December, 1968. For the last

NAACP FOUNDED 1909 over 50 years

three years of our program we must have 2,400 units per year in order to reach our total goal of 16,800 units within a five-year period."

We need to focus our discussion on the following:

1. An examination of procedures and limitations of Federal, state and local housing programs and related activities affecting racial patterns of residence, including: rent supplement, leasing, turnkey, 221 (d) (3) programs; planning site selection, relocation standards, zoning and other conditions in suburbia which block lower-income units.

2. Being familiar with housing operations and to be adept at mobilizing pressure to reverse the use of public resources to "build in" segregation.

3. Suggest the expansion and location of low-income units where they will encourage integration.

There is some danger that this "relocation program" may be used to rebuild the ghettos as ghettos. Congestion prevents revitalization. The housing market must be fully open, with an ample supply of lower-cost housing available throughout the city as well as the suburbs.

When the rebuilding process takes place, there must be assistance provided to encourage outward movement among those who have heretofore been denied access to the general housing market.

We all must recognize that the ghetto system itself is the root-evil which inevitably denies basic freedoms and results in physical, social and psychological damage to the entire society.

The pattern was established and continued through the past 25 years or more--where all available housing for Negroes--publicly-aided or not--has been done either in the ghetto or adjacent to it. Practically all recently announced large-scale slum rehabilitation or "model city" programs are aimed at refurbishing the ghetto. The ghetto and congestion are synomymous.

Dispersing is essential, if eradication of the system is to be a reality.

Fair and equal housing must be made available to every citizens in every community throughout the land, including Atlanta.

We must insist that the Federal and state governments have a responsibility to insure that local housing authorities and urban renewal agencies stop using public funds to entrench and extend segregation.

We refer specifically to the urgent pressing problems relative to public housing location and our efforts to settle some of these problems with the Mayor, the Atlanta Housing Authority and the Housing Resources Committee.

Segregation in public housing is a glaring reality in Atlanta. It is evident by separate application offices. One is located in the white community and the other located in the Negro community.

Further segregation is evident in the racial occupancy of the existing Federal housing units.

"EXHIBIT A"

Housing Projects	No. Whites	No. Negroes	No. Others	Total Units
Palmer House	250	0	0	250
John O. Childs	237	13	0	250
Techwood	604	0	Chinese-2 Korean-1	604
Harris	380	124	0	510
Capitol	715	80	Japanese-1	
Clark Howell	628	0	0	630
Antoine Graves	1	209	0	210

Atlanta now has 9,404 public housing units (Completed and under construction). Of this number, the geographic location is as follows:

Northwest -	4,102	(43.62%)
Southwest -	3,681	(39.142%)
Southeast -	1,621	(17.24%)
Northeast -		-----
	9,404	100%

This reveals that nearly 83 percent of all of the public housing is located on the westside of Atlanta while there are none in existence in the Northeast section. This example of racial segregation is indeed appalling.

There is a new project under consideration in the Skipper Drive-Harwell Road-Bankhead Avenue area which will further saturate the already

saturated area. In addition to this, there are other project sites under consideration within the same geographical area.

Atlanta cannot continue perpetuating the existence of ghettos. Congestion prevents revitalization. The housing market must be fully open; with an ample supply of low-cost housing available throughout the city.

Negro citizens are impatient with the slow-to-respond attitude of public officials. It is ironic that the reaction to social upheaval and turbulence is "Why?"

We are submitting a copy of the Resolution which was adopted by our city-wide Housing Conference. It embraces points of remedy, which we feel are most desirable in Atlanta.

As a result of our concern over these serious problems, we have requested Mr. Weaver, Secretary of Housing and Urban Development, to withhold all funds to public housing and Urban Renewal Programs until all discriminatory practices are eliminated and a balanced dispersion of public housing units are accomplished. Further, we are requesting the Secretary to withhold funds of the Model Cities Program until Atlanta officially adopts an "open occupancy" ordinance.

We consider city-wide planning important in the dissolution of many problems in housing, school sites and the prevention of "sophisticated ghettos." Adequate planning should and must include citizens participation by law, and voter approval of any proposed plans.

Therefore, we are demanding ordinances which will structure the kind of planning that will meet the approval of the majority of citizens in this city.

A Stepladder to Interracial Understanding?

These two college students collaborate summer-work camp in Roxbury. At left is J. their paint brushes in a unique Nagarajan, a Harvard student from Malaysia. His cohort is Mike Whitcraft, a college student.

Interracial Corps Tidies Roxbury Area

Written for The Christian Science Monitor

An interracial peace corps-type project is drawing to a close in Boston's Roxbury section at a time when riots and near-riots have made racial news elsewhere in the nation.

The project is called the Roxbury Work and Study Project. The tangible results will be open for inspection to Boston residents and friends on Friday evening, Aug. 21.

For eight weeks, approximately 20 college students and seven high schoolers have joined forces with homeowners and residents in a paint-up, clean-up work camp located in the midst of Boston's Washington Park urban-renewal area. Working side by side with the local residents who are primarily Negro, they have painted the outsides of houses and garages, built fences and porches, cleaned vacant lots, and engaged in landscape work.

Planning Undertaken

Long before the campers arrived on the scene, the project had yet to be planned and organized. These steps were taken by the host advisory committee consisting of representatives from churches, urban-renewal committees, student and service organizations, the Boston Redevelopment Authority, and the Greater Boston Real Estate Board.

A major concern, of course, was financing the project. Needed paint for each house was purchased by the homeowner at a substantial discount given by a commercial paint dealer. Ladders were donated to Roxbury's Freedom House for the project's use.

The students worked without pay. There remained their room and board for which the Boston Real Estate Board provided most of the funds. The high-school students and their leader have been living at the South End Settlement House; the college group lived in Norfolk House at 14 John Eliot Square, just a few minutes away from the work area.

Campers Oriented

Orientation of the campers began with their arrival on June 26.

In an early study session, the project log records, "We were given a detailed account, with diagrams and maps, of the renewal project in Boston, centering on the attempts being made in the Roxbury and especially Washington Park area. Next was a walking tour through the Dale-Laurel-Catawba Streets area in which we are to work."

There were several reasons for selection of this particular area. Foremost among them the fact that the residents themselves were receptive and showed a high degree of interest in participating in a self-help program. There is a high incidence of home ownership and owners had already organized such groups as the Dale Area Improvement Association. Nearby Freedom House, moreover, was prepared to sponsor the summer Work Camp.

Contagious Improvement

In addition, the area is in the midst of considerable rehabilitation and redevelopment; this made it attractive to the Boston Redevelopment Authority which wanted to produce tangible evidence that modest, private rehabilitation can successfully complement city-wide efforts to improve a particular neighborhood.

The redevelopment agency wanted to show that improvement can be just as contagious as blight.

The Work Campers were recruited with the help of the American Friends Service Committee and the nonsectarian Unitarian-Universalist Service Committee.

Overseas Students

The campers represent different countries, creeds, and races. Some came from the Boston metropolitan area. One young man came from Paris, specifically for the project and will return to college in France shortly. Other campers from overseas are in this country attending school. These included students from Haiti, Malaysia, and Somalia.

The campers' work week was Tuesday through Saturday; the daily hours of the college group were arranged to extend until 7:00 p.m. Such a schedule enabled the residents to participate themselves in this pilot demonstration of self-help housing rehabilitation.

Project officials emphasized that these students are activists who have proved in a graphic

way that idealistic attitudes can be realistically applied.

The scene of Catawba Street was one of typical activity. Several houses were being worked on. A new porch was being painted; another dilapidated one was being torn down. A third house was being painted.

Children Join In

One girl approached our area looking for more brown paint. She had a smudge of brown paint on her nose. A young Negro lad, named Jimmy began to stride along with us. The children as well as adults in the neighborhood helped the campers and Jimmy frequently cleaned paint brushes and ran errands.

The harmonious cooperation of the whites and nonwhites no longer seemed significant to the campers. Most notable were the willingness and good humor which were consistently present among the workers—while working, while talking with neighbors, while answering over and over again the questions of reporters and interviewers. During their "off" hours, the campers had volunteered to tutor and help with voter registration in the Roxbury area.

Handiwork on Display

Homeowners and campers will have an opportunity to enjoy the fruits of their labor when they gather together for the last time Friday evening.

The fixed-up back yards will be the scene of progressive supper cookouts after which friends and visitors will be welcome to view what has been accomplished. The homeowners and campers will then show visiting Bostonians around. City dignitaries will be present.

The streets will be blocked off for square dancing with perhaps an informal variety show presented by the campers.

Asked whether or not they feel the project has been successful, campers, advisers, and supervisors answer a unanimous yes, adding their fervent hope that more citizens, organizations, and other local businesses will continue to encourage and support similar projects.

TECHNICAL AND PARA-TECHNICAL ELEMENTS IN THE SELECTION, DELINEATION AND PLANNING OF RESIDENTIAL REHABILITATION AREAS

Thomas H. Jenkins
Walter L. Smart
Boston Redevelopment Authority

Minneapolis Rehabilitation Institute
University of Minnesota
July 21, 1965

INTRODUCTION

We do not intend to discuss this subject strictly "according to the book." That approach would not adequately cover our experience in the Washington Park Urban Renewal Area of Boston's Roxbury section. Nor would it cover our reflection on that experience to date.

It is commonplace today to recognize and acknowledge that residential rehabilitation is not merely a physical and financial proposition, but that it is also a sociological, educational, economic, and political matter. And it is generally agreed that in spite of its historical age, rehabilitation is a relatively unfamiliar and yet unmastered animal -- especially for urban renewal purposes. In practice, however, awareness of these ideas is not always so evident.

Therefore, we would like to be explicit about two things: 1) by the nature of the job, physical improvement, improved liveability and economic longevity of property are the technical goals of rehabilitation, of planning, development, mortgage insurance, and related agencies. But the tools for approaching and achieving these goals are not only technical but psychological, social and political as well. 2) We believe that rehabilitation is still an uncharted sea, that it certainly is nowhere near a science. In Washington Park we have not solved all the problems or even enough of them, to our satisfaction. But we have made some progress -- perhaps more progress than in most places. We have done and learned some conventional and unconventional things, and wish to share some of the fruits of our experience with you. In this light, we shall discuss techniques, criteria and principles, but also ideas, problems and questions. We shall not attempts a cookbook of "how-to" or simply a recording of "how we did it."

There is plenty of need and room for ideas, suggestions, off-beat approaches and lessons from everywhere. In the case of choosing and outlining a rehab area and designing a program for it, it may be said indeed that the largest room in the world is the room for improvement.

Although we will draw a great deal on our Washington Park

and Boston experience, we feel that much of what we say applies to other places too. Mr. Smart and I will discuss the selection, delineation and planning of rehab areas, in that order. Under each of these topics occasionally, we shall shift voices which the logic of our subject, and your attention, require. The nature of our Washington Park renewal program is such that most of the time we must refer to the rehab area or areas in relation to the urban renewal area. The urban renewal plan calls for a predominantly rehabilitation program with limited redevelopment for a 500 acre area.

SELECTION

Mr. Smart will discuss the selection of rehab areas, or sub-areas, within Washington Park. But first I would like to list what, judging from our experience, seem to be criteria worth considering in selecting an urban renewal area which stresses rehabilitation of existing buildings. They are: building conditions, community readiness, political leadership and response, economic feasibility, new construction opportunities, size, existing facilities (only a minor part), and, if it is the first renewal-rehab area in the locality or the first in a section of the city, it should be a "strong anchor" type of area. (Some of these criteria apply

Rehab area criteria

also to selection of rehab sub-areas within the renewal project.)

The building conditions in the area should, of course, be such that a large percentage of the structures and dwelling units are rehabilitable, i.e., classified as either satisfactory, in need of minor repair or extensive repair (but not major repair). In Washington Park, 76% of the buildings and 80% of the dwelling units were judged rehabilitable. But these physical conditions will mean nothing until and unless the community is ready to accept a renewal and rehabilitation plan, and thereby pledge itself to invest in property improvement. And when it is ready, the political leadership, usually the Mayor, must be willing to respond to the readiness if the area is to be a viable one. This was the case with Washington Park in Boston, Hyde Park in Chicago, and Morton in Philadelphia. This process of initiation and response may be reversed in the case of some areas, with the political leadership seeking to stimulate action. This was the case with Charlestown in Boston and apparently the case with Woodlawn and the Near West Side in Chicago. The Mayor's adoption of an area for a program should include among other things, a commitment to

provide and allocate public improvements and municipal housekeeping services, indispensable companions to the rehabilitation effort.

Generally speaking, the area chosen should be one in which the property not to be acquired is judged to be economically feasible to rehabilitate. Whenever possible, a feasibility study should be made. Rapkin did a study of Washington Park but this is not always the case, as Mr. Smart will point out. Although care must be taken to avoid family displacement through rehab costs, feasibility should be weighed with other criteria. Where there is a choice, if the rehab area is a small one, hopefully it would be adjacent to either new community facilities or adequate improved existing ones.

Finally, if it is to be the first rehabilitation or renewal area in the city or in a section of the city, or if it's the first rehab-area within an urban renewal project, the area should be what we call the "strong anchor" type. This is an area in which rehabilitation seems more certain to succeed because by comparison with other areas, it possesses a highly favorable combination of building conditions, community readiness,

political or local community leadership support, et cetera. This "stronger" type of area contrasts with what might be called the "weaker" and "tougher" type— "weaker" meaning that it has less in the way of community readiness, municipal support, and sophistication about its problems, and "tougher" meaning it has poorer building conditions, a higher proportion of welfare cases and other social problems, combined with questions and hesitations regarding renewal. We might think of degrees and ranges between "strong" on the one hand, and "weak" and "tough" on the other.

Theoretically, the strategic advantages of selecting a "strong anchor" as a 'first' area are: 1) to help insure the ultimate success of rehab in that area; 2) to be able to execute a program more expeditiously there than in a "tougher" area and 3) thereby to more easily inspire confidence in a predominantly rehab program both in other "strong" areas and in "tougher" areas. Also, other things being equal, success in the "strong anchor" area should make it easier later to develop, get approval of and carry out a rehabilitation plan in a "tougher" area, due to diminished doubts, fears and resistance. Finally, staff tools honed in the "strong" area may be more

effective in the "tougher" area than if the "tougher" area had been selected first. I will end my part of

MAP #1 this topic with an illustration. The earliest version of the Washington Park Project area was bounded by Dudley, Warren, Townsend and Washington Streets. At the time, it was voted to extend and enlarge the renewal

MAP #2 rehab area there were at least three theoretical alternatives: 1) north to near Massachusetts Avenue, east to Blue Hill Avenue and Magazine Street, and west to the New Haven railroad tracks, with Townsend still the

MAP #3 southern boundary. 2) Northeast to Blue Hill Avenue, Yedman-Norfolk Streets, northwest to Roxbury Street, and west to Columbus Avenue, with Townsend still the sourthern

MAP #4 boundary. 3) South to Columbus Avenue and Seaver Streets, with Warren and Washington Streets being extended south

MAP #2 as western and eastern boundaries, respectively. There certainly were other considerations that entered the decision. But let's consider it from the "strong anchor" angle. The first choice would have included the proposed route of the Inner Belt highway, an area of a large population exodus to the south, resulting in a weak community structure, and where the conditions were so poor that a recently proposed treatment calls for 88

MAP #3 per cent clearance in its northern sector. In the second

choice, the building conditions in the areas to the east and west were not as good as those in the section south of Townsend Street. And no community desire was in evidence, nor any strong leadership articulating a strong desire for improvement programs. (Incidentally, both these choices would have left Townsend Street on the south, which is a less definitive boundary than

MAP #4 Seaver, fronting on Franklin Park.) The third choice was selected. It included good building conditions, among the best in Roxbury (with some homes worth $25,000 and $30,000), a higher proportion of rehabilitable property, a community request to the Mayor for renewal action, strong community support, articulate citizens, including the man who is now the State's attorney general, and Freedom House, a forceful community institution which allied itself with the renewal effort. Also, and this is not critical, it provided a middle class balance with the predominantly working class population north of Townsend. This fact, combined with the strong desire for renewal, increased the prospect of including in the program people who seemed likely to set the example of investing in property improvement. And now Mr. Smart will deal with selection of rehab sub-areas within the renewal project.

SMART

We should first of all recall the fact that the Washington Park urban renewal project area as approved amounts to 500 acres. This is important. The large size increased the prospect of a successful rehabilitation program. It provided a wide range of housing conditions, permitting rehab activities plus new housing and new supporting facilities. This in turn should eventually enhance the prospects of Washington Park becoming a better balanced community with more self identification than might be the case with a smaller area. It would not be healthy for the community to be too self-contained, however, for among other things, this might lead to a parochial attitude toward the city and its problems, not to mention an unfortunate attitude toward its neighbors. But the selection of a large area in which to operate does tend to be helpful in supporting rehabilitation work. Given the renewal project area, the first thing to consider in selecting the rehab areas is building condition. In Washington Park, our conditions survey gave us the information that largely determine our land acquisition proposals. This of course left us with the properties not to be acquired which in turn became the universe within which our rehab sub-areas were located.

In the early part of the program, except for what we called "early rehab" activity, these rehab sub-areas were not clearly defined. Selection therefore became a matter of taking direct action in some 'first' area or areas and of setting priorities among the areas. The one "early rehab" area was set up in advance of project execution. Its 'selection' was determined actually by FHA -- that is, arriving at the territory in which FHA was willing to insure mortgages in advance

MAP #5 of project execution. The only area FHA would insure at that time is the one bounded by Crawford Street, Elm Hill Avenue, Seaver Street, and Humboldt Avenue.

After project execution, and the beginning experience of spreading our field rehab staff too thin, our approach became one of selecting "priority" areas. Everything else was considered "opportunity" work, that is, instances in which property owners came or called to our rehab site office and asked for rehab assistance. Priority areas were the ones in which we proposed to carry on full-pledged rehab work in a systematic manner, starting in one or two areas then moving on to others. The first two areas illustrate from experience, two of the three principle bases of selection. Selection

of the first, as I have said, was based on FHA pre-execution commitment. The second -- the Dale Street area -- was based on an explicit request and strong community desire in an area that boasts the oldest citizen improvement group in the renewal project area. The third basis had to do with projecting rehab priority areas in accordance with scheduling of redevelopment work.'

The choosing of priority rehab areas also illustrates, in a way, the "strong anchor" approach to selection.

MAP #6 Whether it has been intentional or defacto is a matter for debate. But the fact is that of the thirteen rehab-areas eventually set up in Washington Park, all of the priority areas selected for systematic work to date are located in the Humboldt-to-Elm Hill Avenue and Warren Street corridor, south of Townsend. This is perhaps the strongest section in the renewal area. Moreover, they are contiguous. They are areas 1, 7, 8, and 11, reading from south to north.

Before closing this topic, one note is worth mentioning. It has been mentioned that economic feasibility studies help in determining rehab areas. Places like our project

and the once-proposed Houghton area of Cambridge have had the benefit of feasibility studies. But this is not always the case. Sometimes in the speed and flush of activities to get a project off the ground, there is no time to determine economic feasibility. Rather it may be redevelopment opportunities, with some attention to building conditions, that may determine which areas will be selected for rehabilitation work.

DELINEATION

JENKINS We would like now to pass on to the question of delineating rehabilitation areas. We would like to cover the delineation of the thirteen Washington Park sub-areas, the role of man-made physical boundaries, and the role of community attitudes. As in the case of selection, I would like first to mention the predominantly rehab Washington Park urban renewal area as the framework for rehab. Its delineation is the cage within which the rehab sub-areas Mr. Smart will describe were shaped.

MAP # Recapitulating the project boundaries described to you yesterday, they are: Dudley and Washington Streets, Columbus Avenue, Seaver Street, Blue Hill Avenue and Warren Street. These are all major transportation routes.

The most clear-cut boundary is Franklin Park below Seaver Street. These form a logical protective wall around which major city traffic passes and within which rehab areas can be made more desirable and safer.

In the Washington Park case, there has been a second protective wall around rehab areas, although this is not necessarily a general principal that can or should

MAP # be followed. Redevelopment sites occupy more than half the linear mileage of the major streets that form the project boundaries. Most of these redevelopment sites are housing sites where housing was planned to be faced in to the project community, but others are sites for

WALL MAP certain institutions and community facilities. The Hyde Park-Kenwood urban renewal area -- an 800 acre area -- shows a similar pattern of a double wall of major man-made boundaries and redevelopment areas framing the rehab areas. If this tendency toward self-containment is overdone, it could impair design, physical and social relations with surrounding communities. In the Washington Park case, this tendency is offset somewhat by inter-area or by regional-type facilities located on all four sides of the renewal project area.

And now Mr. Smart will talk about factors that were important in delineating the rehab sub-areas within Washington Park.

SMART There are both physical and social factors which determined the delineation of the thirteen staging areas for rehabilitation.

A. Physical

Most of the thirteen staging areas have new construction around their borders. Whereas the designation of sites for new constructions was not done in order to develope rehabilitation staging areas, nevertheless, the subsequent designation of the rehab areas conformed in large part to add strength and vitality to the sub-areas of the Washington Park Project Area.

We anticipate that by demolishing homes infeasible of rehabilitation, the removing of eyesores, and replacing them with new construction of good design, will give both encouragement and incentive to property owners to cooperate voluntarily in the renewal program by investing and rehabilitating.

B. Social

The major factors in determining the thirteen sub-areas for rehab were by far social in nature, based on the theory that we need other forces concerned and working for neighborhood betterment and improvement. We made a decision to organize neighborhood associations within each of the thirteen areas.

Some of these areas were already organized, such as Area 11, the Dale Area Improvement Association; Area 12, Warren Neighbors Association; and Area 5, Our Neighborhood Betterment Association, etc. When area organizations were already in existence, the area boundaries conformed to the area served by the association. In other instances, new associations had to be formed and factors such as (1) size of area in which normal neighborhood relationships could be expected to be developed and (2) areas in which families had a great deal in common, particularly neighborhood problems. Each of these neighborhood associations sent representatives to the Citizens for Urban Renewal Action Committee so

that both on a project-wide basis as well as at the sub-area level, residents of the community, plus many of the large property owners, come together to discuss common problems and suggest various means for the solutions of those problems. In other words, through this continuing dialogue there is a continuing development and sharpening of a concern for a better community.

Ideally, the desire for a better community should be vested more strongly in the neighborhood than in the Redevelopment Authority.

JENKINS Community attitudes toward clearance can help determine and increase the geographical extent of rehabilitation. We are keenly aware of this in Boston where under the Mayor's leadership, we have an explicit policy of "planning with people." (You'll hear more about this later in the program.) To put it positively, some communities accept clearance more readily than others. In Boston, for example, contrast Washington Park, which accepted 25 - 30 per cent clearance, with the older and deteriorated community of Charlestown, where a minority resisted a renewal plan for over three years, the

community accepted clearance of 10 per cent, thereby increasing the stock of housing to be rehabilitated.

Some communities, which are represented lower in the power structure, are less defensible against clearance than others and therefore have a measurably smaller extent of rehabilitation than if they possessed more influence. This is illustrated in the Chicago case of the Southwest Hyde Park Neighborhood Association, a resident property owners group, compared to the more influential Southwest Hyde Park Redevelopment Corporation, as reported by Rossi and Dentler in Politics of Urban Renewal.

Some communities are not too concerned about the extent of clearance simply because the neighborhood is in physical and/or social transition or even decimation. This is the case with the lower Roxbury area in Boston, as compared with Highland Park. And some communities, because of a certain social history and existing street-and-house design, evoke sentimental attachments that often preclude clearance in a quasi-political sense, and therefore sociologically dictate rehabilitation, conditions almost not withstanding. We think of Long Wharf and Bay Village in Boston and Greenwich Village in

New York.

And this same kind of restraint against clearance, and the implications it has for rehab treatment as alternative, can stem from a strong neighborhood social solidarity and tradition, whether street-and-house-design plays a part or not. The Irish in Charlestown, Boston; the Lithuanians in Donnelly Field, Cambridge; the Polish in the Near Northwest side, Chicago; and the Jewish, Italians and other groups in Greenwich Village are instances that come to mind.

In all of these cases -- social class and ethnic identity not withstanding -- the residents are often described as having a "village" outlook and strong neighborhood identification. In any case, this form of community attitude when focused on clearance becomes a para-technical factor that helps determine the geographic extent and thus the physical shape and outline of rehab areas.

PLANNING

SMART This brings us to our last major topic -- the planning of rehabilitation areas. Mr. Jenkins will more or less list some of the elements we found to be important in

planning rehabilitation activity for our sub-areas in general and in given individual areas. Then, between us we will try to discuss more specifically basic community facilities and public improvements, unconventional ways to approach rehab in problem areas, and why it is important to anticipate unanticipated acquisition.

JENKINS The following elements entered into the planning of rehabilitation areas in Washington Park:

1. The planning and design objectives for rehabilitation set the framework, and covered: compatibility of land uses, avoidance of adverse effects of non-residential traffic generators, elimination of bad effects of non-conforming uses, the promotion of physical and architectural improvement and suitability, the structural soundness of buildings, and provision of adequate off-street parking.

2. The identification of rehab property was accomplished by means of a building conditions survey and an economic feasibility study. The identification was simply stated as all property not designated for acquistion.

3. "Planning with people," which involved many meetings, explaining and defining rehabilitation and its implications, resolving the improvement-without-increased-assessment problem, and later during execution jointly working out problems of sub-area and neighborhood planning and design.

4. Community organization, which, beginning in the early rehab stages, involved door-to-door contacts by the rehab staff, and in cooperation with Freedom House, the formation of a citizens' rehabilitation committee.

5. "Early rehab" work, which was intended to be a staff opportunity to develop and test techniques, and to learn lessons, including the use of FHA financing in advance of project execution.

6. Outlining or delineating the rehab areas.

7. Determining priority rehab areas.

8. Rehabilitation standards have been officially based on the City's Sanitation and building codes and on the zoning regulations. But from the beginning there has been the idea that through the community organization process standards can be raised above the official minimums.

9. Technical assistance was provided on the project site in order to facilitate rehabilitation.

10. The acquisition, retention, management, rehabilitation, or clearance, and disposition of property was legally provided for in the event that any property was not made to conform to the rehabilitation standards.

11. Rehabilitation demonstrations were planned to include individual buildings (such as "Pilot House," jointly with Freedom House) and block-wide groups of buildings painted and repaired on the exterior (as illustrated in our work and study work camp project).

SMART The Washington Park Plan calls for substantial public improvements, sometimes referred to as "project improvements." As we all know these improvements provide an essential support for rehabilitation as well as for new construction. They represent a forceful demonstration of the city's interest in upgrading an area.

Public improvements in our project area were planned to

include as necessary "the abandonment, provision, improvement, extension, reconstruction, construction, and installation of public buildings, open space, rights-of-way, streets and such utilities as water, sewer, police and fire communication, traffic signal, and street lighting systems."

Crucial among these improvements is the job of installing, construction and reconstructing streets and public utilities. The specific nature of this job depends upon the land use and circulation proposals of the urban renewal plan --especially as regards changes. But it depends also on the condition and adequate location of existing equipment. The condition and functioning of these streets and utilities are important to the prospect of owners investing in existing property.

Therefore the Boston Redevelopment Authority hired the services of an experienced consulting engineer to make a careful study of "the existing location, present capacity and future demand, possible use, original design anc construction, materials, current condition, age, probable remaining life, and the functioning efficiency of streets and utilities."

This inventory and sufficiency study was made by a Boston firm and it informed us as to what needs to be furnished in these matters to support the private investment to upgrade the residential property in the rehab areas.

Similarly, a well-worked-out traffic and circulation plan is needed as part of an over-all plan to rehabilitate existing property. Such a plan was developed for us by a traffic consultant, and although special emphasis was devoted to Washington Park needs, it was done in relation to a much larger area.

The key proposals as regards the rehab areas included the following:

MAP # 1. Major streets on the periphery of both the GNRP planning area and the project area are to be improved to increase their attractiveness for through trips.

MAP # 2. Through north-south trips remaining on the internal street network are to be concentrated on a minimum of high type major streets. This included the proposal that Humboldt Avenue would be the only major street running north and south through the Washington Park area.

3. Major east-west traffic flows through Roxbury are to be concentrated on a proposed new, major cross-town street, described to you yesterday, which will be regional in character.

4. Traffic safety is to be improved by removing through traffic from residential areas.

Perhaps the most important element for undergirding the rehabilitation effort is the provision of good schools. The proposed construction and location of three new public elementary schools called for in the Washington Park school plan is the result of a study of the Boston School system, by the Harvard Graduate School of Education under contract to the B. R. A. Also, a combination of proposed conversions, additions and abandonments will greatly strengthen the local school apparatus. Unlike many of the existing school sites the proposed new and improved school sites are to have generous play areas.

In addition, new, enlarged or improved parks and major and minor recreation areas, plus civic, institutional and other community facilities, round out the kind of public thrust that is needed to spark interest and maintain confidence in rehabilitation, and safeguard residential investments.

JENKINS We are learning a lesson that perhaps many others are learning to the extent they try to carry out a full-fledged rehab program. Namely, that the business-like entrepreneural profit-and-loss model is not the only concept that should be used in the job of residential

rehabilitation. While this model may be appropriate for an enterprising private contractor or even for the average development corporation, public agencies, limited divident corporations, non-profit corporations and others do not have to restrict themselves to this approach. For this approach is not effective for some of the rehabilitation problems found in inner city neighborhoods.

Wherein most properties in a given rehab area may be judged to be economically feasible, other properties may present special problems: such as the owner whose income is too low in relation to the poor condition of the building and to the consequent necessary rehab cost, or where the cost of rehab would result in family displacement due to the size of rent increases, etc.

When and if the business-like entrepreneural model fails to work, there are at least two alternatives left open: a) cutting of cost factors and b) subsidy. Free technical assistance and the student work camp projects we have been running are examples of the first choice. Low acquisition cost of property through the local redevelopment agency, rent subsidies by the local public

housing authority, plus any possible new state or federal rent subsidy programs for non-public housing low-income families are examples of the second choice.

Rehabilitation in urban renewal areas is a public purpose that in the interest of developing and preserving sound neighborhoods, that must be served whether it results in private profits or not. It has to be served in some instances even if from the market point of view there would be a dollar "loss." Or where there is neither profit or loss.

We don't claim that this is a novel idea. In fact, it is one that is likely to gain ascendency before too long. Parallel examples of such trend are the maritime industry and mass transportation in metropolitan areas. The entrepreneural and market concept had been applied to each for years. But conditions changed and it has been shown that although the antrepreneural concept was no longer valid for them, they still served indispensable, residual public purposes that could not be denied. I had occasion in 1961 to predict in a paper that metropolitan mass transportation would be federally subsidized. The country's railroad industry is rapidly moving in the

same direction. And so may rehab.

Here are the facts. 1) Our communities continue to become increasingly urban, with concentrated populations. The urban housing supply and its redistribution among income groups seem relatively inflexible. Retraining and ajustment of skills to the new technologies of business and industry are not likely to take place overnight. The War on Poverty may well take some time before a victory is achieved. Many of these persons live in urban renewal areas, and in areas that either will be or should be urban renewal areas. Even under present programs their incomes are not likely to shoot up suddenly to reach various costs of living, in some cases including rehab costs. Politically the pressure may well be that nevertheless the provision of decent housing within much of the existing urban stock (as well as utilizing new stock) is a social goal that cannot be abandoned simply because the procrustean effort to fit all of residential rehabilitation to a partly outmoded idea proves fruitless. It may mean that we'll need a more vigorous and streamlined effort by FHA in the inner city, more technical assistance, an expanded and permanent federal rent subsidy program that would cover tenants in rehabilitated property,

and other programs. In the many cases where the entrepreneural business model fits, let it be used. Where it does not fit, modify to other approaches. And if these ideas are reasonably valid, perhaps planning approaches to residential rehabilitation should start reflecting them.

A related question is the unreality of rehab demonstrations outside a planning or renewal framework, or in advance of project execution, as against the reality of rehab as part of renewal action. As a bellwether or guide to planning rehab projects (or deciding whether to undertake them), a range of rehab demonstrations and experiments have been conducted over the years. According to William Nash in his book on residential rehab, beginning in the 1930's a considerable number of these have been studies and tests of the economic feasibility of rehabilitation. While there is much to say -- and has been said -- for these efforts, there are also some criticisms that can be made.

1) They are limited, being characterized mainly by cost analysis and conventional techniques.

2) In most cases, the developer, real estate operators and investors, and sponsors are engaging in the almost

rhetorical act of merely proving to themselves that it cannot be done. As one planner put it, "If you're going to do it, get in there with all fours." Meaning -- it should be done vigorously and not overcautiously, on a large scale, not in a house buried in the far corner of nowhere, and as part of a larger program, not in isolation or in insulation.

3) One or two selected buildings in an area not in execution is operating in an unrealistic context for rehab if it is to be compared to rehab in active renewal programs. In the latter, there are the accompaniments of public improvements, technical assistance, frequently, changes in property value due to the latter two actions, the effects of new construction in the area, along with other rehab work going on simultaneously.

4) They assume market mechanisms almost exclusively, thereby excluding cost savings possible through such public technical assistance as free property surveys, work write-ups and cost estimates, free design assists, etc.

5) Finally, these demonstrations usually exclude imaginative ways of learning-by-experience approaches to rehab: e.g., "limited" rehab, varying the intensity

of rehab in a given neighborhood and between neighborhoods, and other approaches Mr. Smart will mention.

SMART I would like to say a word about the value of unorthodox approaches to residential rehabilitation. The Washington Park Urban Renewal Area is very unique in many ways: (1) it contains within its borders families with a very wide-range of earning capacities. On one end of the scale, some incomes are reported to be as high as fifteen or twenty-thousand dollars; and on the other end, we have a large number of families supported by public welfare and social security, while the median income in Roxbury is $4,631.

Many families who own property in the Washington Park Area are found at the low end of the income scale, and will obviously have some difficulty in obtaining financing for rehabilitation. In these areas, the rehabilitation objective should be the minimum standards for human habitation. Whereas, in some other sections of the project area, families are encouraged and are aided in effecting a complete remodeling job. The amount of rehabilitation or remodeling done should reflect the standards and aspirations of the families residing

within the rehab staging area.

For the families who will have difficulty in rehabilitating their property, various programs must be found to aid and assist them to meet the minimum property standards. In Washington Park, we are in our second year of utilizing a Work and Study Program. In its first year, we had twenty-eight students from all over the world for an eight-week period. These students worked in a three-block area helping families to help themselves. The emphasis was on painting the exterior of frame buildings. This year, we have one-hundred and seven students involved and again we intend to help forty families paint and remodel their homes. But this year, the students will involve themselves in additional activity such as running tutorial programs, and providing recreation services to youth living in the area. Next year, we hope to expand the program even more and for the first time, take the student work crews inside in addition to painting the outside. With proper supervision, these crews should be effective in refinishing walls, ceilings, floors, and other work of that type. The areas in which work crews cannot be used are obviously plumbing, electrical work, and heating work.

Another major concern in a rehabilitation program such as exists in Washington Park, is the problem of tenant irresponsibility. It should not be surprising to find families who have lived in sub-standard quarters for generations not maintaining their apartment in the best condition. Landlords, in particular absentee landlords, have operated their properties specifically to accommodate this type of behavior for years and have come to accept this as normal in certain areas, especially in non-white areas. However, when faced with the expenditure of large amount of funds for rehab, these owners questioned the validity of the expenditure in light of the tenants' pattern of rent delinquency and low housekeeping standards. These are problems which will not solve themselves with better housing alone, but will require special attention of the program designed to give them help and assistance in learning new methods and techniques in maintaining an apartment, intelligent, rational budgeting of income to make prompt rent payments. To date, we have a pilot project operating in one block of a rehab sub-staging area and in our new 221-D3 projects. The funds were provided by Action for Boston Community Development , with two staff workers called Home Development and Guidance Specialists. It is the job of these

staff persons to acquaint themselves with the families in the area of their responsibility, to deal with the specific nature of the problems on an individual basis, to make referrals to other social agencies when appropriate, to bring together the tenants of this area in meeting so that these types of problems may be discussed amongst themselves so that the aspirations of some can be spread to include the group.

The results of this program have not been spectacular, but then again, it has only been operating for approximately five months to date. We fully anticipate the program being successful, if not with 100% of the families, at least with 85% to 90%. In those instances where all efforts fail, a very small number may have to be evicted. In this eventuality, we are prepared to offer a different kind of service to the families being evicted.

There is obviously great need for adult education on a variety of subjects throughout areas such as Washington Park, with consumer education at the top of the list. Whereas the LPA cannot be all things to all people, it can, however, take the initiative in mobilizing resources

and help to design the program that will have maximum impact on areas of need. We are hoping to establish such a program in Washington Park in the near future with the cooperation of Boston University.

JENKINS Mr. Smart spoke of the importance of our Student Work and Study Projects for the owners who have difficulty in rehabilitating their property. I would like to describe briefly how our work and study projects came about in relation to planning our rehab program and to point up the significance we think these projects have for our overall rehab program.

Early last year, we found that our volume of rehab properties that were started, underway or completed showed up as good by comparison with other places in the nation. But the rate was not nearly fast enough for the pace we had set for ourselves. The problem was, how to increase that rate.

We discovered that it was not so much a matter of boards and nails, or bricks and mortar, but also of people and community, we had to deal with. With our providing technical assistance to homeowners we had put quite a number of properties in the rehab load. But these were

not "catching," not contagious. Why? After an analysis we condluded: a) the properties were scattered and could not easily communicate that rehab was going on; b) a lot of these were invisible interior rehab jobs; and c) there was still an insufficient understanding of rehab on the part of homeowners.

What were some solutions? a) "Visual impact" through grouping or concentration of exterior treatments, espcially paint work; b) community organization; c) community education. Our rehab staff had been working rather intensely on property surveys and interior rehab work with owners in the three-block area Mr. Smart referred to. Meantime we suddenly had an opportunity to have a student work camp project in our renewal area. We put these two things together, hoping to make a start meeting the problems I have just spelled out.

In terms of these rehab problems, what meaning do the Work and Study Projects have for the community, from where we sit? a) visual impact is accomplished by grouping contiguous new paint jobs with new, and by combining new ones with recent jobs done by the owners themselves before the student project starts. The

impact is accomplished also by painting, where possible, buildings of strategic sizes and locations. The communication value of visual impact is that it attracts people through a language they can understand.

b) With this attraction, residents of the wider renewal area can be invited inside these pretty-looking houses through special "open house" visits arranged by the local community organization, something that should happen this summer in Washington Park. Once inside, the people can see and discuss the "gutsy" interior rehab, ask questions and get answers and advice, and perhaps come to understand it with a positive association, and hopefully to act on that understanding by investing in the improvement of their own property. Both these open house visitors from the project at large and the residents of the work and study project area can learn the following two lessons:

(1) how to use cooperative methods as a way to cut down on costs; quantity discount purchase of paint, equipment, tools and materials; how several owners can hire paint contractors at the same time and eliminate the extra cost of moving staging equipment back and forth to the area, how to help each other to

paint houses and exchange and loan tools and equipment, and how to pool equipment storage space.

(2) the value of community organization for property and community improvement, at the neighborhood level.

Out of this experience we are coming to some rather interesting conclusions:

(1) that, like it or not, with half-way decent conditions and maintenance inside, a visable exterior paint job probably does more for the market value of the property than the invisable interior work. This means that it also contributes to the property's economic life. Although this certainly is not sufficient for our rehab standards or the legal requirements of the renewal plan, and although it does not help the structural soundness or actual longevity of the property, it does point up the importance of the paint job.

(2) That under ordinary circumstances paint cost for a house is a sizeable item. That in some cases, this cost could end up substracting from their owner's investment in interior and structural rehab. And that, therefore, in certain areas this cost should be drastically reduced. The fact is that the cost of

painting a house ranges ordinarily from $500 to $1500 depending on building size and quality of paint.

(3) That the single-most cost in paint contract jobs is labor. We found that by supplying the labor through students working with owners, the average cost per house to the owner was less than $100.

(4) Finally, we have concluded that instead of using work and study projects for one or two years, or in only one or two places as so-called "pilot" projects, we can use more and bigger projects every year. And as Mr. Smart said, we can expand the scope of their rehab work beyond painting.

SUMMARY AND CONCLUSIONS

SMART In summarizing Mr. Jenkins' and my remarks, let me briefly state:

1. That in selecting areas for rehabilitation, the LPA should pick an area which can be protected from adverse influences of the surrounding community. The area should be sufficient in size to permit the development of new housing; public facilities and other eminities designed to create a viable economically and socially sound community.

2. That sub-areas of the Project should be delineated to permit administratively viable units in order that services can be planned and utilized efficiently with the following criteria in mind:

   (a) Lines should be drawn along existing service area boundaries if such exist. Where no organization does exist, we recommend that they be created to develop total involvement of the area in the rehabilitation program.

   (b) That where possible, sub-aras should include some new construction, i.e., new housing,

public facilities, commercial development, etc. o increase the confidence of property owners that the area will be improved beyond his personal expenditures.

3. That there are many problems which can affect the success or failure of a rehabilitation program over and beyond problems of mortgages insurance, fire insurance, and cost of rehabilitation. Additional problems will be found in low incomes, poor credit ratings, poor standards of housekeeping, etc. These social problems require attention and programming if rehabilitation is to succeed.

4. That Urban Renewal Projects, the size of Washington Park, will require four or more years to complete. It is important to stage improvements such as supporting facilities in a way as to provide maximum impact on community morale.

I. INTRODUCTION

Compared to the length of time the Washington Park Urban Renewal Area has been in project execution and the rate of rehabilitation progress in other cities, it can be said that the rehabilitation program in the Washington Park Area is being carried out successfully: In 26 months since FHA certification of the Washington Park Area, rehabilitation is completed or in progress on 300 properties containing 1,000 dwelling units, and involving $2,000,000 in rehabilitation expenditures as covered by $3,000,000 in mortgages; 66 of the mortgages, totaling $1,500,000, are insured by FHA, including two 221 (d) (3) mortgages involving 84 units.

We feel that we have developed an effective and workable rehabilitation program in the Washington Park Area by rigidly testing a number of older rehabilitation techniques as well as some we have

devised ourselves. This does not imply that we have all the answers to a successful rehabilitation program: not at all, for we are still learning and groping in a number of critical areas; but the record does indicate that we have achieved a certain amount of success and developed ideas and techniques which can be helpful to other local public agencies undertaking a rehabilitation program.

Accordingly, this paper is divided into two sections: one section is a brief history of the Washington Park Urban Renewal Area, and the other section is a discussion of the activities and techniques which BRA and other groups cooperating with BRA in upgrading the Washington Park Area have undertaken in connection with our particular brand of rehabilitation.

II. HISTORY OF THE WASHINGTON PARK URBAN RENEWAL AREA

The Washington Park Urban Renewal Area is in the Roxbury section of Boston. The project area covers 502 acres and includes approximately 25,000 people. This area is predominantly a residential area with less than five percent of its area being used for industrial purposes. Most of the buildings are three decker, frame construction and built around the turn of this century; except for a few apartment buildings, there has been little residential construction here between World War I and 1963 when some new construction had been undertaken in conjunction with urban renewal.

The Washington Park Area underwent certain social changes which are becoming characteristic of urban renewal areas. When originally laid out, this particular neighborhood was a very desirable address, as higher income people built here. The elevated system made it possible to get into the center of Boston within ten minutes, and a housing boom occurred in the vicinity of the elevated as the population of Boston rapidly expanded in the late 1800's and early 1900's. The families of skilled workers, mostly of Irish extraction, started to move into the area; then middle-income families of Jewish background made this area their home; then in the 1940's, Negroes began to move into structures vacated by white families moving to the suburbs, with Negro professionals moving into the southern half of the area where the better housing is located and blue collar workers moving into the northern half. The racial distribution changed from

80% white and 20% Negro in 1950 to 20% white and 80% Negro in the early 1960's.

Some sections of the Washington Park Area started to deteriorate in the 1940's, as property owners neglected and/or exploited their properties. Many social problems related to poor housing and the migration from rural to urban areas also began to get serious and it became apparent that drastic surgery in the form of urban renewal was needed.

Survey and planning for the Washington Park Area commenced in 1960. A strong community organization network was developed under the leadership of Freedom House, Inc., a local non-profit civic and cultural center, during the succeeding two years, as BRA, under its new Development Administrator, Edward J. Logue, put the "Planning with People" formula to the test. Subsequently, at a number of public hearings on the Urban Renewal Plan held at a high school within the urban renewal area by BRA and the Boston City Council in December, 1962 and the first quarter of 1963, overflow crowds indicated their support for the Washington Park Urban Renewal Plan and urged BRA to implement the Plan with all deliberate speed.

Briefly, the Plan is a residential rehabilitation plan and provides for clearance of 30% of the structures in the project area. This cleared land is to provide sites for construction of badly needed

public facilities--such as three elementary schools, two libraries, a health center, a court house, a police station, a community center, numerous parks and playgrounds and 200 units of public housing for the elderly--, private facilities--such as 1300 units of low-to-middle-income housing, three new commercial areas, and an industrial expansion--, and private institutional facilities--such as a YMCA, Boys' Club, and three churches.

The financing plan for the Washington Park project provides for a federal grant of $23,000,000, public improvements and supporting facilities to be constructed by Boston, with state aid, at a cost of $14,000,000 and private investments in new construction and rehabilitation valued at $26,000,000.

The Washington Park project took advantage of the early land acquisition program to commence land acquisition, relocation and demolition activities on December 5, 1962, while survey and planning was still in progress. Consequently, by the time all plan approvals were secured and the Project Expenditures Budget approved on April 30, 1963, project execution activities were well underway and we were able to get a construction start on a housing development in October, 1963. FHA certification for eligibility for special mortgage assistance programs was granted on May 10, 1963.

Progress in the Washington Park Area two years after the start of project execution is outlined as follows:

...of 48 months allotted for project execution, 29 months have elapsed, or 60%;

...of 1047 parcels to be acquired in designated clearance areas, 1030 have been acquired, or 98%;

...of 1650 families to be displaced from clearance areas, 1575 had been relocated, or 95%;

...of 1200 buildings to be demolished in clearance areas, 1050 had been taken down, or 88%;

...of 1500 new housing units scheduled for construction on clearance sites, 460 had been constructed, or 31%, and an additional 850 units had been committed to developers, or 56% (accordingly, 1,310 new housing units have been constructed or committed, or 87%);

...and of 1800 residential properties in rehabilitation areas, 565 properties had been inspected and either rehabilitation was in progress or completed or the properties were found to be standard, for a total of 24%.

Obviously, it would appear that the Washington Park Project is moving ahead of schedule in clearance areas but is behind schedule in the rehabilitation areas. It is our opinion, however, that we are not as far behind schedule in rehabilitation areas as the record seems to indicate, for we have expected rehabilitation to lag until a significant amount of new construction has been effected. It is our belief that new construction in a rehabilitation project creates confidence in the minds of property owners respecting the future of their neighborhood, as well as confidence in the local public agency. This latter point is particularly important when the LPA's rehabilitation staff is to work with property owners in order to interest them in making substantial investments in rehabilitation.

III. REHABILITATION TECHNIQUES AND PRACTICES

The following checklist of activities, techniques, and agencies directly connected with our rehabilitation program will be discussed from the standpoints of the importance of each and citing the record, good or bad, in the Washington Park Area:

1. Rehabilitation servicing
2. Sub-areas and sub-area planning
3. Field operations in clearance areas
4. New construction
5. Spot clearance
6. Public improvements and supporting facilities
7. Disposition of buildings at a write-down for rehabilitation
8. Demonstration rehabilitation
9. Community organization
10. Local identification
11. Federal Housing Administration
12. Mortgage financing by local banks
13. Non-profit organization for rehabilitation purposes
14. Code enforcement
15. Poverty Program

Rehabilitation Servicing. A later session is to be devoted entirely to rehabilitation servicing, at which time Bob McGilvray, Chief Rehabilitation Officer in the Washington Park Area, will detail the Washington Park servicing operation.

I will only comment here that our servicing operation endeavors to make rehabilitation as easy as possible by helping the property owner decide what should be done, determine the kind of financing plan that he can afford, obtain the actual financing, and get the rehabilitation work underway. We work closely with and advise the owner every step of the way.

Sub-areas and sub-area planning. Our total rehabilitation staff averages 20 persons, including rehabilitation technicians, designers, draftsmen, and other rehab related staff. We feel that if we tried to cover the entire 500-acre project area, we would be spread too thin to have the necessary follow-through in any one area to produce significant results. Accordingly, we have divided the project area into 13 sub-areas, forming a community organization unit within each sub-area and working 3 or 4 sub-areas at a time. While we will service a property immediately upon request regardless of its location in the project area--these requests are referred to as "opportunity" cases--, most of our resources are concentrated in sub-areas where surveys are carried out on a systematic basis. The sub-areas are assigned priorities which are based on a combination of proximity to new construction areas, interest in rehabilitation and quality of leadership within the sub-areas.

This technique has worked well, for there is a positive correlation between location of buildings which have been or are being rehabilitated and sub-areas where BRA is concentrating rehabilitation services.

Sub-area planning is also scheduled for each of the thirteen sub-areas. The purposes of sub-area planning are to coordinate the construction and design of public improvements to be installed in rehabilitation areas and to determine the use and disposition of vacant lots acquired from the City or caused by spot clearance in

rehabilitation areas.

After our staff develops alternative plans for a given sub-area, meetings are held with residents of that sub-area in order to discuss the planning proposals, and to hammer out a final plan which both the sub-area residents and BRA staff deem desirable. Typical uses of vacant land as provided in a sub-area plan include new housing construction, tot-lots, garden plots, off-street parking and property line adjustments to land locked properties.

We feel that sub-area planning bolsters our rehabilitation program by converting vacant lots which may become blighting influences into active usable areas which strengthen the neighborhood.

Field Operations (land acquisition, relocation and site clearance). Field operations are the drastic surgery of renewal which removes cancerous blighting influences through clearance and keeps them from spreading; obviously, the more widespread blight is, the easier for it to overwhelm contiguous areas. It is important, therefore, to eradicate blighted areas as fast as possible and give the borderline areas some air to breathe and time to start rehabilitation before it is too late.

A function of field operations which is just as important as removal of blight is the creation of hope in property owners in the future of their neighborhood which is indispensable in a rehabilitation project. In 1963, after almost three years of survey and planning activities in the Washington Park Area, the people were understandably tired of planning and wanted some tangible action. Consequently, when demolition started, there was a feeling that the area was finally "on the way"; more important, demolition represented an irrevocable commitment by BRA to carry through the project, as this action was visible proof that the Authority was making a significant investment in the project by expending funds and creating an organization to acquire property, relocate families and clear land. This fact helps rehabilitation, for the property owner does not feel alone in his efforts to upgrade the area, but has a partner, and a powerful one, who is acting and spending money to do his share of the job.

We have endeavored to keep our field operations moving at a brisk

pace at all times. Because clearance areas are extremely unsightly, they attract the most attention and the presence of blighted areas anywhere in the project area represent real threats to the entire neighborhood in the minds of apprehensive property owners, even though the Authority may be relocating families and demolishing buildings at a record rate in other parts of the project area. Accordingly, any slackening in the pace of field operations is often exaggerated as a sign that things are not going well and the Authority is thinking about "pulling-out".

Consequently, by moving field operations rapidly, these rumors are kept to a minimum and, just as important, the relationship between blighted and salvable areas is changing in favor of the latter. For example, in January, 1963, 30% of the housing stock in the Washington Park Area was not salvable and 70% was good enough to save; after 2½ years of field operations, only 15% is not salvable and 85% is "good", i.e. standard, rehabilitated, or newly constructed; by the end of this year, less than 5% will be not worth saving and over 95% will be "good". The "bad" buildings will be thinly scattered in rehab areas throughout the Project and will be taken down by either the Authority or Boston's Building Department during 1966.

We consider relocation as our most important field operation for two major reasons: (1) as urban renewal professionals, one of the reasons for our existence is the relocation of people from sub-standard

to standard housing, and (2) relocation is a potentially explosive issue which if not handled correctly can shake the entire community's confidence in the Renewal Authority. Indeed, property owners in our rehabilitation areas look to the quality of our services to displaced families as an indication of the kind of services they can expect from BRA. Even though our relocation problem in Washington Park is compounded by the fact that most of our displacees are low-income, minority families, the operation is coming off without incident and so smoothly that the Washington Park community leaders have actually complimented us on it; this is a real tribute to the administrative ability of Walter Smart who directed that operation, among other duties. This, too, greatly helps to promote a rehabilitation program.

New Construction. While field operations in Washington Park promote property owners' hope in their neighborhood's future by removing blight, new construction generates property owners' confidence in the future, as pockets of blight are transformed into centers of strength. New construction represents stability in the sense that new buildings are rarely susceptible to sudden depreciations in value during at least the first couple of decades of their useful lives.

New construction also creates confidence in the local public agency by supplying visible evidence that the LPA has the know-how and drive to get complicated, difficult and lasting jobs done. It was no accident, therefore, that BRA pushed very hard to start new construction in Washington Park as soon as possible after project execution. Indeed, the Authority undertook an early land acquisition program in December, 1962 which resulted in land acquisition, relocation and demolition on a 3.5 acre site slated for middle-income housing four months sooner than normally would have been possible. Consequently, construction commenced in October, 1963, just five months after the start of project execution. This 82-unit housing development was completed and occupied in early 1964, an accomplishment which impressed the Washington Park community and helped BRA to gain the community's confidence as an agency that was a "do-er", as well as a "planner". This confidence in the BRA usually carries over into the rehabilitation program; indeed, without this confidence, it is doubtful that property owners will place their trust in BRA to deal

with matters which affect the property owners' economic position for future decades.

Spot Clearance. During the Washington Park project execution stage, a small percentage of buildings which originally were designated for rehabilitation under the Urban Renewal Plan became dilapidated because of neglect by the property owner, vandalism, or fires. Most of these buildings became vacant, abandoned and fire and health hazards. The continued existence of such buildings can materially affect efforts to successfully execute a rehabilitation program, particularly because efforts of abutting owners to secure fire insurance and rehabilitation financing are seriously jeopardized. The members of the Boston Banks Urban Renewal Group which had been making loans for rehabilitation in the Washington Park Area were also justifiably concerned that their investments were adversely affected by the existence of such hazardous conditions.

The approved Washington Park Urban Renewal Plan provides for the acquisition and clearance of such properties by the BRA. To date, we have acquired 47 dilapidated properties in rehabilitation sections of the Washington Park Areas, and spot clearance is taking place right now. Of the 2,000 residential buildings in Washington Park rehab sections, we estimated that around one hundred additional buildings in rehab areas will have to be demolished. These buildings will be cleared by either the Authority or the Building Department.

The BRA's attitude toward property acquistiions in rehabilitation areas is to increasingly share the responsibility of removing hazardous buildings and conditions with the City's Building Department.

That is, if it is determined that a property has become hazardous due to the owners' neglect and exploitation, the Authority will not acquire that property, but will leave it to the code enforcement agencies which can either secure a court order to improve the property or demolish the building, both actions at the owners' expense. In cases where it has been determined that a property has become hazardous due to conditions beyond an owners' control, such as fire and/or vandalism, and the owner had not exploited the property, the Authority has acquired the property at fair market value and demolished the building at the Authority's expense.

In any event, by actively seeking to gain the cooperation of various code enforcement agencies, we are striving to remove all hazardous buildings regardless of where they are located through spot clearance.

Public Improvements and Supporting Facilities. To property owners in rehabilitation areas, public improvements represent tangible evidence of the City's good faith in keeping its promise to help them upgrade their neighborhood. Owners required to rehabilitate their properties under the Urban Renewal Plan expect the City to also meet its obligations required by the Plan, such as construction of schools, libraries and health centers, streets, sidewalks, parks, playgrounds, and improvement of street lighting in new construction and rehabilitation areas.

Coordination of the public construction program with community organization efforts can stimulate investments in rehabilitation by widely publicizing to grass roots property owners and residents that heavy public investments are being constructed to protect private investments in rehabilitation made by property owners.

The public construction program in the Washington Park Area has been disappointing. After over two years in project execution, no supporting facilities have been constructed, or even are under construction now, and only a couple of hundred thousand dollars worth of public improvements have been completed in new construction areas, as compared to $7,000,000 of new private construction; worse still, no public improvements have been constructed in rehabilitation areas, as compared to $2,500,000 invested in rehab by property owners. This record by the City has dampened some of the enthusiasm toward rehabilitation that BRA is endeavoring to promote among property

owners, and has lessened the effectiveness of the overall BRA effort, as we are missing that tremendous boost in a neighborhood's morale and confidence that results from having a street resurfaced, sidewalks repaved, and street lighting improved. To the individual property owner, these kinds of improvements right in front of his property is just as important as new construction a few blocks away.

We are hopeful that the City's public improvement program is finally starting to pick up. About $1,000,000 of public improvements are scheduled for this year, and we are pushing the Public Works Department hard to commence constructing improvements in certain rehabilitation areas while keeping pace with public construction needs in new construction areas. Construction of two playgrounds in rehabilitation areas by the Parks Department is also scheduled for this year. If public construction can be undertaken on a massive scale the remainder of this year and in 1966, we are confident that this will be a major factor in getting property owners to invest in rehabilitation on a broad scale.

Disposition of Buildings for Rehabilitation. During project execution, it is likely that a local public agency will come into possession of salvable buildings from the City or private parties unable to rehabilitate and/or sell their properties on the open market. In many cases, the only way to make rehabilitation feasible is to resell the buildings at a write-down.

The BRA has adopted a policy for disposing of salvable buildings in rehabilitation areas to developers for purposes of rehabilitation. The objectives of this policy are (1) to encourage a higher owner-occupancy ratio; (2) to provide additional relocation resources; (3) to provide housing at rentals and prices comparable to, or lower than, those made possible in newly constructed buildings under the 221 (d) (3) program; (4) to improve neighborhoods; (5) to assure property owners in the Washington Park Area who have rehabilitated their properties that their investments are protected; and (6) to demonstrate rehabilitation techniques. The policy also specifies that developers are to be selected in accordance with the following priorities which are designed to promote the objectives of the policy: (1) occupant of building to be rehabilitated where he is not the former owner of the property; (2) displaced family who desires to become an owner-occupant; (3) tenant family who desires to become an owner-occupant; (4) others who are interested in rehabilitating the property. Finally, the selling prices of properties to be sold for rehabilitation are to be based on re-use appraisals secured by the Authority.

The BRA has disposed of four buildings in the Washington Park Area to private parties for purposes of rehabilitation. All four properties had been tax-foreclosed and acquired by the Authority from the City of Boston. Two properties had been sold to displaced families, one to a private developer and the fourth to a non-profit organization for demonstration purposes, as will be described later. All were sold at a price determined by re-use appraisals.

Our staff is presently in the process of acquiring seven privately owned properties, containing 21 dwelling units, in order to combine them with two tax-foreclosed properties, containing 4 units, which BRA acquired from the City for the purpose of disposing all 9 properties, which are very close to each other on the same street, as a rehabilitation package to a private developer. Most of these buildings are borderline rehabilitation possibilities if worked separately; however, by combining all 9 buildings, containing 25 dwelling units, into a rehabilitation "package" in order to attain construction economies, rehabilitation becomes feasible.

The idea of such a "package" is appealing to rehabilitation developers, and there are at least two financially-capable firms impatiently waiting for the Authority to secure re-use appraisals and to start the selection process. We are looking forward to disposing of this rehabilitation package because the rehabilitation of 9 buildings at once is certain to greatly raise morale and confidence in the future of the entire surrounding neighborhood.

One of our problems in this aspect of the program is obtaining re-use appraisals quickly, as appraisers are not yet familiar with this kind of appraising technique, and either shy away from it, or demand a long time to write-up their report. If we can shorten this time block, we feel we can really use this rehabilitation tool very effectively by starting the "ball rolling" ourselves in a specific area through the acquisition and disposition at a write-down of the really tough buildings where the owner cannot rehabilitate, and the other owners are waiting for someone to start before they chance rehabilitation themselves.

Demonstration Rehabilitation. One of the salvable buildings acquired by BRA and subsequently disposed of for rehabilitation included a disposition to Freedom House, Inc. for demonstration purposes. The objective of the demonstration is to stimulate interest in higher quality rehabilitation by showing different types of rehabilitation and illustrating that the spaciousness and in-city location of older homes can be capitalized upon by building-in modern comforts and conveniences.

The effort, called Pilot House, involved the rehabilitation of an abandoned, partially vandalized, tax-foreclosed building which was nevertheless still structurally sound. Pilot House has just been completed and includes (1) a composite of home improvements, such as two different styles of bathrooms, (one using tile and the other, myalite), a variety of wall construction types, (plaster, dry wall, and different kinds of panels), two different heating systems, (one is baseboard, the other, forced air); different kinds of windows, and two different types of kitchens; and (2) an exhibition of the skills and materials of home improvements contractors and suppliers who contributed their products at cost or less.

In a sense, Pilot House is a miniatrue "home-show" that is geared toward rehabilitation.

Community Organization. Community organization is the link that brings the residents of the project area and the BRA rehabilitation technicians together. Fortunately, we had built up a fairly elaborate community organization network in the Washington Park Area during the survey and planning period, which will be described by Muriel Snowden of Freedom House, Inc. in a later session; I will only mention that Freedom House, Inc. has been the catalyst that has made our community organization effort work.

We consider community organization an indispensable ingredient in a massive rehabilitation program. Rehabilitation without community organization is sporadic and inefficient because property owners and other residents are not informed of the latest plans for their area or of their role in implementing the plans. People at the grass roots level need leadership and advice and to help and encourage each other; community organization helps to achieve these goals.

We make a special effort to contact all property owners in the area we are concentrating on in order to explain the program and indicate the services which BRA is making available to all owners. We start by calling a meeting and inviting all property owners in the sub-area to attend; this is followed by sending a small, colorful brochure to all owners; and a week later, a follow-up letter is sent requesting an appointment for making a survey. Sub-area meetings are called periodically thereafter to discuss construction of public

improvements in the sub-areas, or when property owners need additional encouragement to rehabilitate, or to correct misinformation, or to explain detailed aspects of the rehabilitation program. The one factor which always brings a good crowd to a sub-area meeting is a report on construction of public improvements scheduled for that area; this is called a "good news" meeting and always raises morale and encourages property owners to invest in fixing-up their properties.

Our community organization effort undertakes clean-up programs regularly to call residents' attention to ways which can improve the physical appearance of the neighborhood. Clean-up programs also cause property owners to look at the appearance of their own properties and to think of improving them, such as through rehabilitation. Last summer, we successfully involved a twenty-block area in a program to improve its appearance; more important, we carried out an experiment with the Public Works Department which resulted in adopting a regular clean-up procedure which is more effective than formerly. The result we are striving for is a strong feeling of pride and concern for the appearance of the area.

Later, Muriel Snowden will talk about our Washington Park Community Education Program in which over 1200 elementary and junior high school pupils in the Washington Park Area toured our site office to learn about renewal, and our Washington Park Work-Study projects which help needy property owners to fix-up their properties and

represent a coordination of physical and social renewal efforts at the grass roots level.

These activities attract attention to the positive aspects of renewal and are part of our efforts to convince residents and property owners that if they work together and with renewal technicians, a solid and dramatic upgrading will occur which will both enrich their lives and result in a solid increase in the value of their properties.

Local Identification. During the survey and planning stage, a concern voiced occasionally by people in the community was that after the BRA had acquired and cleared the land, it would sell "their community" to the "New York financiers". Local identification is critical in a rehabilitation project, as the residents must feel they, and not the "carpetbaggers," are up-grading the community. Consequently, the sponsors of all new developments to date have been either from the project area, or the City of Boston: five of our seven housing developments are sponsored by corporations formed out of two churches located within the project area itself; the other two developments are sponsored by a local union and a local charitable organization; a shopping center site has been sold to a merchant who has many customers and is well known in the project area; another shopping center site is being sold to a displaced businessman; an industrial site is being sold to two firms in the project area for purposes of plant expansion, and the YMCA and Boys' Club are locally sponsored.

This local identification helps our rehabilitation program, as the residents feel that the Authority was sincere in its promise made during the survey and planning period that it would work as a partner with local residents in upgrading the area, and not as a land manipulator; this feeling by the community makes it easier for us to work with residents and owners in encouraging them to meet their obligations of our partnership.

Federal Housing Administration (FHA). Until lending institutions are willing to make conventional loans on a widespread basis in the Washington Park Area, FHA mortgage insurance remains the key to obtaining rehabilitation financing. Bob McGilvray, at a later session, will cover the mechanics of FHA participation in our rehabilitation servicing procedures, and I will mention only our experience with FHA.

FHA's contribution to rehabilitation progress in the Washington Park Area has been outstanding as far as home mortgages, or the 1 to 11-unit program, are concerned. To date, 60 FHA 220 mortgages have come through our office. FHA's field personnel understand our plan and their appraisals are keyed to successful plan implementation. We are well satisfied with FHA's work in insuring mortgages covering rehabilitation of buildings with 1 to 11 units, and any complaints we have are of a minor nature.

We are having problems, however, moving our program involving rehabilitation of large apartment buildings, or the multi-unit program. Presently, no rehabilitation has been completed in Washington Park under FHA's 221 program; there are two buildings containing 92 units, however, presently being rehabilitated under the 221 (d) (3) program. Unfortunately, both buildings required a painfully long time to process: months and months after formal FHA application. In some cases, the cause of delay was entirely the fault of the applicant; in many cases, however, it appears that the FHA's architectural

review section was being unnecessarily stringent in trying to apply new construction standards to rehabilitation of "middle-aged" building. Whatever the reasons, the length of time required to get our first 221 (d) (3) rehabilitation projects going has had a dampening effect as our enthusiasm in encouraging developers to undertake this kind of rehabilitation which is badly needed in the Washington Park Area, for the great majority of our families are in the low-to middle-income category. We feel obligated to cite this record to developers who then become discouraged and reluctant to become involved despite our assurances that BRA will do all it can to shorten the time required for FHA processing.

If we can solve this time problem, we are confident that non-profit developers can be found to rehabilitate up to 1,000 dwelling units in the Washington Park Area alone under the 221 (d) (3) program for low-to moderate-income families.

Mortgage Financing by Local Banks. Twenty-one local banks have pooled $20,000,000 to be used for financing rehabilitation in Boston's residential renewal areas. This group, called Boston Banks Urban Renewal Group (BBURG), has earmarked $6,000,000 for the Washington Park Area, with more to be provided, if needed.

When the Washington Park Plan was about to be approved, BBURG was finally confronted with the reality that it had to make good its promise to participate. BBURG insisted that we start rehabilitation efforts in areas where the prospects for success were good in that the buildings did not require too much work and incomes were relatively high, for it wanted to be sure that we could develop workable rehab servicing techniques before moving into the tougher areas. During these first few experimental months, workable and effective procedures were developed and a suprisingly large number of property owners undertook rehabilitation. This initial success and subsequent FHA certification for special mortgage programs have led to BBURG's decision to leave selecting the areas of rehabilitation concentration entirely to BRA.

Overall, our experience with BBURG has been very good, as it has made loans to finance rehabilitation, provided FHA insures the loans. Conventional loans are still hard to come by; indeed, most member banks of BBURG will refer applicants from the Washington Park Area who come directly to the bank for a conventional loan to our site office in order to come through the BBURG system where FHA insurance

can be obtained. A seeming disadvantage to the loan applicant is that he is required to pay one point service charge if he comes through BBURG; this charge, however, is more than offset by the favorable terms which the loan applicant would probably not be able to secure otherwise (that is, 5¼ percent interest, plus one-half point FHA premium, with up to 30 years repayment period).

Non-profit Organization for Rehabilitation Purposes. There are a number of apartment buildings, containing from six to fifty units per building, scattered throughout the Washington Park Area which are run-down and unsightly, but just within code standards, whose owners live in other parts of the city or out-of-town and who have little or no interest in the condition and appearance of their properties or of the welfare and comfort of their tenants. Many of these owners desire to sell their properties for a variety of reasons, but cannot do so without taking a mortgage. Because these buildings are usually larger than the owner-occupied buildings around them, they attract attention and greatly detract from the appearance of a block when they are the only ones not fixed-up; on the other hand, when they are improved, they lift the appearance of a block even though many of the smaller buildings need improvement, and their visual impact encourages other owners to rehabilitate.

In an effort to find buyers for these apartment buildings and to maintain, or possibly increase, the supply of housing for families earning low-to-moderate incomes, our staff helped to organize a non-profit organization called "Rehab, Inc.". The purpose of Rehab, Inc. is to rehabilitate buildings for low-to-moderate income families and to develop employment opportunities for unemployed persons (possibly in conjunction with the Poverty Program). The Board of Directors of Rehab, Inc. is comprised of reputable businessmen, professionals and clergy, most of whom are from the Washington Park Area so that

the Corporation has local identification.

Rehab, Inc. intends to utilize financing insured under the 221 (d) (3) program. Its major problem right now is raising working capital to purchase options on buildings it wants to purchase, and to cover other administrative and operating expenses. The BRA staff is working closely with Rehab, Inc. by helping to develop architectural and rehabilitation plans, financing plans to attain the lowest possible rentals, and to seek out possible sources of funds to get the "show on the road."

Once Rehab, Inc. and similar-type organizations are established, they can purchase and rehabilitate properties of owners who cannot or will not rehabilitate, but who are willing to sell for cash at fair market value. Presently these owners are looking to BRA to purchase their properties; but because of the tremendous amount of paper work and time required for BRA to acquire and dispose of properties for rehabilitation, this process is just too expensive and too long relative to a four-or five-year project execution period to be used extensively; besides, if no write-down is necessary to make rehabilitation feasible, there is no reason for BRA to get involved. On the other hand, Rehab, Inc., once it is tooled-up, can rehabilitate much faster, the impact will be much greater, and the entire process much simpler. Just as important, Rehab, Inc. will be in the project area after BRA closes out the project.

Code Enforcement. The BRA is not empowered to enforce codes, and our function is to report code violations to the appropriate code enforcement agencies. Recently, the City of Boston created the Department of Housing Inspections in order to enforce health codes more vigorously and to correct health code violations quickly.

Our staff has established a procedure with the Department of Housing Inspections which provides for reporting violations as we uncover them during our surveys and involving owners who have indicated they have no intention of correcting the violations. We are hopeful this procedure will be effective, as many of our rehabilitation staff members have the background and training to report violations in such a way that a minimum of follow-through will be required by the Department's inspectors.

In any event, we have just instituted this procedure and it is still too early to make generalizations about its effectiveness in code enforcement.

Poverty Program. As urban renewal is the physical planning side of upgrading a neighborhood, the Poverty Program is the social planning side of a neighborhood's revival. We plan to utilize certain aspects of the Poverty Program to help us reach our rehabilitation program objectives in the Washington Park Area.

One of the most important among Poverty Programs as far as rehabilitation is concerned is the Home Management Services Program. This program aims to teach lower income families how to live in an urban environment through advice on matters such as home economics, budgeting, personal hygiene, sanitation and care of clothing and personal property. This program is of particular interest to many absentee-owners who resist investing in property improvements because of fear of vandalism by tenants.

Another aspect of the Poverty Program of interest to us is the provision of adequate child day-care centers. Many families desire to improve their level of living, including home rehabilitation or the paying of higher rents for better housing, but cannot do so unless the mother of the family goes to work. Many mothers pass up jobs because of inadequate child day-care centers. The establishment of child day-care centers in which mothers can confidently leave their children will enable mothers to take on a paying job to supplement the family income.

Aside from these specific programs, the Poverty Program can promote rehabilitation by engendering a feeling of confidence in the

neighborhood's future with respect to both physical and social improvement. Since the Poverty Program is not yet underway in the Washington Park Area, however, no generalization about its effectiveness in promoting rehab can be made at this time.

IV. CONCLUSION

After two years of vigorously carrying-out rehabilitation activities in the Washington Park Area, we have discovered two things: (1) a large scale rehabilitation program is a very complicated endeavor, requiring the use of complicated tools some of which are already available and others which must be invented to accomplish special purposes, and (2) rehabilitation can be carried out on a large scale provided the local public agency has adequate resources available, particularly qualified rehab staff, and the cooperation of outside groups indispensable to the rehabilitation process, particularly the FHA and local banks.

As you can see from the checklist, there are fifteen items on the list that require coordination and expediting. Most of the activities are under the control of the local public agency and, once properly staffed, the LPA can make progress in those areas; outside agencies, however, such as the FHA, local banks and even the Public Works Department, are not under the direct control of the local public agency and unless they sincerely and vigorously participate in the program, the overall effort will move only sluggishly at best regardless of the amount of resources available to the LPA.

In the Washington Park Area, we have discovered that the best way to get outside agencies to participate in the program is to be very specific about what we need from them and when we need it; and then to diligently, but respectfully, follow-through on agreed-upon

programs and schedules. This practice together with the effort which is required to achieve and maintain internal coordination and schedules adds up to hard work carried out over long periods of time. This conclusion, of course, is one all of us, in Boston or anywhere else, had arrived at when we first thought through all the ramifications of a program endeavoring to reverse a long-term trend in a relatively short period of time.

Urban Renewal Project

TECHNIQUES OF PROPERTY OWNER SERVICING

ROBERT B. MC GILVRAY
CHIEF OF REHABILITATION
WASHINGTON PARK URBAN RENEWAL AREA
BOSTON REDEVELOPMENT AUTHORITY

MINNESOTA REHABILITATION TRAINING INSTITUTE
UNIVERSITY OF MINNESOTA
JULY 28, 1965

You have had considerable exposure to our Washington Park Project earlier in the course of this Rehabilitation Institute. Nevertheless, before I get into the techniques of property owner servicing applied in Boston, I would like to briefly review the history of the rehab program in the project area.

You will recall that our project is 502 acres large with approximately 1800 properties containing 6500 dwelling units earmarked for rehabilitation services. We started early in 1963 by opening a small rehabilitation site office. As a matter of fact, the rehabilitation people took off their white shirts and ties and remodeled a vacant tax-title house into an office in order to demonstrate to the residents that our rehab team was a practical common sense outfit, and not a crew of "Catalogue Engineers."

We proceeded to divide the project into 13 sub areas or staging areas. Once an area was selected for comprehensive treatment that included among other things, community meetings, area priorities, and sub-area planning, we began our series of contacts, surveys and services.

Code enforcement specialists, licensed builders or practical tradesmen make up our survey teams. Ed Logue has referred to our Specialists as "mechanics with the gift of gab." Add to this a community contact man, a finance specialist, a couple of good architectural designers and you have a well rounded staff to service property owners.

Almost from the very beginning our program has followed eight basic steps to successful property rehabilitation and these steps with minor variations, are used whether a property is owner-occupied, absentee owned, single unit dwelling or large apartment house. They are as follows: Initial Contact, Property Survey, Work Write Up, Cost Estimate, Pre-Application Conference, Bank or FHA Application, Bank or FHA Approval, Work or Job Start. The techniques used during each of these eight steps are outlined in the following paragraphs.

Initial Contact -- First contact with the property owner. Our contacts are secured by one of five ways:

1) Community Contact Specialist -- When our staff person contacts the owner during a concentrated effort in one of the staging areas, the program is explained

and an appointment is made. In Washington Park, our community contact specialist is a man who has resided and worked in the area for over thirty years. His visit is preceeded by mailing our rehab brochure entitled "Let's Start With A House." If a contact is difficult to make, a letter goes out to the owner briefly explaining the program and indicating that our community contact man will call on them soon.

2) Referral by the BRA's Community Organization Consultant -- During the course of community organization meetings held by Freedom House Inc. property owners may indicate a desire to start rehabilitation; when this happens, Freedom House will arrange for a survey to be carried out by our staff. Usually the owner is aware of the program before the team arrives.

3) Opportunity when a property owner, interested and anxious to start rehabilitation, comes forward and requests a survey or service. Many people in the past have been unable to secure mortgage loans or home improvement loans in Washington Park. Most of these people have waited until project certification and then come forward looking for loans and mortgage money.

4) Reference Contact -- An owner refers us to one of

his relatives or friends who would also like to start rehabilitation. Many contractors, when called in to estimate work on a property in the Area, will often suggest that the owner consult the project rehab staff. The survey team or community contact person will then explain the program and set up a survey appointment.

5) Letter Contact -- Is usually sent to an absentee or an out-of-state owner informing them of our program and requesting a survey appointment. Sometimes, in connection with the Mortgage Approval of an adjacent or contiguous property, a bank will, as a pre-requisite to granting mortgage loan, ask that the surveys be completed on the adjacent property and some form of positive renewal or rehabilitation action be initiated.

Property Survey -- The second of our basic steps is public relations at the personal contact level known as a Property Survey.

There are many ways that a survey can be conducted. You will notice that we call it a survey and not an inspection. The word inspection has a tendency to place

the property owner off-base and ill at ease, whereas survey is a general term and does not make it seem so official.

In Boston, we like to equate the Property Survey with our semi-annual car safety inspection for a "Sticker" where the brakes, lights, horn, steering and windshield wiper are tested. This makes it easy for the average property owner to understand why we are in their home. We are checking the house for safety, egress, means to prevent the spread of fire, structural defects, and making sure that all devices and safeguards required by the codes, are maintained and in good working order. In other words, we are doing him a favor. To me it is one of the tools of the sales approach that we are going to do something for them and not the other way around.

The positive approach is used. We always mention how quickly the survey will be completed. "We'd like to go right downstairs and check out the basement and then come back to this floor, etc." Architectural and landscape design services are mentioned as well as the fact that all of our services are FREE.

We explain about the Work Write Up, when it will be delivered and approximately how long it will take to complete the whole process. Some people will balk at this point saying "Well, we're not interested in doing any work on the place right now." Those people will require the most effective selling job. I say "selling job" because in Boston most of our rehabilitation dollars have been "sold" and not strong-armed with enforcement. Things of value or of obvious interest in the home are mentioned by the survey team, for instance "What a beautiful piano," or "Did you do the decorating yourself or did you bring in a professional decorator?" Personal reference to the family is made regarding the good-looking or well-mannered children.

We make sure that all available information is put down on the inspection form and remodeling estimate guide without seeming "nosey" or too official. We always make it a point to let them see the forms we are using. If the owner wants to sit down and discuss the program at some length, we strike while the iron is hot.

Although we always leave on a friendly basis, we do not soft-pedal conditions that are dangerous to life

and limb. These conditions are pointed out and explained to the homeowner. Quick solutions are discussed as well as possible legal action by our City Building Department or Department of Housing Inspection.

Getting mortgage or income information from property owners must be done with the skill of a surgeon. You just don't come right out and ask how much they make, or how much they pay the bank every month, or what the taxes and water bill are. A real nosey approach will be met with resistance. We start by wondering "When did you buy the house?" and "How much did it cost then?" It goes without saying that the house is certainly worth a lot more money now, and if a few improvements were plugged in, the value would really be "up there." All of this information must be drawn out slowly and with tact.

How much rent the tenant upstairs pays is important only if there's a definite "need to know," and it can probably be gotten a lot easier by the finance specialist at the Bank Application stage.

Mortgage information will not be secured unless there's a definite prospect of rehabilitation work on the property. If the property meets the standards set

forth in the plan, and looks good on the outside, and there is not too much interest on the homeowners part, then there's really no need to dig and pry into the financing of the property or the people.

Probably the most important part of the property survey and one which can be most effective throughout the course of the rehabilitation program is the thoroughness with which we conduct the property survey. You must convince the owner that you are so good at your job that you know more about his property than he does. A return trip through the property to record or verify an item or condition does not give the owner confidence in the professional calibre of the team. Let me tell you of one small "gimmick" that is sometimes used in our project. Our teams always record the number of windows (regardless of condition) in the property and later during one of the discussions or conferences, that fact will come out. "I wonder how much heat you lose through the twenty seven windows you have in your house?" or "Thirty-five windows to be puttied and painted at five to seven dollars each will cost in the neighorhood of two hundred dollars." Most people don't know how many windows they have in their house. Some people

don't care; but its significant that we were good enough at our jobs to get that kind of data the first and only trip through the property.

The Work Write Up -- A form of technical writing done by the rehab specialist for each property after the survey is completed is called a Work Write Up. It contains an itemized list of the work required to bring the property up to the standards set forth in the plan. Also included are items suggested by the specialist or pet projects the owner has mentioned.

Work that must be done to conform to the Urban Renewal Plan standard is preceded by an asterisk (*) or star in the left hand margin. Only those items that can legally be enforced are "starred."

A well written Work Write Up may be the deciding factor that changes a job from a bare minimum to a first-class rehabilitation project.

The Work Write Up is delivered to the owner in one of two ways. Either it is hand-carried by the specialist to the owner and explained in detail indicating

approximate costs and methods of getting the work done, or if it is difficult to arrange an at-home appointment, it is mailed out with a cover letter explaining the total Work Write Up and how we have singled out those items that must be done.

It is desirable to have the specialist who performed the survey deliver the Work Write Up because he is the staff person most familiar with the property, and any personal touch or rapport that has been established with the owner can be continued.

At this time plans and drawings, if any, are gone over and prices are discussed, as well as deletions or additions to the Work Write Up. Make and model numbers of appliances are also selected. The property owner is made aware of the bidding process and the various steps in the mortgage application process.

Design services enter the picture only when structural changes are to be made, except for kitchens and bathrooms where relocation of fixtures, appliances and cabinets require graphic representation without necessarily changing the structure.

These services are used for three main purposes:

1) to encourage new developers to acquire property in

difficult cases when the present owner is not in the position to rehabilitate; 2) as a regular service to the owner who is willing to undertake comprehensive rehabilitation; and 3) as a "selling" aid.

In the first case, we prepare a total package exhibit to give a true picture of the work involved as well as ideas of how to improve the property through remodeling. These projects are relatively few and do not amount to five per cent of the cases. Secondly, design is usually requested by the owner who has planned to change his property beyond the limits of our standards. In other cases it becomes necessary when the circulation within the building does not meet the FHA minimum standards and they have to be complied with in order to obtain a rehabilitation loan. There are other instances where in order to make full use of the space available, a change of occupancy is financially recommended; then architectural plans must be made describing the work involved. Direct design services to property owners has accounted for only 25% of the total rehabilitation work load in our project.

The average homeowner requiring a floor plan for his rehab project must have it explained in detail

whereas an elevation drawing or pictorial rendering is self-explanatory. The Boston Redevelopment Authority employs excellent rehab designers from M.I.T., Rhode Island School of Design, or Parsons in New York. I sometimes think that these designers try to "out sell" the rehab teams. Frequently, the specialist, with a kind of overview of the property, the people and the financial picture, will have to monitor a designer with an expensive "fist" and make sure that the "gutsy" improvements receive top priority.

Cost Estimate -- In Washington Park, we have a Citizen's Urban Renewal Action Committee (CURAC) with a special sub-committee for rehabilitation. This sub-committee receives applications from contractors interested in doing rehab work in the area. It checks them out and puts them on a list that is made available to property owners. The rehabilitation specialist requests that the property owner pick at least three contractors from that list to bid on the work, and he also suggests the "yellow pages." We also mention that if their

"Uncle Louie" is a contractor, (and it's amazing how many people have a friend in the business), it would be a great idea if he bid on the job too. We show and explain to the homeowner our set of three bid documents, the "invitation" form in which the owner invites a contractors bid; the "instruction" form which insures that all contractors will bid on the same amount of work and the "bid" form itself. The owner personally invites the bids by signing these forms. If this is to be an FHA insured mortgage, then five (5) copies of the FHA 2005 specification form are signed. Copies of all forms used are left with the homeowner to study, as is a copy of the Basic General Conditions and Specifications which pin down materials and methods not covered in the Work Write Up.

A bid opening date is set approximately three weeks away and the owner is asked to specify certain times when the contractors can have access to the property to prepare their bids. The bids are received by the BRA and with the owners permission, are opened in our shop and recorded in the personal history sheet. The owner is advised of the results and usually the low-est bidder is picked.

It is not always easy to get general contractors to bid on rehabilitation work because of the length of time that elapses between the bid opening and job start. The cost of a new aluminum and glass entrance set-up has escalated over $100 in the last six months, reflecting the general price rise in aluminum products.

Let me emphasize that one of the most difficult and again important steps in the rehabilitation process is to secure bids from responsible contractors. At the start of our rehabilitation program, the contractors were paid in a lump sum when the work was completed. The procedure involved interim financing by the contractor and the resultant interest charges were passed on to the owner. We soon put a stop to that. In August of 1963, we got the banks to release "uninsured" money to the contractors after the FHA had agreed to perform 3 inspections for partial payments. The bank accepted the FHA architectural progress report as tantamount to an approval and released partial payments. If this could be done on a national basis, I'm sure many more contractors would get involved and the increased competition would drive rehabilitation costs down.

The Pre-Application Conference -- is a term usually applied to FHA multi-family financing, but for our purposes it most aptly describes the next step in the process. After the bids are reviewed, a preliminary discussion of work, costs, existing mortgages, rents, expenses and general feasibility is held to determine that we have a workable program. Sometimes this discussion takes place at the Work Write Up stage.

A bank application date is usually set and the property owner is told what information will be required of him. (Legal description of the property, assessed value, full names of owners, data on present mortgage and personal information concerning the mortgagor).

As an example of the kinds of decisions made and solutions found at a pre-application conference, let me cite you two cases: One involved a very large wood frame 2½ story property containing three (3) apartments. Major repairs were needed on the exterior and interior of this "white elephant." Rehab costs to remove deferred maintenance violations, plus items required to meet an FHA standard for mortgage insurance amounted to over $7,500.00. The mortgage balance on a $15,600 - 20 year VA at 4½% was approximately $11,400.

Monthly payments including taxes were $170. The rents returned $190 to the owner occupant, who supposedly was living rent-free, and on paper showed a profit of $20.00 per month.

The owner was a $90.00 a week truck driver with a wife and teenage child. The wife worked full time at $80 per week. Their credit rating was satisfactory and there were very few outstanding debts. During the pre-application conference it was decided that by sub-dividing the large 7-room first floor unit into two separate apartments, enough additional rent would be realized to support not only the rehab cost, but also the cost to sub-divide the unit, ($4,000).

The new mortgage picks up the existing balance of $11,400 plus the cost of rehabilitation of $11,400 and gives us a total of $22,800 over 30 years @ 5¼%. The owner now has a monthly income of $285 and payments (including taxes) of $215 which leaves a monthly income of $70 plus a rent-free apartment.

Ordinarily, the Authority discourages the sub-division of apartments because the need is so great for large rental units, but in this case it appeared the only way to get the necessary rehabilitation done.

Another case involved a "little old lady" receiving old age assistance from the Welfare Department. Although she owned her single family home, because she was on aid, a real estate lien was automatically placed on her property. In Boston it is permissible to receive Old Age Assistance (OAA) or Medical Assistance to the Aged (MAA) and still own property. The lien is paid off at the time the property is sold or transferred and usually amounts to the total dollar value of the aid rendered. The property was surveyed and found to require a certain amount of work. A Work Write Up was completed listing only those items necessary to bring the property into conformance with the rehab standard, and bids were requested. Things looked pretty bleak at the pre-application stage. As soon as the low bid ($535.00) was received, it was decided to knock on the door of the Welfare Department. They were contacted and the situation explained in detail, first to the case worker, then the supervisor and finally the Welfare Law Department. It was decided by the Welfare Department to allow the recipient to borrow the necessary money at the local commercial bank

and her monthly aid check would be increased by enough to cover the loan payments. The alternatives might have meant a (public housing or housing for the elderly) relocation case for the Welfare Department and a broken heart for my little old lady. Our solution allowed the recipient to stay in her home and the Welfare Department to maintain one of their clients in private housing

Bank or FHA Application

It is not enough to survey the houses, tell the owners what is wrong with the house, draw a sketch plan, estimate the cost of repairs and then let them fend for themselves; if you do that, you only bring the ball to the ten yard line, you do not score. In order to put the ball over the goal line you must get financing. Indeed, financing is the key to any enforcement, improvement, or property rehabilitation program. I think it's important when we talk about property owner servicing and the value of the shopping center approach to rehabilitation that we consider the alternative.

If a homeowner wants to get a rehab loan or mortgage, he must chase all over town looking for a bank that, after a detailed explanation, will consider the loan probably at a short term and a 6% interest charge. Sometimes two points might be charged. (2% of the mortgage value at the time of passing.)

In Washington Park, a property owner may come to our office to make a formal bank application. After a credit check, the Boston Banks Group, which title I will explain later, clears the application for formal processing. The rehab team is then notified to prepare 5 copies each of the work write up and the 2005 form. The accepted contractors bid is attached as is the 2014 cost sheet from FHA. Our staff fills out this cost sheet and it is checked by the FHA Architectural Examiner. The Site Office staff from the Boston Banks Group fills out the 2004 (FHA Application) series as well as the 2561. (Transient use form) In other words, everything is done right in the shop.

Sometimes when an owner appears to be financially marginal, or when the property requires an amount of work bordering on the economically infeasible, the BRA through its finance specialist, orders a credit check. This credit check only costs three or four dollars and it could save ten times that much in staff time that might otherwise be spent chasing rainbows.

Bank or FHA Application Approval -- A formal commitment is sent to the Boston Banks Group who then assigns one of the member banks as mortgagee. Assignment is done in relation to the amount of assets of the participating banks. A letter is mailed to the mortgagor informing them of the commitment and setting up a formal passing date. At the passing, the owner pays the Boston Banks Group a service charge of 1%. The overhead and salaries of the bank people in the project office are paid out of the 1% service charge fund.

When a conventional mortgage is approved, the lending institution notifies the property owner and sets up the passing date.

The Work or Job Start, To continue the pattern of service, the work is "bird-dogged" by the rehabilitation specialist who follows job progress and verifies that the necessary permits are issued. He periodically inspects the job and settles any minor problems between the owner and the contractor.

The Boston Redevelopment Authority makes available an Agreement or Contract form to owners and contractors, that is intended to protect all parties involved.

Work Completion -- At Job completion, the rehab specialist inspects the completed work and if the job was a 220 loan the FHA Architectural inspector gives his final approval.

Let me now compare Harlem Park to Washington Park. The Harlem Park experiment in Baltimore in 1961 and 1962 developed and tested new ideas and procedures that were needed to get residential rehabilitation moving. The Boston system of property owner servicing has incorporated many of those procedures and added some new ones, found necessary or desirable to achieve what we believe to be an effective service program designed to deliver that "ball" over the goal line.

Most significant of the new "wrinkles" in the Boston effort are 1) the FHA participation at the site office level in 1-11 unit mortgage applications, 2) the Boston Banks Urban Renewal Group, who also staff the site office and 3) the Work Write-Up certification by the BRA.

In June of 1963, the FHA assigned three people to work in our project office two days a week and, in effect, pre-approve mortgage insurance applications. The FHA staff included an architectural examiner, a mortgage analyst and an appraiser. They have been instrumental in the commitment of almost seventy loans in the 1-11 unit category. In addition to this, the Boston Banks Urban Renewal Group assigned staff people to process mortgage applications two days a week.

The Boston Banks Urban Renewal Group Was an existing bank group that had a firm belief in the total Boston Program and put on Urban Renewal "clothing" to service rehabilitation loans. Initially $6 million has been set aside for the Washington Park Project. At the present time, 24 savings, savings and loans, and cooperatives are members of the Urban Renewal Group and have agreed to write loans in the area under the FHA Section 220 mortgage insurance program. To date, their member banks have written loans amounting to $1.6 million.

The Work Write Up Certification came about after it was determined that the FHA architectural people were "second guessing" the project rehab people. For instance, a ceiling might be scheduled for "repair" in the work write up and bids would be received on that basis. The FHA architectural man, during the course of his inspection for mortgage insurance may apply a higher standard on a 60 year old building and might require that the entire ceiling be replaced. The cost would be changed from $15 to over $100 thereby requiring new bids. This meant a change in the work write up, an amended bid and probably another trip by the contractor. You can imagine the effect this had on the property owner. They began to wonder if we really knew what we were doing.

The FHA, in order to avoid a lot of this duplication and with confidence in a well-qualified LPA staff, agreed last December to grant permission on a six-month experimental basis, to allow one man on the project staff (myself) to certify that the work write up and the cost were in conformance to the agreed upon standards for the area. (FHA Minimum Standards for Rehabilitation 1-11 Units #950.) Since that time, I have

certified the Work Write Up and Costs on 18 properties containing 51 dwelling units for a dollar volume in rehabilitation costs of $126,200 and a total mortgage value of $262,325.

COST TO SERVICE PROPERTY OWNERS

I would like to make it quite clear to you that a property owner service program, like everything else, costs money. It must have a price tag.

In Boston we employ rehabilitation specialists who must have specialized backgrounds as licensed builders, code experts, estimators, technical writers and also have the ability to sell. For this we pay $6,500 to $8,500 a year. Secondly, the specialists are backed up by rehab assistants who have some trade or code background, and who are the people that carry the clipboard, the flashlight and the rule. They get, depending on qualifications, $5,000 to $6,500 per year. The designers I mentioned earlier, must have a good architectural background as well as a flair for interior design and decorating, and they are worth almost as much as your top specialists. Finally, the finance specialist or advisor must be a man who has broad experience in all phases of financing and can deal directly with both owner-

occupant and prospective buyers as well as work with absentee owners and limited dividend corporations on their financing problems. He will cost in excess of $9,000 a year.

The salaries I have just mentioned are not unreasonable, in fact, we're fortunate to get rehabilitation experts at those prices. As a frame of reference, let me tell you that a union carpenter in Boston is paid at the rate of $9,000 a year, exclusive of health and welfare or pension fund.

Consider that a good rehab service program will never be a 9-5 operation. I know of no system in this business where the nine-to-fivers can make rehab work. Many of our property owners make their decisions in the early evening hours or on Saturdays while the rehab specialist is there prompting that decision and in effect "closing" the sale. It is not uncommon to see rehab personnel time sheets list 50 hours a week for two or three weeks in succession.

LARGE APARTMENT HOUSES

I would be remiss in my talk to you today if I did not consider the large apartment house owner or, as he is more commonly referred to, the absentee landlord

and the influence he has on a property owner service program.

In Washington Park our surveys to date have uncovered 86 properties that for financing purposes must be considered multi-family or large apartment buildings, as each contains more than 11 dwelling units. There are over 1700 dwelling units contained in these 86 properties and they account for 25% of the total units in the project area subject to rehabilitation treatment. While these buildings are not substandard now, they will become substandard if not improved in the near future; furthermore, as these buildings tend to attract attention because of their size, their unsightly appearance greatly detracts from a street which has otherwise been upgraded; finally, the small homeowner tends to regard investments by the owner of a large building as an indication of an informed investor's evaluation of the area's real estate future. All of these things protect FHA's investment.

For the last two years our rehab staff has serviced these owners on a more or less sporadic basis, lacking the tool or key or magnet if you will, that would lure their dollars out of their pockets and channel them into property improvements.

The typical absentee landlord in our project area has owned the property for at least ten years. The debt service will usually include a second or third mortgage at rates of up to 18% and terms as short as six years. In fact, some short term mortgages have artificial or misleading monthly payments relying on a "ballon" payment at the end to act as an equalizer.

Most of the multi-owners would like to recover some equity from the building and the inability to recoup cash through any of the rehabilitation financing plans has inevitably hampered rehab action on their part. We have not been able to make use of the 220 Project Mortgage, and the 220 One to Eleven Program will require a substantial additional cash investment.

It was felt that a normal practice of code enforcement would not bring about the desired effect. Most of the 1700 units have few code violations and it is a generally accepted fact that a minimum rehabilitation job through code enforcement cannot essentially change the character of the property or the area. What was needed was a special effort of service that, short of "spoon-feeding," would induce these landlords to commit themselves to upgrade and renovate their property.

Several things had to be done to help the owner make his choice:

1. Provide him with a motivating force to rehabilitate, and this is being done through code enforcement, neighborhood action and competition.
2. Provide the administrative staff to explain the content, procedures and advantages of several financing plans at reasonable rates as well as free services in terms of pre-process planning and designing, as part of a total "vehicle" of service to multi-owners.

It might be argued that "those" people have plenty of money and therefore can afford to do all the necessary things needed to secure a new mortgage or get rehab financing.

I maintain that someone has to "prep" or "work up" the package for presentation to the FHA.

I am convinced that the staff time required to service large apartment owners will be rewarded by the amount of dollar investment, and in the modernization of hundreds of rental units by the present owners.

We have a new special-service section in Washington Park and its only job is to service large apartment

house owners. The new section concerns itself with surveys, work write ups, cost estimates, specifications and plans. (The latter two items being kept to a minimum). Enforcement of the codes plays a major part in the program. We feel that we had to lay down some ground rules, supply the necessary administrative personnel and service the multi-owner with as much concern as we do the 1-11 unit properties.

If we, as a local public agency are to apply new tools and new methods for the rehabilitation of our large apartment houses then we must do some hard thinking about the FHA and their approach to multies. At the present time there exists no special task force at the FHA to process multi-rehab applications; in fact, they have "lumped" urban renewal rehab in with a multitude of suburban and near suburban projects and have not assessed any priority on rehabilitation in terms of staff or schedule.

It would be most helpful if the FHA would recognize the enormous potential that a partnership with the LPA would unleash in the multi-family area and create a special rehabilitation section to process those applications in the Boston office. Staffing could be accomp-

lished by internal transfers or recruitment from private industry or the larger LPA's.

Initially two architectural men would be needed to examine plans, specifications and work write ups for conformance to the standards; a knowledgable urban renewal appraiser would be necessary to interpret the benefits attached to a property in an urban renewal area and give a "long-look" at the value as it relates to the existing debt. The complex mathematics of multi-family financing will require a mortgage credit man who can give a liberal view to a sponsor's ability to carry debt, maintain the property, and aside from non-profit or limited divident corporations, show a profit.

Meet Boston's Mr. Urban Renewal

After decades of neglect, American cities are being made over. One of the nation's major efforts is under way in Boston under the direction of Edward J. Logue. Here are Mr. Logue's views on rebuilding cities as expressed to staff writer George B. Merry in an interview.

Photos by staff photographers

Blueprints for Boston

One of the busiest men in the emerging 'new Boston' is the city's redevelopment administrator, Edward J. Logue, shown here with Mayor John F. Collins (right). Mr. Logue is recognized as one of the top men in the renewal field. A graduate of Yale College and Yale Law School, Mr. Logue has been rebuilding cities since January, 1955. Starting out in New Haven, Conn., he moved to his Boston assignment five years ago. He is one of a group of planning specialists now advising Mayor-Elect John V. Lindsay on New York City's renewal program. Under Mr. Logue's direction, a dozen Boston projects involving nearly $1 billion are moving ahead in a variety of stages.

Boston

Do our cities really need urban renewal?

They certainly do. There are too many tens of millions who leave the central cities and go out to the suburbs to leave any doubt as to whether our cities are in serious difficulty. They simply have not had enough public and private investment in the rehabilitation of existing property and in the putting up of new schools and other things that make the cities competitive with the suburbs.

Can't this job be done mostly, if not entirely, through private investment?

Private investment is, of course, absolutely essential to the success of a city's rebuilding program. However, it is equally clear that unaided private enterprise has not, and indeed cannot, do the job without substantial federal funds. And it is not just is increasingly competitive with the suburbs around it as a place in which to live, raise a family, and send children to the public schools.

What other cities have, in your judgment, been successful with their efforts to renew run-down areas?

Philadelphia; Pittsburgh; Chicago; Washington; St. Louis; San Francisco; Norfolk, Va.; Hartford, Conn. (on a limited scale with their splendid project —Constitution Plaza); Baltimore; Detroit; and Minneapolis.

If the money were available, how quickly could the national urban-renewal program be completed? Is it 10 years, 20 years, 50 years?

I would think enough could be done in 10 years, with simplified procedures, to restore public confidence and encourage private enterprise and local government to go forward on their own.

If we ever seriously try to do this job as a nation and commit the necessary resources and priority, I am confident we will then simplify the procedures a very great deal so that we will not have all these separate applications and separate projects. Instead, we will, in effect, have contracts between the city and the federal government, which will give us the same kind of broad discretion to do what we think in our respective cities is most important to us.

see a glass box set on top of a masonry building and think what a monstrosity that is. I can also look out, in the other direction, on the new buildings which are going up in the Government Center and note with satisfaction that they are not the Park Avenue-type glass boxes, but they are the masonry buildings which respect the "old Boston" and the character of "old Boston."

Secondly, it is important to have a client — an owner — who cares about good architecture and is willing to go to some trouble to get it. The best possible architects must be working on the new buildings. We have certainly had a distinguished roster of architects working on the buildings for the "new Boston." I think here we are going to be among the top three, or four, cities in the nation in the quality of the new buildings that are going up and will be going up in the years ahead.

Can the renewal program provide enough decent housing for moderate-income and low-income families?

Within the renewal areas, I think it can. The size and pace of the renewal program and the code-enforcement program have a lot to do with how much of the total job we can achieve.

Many of our friends in the suburbs think that we should fill Boston with large-scale public housing projects to take care of the poor or badly housed. I

pleased that we are going to have more than our share of them in Boston.

The architectural review board process is something I have very deep personal convictions on. My job would be very dreary and burdensome if I knew that the end result would create a lot of ugly buildings. That is something I would not want to do for even five minutes.

What big lesson, or lessons, have you learned through your experience here in Boston?

Be patient — but not too patient — with the political process. Boston is bigger than New Haven. There are more people involved, more layers of decisions. Along the way we learn to improve on past performances.

Should renewal plans be submitted to the people for their approval through a referendum?

I don't believe so. No! A referendum is a simple "yes" or "no" on a very complicated thing. Do you have the referendum at the very beginning when you don't know what you are going to do, or at the end after you have invested several hundreds of thousands of dollars, and several thousand man-hours in consultation and trying to determine what people want?

We learn from our public hearings in the neighborhoods involved, as well as during the meetings with

for Boston

is under way in Boston under the direction of Edward J. Logue. Here are Mr. Logue's views on rebuilding cities as expressed to staff writer George B. Merry in an interview.

Boston

Do our cities really need urban renewal?

They certainly do. There are too many tens of millions who leave the central cities and go out to the suburbs to leave any doubt as to whether our cities are in serious difficulty. They simply have not had enough public and private investment in the rehabilitation of existing property and in the putting up of new schools and other things that make the cities competitive with the suburbs.

Can't this job be done mostly, if not entirely, through private investment?

Private investment is, of course, absolutely essential to the success of a city's rebuilding program. However, it is equally clear that unaided private enterprise has not, and indeed cannot, do the job without substantial federal funds. And it is not just government money. It must be federal money. Cities will not be able to renew themselves.

Which city has made the greatest strides with renewal? What has been accomplished?

New Haven, Conn., has done the most, so far. I hope we will surpass them pretty soon.

What you will see in New Haven are neighborhoods which have been restored, with magnificent new schools in them which are used throughout the day and throughout the year, public works in the form of new streets and street lighting, and an enormous amount of rehabilitation—people fixing up their homes; plus a large quantity of new, moderately priced housing.

In one neighborhood after another the decline has been halted, the population has been stabilized, property values have started to go up, and New Haven is increasingly competitive with the suburbs around it as a place in which to live, raise a family, and send children to the public schools.

Eye on the 'new Boston'...

When Mr. Logue came to Boston to head up the urban-renewal program, he was offered an office in a building near City Hall. He refused, insisting that renewal was an integral part of city government and that the renewal agency's headquarters must be in City Hall. From his dramatically modernized office on the 11th floor of City Hall Annex, Mr. Logue now watches the 'new Boston' spring up around him. Shown is part of the new Government Center project.

What other cities have, in your judgment, been successful with their efforts to renew run-down areas?

Philadelphia; Pittsburgh; Chicago; Washington; St. Louis; San Francisco; Norfolk, Va.; Hartford, Conn. (on a limited scale with their splendid project —Constitution Plaza); Baltimore; Detroit; and Minneapolis.

If the money were available, how quickly could the national urban-renewal program be completed? Is it 10 years, 20 years, 50 years?

I would think enough could be done in 10 years, with simplified procedures, to restore public confidence and encourage private enterprise and local government to go forward on their own.

If we ever seriously try to do this job as a nation and commit the necessary resources and priority, I am confident we will then simplify the procedures a very great deal so that we will not have all these separate applications and separate projects. Instead, we will, in effect, have contracts between the city and the federal government, which will give us the same kind of broad discretion to do what we think in our respective cities is most important to us.

This would work in much the same way as the Agency for International Development (AID) makes contracts with underdeveloped countries. I hope we can climb up on the priority list so that we are somewhere equal with India and Pakistan.

About how much money will be needed?

The last serious studies that we made indicate that it will require something over $10 billion. That was a few years ago. As a matter of fact, we have asked the Congress, and we have asked the President directly, to make a study of this and to determine just what is needed. I would suppose this would be the first important research assignment that the new Secretary of Housing and Urban Development will hand out to his staff.

How big is the Boston renewal program in terms of public funds and private investments and commitments?

As of now, public and private investment is approaching a billion dollars. One-third of this is public monies through federal urban-renewal grants, city public improvements, and state financial assistance, plus the investment in such places as the Government Center.

How much bigger will the Boston program get, and when can we expect it to be complete?

I think we will not be undertaking any more large-scale residential renewal projects beyond those we have started or are in the advance planning stages.

I personally believe that building-code enforcement and other financial aids, made available by the Housing Act of 1965, can make it possible for us to do many of the things in mildly blighted areas without all of the cumbersome urban-renewal processes.

This shows that we have paid attention and given priority, as I think we should have, to the areas which are most seriously in need of the urban-renewal process. Other areas of the city might benefit from it, but there are other ways of giving them help—new streets and sewers, new tree-planting and new street-lighting, demolition of clearly unsafe, and usually abandoned, structures which are neighborhood eyesores.

All of these things can be done through the existing framework of government, but in the past Boston simply has not been able to afford that. Under the new Housing Act we can.

In a successful residential-renewal program, what are the essential ingredients?

1. A strong base of neighborhood support.
2. A plan which emphasizes rehabilitation of at least 75 percent of the existing occupied homes. If you have much more disruption and dislocation you will make people uncertain about the future of the neighborhood, whereas if you limit it to only one-quarter, or as in Charlestown only 10 percent, demolition, people can know that the neighborhood that they have always known and loved is not going to be drastically changed but only upgraded.
3. There should be a sufficient new supply of moderately priced housing. We want to have housing which the people who have lived in the neighborhood can afford. We are trying to preserve and improve neighborhoods for the people who now live there and not chase them all out and bring in an entirely new economic group.
4. The city has to demonstrate its good faith by putting in schools, fire stations, libraries, parks and playgrounds, street lighting, and simple things like trees to show that it, too, is as concerned about the neighborhood as it is asking the property owners to be.

What do you consider most important in the design of new buildings for today's cities?

The building must respect the environment in which it is located.

I can look out my window, down State Street, and see a glass box set on top of a masonry building and think what a monstrosity that is. I can also look out, in the other direction, on the new buildings which are going up in the Government Center and note with satisfaction that they are not the Park Avenue-type glass boxes, but they are the masonry buildings which respect the "old Boston" and the character of "old Boston."

Secondly, it is important to have a client—an owner—who cares about good architecture and is willing to go to some trouble to get it. The best possible architects must be working on the new buildings. We have certainly had a distinguished roster of architects working on the buildings for the "new Boston." I think here we are going to be among the top three, or four, cities in the nation in the quality of the new buildings that are going up and will be going up in the years ahead.

Can the renewal program provide enough decent housing for moderate-income and low-income families?

Within the renewal areas, I think it can. The size and pace of the renewal program and the code-enforcement program have a lot to do with how much of the total job we can achieve.

Many of our friends in the suburbs think that we should fill Boston with large-scale public housing projects to take care of the poor or badly housed. I wish they would come to our neighborhood meetings and help us persuade the people there that even a little bit of family public housing would be desirable.

There is great resistence to this in Charlestown, South Boston, and Roxbury. People do not like to be housed in institutions, and over the last 25 years, in America, our public housing program has established an institutional character.

I think that Boston is on its way to improving the quality of housing. I doubt that this city, or any other central city of a metropolitan area can solve the problem by itself.

It is time we recognized that the suburbs should not be inhabited only by the well-to-do. There should be some lower-income families either in relocation housing or perhaps even public housing—not the great big project kind, but a 25-unit, well-designed kind.

In a wealthy suburb such a public housing project, it seems to me, would not hurt that suburb very much, and it might provide 25 families with a great deal of incentive to improve their own conditions so that they can live in private housing.

What, if any, are the major shortcomings of the national renewal program? Where is it missing its target?

First let me be positive. I think Bob Weaver [Commissioner Robert C. Weaver of the federal Housing and Home Finance Agency] has done an outstanding job. Bill Slayton, the Urban Renewal Commissioner, has really overhauled the urban-renewal program and made it more sensitive on relocation, more aware of good design. Red tape has been cut down, and the whole process has been greatly speeded up.

But Congress and the President have yet to give sufficient money and sufficient importance to the urban-renewal program to allow it to proceed as quickly as it should. When the officials in the housing agency and the Urban Renewal Administration are restricted by the Bureau of the Budget and the White House in the pace and the amount of funds, then we have the basic reason for the lack of more progress to date.

What major strengths do you see in the present renewal effort?

As it is evolving, certainly one of these is the approach used in New Haven and Boston in trying to save neighborhoods (not just residential neighborhoods but business districts as well) by planning with the people who are concerned and asking them to be your partners.

This creates a climate of confidence which is quickly evident in the cities with outstanding urban-renewal programs. If you go to New Haven and walk the streets and talk to the people and to the businessmen, you get a different feeling than you did 10 years ago.

If you go to San Francisco, Philadelphia, and Baltimore and cities which frankly thought they had had it, and where the new investment was almost exclusively on the outside in the suburbs—these places are beginning to get a heavy share downtown.

Is the job being done in Boston different in any appreciable way from similar efforts in other cities?

Yes. Very few cities emphasize rehabilitation the way we do. Very few are attempting to deal with the problem on anything like the scale that we are.

Boston has a group of distinguished architects who pass judgment on the design of proposed major new buildings within renewal areas. Is this concept of architectural review unique here?

Oh no. It is done in various ways and with great skill in Washington, Philadelphia, San Francisco, Baltimore, and New Haven, to name, perhaps, the leaders.

Urban renewal has created some very handsome new city areas. It has led to some very striking, desirable, new buildings—both public and private. I am pleased that we are going to have more than our share of them in Boston.

The architectural review board process is something I have very deep personal convictions on. My job would be very dreary and burdensome if I knew that the end result would create a lot of ugly buildings. That is something I would not want to do for even five minutes.

What big lesson, or lessons, have you learned through your experience here in Boston?

Be patient—but not too patient—with the political process. Boston is bigger than New Haven. There are more people involved, more layers of decisions. Along the way we learn to improve on past performances.

Should renewal plans be submitted to the people for their approval through a referendum?

I don't believe so. No! A referendum is a simple "yes" or "no" on a very complicated thing. Do you have the referendum at the very beginning when you don't know what you are going to do, or at the end after you have invested several hundreds of thousands of dollars, and several thousand man-hours in consultation and trying to determine what people want?

We learn from our public hearings in the neighborhoods involved, as well as during the meetings with groups of local residents, whether they want a renewal project.

What strengths does the Boston program have?

A broad base of citizen support. The warm endorsement of most of the community's leaders, except for a few people in the local community who believe they can get some mileage by opposition.

The great strength with Boston, as with any city, is the kind of people who live there. These are resourceful people. They have a deep affection for the City of Boston. They enjoy the politics of it—sometimes I think as a spectator sport—but they rise to defend it when they think they need to.

Topographically, Boston is one of the most interesting cities in America. Boston, because of its hills, its rivers, and its harbor is one of the most beautiful cities anywhere.

I've loved it here and my family enjoys it as much as I do.

...and on the old

Asked if Boston's many historic sites have been an obstacle to sound renewal, Mr. Logue's reply was: 'No indeed. These are things we use as anchors—as sources of strength. . . . I don't want to live with the responsibility of having destroyed "old Boston." We have no intention of doing that. Anyone who has taken a serious look at our program knows we are not.' Here Mr. Logue strides toward his home at 30 West Cedar Street on historic Beacon Hill.

is recognized as one of the top men in the renewal field. A graduate of Yale College and Yale Law School, Mr. Logue has been rebuilding cities since January, 1955.

say on New York City's renewal program. Under Mr. Logue's direction, a dozen Boston projects involving nearly $1 billion are moving ahead in a variety of stages.

U.S. economic curbs backed

By Philip W. McKinsey
Special correspondent of The Christian Science Monitor

Washington

BUSINESS

Unless the Vietnam war gets worse than expected now, the United States economy can provide both guns and butter during 1966—with no need for real economic restrictions.

Nevertheless, growing labor shortages will put a little more strain on wages and prices than during the past year. A little dampening down is therefore in order.

This is the view of the National Industrial Conference Board, a respected economic-research organization financed by blue-chip corporations.

Martin R. Gainsbrugh, the board's senior vice-president, says business economists and executives endorse two recent actions of the federal government aimed at deflating price pressures: the increase in interest rates, and release of stockpiled aluminum and copper.

Even the government's intensified program to cut down direct investment abroad by American business, he asserts, is recognized as necessary.

Industries surveyed

At the same time, businessmen now expect the government to do its share by clamping down on nondefense spending and welfare programs.

The warning was sounded by Mr. Gainsbrugh as the administration begins putting the final touches on its defense and welfare spending plans for next year.

Testifying before the Joint Economic Committee of Congress in its hearing on the interest-rate rise, Mr. Gainsbrugh reported that a quick conference-board survey of industry sources showed that 92 percent expect that the change in interest rates will not affect their capital-investment plans. There will be no effect in the current quarter and only a slightly increased effect as next year wears on.

Corporations can be expected to review their capital-spending plans and eliminate "as many unnecessary elements as possible" to cut down financing costs. But "no capital project currently planned seems likely to be cut back significantly." What cutback there is will be beneficial in reducing pressures on the money market.

Other economists have made the point that of course the business community would prefer higher interest rates instead of a tax increase, because the former affects them less.

"Who wants higher rates here?" asks Prof. Seymour Harris, chairman of the University of California's Economics Department. "Primarily European bankers, because they are unwilling or unable to control their inflation; and American bankers who want higher prices for their product, and more profits. But the banking system should serve the public, not the banks."

Difference of degree

Mr. Harris differs with Mr. Gainsbrugh on the degree of effect higher interest rates will have on the economy. He sees it as possibly "denying the American people $40 billion of additional income expected in 1966." He would prefer a stretching out of welfare programs.

He acknowledges that "at present there are some inflationary signs. But he suggests a small tax hike if something is needed to combat inflation.

Just how much inflationary pressure will be felt from the increased needs of Vietnam will not be known until President Johnson discloses his defense budget. There are reports in Washington that it will go from this year's $53 billion to as much as $60 billion. A more conservative, and probably better, guess would place it at about $56 billion.

Mr. Gainsbrugh points out that even a $60 billion outlay would represent only 8 percent of national output, compared to the 10 percent spent in 1957 without creating any undue strain.

It is true that there are some bottlenecks developing, in certain labor skills and scarce materials. But "huge additions" to industrial capacity are just now coming into play to help meet escalating demands.

As a result, unless the war escalates faster than expected, concludes Mr. Gainsbrugh, "we can have both guns and butter without encountering the shortages and resulting price pressures that quickly compelled the various restrictions . . . early in the Korean war."

U.S. interests swallow London Diners' Club

By John Allan May
European economic correspondent of The Christian Science Monitor

London

Victory goes to the United States in the great Diners' Club battle in London.

Westminster Bank, one of Britain's "big five" clearing banks, had moved in to secure control of the Diners' Club of Britain's credit-card business.

In New York, Chase National Bank meanwhile backed a group seeking control for the United States parent Diners' Club.

Following traditional British methods, Westminster put in a "bid" for British Diners' shares. The bank offered shareholders 24 shillings a share if they would sell—nearly 30 percent above the ruling London market price.

United States interests put in counter bids. Westminster raised the ante. The bank went as high as 27s. 6s. And finally even offered 30s.

Offer withdrawn

But on the market the price anyway had been slowly creeping up. It touched 32s. Chase Manhattan and its American group had, it is reported, been buying up British Diners' shares on the quiet. Thursday American Diners' Club could announce it owned more than half of British Diners' Club already. It had voting control and meant to keep it.

Westminster withdrew its offer. The battle was over.

This foray into the take-over field by a British checking bank was most unusual. In London, the merger and take-over business is the preserve of the "merchant banks."

Possibly this deal required resources beyond the reach of most merchant banks. For Westminster itself, however, it seems to have been mainly a prestige venture. The British bank hoped by stepping in to save the greater part of Britain's credit-card business from falling into American hands. American Express already is very strong in Britain.

The battle shows how British ways are changing. It has long been believed there exists a strong built-in national resistance to "living on tick" here. But now more and more young people accept that these days you have to give credit when rather than where credit is due.

And credit is duly becoming an everyday feature of modern British life.

Open door to quick loading

Latest in a growing list of freight handling advances in the railroad industry is an 'all-door' car by International Car Corporation. Sliding doors cover both sides and allow quick loading with fork lifts directly to any part of the car bed.

Steel issues display burst of strength

By S. M. Robards
Special to The Christian Science Monitor

New York

Have the fortunes of the steel industry suddenly taken a dramatic turn for the better? Has the war in Vietnam taken up all the slack in production resulting from steel-inventory liquidation by users of the vital metal?

Hardly. But the performance of the steel stocks lately on the New York Stock Exchange indicates something is going on. With a sudden burst of strength, virtually every issue in the group has advanced.

After muddling in the doldrums for months as one of the least popular investment vehicles on the exchange, the steel issues have begun to assume market leadership.

Their return to popularity is almost paradoxical, for the industry's problems are legion—at least for the near term. But Wall Street has a way of discounting such things and this may be precisely the case with the steels.

en masse. But they didn't, because Mr. Block told the investment community nothing of which it was not already aware.

After a while, problems get to be old hat. And selling steel stocks today seems to be old hat. The industry will be revitalized in a year or two by huge expenditures on new, more efficient plants and equipment. This is what investors are looking at.

They are looking at some other aspects of the outlook, too. The American Iron & Steel Institute reported that steel production in the week ended last Saturday jumped 2.5 percent from the previous week's level.

The gain came on the heels of a 2.7 percent output increase the week before. To industry analysts, this indicated that the decline had finally halted.

Demand increases

Demand is picking up and, even though inventory use continues, it has reached the point where more steel has to be produced to meet the demands of steel users.

New York

Have the fortunes of the steel industry suddenly taken a dramatic turn for the better? Has the war in Vietnam taken up all the slack in production resulting from steel-inventory liquidation by users of the vital metal?

Hardly. But the performance of the steel stocks lately on the New York Stock Exchange indicates something is going on. With a sudden burst of strength, virtually every issue in the group has advanced.

After muddling in the doldrums for months as one of the least popular investment vehicles on the exchange, the steel issues have begun to assume market leadership.

Their return to popularity is almost paradoxical, for the industry's problems are legion—at least for the near term. But Wall Street has a way of discounting such things and this may be precisely the case with the steels.

Declines predicted

Wednesday, the same day the steels set the pace for the entire stock market, a somewhat pessimistic forecast was made by one of the industry's leaders.

"During the first six months of 1966, finished-product shipments may be 12 to 16 percent below the artificially high level of the first half of 1965," said Joseph L. Block, chairman of Inland Steel Company.

"Ingot production," he went on, "will probably range between 60 and 65 million tons, compared with 71 million tons in the record first half of this year."

Mr. Block added: "Even though the favorable economy is sustained throughout 1966, steel output and shipments for the year will probably fall slightly below the 1965 level."

The Inland Steel chief executive wasn't finished. "Our industry will continue to face fundamental problems in the coming year," he remarked. "The most serious of which will be growing employment costs, a high level of steel imports, and the likelihood of continued efforts by the federal government to control prices."

Lone pessimist

Mr. Block's forecast was part of the highly respected semiannual survey conducted by the First National Bank of Chicago. His comments were the only pessimistic ones made by a blue-ribbon panel of 11 of the nation's industrial leaders.

Against this backdrop, the steel stocks might have had every reason to sell down en masse. But they didn't, because Mr. Block told the investment community nothing of which it was not already aware.

After a while, problems get to be old hat. And selling steel stocks today seems to be old hat. The industry will be revitalized in a year or two by huge expenditures on new, more efficient plants and equipment. This is what investors are looking at.

They are looking at some other aspects of the outlook, too. The American Iron & Steel Institute reported that steel production in the week ended last Saturday jumped 2.5 percent from the previous week's level.

The gain came on the heels of a 2.7 percent output increase the week before. To industry analysts, this indicated that the decline had finally halted.

Demand increases

Demand is picking up and, even though inventory use continues, it has reached the point where more steel has to be produced to meet the demands of steel users.

The basic reason for the lackluster performance of the steel stocks for months has been the certainty that production would suffer because of inventory liquidation.

The industry recorded its best half-year ever in the first six months of 1965, because steel users bought the metal for stockpiles as a hedge against a strike. The strike never occurred and inventories had to come down.

They've been coming down ever since early September. But Bethlehem Steel Corporation announced it has refired two open hearth furnaces and one blast furnace at its Lackawanna works, near Buffalo.

Production is turning up. And almost everybody knows the industry is in for some rough going in the next six months or more, because results can't hope to compare favorably with the first-half 1965 results.

Now that nobody is hoping for any good news for the next six months from the steel industry, any good news that comes out will tend to be unexpectedly bullish.

Support lacking

AFL-CIO revives 35-hour-week aim

By Ed Townsend
Labor correspondent of The Christian Science Monitor

San Francisco

AFL-CIO has revived its old objective of a 35-hour workweek without a cut in present weekly wages. It describes this as a "job-creating, goods-consuming measure" to help the unemployed and underemployed.

But the federation's leaders are finding it hard to generate interest in the demand that it will put forward—again—on Capitol Hill and in collective bargaining in 1966.

Workers show little support now for the "job-security" issues that were critical to them only a year or so ago. The steady drop in unemployment has taken away many of the worries that labor had in the early 1960's.

AFL-CIO calls this "self-satisfied complacency" that is blind to shortcomings in the national economy. The federation's president, George Meany, warned AFL-CIO's biennial convention in San Francisco this week that serious job problems still must be solved.

The federation concedes that there has been "impressive progress" over the past two years. Unemployment has dropped to 3,200,000 or 4.2 percent of the labor force. Further declines are foreseen, perhaps to very close to a 3 percent "full-employment" level.

But, according to AFL-CIO, unemployment figures are still too high—and, the federation says, they are misleading.

Surveys tallied

Its surveys show that in addition to the counted unemployed:

- Some 2,000,000 additional people are "compelled to work part time" when they want full-time employment.
- About 1,000,000 or more aren't counted; they are out of the labor force "because there are no available jobs for them in their communities," AFL-CIO contends.

The federation's "adjusted" figure for unemployment is a claimed 7 percent "despite the substantial improvements in the national economy."

Moreover, says AFL-CIO, the labor force now is increasing at a rate about 50 percent faster than in the past decade. Some 1,500,000 new jobs are needed annually over the next five years merely to keep unemployment rolls from swelling.

"Unless an immediate start is made toward a 35-hour workweek with no loss in earnings, plus penalty pay of double time to discourage overtime work, there won't be jobs enough to go around, no matter what else is done," AFL-CIO says.

The federation's analysis of improved employment levels credits government policies of the past two years for creating jobs. They include the two-stage tax cut, increased social security benefits retroactive to the first of the year, and the excise tax reduction in June.

Jobs opened up

AFL-CIO also finds that the federal antipoverty program, aid for schools, and public works for distressed areas have added to the level of economic activities—and opened up jobs.

Such measures have demonstrated the usefulness of "expansionary economic policies," Labor's economists say, but they haven't produced enough jobs—and they aren't likely to.

AFL-CIO would like Congress to "examine in depth" a plan for the "automatic and flexible adjustment of the basic statutory workweek, without loss of pay, as a means of maintaining full employment in the face of technological changes and fluctuations in goods demands."

Walter P. Reuther, president of the United Automobile Workers, suggested such a plan several years ago. Under it, employers would pay an employment tax similar to that for unemployment compensation. Whenevr the jobless rate climbed above certain formula levels, either nationally or by industry, the workweek would be cut to spread out the available jobs—and the costs would be met from the federal "employment-stability" fund.

Nearly 1,000 delegates at AFL-CIO's convention gave these economic proposals their unanimous support this week. But they did it routinely and without any sign of personal commitments. Two years ago, similar proposals engendered sparks of excitement from unionists afraid for jobs.

AMC chief optimistic; sees better year ahead

Business roundup

Detroit

Roy Abernethy, American Motors president, predicts a good future for his company and says its sales will pick up soon.

"American Motors is not in trouble in any way, and when you look at things overall, we are on the way up," he said.

AMC sales this year have been estimated at about 303,000, a substantial drop from the 362,000 sold in the comparable period last year. Just a week ago, the firm announced a three-week shutdown of its production lines, for "realignment of field stocks."

Mr. Abernethy said AMC made money in October and November, and hinted that the firm would finish in the black for the quarter. The company lost $13 million in the third quarter of this year, and passed its dividend.

The AMC president repeated his contention that the company's main problem in the market place is an image lag. "Many people still think of us as the maker of compact cars, and we have to convince them that our cars match anything the Big Three has to offer, with the exception of two or three," he said.

Airline investment spurt

New York

Well over $12 billion will be spent by major United States airlines in the next 10 years on planes and equipment, says the chief of the Air Transport Association.

Stuart G. Tipton, ATA president, said the outlay would be almost double what the lines spent in the last 15 years. His prediction is based partly on government estimates that United States airline traffic will at least double by 1975. It assumes continued heavy buying of jets and the arrival of a supersonic jet by 1972.

Mr. Tipton said the investment gamble by airlines on the future is underlined by the debt of major United States lines, which already represents 58 percent of their total invested capital.

As of Jan. 1, he said, domestic airlines will have on order some $3 billion worth of airplanes for delivery in 1966-69.

This year, United States airlines will have sold an estimated 95 million seats, a 50 percent jump over the 1962 total. Freight traffic has grown even faster: an estimated 2.3 billion ton miles in 1965, compared with 1.3 billion in 1962—a gain of 70 percent.

Retail climb continues

Washington

Retail sales in the United States were up last week to a level 5 percent over the previous week and 7 percent higher than the comparable week last year.

The sales totaled $6.64 billion, according to Commerce Department figures.

For the past four weeks, retail sales were 8 percent higher than sales in the comparable 1964 period.

Durable goods sales amounted to $2.04 billion, and nondurables, $4.60 billion. Department store sales came to $1.33 billion, about $216 million higher than the previous week, and 5 percent above the comparable 1964 week.

Johnson renames Jaffe

By the Associated Press

Washington

Theodore Jaffe of Providence, R.I., has received from President Johnson a recess appointment for another three-year term as a member of the Foreign Claims Settlement Commission, a $26,000-a-year post.

The appointment is dated from Oct. 22. Mr. Jaffe has been on the commission since March, 1961. The appointment will be submitted to the Senate for confirmation after Congress reconvenes Jan. 10.

Bank insurance sales attacked in court suit

By the Associated Press

Atlanta, Ga.

An organization of insurance agents has filed federal court suits attacking a ruling by the Comptroller of the United States Currency and asking that Georgia's largest bank be prevented from selling insurance.

The two suits were brought by the Georgia Association of Independent Insurance Agents and four of its members and backed by the National Association of Insurance Agents, Inc. (NAIA).

William E. Webb Jr., Statesville, N.C., president of NAIA, said, "The sale of insurance by banks is in violation of the intent of Congress, federal and state laws, and the public interest.

"Our legal action has been taken not only to defend the 150,000 independent insurance agents in this country, but also to serve the public interest," he said.

The Georgia Association asked the court to declare null and void and in violation of the National Banking Act a 1963 ruling by James J. Saxon, Comptroller of the Currency, that national banks could serve as agents and receive commissions for selling insurance incidental to banking business.

The ruling would allow national banks to sell insurance in cities with populations of more than 5,000 and to retain as income the commissions or other compensations received.

The second suit asked the court to stop the Citizens & Southern National Bank, Georgia's largest, from selling or writing automobile and home insurance.

It contended the Citizens & Southern was "willfully and unlawfully engaging in an insurance agent's activity."

The suit also claimed that Mills B. Lane Jr., president of the bank, was chairman of the board of directors of American Southern Insurance Company, a Georgia corporation, and that the bank was selling policies of the company.

Dialogue with youth

By Erwin D. Canham
Editor in chief of
The Christian Science Monitor

Reader: Another Thanksgiving Day has come and gone, and as it fades into the past, it leaves us with a glowing, growing gratitude for the fresh and bright generation of today's young adults.

It was our privilege to have at our dinner table (five tables, really) on this very special day, no less than seven adults and thirty-three youngsters, boys and girls of high-school and college age. They stayed with us throughout the day, the last of them leaving about 10:30 in the evening. What a day it was! It had begun at church where we had each humbly and sincerely praised God for his gracious, loving care. Shortly after noon, forty of us had gathered together in our home and the day was filled with joyous giving, feasting, playing, dancing, and music-making. When the day was done, helping hands suddenly appeared from everywhere putting furniture back into place, carrying party left-overs to the kitchen, taking down decorations, mopping and sweeping floors. No one was asked to help—the help came forth spontaneously, and it was joyous help enhanced by exclamations of gratitude for a wonderful day and a wonderful time.

When the clock struck twelve, they were gone, our own children were sleeping soundly, and the house was quiet once more. But in our hearts a new song had been born, and our day closed with even deeper praise to God. On this hallowed Thanksgiving Day, through the expressed joy, respect, and gratitude of today's youth, God had shown to us His glorious promise of tomorrow's eternal gladness.

E. D. C.: Here is an eloquent and loving tribute to youth. I can add nothing to it, except deep thanks.

Carolers in Japan

Portland, Ore.

Our favorite festivity of the Christmas season has been the caroling that we have shared with friends in various parts of the country where we have lived. This took on an international flavor the first year of our marriage when, living in Japan, we were invited to join a group of young people who were going to carol in Tokyo.

We invited two young teenage friends to drive with us from our small Minami-Rinkan hometown to Tokyo, in search of the school where the caroling group was scheduled to meet for a warm-up session. When we did find it, we were welcomed very graciously and given a list of very familiar carols which was enhanced with the addition of "Silent Night" in Japanese. Around the piano were young Japanese women and men, young American servicemen, and a couple from the American Embassy and their family.

When the practice time was over, we piled into cars with drivers who knew the intricacies of the Tokyo streets and began our musical visits to five or six homes. Such warm welcomes we received . . . literally! Several of the people had prepared bonfires for us to stand by as we sang in the chill night air, and the thoughtful hosts also passed among us bearing plates of rice cookies and oranges for our refreshment.

One of the homes we visited was occupied by an American woman working in Japan, who had a house guest from Germany. When we sang "Silent Night" to these ladies, first in English, then using the Japanese words, I thought of how this lovely song had originated in the guest's homeland but had gone forth into all the world and become loved by all people who sing it, regardless of their language.

Another lady we sang to was a young Japanese woman, educated in America, who was then working for the Reader's Digest in its Tokyo office. We read later that she married an American professor, and her current address is the American Embassy in Tokyo, for her husband is our ambassador there.

We had read in "Windows for the Crown Prince" (by Elizabeth Grey Vining) about Mrs. Takaki, who was a lady-in-waiting to the Empress of Japan. Imagine our delight when she and her daughter so graciously served up refreshments while we sang outside their home.

One of the friendships begun that evening was with Kiyoko, a quiet, intelligent young college girl who was caroling with us. She later invited us to her home, and through the kindness of her parents we were able to see many things in Tokyo we would not have seen without their guidance. Kiyoko and one of her sisters and her brother came to America for college work, and after graduation, she served for a time as a gracious guide at the United Nations Building. Knowing her family was one of the highlights of our stay in Japan.

Memories of that cool Japanese December night are very warm indeed when we recall the happy voices united in song, and the warm hospitality received from the hearers.

Holiday visit from neighbors?

An apparent "flying saucer" was recently visible over Czechoslovakia's Giant Mountains for about half an hour, before it disappeared. It caused considerable excitement until identified by the Prague Meteorological Office as a peculiar type of cloud formation known as altocumulus lenticularis.

Christmas fruitcake in the making

Arlington, Va.

In our home, the day after Thanksgiving is reserved for a pre-Christmas ritual—the making of the fruit cake. The family can lunch and dine on the leftovers from the previous feast day, and we can devote our major effort to our cake.

The pecans, the white raisins, orange and lemon peel, the sirupy red cherries, colored rings of candied pineapple are all purchased well in advance of "the day." It is always the same recipe which is used. We never deviate from the Southern White Fruit Cake and never tamper with the recipe. How did it all begin?

As a bride, I followed my husband about the country for five-and-a-half months before he went overseas. Most of that time we were stationed in a charming little town in South Carolina. We were fortunate enough to be taken in by a very dear couple who rented us a bedroom and bath, a living room, and gave us kitchen privileges. My landlady donated much needed guidance and advice in the art of cookery and guided me in the most advantageous use of those precious World War II ration stamps!

tree with popcorn and cranberry strings, borrowed some tree lights, ordered a goose, and brashly invited another soldier to be our guest for Christmas dinner. On Christmas Eve, we walked to church. The air was cool but velvety, the stars bright, and the ivy-covered church looked like a bit of old England from a stage setting. After services, we went home to have hot chocolate and some of that festive fruitcake. But lo and behold, to my horror we found the cake one mass of mold! I had stored it too close to the space heater!

But that was too wonderful a Christmas to be dimmed by a spoiled fruit cake, or the goose which proved to be too tough even for "pileau." My landlady shared her delicious Southern White Fruit Cake with us and gave me the recipe!

The following three Christmases, boxes were sent to my husband and to my brother in Europe, and each box contained one of the luscious white cakes. After the war there came little hands to help put the cherries atop the cake, and little noses sniffed the good odors, and little mouths surreptitiously

white raisins, one pound of pineapple (white and red and green for color), ½ pound of candied cherries, ¼ pound of orange peel, ¼ pound of lemon peel, and 2 pounds of shelled pecans. When this is thoroughly mixed, cover it and let it stand in the refrigerator for about eight hours or over night.

Preheat your oven to 275 degrees. Pat the batter into waxed paper-lined pans, using one large angel cake pan or two bread pans. Bake for two hours, and decorate the cake with fruit and nuts after the first hour of baking. Remove from the oven, let cool thoroughly, and then wrap carefully and store in a cool place to prevent spoiling or drying out.

Those are the ingredients and the method of procedure as given to me 22 years ago. I've found the making of a family tradition is very much like the making of a cake. You start with a significant event. You add a dash of happy anticipation, a pinch of wonder, and stir with imagination. Now bake it with good will, and lastly, preserve it with love.

Christmas fruitcake in the making

Arlington, Va.

In our home, the day after Thanksgiving is reserved for a pre-Christmas ritual—the making of the fruit cake. The family can lunch and dine on the leftovers from the previous feast day, and we can devote our major effort to our cake.

The pecans, the white raisins, orange and lemon peel, the sirupy red cherries, colored rings of candied pineapple are all purchased well in advance of "the day." It is always the same recipe which is used. We never deviate from the Southern White Fruit Cake and never tamper with the recipe. How did it all begin?

As a bride, I followed my husband about the country for five-and-a-half months before he went overseas. Most of that time we were stationed in a charming little town in South Carolina. We were fortunate enough to be taken in by a very dear couple who rented us a bedroom and bath, a living room, and gave us kitchen privileges. My landlady donated much needed guidance and advice in the art of cookery and guided me in the most advantageous use of those precious World War II ration stamps!

It was probably a combination of pride and being overly eager which prompted me to attempt a fruitcake, a dark one, without consulting my landlady and friend. At any rate, I concocted a huge cake which was actually not too bad. We sampled a bit of it, wrapped it tightly, put it into a tin container and stored it, hoping the overseas orders for my husband would not come until after we had had our first Christmas together.

And they didn't! We decorated a tiny pine tree with popcorn and cranberry strings, borrowed some tree lights, ordered a goose, and brashly invited another soldier to be our guest for Christmas dinner. On Christmas Eve, we walked to church. The air was cool but velvety, the stars bright, and the ivy-covered church looked like a bit of old England from a stage setting. After services, we went home to have hot chocolate and some of that festive fruitcake. But lo and behold, to my horror we found the cake one mass of mold! I had stored it too close to the space heater!

But that was too wonderful a Christmas to be dimmed by a spoiled fruit cake, or the goose which proved to be too tough even for "pileau." My landlady shared her delicious Southern White Fruit Cake with us and gave me the recipe!

The following three Christmases, boxes were sent to my husband and to my brother in Europe, and each box contained one of the luscious white cakes. After the war there came little hands to help put the cherries atop the cake, and little noses sniffed the good odors, and little mouths surreptitiously devoured the nuts and pineapple. For 22 years it has been our cake, a part of our Christmas.

If there be any new brides, or any homemakers in need of a Christmas cake recipe, we are happy to share ours. It is really quite simple.

First of all, cream a pound of butter, mix thoroughly with a pound of sugar, beat in a dozen eggs—one at a time, and then add four cups of all-purpose flour. To this batter add the following fruit which has been drenched in ½ cup of flour: two boxes of white raisins, one pound of pineapple (white and red and green for color), ½ pound of candied cherries, ¼ pound of orange peel, ¼ pound of lemon peel, and 2 pounds of shelled pecans. When this is thoroughly mixed, cover it and let it stand in the refrigerator for about eight hours or over night.

Preheat your oven to 275 degrees. Pat the batter into waxed paper-lined pans, using one large angel cake pan or two bread pans. Bake for two hours, and decorate the cake with fruit and nuts after the first hour of baking. Remove from the oven, let cool thoroughly, and then wrap carefully and store in a cool place to prevent spoiling or drying out.

Those are the ingredients and the method of procedure as given to me 22 years ago. I've found the making of a family tradition is very much like the making of a cake. You start with a significant event. You add a dash of happy anticipation, a pinch of wonder, and stir with imagination. Now bake it with good will, and lastly, preserve it with love.

For children

A robot for Christmas

By Peter J. Henniker-Heaton

On Christmas morning in the year 2000 countless children woke up to find Rob the Robot standing among the presents at the foot of their beds.

And not only on Earth. It was the same on the Moon, and on Mars.

Rob was life-size, which made him a different size for each child. He was made of metal outside and of all sorts of wheels and wires inside. He could speak four languages and recognize all colors.

He had a built-in "No" for anyone who asked for help with homework, but he would happily do all household or backyard chores for his owner.

All he asked in return was a little oil sometimes and a recharge of his batteries every Saturday.

On that Christmas Day few of Rob's new owners noticed the tiny label on the back of his right heel: "Invented and Made by John Bloggs."

And still fewer stopped to wonder why or how John Bloggs had come to invent Rob.

Thirty-five years before, early in December of the year 1965, the eight children in the Bloggs family sat down to make up their lists of chosen Christmas presents.

Most of the lists were long. They began with big things like spaceships and tame elephants; they ended with small things like colored pencils.

There was no harm in asking for the big things, even if you only really were given the smaller things near the bottom of the list.

So the other children thought, but not Jackie Bloggs, the youngest, aged 7.

Every year he had asked for just one present, not too small and not too big, and he had been given it. Jackie knew his mind, and he thought this was the way to do things.

This year as usual he asked for one thing only, but what he asked for was not usual.

He wrote down: "Please, I want a robot life-size who will do things for me."

"There aren't such robots," his mother explained kindly.

"Yes, there are," said Jackie, "I've read about them."

"That was only in a storybook," his father objected.

But Jackie persisted.

"He's the only present I want," he told his parents. "Please, look hard for a robot. I'm sure you'll find him for me. Life-size and able to see colors."

Jackie's parents had never disappointed him. They didn't want to disappoint him now. But they didn't see either how they were going to get a robot; at least not the kind of real robot Jackie wanted.

And each morning Jackie told them more things that he was planning for his robot to do.

It was going to paint him a picture. It was going to speak the prologue for him at his school's New Year play. It was going to chop wood. It was going to make him chocolate and walnut fudge.

But, in spite of all this, Jackie was beginning to have doubts. His brothers and sisters were all telling him there weren't any such robots; so were his schoolmates.

Then one evening just one week before Christmas Jackie was watching television.

At the end of the program there was an appeal for Christmas toys for poor children. Jackie became thoughtful.

No one will ever know exactly what his thoughts were, but after supper that evening he told his mother about the program.

"I want to give those poor children a toy," he ended. "I want to give them my best toy. I want to give them that robot you and Pop were going to give me for Christmas."

"But not all children like robots," said his mother. "If your father and I took the money that we might have had to spend on your robot and planned carefully, we could get several toys for several poor children. Wouldn't you like us to do that?"

"I'd like that," Jackie agreed. And so it was.

Jackie never forgot the robot he had wanted so much for Christmas.

Somewhere deep inside him he decided something, though perhaps he didn't know it at the time. He decided that all children who wanted robots for Christmas should have robots for Christmas.

From that day on he read all he could about robots and he spent a great deal of time thinking about them.

Soon he started to build small ones himself.

At school he studied robots and later at college he studied robots.

After that he was soon making bigger and stronger robots, able to walk and talk and do things.

And at last the day came when he invented Rob the Robot—a robot just like the one he had imagined for his own Christmas so long before.

Rob was soon in all the stores at a price that almost all parents could afford; Jackie Bloggs had seen to that, too.

So now in the year 2000 Rob was standing tall among the Christmas presents at the foot of children's beds everywhere.

On Earth and on the Moon and on Mars.

Railroad trims its holly tree

Jackson, Md.

The Baltimore and Ohio Railroad's famed Holly Tree-by-the-Tracks at Jackson, Md., will again be decorated and lighted, perpetuating a Christmas tradition of eighteen years' standing.

The 50-foot holly tree will remain lighted from dusk to dawn through January 2.

The huge tree will be trimmed by B & O employees and members of their families who have volunteered for the big job.

The volunteer trimmers, organized by John T. Collinson, chief engineer of the railroad, will use strato-tower cranes to hang lights and ornaments from the topmost branches of the towering holly.

Gregory S. DeVine, president of the railroad, joined the tree-trimmers at the Jackson site for a noontime session which saw final touches put on the decorating job. More than 80 young holly trees set out by the railroad surround the big tree, forming a holly park at trackside.

The tree, growing naturally beside the main line between Baltimore and Philadelphia, is located 40 miles northeast of Baltimore, just off U.S. Route 40, at a point two miles north of the Susquehanna River Bridge.

With its thousands of twinkling lights and giant-sized ornaments, the tree — sometimes referred to as the "Traveler's Christmas Tree" — has become one of the principal holiday attractions in Maryland. More than 525,000 people have visited the site since the tree was first decorated in 1948.

"First the blade, then the ear, then the full grain in the ear"

PUBLISHED BY THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

China and the world

Defense Secretary Robert McNamara has drawn a grim and pessimistic picture of the world's coming relationship with Communist China. He has warned the NATO foreign ministers in Paris that Peking may begin testing nuclear weapons by 1967, be able to drop them on European or American cities by 1975, and will seek to overturn Asia, Africa and Latin America as a step toward world conquest.

Sweeping as these forecasts are, there is little in China's words or deeds which can reassure us that they are overdrawn. Indeed, wisdom and concern for the future should persuade the world to give them the attention which any reference to the globe's most populous nation deserves.

The main question immediately becomes: supposing that Secretary McNamara has read China's intentions aright, what does the world do about it? Dark as history has often been, the disasters which did not befall mankind are in most cases worse than those which did. It can and, we believe, will be so in the case of Communist China.

Indeed, there are already glimmerings of hope that the "China problem" may be gradually falling into perspective and place. There is, to begin with, the fact that much of the world is coming to take a more realistic view of China, its ambitions and the means which it is ready to use to achieve these latter. During the past 12 months there has been an amply documented drop in both Asian and African friendship for and possible naïveté over China. During the same period the Soviet Union has shown increasing awareness of the danger which a revolutionarily resurgent China has for it. Finally, there has come a certain loosening in Washington's hitherto steelbound stand against most contacts with Peking.

These are not enough to contain or exorcise a Chinese danger. But they do hint that, as China more fully reveals its hand, much of the rest of the world has begun to recognize the danger signals. This is a necessary first step toward the working out of some practical solutions to the Chinese challenge.

We believe that the wisest course to pursue with China is to stand ready at all times to talk with Peking but also to repel all Chinese attempts to spread its influence by armed attack or subversion. Perhaps China's entry into the United Nations (with safeguards for Formosa's continued representation in the General Assembly) would help. This is still a moot question. Within the next decade, much will change. Faced with firmness and, where possible, friendliness, even Peking can learn to follow a wiser course.

Not taken for granted

It is not surprising that masses of Negro citizens in the big cities usually vote for candidates of the political party that has promised them the most benefits. But the time is passing when a party can assume it owns the Negro vote—that the loyalty of this minority group can be taken for granted, no matter what a party does or fails to do.

In recent mayoral elections Negroes in traditionally Democratic areas gave indications of willingness to leave the party to which they have long had ties. In Cleveland a Negro candidate for mayor came close to unseating the Democratic incumbent. Louisville Negroes were credited with helping elect a Republican mayor. In New York, the independent candidate ran unexpectedly well in normally Democratic areas of Negro population.

In the two largest American cities Ne-

("We can't get the city hall to clean streets in our neighborhoods") to major ones about lack of influence in party councils. A "position paper" signed by 32 Negro office holders in New York not only protests lack of voice in policymaking sessions of the local Democratic Party but also demands more Negro representation on state and congressional tickets.

In Chicago there is talk among some Negro leaders of putting up candidates to oppose those of the local Democratic machine in coming elections.

Such drastic action may not be necessary or even practical. A change in voting habits is the first need. This sounds simple but it calls for sacrifice of patronage jobs on the part of many Negro Democrats.

Equally important is for the local Republican organization to give Negro voters some place to go. It must make clear its concern for and understanding of mi-

Let's think

Labor under the ceiling

By Erwin D. Canham

What is the future of the labor movement in the United States?

Is it to focus on better wages, fringe benefits, and working conditions for members of trade unions? Or is it to become something much broader and vaguer—a powerful political force working for general

age between Democrats and Republicans, by making it more difficult for liberal Republicans to benefit by labor votes.

It is obvious that organized labor does need a new program. It ought to be a program able to appeal to rank-and-file union members. That's the test of labor leadership's ability to retain

On a Scottish island

A Christmas tree

By Mabel Grey Gehring

"Chrissie, tell us again about Christmas trees." This from one child. And from another, "Are they as big as regular trees?"

Chrissie replied, "Some of them are only as tall as a person's elbow, but they're all bonny when they get trimmed up."

At this moment a young girl entered through the half-open door and three shrill voices addressed her eagerly. "Annie, did you ever see a Christmas tree? Chrissie has seen lots of them."

Annie nodded. "Yes, when I was at school in Edinburgh." Then glancing toward a proffered chair, "No, I can't stay. Just dropped in to see how you're getting along."

This was on a Scottish island, where Chrissie, back on a visit, had grown up. She turned now to the children, saying, "I'll go a bit of the way with Annie. I'll be back soon."

Another minute and they were walking down a lovely lane—a murmuring stream on one side, a fragrant hedge of honeysuckle and wild roses on the other. Said Chrissie, "I'm glad I can help Peter out like this. When his housekeeper had to leave unexpectedly and he had no one to take care of his bairns, he thought he'd have to miss some important meeting on the mainland. The relief on his face when I offered was a grand sight. Oh, Annie, if I'd only had more sense 20 years ago—at your age—I'd have married him when he asked me. But no, I was full of ambition—sure I could be successful as a fashion model."

"Well, you are—one of the best, they say. And you're entertained at the swankiest houses in London."

Chrissie sighed. "How easily I'd give all that up—how very easily. Well, I'd better be retracing steps now—my young people might be up to something."

And they were! Longing to have a Christmas tree, right away, they had rummaged among their own small possessions and tied them on the branches of a potted plant in the parlor—a plant with a thick stem and rubbery leaves. They were gazing at it in puzzled silence as Chrissie came in and one of them queried, "Is it as bonny as it should be?"

She shook her head, the tears glistening. Then she stated with determination, "Wait until Christmas and you'll have a real tree."

"How do you know we'll have one?" "Where would it come from?" "How would it get into the house?" All three were speaking at once.

"Never mind now. It'll be here. Now not another question for I won't answer."

The youngest child was staring at her solemnly. Then he said, "We *like* Chrissie."

She caught him close with a smothered, "Oh, Petey." Then she added, briskly, "Get brushed up, all of you. Your dad will be here

Not taken for granted

It is not surprising that masses of Negro citizens in the big cities usually vote for candidates of the political party that has promised them the most benefits. But the time is passing when a party can assume it owns the Negro vote—that the loyalty of this minority group can be taken for granted, no matter what a party does or fails to do.

In recent mayoral elections Negroes in traditionally Democratic areas gave indications of willingness to leave the party to which they have long had ties. In Cleveland a Negro candidate for mayor came close to unseating the Democratic incumbent. Louisville Negroes were credited with helping elect a Republican mayor. In New York, the independent candidate ran unexpectedly well in normally Democratic areas of Negro population.

In the two largest American cities Negro leaders are now discussing what they see as their lack of influence within their party. Complaints range from minor ones ("We can't get the city hall to clean streets in our neighborhoods") to major ones about lack of influence in party councils. A "position paper" signed by 32 Negro office holders in New York not only protests lack of voice in policymaking sessions of the local Democratic Party but also demands more Negro representation on state and congressional tickets.

In Chicago there is talk among some Negro leaders of putting up candidates to oppose those of the local Democratic machine in coming elections.

Such drastic action may not be necessary or even practical. A change in voting habits is the first need. This sounds simple but it calls for sacrifice of patronage jobs on the part of many Negro Democrats.

Equally important is for the local Republican organization to give Negro voters some place to go. It must make clear its concern for and understanding of minority group problems. When a good choice is offered, local government will be the gainer.

The last romantic

Only last month Somerset Maugham was listed in the Sunday Times of London among 100 key representatives of modern letters. Certainly the author of "The Moon and Sixpence" and "Of Human Bondage," whose long career has just ended, had the characteristically "cool" look of the modern.

Born in Paris and an original member of the Riviera's international set, he was cosmopolitan, if not out-and-out rootless.

He endured both people and experience with skepticism and a degree of alienation. No matter what might happen, or whom it might happen to, he appeared ready to pull out one of those fastidious writer's notebooks he maintained and clinically record all.

A study in aloofness, he cultivated the unloved and unloving face of a man early and thoroughly disillusioned in his nursery by a succession of indifferent nannies—as indeed was the case.

But another less visible Maugham coexisted with the elegantly blasé worldling.

This was the Maugham who had ecstatically read all of Scott before he was ten.

This was the Maugham who could out-Stevenson Stevenson on the Pacific: "You sail through an unimaginable silence upon a magic sea. . . ."

Long before James Bond, the British secret agent Ashenden had been fantasticated by this other Maugham, a masterful inventor of bravura plots at a time when plot was going out of style.

Inside the weary sophisticate, then, an unjaded child seemed to be signaling wildly to get out. It is this almost unintentionally winsome Maugham who is most likely to survive—less as a modern, if one may contradict the Sunday Times, than as the last of the 19th-century romantics.

Saudi resurgence

To the credit of King Faisal, the standing and influence of both Saudi Arabia and the Saudi monarchy have increased since he took over last year from his brother, former King Saud. The problem confronting all Saudis over the past two decades can be summed up in the phrase: adjustment to the second half of the 20th century.

In the days of his father, King Faisal was already the most enlightened of the Saudi princes—conservative yet understanding the need for change at home in a world already changing at breathless speed outside. Now on the throne, he manages to combine a style appropriate for a king with a personal example of austere probity. And with great shrewdness, he has chosen a middle course between the last-ditch conservatives of his faith and the impatient young radicals inspired by the example of President Nasser or of the Baath Party in Syria.

His policy is already paying dividends. Saudi Arabia is no longer the butt of scornful jokes in the Arab world—at least not in the way it was a decade ago. And young Saudi intellectuals getting their schooling abroad now tend to be loyal to rather than critical of their king. Above all, the course of events in Yemen has tended to prove King Faisal right and to show that in the Arabian peninsula the pace of needed change cannot be forced beyond a certain point.

Two developments of the past week fit into the apparent pattern of King Faisal's diplomacy. One is his visit to the Shah of Iran. The other is the disclosure that the Saudi Government has made a deal with British rather than American manufacturers for the supply of supersonic fighter-bombers. This deal represents less a swing away from the United States than a genuine desire to mend fences with the British.

Britain still has what might be called colonial outposts around the perimeter of the Arabian peninsula, from Aden to Muscat to the Trucial Sheikdoms to Bahrain. Eventually and inevitably British power will one day be withdrawn from these outposts. Apparently, King Faisal sees himself as the logical and most likely heir to British influence in Britain's present Arabian outposts. There is no reason to believe that Britain would be averse to this.

If King Faisal succeeds in setting an example of enlightened change within his kingdom and can simultaneously establish easy and honorable relations with the rulers now under British protection, his would be an influence for stability in Southwest Arabia and in the Persian Gulf. His interest in the gulf explains, of course, his visit to the Shah in Tehran.

The only big question mark hovers over who or what comes after King Faisal.

Let's think

Labor under the ceiling

By Erwin D. Canham

What is the future of the labor movement in the United States?

Is it to focus on better wages, fringe benefits, and working conditions for members of trade unions? Or is it to become something much broader and vaguer—a powerful political force working for general social goals, a quasilabor party though closely allied to the Democrats?

That is to say, is the labor movement running out of program to be achieved by collective bargaining? And must it strive to perpetuate and enlarge itself by taking on a much greater program? As work in the United States is continually upgraded in skill, does this also alter organized labor's role?

If guidelines such as those laid down by Presidents Kennedy and Johnson are to be maintained and objectively interpreted, does not bargaining become in a way pro forma?

When, therefore, does organized labor cease being a tool for improving the lot of the working man and woman, and become a structure for the attainment of socioeconomic programs or ideologies?

Objectives adopted

The annual AFL-CIO conference, just terminated in San Francisco, adopted a wide range of social objectives. It acted much more like Britain's Labor Party than Samuel Gompers' horny-handed workingmen. It moved even further into the policy framework of the Democratic Party. Thus it tended to widen the cleavage between Democrats and Republicans, by making it more difficult for liberal Republicans to benefit by labor votes.

It is obvious that organized labor does need a new program. It ought to be a program able to appeal to rank-and-file union members. That's the test of labor leadership's ability to retain power, to hold and enlarge membership. Wages, pensions, working conditions are pocketbook issues. But if improved wages and conditions are to be governed by a formula laid down by the White House, how does labor leadership justify its continuing demands on membership for money and mandate? Does a broad social program have any comparable appeal, especially when such a program — perhaps the identical program — is advanced by a Democratic President or candidate for that office who has the political office and instruments to carry it out?

Future uncertain

It seems to me that as long as presidential guidelines control the limits of collective bargaining — and as long as they are directly and accurately related to productivity gains—there is very little basis for labor leadership's appeal to its members. I do not think the alternative of a social program — labor's sponsorship of the Great Society—has a strong and indispensable pull on labor members.

Therefore, the future of organized labor is uncertain. Some elements of this uncertainty seemed evident at San Francisco. It comes at a time, too, when the old guard of labor leadership is moving from the stage. Extensive shifts in officers are under way. How can the new men mean as much to the members as the outgoing officers have?

The American economic power struggle is between management, controlling capital and the structure of the enterprise, and labor unions, controlling the work force. Government is the third party, often casting its weight decisively on labor's side, and occasionally on management's. Two great forms of capital are struggling with one another: money-management capital and work-force capital. The leaders of labor think and act more and more like the capitalists they are.

Stake in success

Unions and their leaders have a vast stake in the success of the enterprise, and of the national economy. Many of them have immense pension funds and other accumulations of capital, which they must invest in profitable ventures. Few, indeed, among them are socialists.

This kind of power struggle will continue, but if there is a rigid ceiling on gains it will be hard to retain the enthusiastic and sacrificial support of rank-and-file membership.

Unskilled labor becomes less and less important. The AFL-CIO demand for a $2 an hour minimum wage is self-defeating, for it will create unemployment among those who need jobs most: Negroes and youth.

Organized labor needs creative statesmanship as never before.

model."

"Well, you are—one of the best, they say. And you're entertained at the swankiest houses in London."

Chrissie sighed. "How easily I'd give all that up—how very easily. Well, I'd better be retracing steps now—my young people might be up to something."

And they were! Longing to have a Christmas tree, right away, they had rummaged among their own small possessions and tied them on the branches of a potted plant in the parlor—a plant with a thick stem and rubbery leaves. They were gazing at it in puzzled silence as Chrissie came in and one of them queried, "Is it as bonny as it should be?"

She shook her head, the tears glistening. Then she stated with determination, "Wait until Christmas and you'll have a real tree."

"How do you know we'll have one?" "Where would it come from?" "How would it get into the house?" All three were speaking at once.

"Never mind now. It'll be here. Now not another question for I won't answer."

The youngest child was staring at her solemnly. Then he said, "We *like* Chrissie."

She caught him close with a smothered, "Oh, Petey." Then she added, briskly, "Get brushed up, all of you. Your dad will be here shortly."

Peter arrived within the hour and soon afterwards Chrissie went back to the Royal George Inn, where she had a room. On the way there she stopped at her young friend's house. "Annie," she announced, "I'm going to ship in a Christmas tree for the youngsters. Will you hide it until Peter picks it up?" Then wistfully, "How I'd love to see their faces. . . ."

Annie was a natural matchmaker, so she decided to do something about this situation. The following evening, therefore, she went to the post office at the same time Peter usually came for his mail. When he appeared she went straight to the point with a flat statement. "You and the bairns will certainly miss Chrissie when she goes."

"Aye," glumly, "that we will."

"Then why don't you persuade her to stay?"

"That wouldna be respectable."

"Oh, I mean ask her to marry you."

"Annie, I wouldna have the effrontry — her wi' London at her feet."

"Maybe she'd rather have you."

He eyed her searchingly. "Do you ken something that I don't ken?" To which she retorted, "That's for you to find out." And away she hasted.

The next morning, Sunday, as Annie approached church, Chrissie was coming from the other direction. She held up her left hand on which was Peter's signet ring and whispered jubilantly, "We're to be married in Glasgow and we'll take a wee jaunt but be back the week before Christmas and we'll come for the tree and get it into the house after dark and we'll do the decorating Christmas Eve and. . . ."

The bells which had been pealing for fifteen minutes halted abruptly. Conversation between the two also halted abruptly, but each had an air of quiet contentment as mounting the steps they entered into the peaceful old building.

Signs of disharmony

By Richard L. Strout

Washington

Many feel the Federal Reserve Board should be "independent," but it is the independence of an oarsman in a two-man rowboat above Niagara Falls. The boat is the economy and the White House has one oar, the Fed another; each is independent but unless they pull together they may go over the falls.

In a sense, therefore, the Fed can be independent *within* the federal system, but it cannot be independent *of* it.

There is another feature that writers note. There is real disagreement among experts whether the Fed's monetary power, i.e., the ability to raise or lower interest rates and to turn on and off the supply of money, really can control inflation. Some say "yes," some say "no"; there is room for honest disagreement.

Of course inflation can be checked by bringing the nation's economy into a recession, or stagnation. But the board itself is the last agency that wants that. It does have a powerful influence on the economy, certainly. When it is wielded in harmony with the executive—when the two oars flash in unison the country should feel relieved. When there are signs of disharmony as at present, there is real cause for anxiety.

The layman may be surprised to learn how complex this debate over the board's status is. In March, 1964, Prof. Milton Friedman, the conservative and brilliant economist of the University of Chicago who was one of the advisers of Barry Goldwater, told a congressional committee that he opposed the "pseudoindependent" status of the system. Dispersal of monetary authority in government, he argued, "is likely to do more harm than good—as in the past."

Dozens of authorities take just the opposite view; the political authorities, they feel, should yield to the board's judgment when there are differences. The difficulty is that when it comes to a showdown the politicians must answer to the electorate.

Some subordinate changes in the board's operation might make things easier though they would not resolve the basic controversy. The highly respected Commission on Money and Credit in 1961 made certain recommendations. Though the Fed would still be independent, the commission proposed that the president should designate the board chairman, and that the latter's four-year term should be made coterminous with the president's. Thus a chief executive would be dealing with a chairman he had personally selected. Chairman William McChesney Martin backs this change.

The commission also proposed cutting the board membership from seven to five and reducing terms to 10 years from 14. Each governor would then become more powerful, but at the same time the influence of the president's appointive power would be enhanced. The commission proposed overlapping terms so that a president would have one vacancy to fill shortly after inauguration. This would be a powerful influence on a five-man body.

By coincidence, President Johnson will be able to influence the present membership decisively next month. The 14-year term of a member who is ineligible for reappointment expires in January. Under the present membership the board voted 4-to-3 against the President's wishes last week; by his new appointment the President can reverse this and get a majority on his side.

These and other changes were recommended by the neutral Commission on Money and Banking in 1961. They may influence Congress if it finally decides that legislation is necessary to meet the present unsatisfactory and potentially dangerous situation.

The South End Today

A Special Report

The South End Today

The people who live in it are fiercely proud of it one day, hopelessly discouraged the next. It is very Boston — and today that means Change

"One of the major problems that the South End has had to suffer – really *suffer* – and which has interfered with the renewal of the South End in the comprehensive sense has been the stigma that's been attached to this community for many years – the negative image that outsiders have of this area. This image has *some* basis in fact: there is prostitution on a large scale in some parts of the community, there is a skid row, there are poor housing conditions. Nevertheless it's a maligned area; this negative image has been portrayed constantly in newspaper reports and elsewhere, and all the good and all the positive and strong aspects of this community have not been emphasized. This adds to the area's deterioration, because if people feel negatively about a community, then they become reluctant to identify with it, and feel apathetic and overwhelmed."

–Charles Fraggos
Director, Community
Organization Services
United South End Settlements

FIRST IMPRESSIONS: dust and the smell of cheap cooking fat; the raucous sounds of alcoholic laughter, glass breaking, loud metallic music floating out of bars. It seems unkempt, hostile, and vaguely dangerous. It is night and the neon lights provide a discouraging kind of illumination. This is Tremont Street (and Washington Street and Columbus Avenue) in the South End: slum street, part of a very negative image projected by this particular community. Historically an important street, as are all of Boston's basic old streets. Tremont in the South End is the very same Tremont that runs along the east side of the Common and past the Parker House to the Government Center, but it seems hard to believe. Tremont Street in the South End is a mulligan stew of filth, poverty, and

continued on next page

This report was written by the staff of BOSTON *Magazine from research compiled by Pat Brown.*

In the above aerial view of Boston, shot from 12,000 feet, the South End area is composed of Huntington Avenue and the Prudential Center to the West, the Turnpike Extension to the North, the Southeast Expressway to the East, and the proposed route of the Inner Belt Expressway to the South. At the far left is the Charles River, and Logan Airport, to the North, is at the top (Photo courtesy Aerial Photos of New England).

dead-end futility. Citizens of the South End are the first to admit it, and are greatly dismayed by it. To outsiders, they are defiantly hopeful that the future will bring better days to a part of Boston that was once as proud as Beacon Hill. The past, however, is one thing and the present is another — and much more forceful.

But Tremont Street is only part of the South End. Down the side streets there are other components of the community: graceful brick Victorian townhouses, dappled with sunlight filtering through enormous old elms, quiet except for the sound of children playing street games. Behind the brick facades there is a community in action, speaking out with vitality and strength, eager to deal with its problems, bearish in its pride and optimism for the South End. The members of this community speak of the South End as an area of such warmth and richness and variety that suburbia pales by comparison. They are also realistically concerned with the problems which face not only the South End but all urban residential acreas today: high-school dropouts, wide-scale unemployment, inadequate housing, poor public facilities, political apathy.

Mel King, a social worker and candidate for election to the Boston School Committee, describes one element of the South End's population: "You walked down the street just now and you saw the broken, the bent, the disturbed, the beaten – people out there beaten because they failed to adopt the modus operandi of the system, which is necessary in order to make it." There are others who make it against unfavorable odds. "In a neighborhood like this we have large numbers of families who do beautifully," says Virginia Rivard, also a social worker. "They have real strength. We could all learn from them how to make a dollar do the work of two. They manage their own lives and do it well."

Between the extremes of those who succeed and those who don't there is a complete spectrum, somewhat concentrated toward the lower end. The South End is full of people who have been on the receiving end of the abuse and neglect of other people and who have reacted to it in a variety of ways. Their problems are a microcosm of mid-twentieth-century urban life.

But into this microcosm drop the second largest urban renewal plan ever undertaken in the United States, and its configuration changes. Even in the planning stage, where the program is today, its impact is beyond

Over the years, the bow-front houses of the nineteenth century have been put to a multiplicity of uses; now they wait for restoration.

"My great dream is that I could have an apartment, maybe two rooms, and some nice clothes. And some friends . . ."

comprehension. In its physical aspects alone it will certainly wreak drastic changes on the face of the South End. For better or worse – and it is subject to both interpretations – its consequences will be felt by the most isolated roomer living alone and hitherto unnoticed in one of the South End's myriad single-room apartments. The program is intended to cope with the South End's proliferation of problems; it may well create new ones, equally insoluble.

THE POPULATION of the South End is composed of people from at least forty different ethnic backgrounds, for the most part concentrated as elsewhere in homogeneous subcommunities: Syrians on Shawmut Avenue, Chinese on Waltham Street, Greeks on Dwight Street. "From the standpoint of community organization," says Dick Green, South End Project Director for the Boston Redevelopment Authority, "the South End is both the oldest and best in the city — and possibly one of the best in the country." The organizational backbone is the sixteen Neighborhood Associations, delineated geographically and generally about four or five square blocks in area. The Associations work on local problems — police protection, trash collection, street lighting, and so forth. Together they form the South End Federation of Citizens' Organizations (SEFCO), which deals on a community-wide level with the same problems.

At the individual level there is no dearth of neighborhood activities in the South End. "I can think of countless people who never say no to anything," says Virginia Rivard. "They've got two jobs — one lasts all day and the other all night." As the volunteers get to know each other and their community, they contribute a small-town warmth and cameraderie that is rare in any city. In warm weather people sit in the dusk on their stone Victorian steps and chat with their neighbors — something never seen on identical doorsteps along Marlborough Street. And people who work in the South End but live elsewhere are conscious of this rapport too; "At home in Chestnut Hill," says a South End storekeeper, "I don't talk to my neighbors because they don't talk to me. Here I know all my customers by their first names and I see them going out of their way to help others in need. They really care about each other."

Supporting and supplementing the activities of individuals and citizen organizations are a number of community agencies, notably the United South End Settlements (USES), and the South End's thirty-four churches. USES operates out of seven centers staffed with many social workers who live in the South End and thus are more than ordinarily interested in their

Renaissance at 36 Gray Street

THUNDERATION! There is a man in his shirt sleeves on those steps." With that discovery, the father of the late George Apley sold his handsome bow-front house in the South End and moved his family to the fashionable confines of Beacon Street. This incident in Marquand's novel occurred in 1873, the year of the financial panic which triggered the decline of the newly developed South End. When the dust settled after the monetary upheaval, banks held mortgages on many of the new houses. Real estate values plunged as the Apleys and other wealthy landowners retreated across the railroad tracks. By 1890 the South End, although a few decades earlier considered the most promising district in town, was a wilderness of bars and rooming houses.

Today the South End is staging a comeback. People are moving into the area not because they have to, but because they want to. Architect Tom Green is one of the new converts. His search for a townhouse quickly led him to the South End, where prices are considerably lower than in other parts of town (on Beacon Hill, town houses start at a whopping $40,000). Mr. Green's affection for the area is not tied by purse strings, however. He believes the South End is "potentially the most interesting neighborhood in town — and the most intact from an architectural point of view."

Tom Green house-hunted for two years, noting with some agitation that the price of one house rose from $7,000 to $12,000 during that period. Last year he bought 36 Gray Street, a hundred-year-old brick house on a quiet residential street four blocks from Copley Square. Despite antiquated plumbing and wiring, the structure of the house was in good shape. Mr. Green moved right in and proceeded to tear down walls, take out half the second floor, convert closets into bathrooms and side rooms into closets. To help with expenses, he improvised the furnishings and rented out the top floor.

The result is clean and Scandinavivan. If the house lacks a woman's touch, Mr. Green will hear about it soon enough. On October 16 approximately two thousand women will invade his bachelor citadel; 36 Gray Street is on the League of Women Voters House Tour, which this year explores the South End along with old faithful, Beacon Hill. The League's choice of the South End is evidence of the burgeoning interest in a long neglected neighborhood. As the visitors tour from house to house along South End streets, they will probably sense some of the excitement of the place. As one South End resident put it, "Moving here is like joining a crusade.'

work. Their activities include home visits to the sick, financial advice, family counseling, organizing activities for the isolated and lonely, and working with children and teenagers.

Despite the existence of such a relatively large number of community organizations, social progress in the South End has been mostly confined to individual cases — and even here there has been something of a vicious cycle, in which people moving up in society flee the area for greener pastures, and are replaced by people moving down. "The South End has been a dumping ground for every social problem," says Tom Deely of the BRA, "and these problems have a habit of replenishing themselves no matter how they're attacked."

One reason the South End has so much trouble solving its problems is that it lacks adequate political support. There are no representatives from the South End in either the state legislature or the city council. The Neighborhood Associations have been working on this problem with the help of USES's Community Services Department. "We've gotten some excellent support from our legislators," says Chuck Fraggos, director of the Department. "When SEFCO had an informal coffee hour with the legislators, all thirteen came. They were impressed with the turnout — over four hundred people came — and with the wide range of questions that were asked. When we first asked the legislators down, only one – John Frenning – came. Times are changing." Royden Richardson, minister at the Tremont Methodist Church, thinks that the increased attention being paid to the South End inevitably bodes well: "The South End isn't a political entity, which makes things difficult, but if we can get all the people who have an interest in the South End to keep looking out for it, things could become really exciting."

It would be hard to list, in order of importance, the problems which the South End is tackling; but certainly housing would be at or near the top of anybody's list. The community has many well-kept homes, usually owned by the people who occupy them. But half of its residential structures are absentee-owned rooming houses and apartment houses. Few of these are exemplary, and many are deplorable. "The typical substandard rooming house is badly deteriorated," George Vounatsos, director of the Shawmut Neighborhood Center, says. "In the average room there are no cooking facilities; there are one or two ancient relics which pass off as bureau and bed; the linen is filthy; the roomer cooks and washes his clothes in the same utensils, on a makeshift burner which he's not supposed to have."

Sometimes the rents are outrageous, and exploitation is obvious. "There are families here paying $200 a month for a decrepit apartment," Tom Deely says, "because they lack the sophistication or the education or the knowledge of the market to do better. And sometimes if they haven't got a good credit rating they don't have the freedom to move around."

On the other hand, even those landlords and homeowners with the best intentions in the world face major stumbling blocks. There are some two hundred abandoned buildings in the South End, and when they stand in the midst of a series of row houses – crumbling and boarded up and surrounded by refuse – they cast a pall over the rest of the street. Because of vandalism and the threat of fire, adjacent property owners find it difficult or impossible to get bank loans and insurance. If they can scrape together some money, they may try to buy the abandoned building, but frequently this is a frustrating proposition inasmuch as getting through the necessary red tape can take months or even years. The process of decline is much more difficult to reverse than to set in motion.

The BRA's urban renewal plan concentrates, as most such plans do, on housing. Dick Green and Tom Deely – and other BRA planners – speak of the South End in the first person plural: our streets, our problems. They have obviously managed to flavor their professional objectivity with some emotional attachment to the South End. "We were overwhelmed when we first came in," says Dick Green. "The South End has *all* the urban problems. You name it: poverty; 116 liquor licenses; the banks and insurance companies haven't had confidence in the area; the traffic's a mess; the fire rate is high; industry is mixed in with housing. Down on Greenwich Street, people showed us houses that previous planning projects had designated for industrial use, and they asked if we thought they *should* be for industrial use. We said we didn't really know, because we didn't know enough about the area. But then they very carefully took us into all these houses up and down the street. It's a lovely little street, with very human-scale houses, and it got to us all eventually. We said, 'It's a shame that this should be for industrial use,' and when we said *that,* they said, 'Why don't you come in for a bite to eat?' They had staged a tremendous snack – that's an understatement – but they weren't going to give it to us until they got our reaction."

Basically, the plan the BRA came up with concentrates on moving all non-residential activities to the western part of the South End, and leaving the eastern side for residences. Seventy-five per cent of the existing structures are to be retained and renovated, thus saving most of the row houses. Traffic from the industrial sector is to be routed around the South End via such existing arteries as the Fitzgerald and Southeast Expressways and such future ones as the proposed Inner Belt and Southwest Expressways. Tremont Street, which cuts through almost all of the South End's subcommunities, is to undergo a vast upgrading which will include drastic cutbacks on the liquor licenses – thus, it is hoped, forcing most of the area's more unsavory establishments to move on. New community facilities are to be added, primarily at the gateways to the South End and the center area: units of public housing for the elderly and for low-income and middle-income families, a Cultural Arts Center, new schools and playgrounds. All structures not demolished will be renovated to meet Housing Code standards.

Because Dick Green *et al* were conscientious about going to the South End and involving its residents in the urban renewal project, the plan was well received at its public hearing in

late August. All in all, the plan has been presented and discussed before a total of one hundred and fifty-five groups. Nevertheless there have been communications problems; Mel King ran a sample survey among South Enders and found that something less than twenty per cent of the people contacted had ever seen the plan or knew anything about it. Royden Richardson points out that "despite the large number of well-informed people here, there is a larger number who have no concept of what is happening and thus will have no voice in matters which will affect them deeply. They've had an opportunity to have a say; but life simply presents them with so many pressing problems, they're so busy worrying about today that worrying about tomorrow is a hopelessly difficult concept."

These people may face wholesale relocation. Their housing will undergo the greatest upgrading, which almost automatically means that their rents will go up too. This is an old urban renewal story: whole subcommunities are forced to leave a renewed area because no housing remains that they can afford; frequently they move away into other slum areas in the rest of the city. The fabric of the neighborhood they are forced out of is left in shreds; whatever it may become, it is never quite the same again. Since many South End residents are happy to see these low-income people leave, not much has been said on their behalf, but a few people – mostly social workers and ministers – feel that their problems are of critical concern.

One answer, of course, is low-cost public housing, but in the South End the phrase carries a stigma – partly because the existing public housing is so unattractive. It sits in overwhelming monoliths of yellow brick, arranged like giant toy blocks on a sterile asphalt floor. Despite attempts to plant trees and shrubbery, it remains an unyielding eyesore; and to the rest of the community, it means failure. Its occupants are, in the eyes of other South Enders, "those who can't make it like the rest of us; those who have to be fed at the public trough." No matter how inaccurate or over-simplified this impression may be, it still means public housing to most people, and they don't want any more of it in the South End.

The BRA has yielded to this pressure, and its plan calls for only three hundred public housing units, on scattered sites with no more than fifty units per site. Nevertheless the BRA feels that a massive exodus will not take place, for the principal reason that interest rates from banks and insurance companies are scheduled to drop sharply when the plan goes into effect, thus making home-owning much easier. The BRA also argues that the South End's normal five per cent vacancy rate will absorb many of the dislocated people, and that privately-sponsored non-profit rehabilitation of the two hundred abandoned buildings will absorb the rest. Lastly, the renewal is phased as much as possible so that demolition will be gradual and existing structures will remain standing until new ones are ready.

Not a few people feel that the BRA is hyperoptimistic. "We've tried to fix up some of the abandoned buildings," says Mel King, who is involved in two of the non-profit housing groups, "and we've found it so expensive that the rents we have to ask are in many cases beyond what the people in this area can pay." There is, further, the mixed blessing of an influx of young middle-class people from other parts of the city. In the past year or two it has become both fashionable and economically sound to buy up town houses at low prices, renovate them at favorable interest rates, and move in with their families. Some of them are moving in to give their children a chance to grow up in a multi-racial, multi-ethnic community; others are moving in because it's the thing to do; still others have visions of making over the South End into a Georgetown of sorts.

Despite the good intentions of such people, Mel King and Royden Richardson and a few others voice concern that, once again, the low-income people will be forgotten and forced out in wholesale lots. They think that the new young middle-class arrivals are basically self-centered and only secondarily concerned with the community at large, although Rev. Richardson does feel that these people "can, in time, become real allies to those of us who are interested in rehabilitation as well as upgrading and rebuilding."

IN THE WORRISOME low-income population there are four main groups which account for a disproportionate percentage of the South End's problems: the single unattached people who live in rooming houses, the skid row population, the aged, and the school-age children and adolescents.

Those who live in rooming houses frequently occupy the same room on the same street for twenty or thirty years; they are, on the whole, largely isolated from the rest of the world; their families live elsewhere, they have few friends; there are no birthday parties; Christmas is just another day. Some of them live entirely on general relief, which means an income of fifteen dollars per week. In the past, the social agencies have not had much contact with these people simply because there have been so many problems of overriding importance. Thirteen months ago, however, USES opened a new service — the Shawmut Neighborhood Center — which is designed to go out to these people rather than waiting for them to come in. Their most basic problem is loneliness – in all its ramifications – and frequently they are unaware of the various services available to them: visiting nurses, legal aid, welfare adjustments. When housing conditions are upgraded to Code requirements, many of these people will live in better physical conditions. But they have other, less tangible needs. George Voutnatsos of the Shawmut Center wonders whether "anyone really knows how to improve the lot of the single, isolated individual. I know it's not enough just to give him the money to exist. He needs company, he needs dignity, he needs a place other than a barroom where he can hang his hat for recreational purposes. I think these problems are *beginning* to be dealt with effectively – but the millenium is not in sight."

The South End's troublesome skid row population, which is too transient to count accurately but presumably numbers in the thousands, presents special problems beyond the scope of any urban renewal plan. Many of its members migrated to the South End from Scollay Square and the West End when they were demolished; they now are most heavily concentrated on Dover Street and at the Dover Street end of Massachusetts Avenue. There are Salvation Army missions scattered through the area, and the churches try to help these people too; but Gilbert Caldwell, minister of the Union Methodist Church, speaks for most of his cohorts when he terms such efforts "a stopgap, bandaid kind of approach. Inviting these men in for a meal and a bath and a bed satisfies physical needs to some extent, but it doesn't speak to the underlying problem of alcoholism."

In addition to his religious work, Rev. Caldwell is coordinator of the War on Poverty in the South End. At the moment he is working with Boston University to develop a skid row rehabilitation program which will focus on the basic alcoholism prob-

lem. He hopes to open a treatment center on Dover Street where B.U. medical school and mental health staff members will treat this particular subcommunity and carry on basic research. "This is the kind of in-depth approach to alcoholism which we currently lack," Rev. Caldwell says.

When the urban renewal plan goes into effect, the cutback of liquor licenses and the anticipated closing of numerous dubious establishments will probably cause much of the South End's skid row population to emigrate. Not many South Enders will miss them. They are, nevertheless, people – people much in need of help from other people. Where it will come from is unclear. "I think this type of person is not compatible with a residential neighborhood," Royden Richardson says. "Sometimes people ask me if I care about them. Of course; they're human beings and I care about human beings; but I also know that there are other human beings who need care too. The many families here – they need care. These drifters just aren't compatible. So if I had to make a choice, I'd sacrifice the drifter." But then he adds, almost apologetically, "I wouldn't want to completely abdicate my responsibility . . ."

FOR THE ELDERLY, the South End is a convenient way station en route to death. The rooming houses are inexpensive; hospitals are close by. The result: a staggering twenty-five per cent of the South End's entire population of 31,000 is over sixty years old. They, too, suffer from loneliness and isolation. "They cook badly for themselves and forget to eat," Virginia Rivard says, "and they're not able to do for themselves all they ought to do. They get cut off from the world, but for many of them it's not a new problem. Many of them have been single-roomers for years; now they've simply moved into the 'elderly' category and become another kind of statistic."

There are many organizations for the elderly; in fact, of all of the South End's subcommunities, their needs are the best met. They were not without spokesmen during the urban renewal planning; the five hundred planned housing units for the elderly will be located near churches, shopping centers, and community facilities. Neverthless the lives of many old men and women in the South End would be and will be bleak no matter what is done for them by governmental and private agencies. Theirs is a national and cultural problem rather than a local one: nobody wants them; they are a burden on their children; they have to live *somewhere,* and the South End is as good, or as bad, as anywhere else. Not all of the elderly people in the South End like to talk about their lives or will even permit an interview. The sight of a tape recorder looks official; official things aren't always welcome. But a man named John Allen (a pseudonym, of course) was willing to sum it all up:

> Before I bought the television, I would just sit and look out the window. I don't go out much . . . just to the liquor store, a block or two, and downstairs to buy food. Not like those drifters in the street — they can't take care of themselvs. If I go out they ask for a dime, for a drink. Sure, I drink myself — I'm not an alcoholic, you understand — so what can I say? I give them a dime if I have it. But this television is so nice. The television is all I need for myself. If I could have a television or a car . . . I'd choose the television. I don't go out very much at all. I like Bob Hope . . . The worst is being sick. It's so lonely when I'm sick I can't hardly get out of bed sometimes. Nobody comes up even to see if you're alive. I've lived in rooming houses all my life. It used to be they came up every day and made the bed. Now nobody comes . . . Last Thanksgiving the landlady was cooking downstairs and she gave me a dollar and a half and said, "John, now you go out and get yourself a Thanksgiving dinner." Now, I'll tell you, I feel good about that lady ever since. People trust me, my credit is good. If I borrow a dollar, I always pay it back . . . My great dream is that I could have an apartment, maybe two rooms, and some nice clothes. And some friends.

John Allen watches Bob Hope and waits, and waits. He hears about urban renewal on the eleven o'clock news (the voice of Katherine Craven, the face of Edward Logue, and vice versa) but other than that it means nothing to him. He is at the end of the line in any case.

AT THE OTHER END of the line — also waiting — are the South End's children. For a few, the line leads to nirvana. They come from good families, they succeed in school, they go on to good jobs and raise fine families (usually somewhere else). No problem. But there are others for whom the line goes only to a room like John Allen's. Their problems are overwhelming. They have been studied and restudied ever since social workers came into being, but there has been little progress, if any. Adulthood offers them a chance to be unemployed, or to become a drifter, or to embark on a career in the broad field of crime. This is an easy way out, frequently taken.

Five new school buildings are included in the BRA plan for the South End, replacing four which were built before 1890. Some feel this is not enough. School Committee member Arthur Gartland says: "At the rate at which we're going, we could optimistically say these schools will be available in five years. We must hope for something better than that; whether we'll get it or not, I don't know."

In the existing public housing projects, forty-six per cent of the white and forty-five percent of the Negro students annually drop out of school at one level or another; in the so-called hard-core groups, the dropout rate runs as high as eighty-five per cent. "The school system doesn't have any really basic, gut-level programs," Mel King says. "Most of what little is done for dropouts is done outside the school system, through ABCD." ABCD (Action for Boston Community Development) has initiated guidance counselng and remedial reading programs in coordination with the schools; Arthur Gartland says cautiously, "I think they're becoming aware of the needs."

AGAIN THERE ARE overtones of stopgap, bandaid action. A more basic educational problem is the relative non-communication between parents and teachers. "I've long had a feeling, which I've frequently expressed, that the parent-teacher associations are ineffectual," Arthur Gartland says, "that in too many schools too few parents attend; that in some of the schools in the so-called difficult districts, meetings are held only in the afternoons, if at all, and they're infrequent. Afternoon meetings in effect exclude fathers, except those who are unemployed, and exclude working mothers too. I heard a principal in the South End say, 'Anybody can come here at any time.' Well, that's not quite the same thing."

"This is part of the gap between the home and the school, between the school and the community," Mel King adds. "Principals will say that we have an open door policy, that parents can come in, but what does it mean to parents who are inarticulate, who have had bad school experiences themselves, who look upon the school people with some kind of awe? To say that you have an open door policy means nothing. If you're *really* concerned about involving parents in the educational processes of their children — and if you want them to understand what's going on in the schools and what they can contribute — it has to be more than just a *statement.*"

Outside the schools a great many programs at places like the Youth Opportunity Center zero in on the needs of young people. The Youth Employment Service helps teenagers get odd jobs so they won't have an excuse to drop out of school; the Job Corps provides employment training; there are youth employment agencies, "head

start" programs, special tutoring programs, clubs and organized activities designed to spur interest in further education, "motivation funds" to help finance college education and/or job training, programs which send workers through neighborhoods disseminating information about job opportunities. Despite all these programs, some children and adolescents simply are not reached. "You reach *some* kids," says Mel King, "and that's the real bugaboo. People always say, 'Are you reaching the hard-core kids?' You have to ask what is meant by a hard-core kid. We've had kids that had no place to live — they were sleeping in bus stations and doorways — no family, no food. They come in, they want to get into a training program, they find jobs — they make it. Are these hard-core kids? No. I assume anybody you can't *reach* — who comes in and won't buy what you have to offer — is a hard-core kid. There are quite a few around."

Urban renewal alone won't solve the problem of Mel King's hard-core kids. The harsh fact is that today's hard-core kids of twelve and thirteen have, for the most part, already had it. Not just in the South End, of course; this is an area in which the South End can't go it alone. Education — how to improve it — is probably the single most important question facing every major area of the city. "You wouldn't want to go to school either," Richard Johnson, a fifteen-year-old boy, says flatly, "if you had to go to *my* school."

THUS THE SOUTH END. For the people who live in it, it can be (sometimes simultaneously) the best and the worst place in the world. They are fiercely proud of it one day, hopelessly discouraged about it the next. At least it cannot be taken for granted — which does give it an edge over suburbia. It is *very* Boston; it needs help; it bears watching.

Let's say it's your House

It could be a brick four-story,
or a wood three-decker,
or a single frame house.
But you own it.
You want to fix it up.
Maybe some new siding or
roofing, an extra bathroom
for the youngsters, or more and
bigger closets for the wife.
Whatever kind of house it is,
whatever you want to do to it,
we suggest you visit us.

Who are we?

We work for your Neighborhood
Home Improvement Office.
We want to encourage people to fix up
their homes for several reasons.
First of all, houses kept
in good shape are worth more.
They are like money in the bank.
They're also more fun to live in.
Finally, if you fix up your property,
and your neighbor fixes up his,
pretty soon you begin to see a new street.
Enough new streets make a
new neighborhood, and
new neighborhoods make a new city.
This is what the New Boston is all about.

Here is what we can do to help you!

1 Free cost estimates. What do you want to do and how much will it cost? We can make an expert analysis and come up with the answer. And it's an honest answer.
We're not selling flooring or siding, or anything except a better neighborhood.

2 Free technical advice on the best way to tackle your particular housing problem. Also help in preparing plans, help in getting bids from contractors, and supervision of the actual work as it progresses.

3 Free financing advice. We can tell you the best place to shop for a home improvement loan. We can even help you make the personal contact at the bank or lending institution of your choice. And we can see to it that you get the best possible terms — in some cases, you may even be able to refinance your present mortgage so that your monthly payments are less.

CHARLOTTE, NORTH CAROLINA
March 3, 1966

Moreland Griffith Smith, FAIA
Director, Urban Planning Project

I went to Charlotte to meet with city officials and let them know of the SRC Urban Planning Project and our services. Dr. Ray Wheeler arranged the meeting with the mayor, city manager and their staff. Mr. John Wheeler joined us for the day, and Mr. Fred Alexander, Charlotte alderman who is on our board, met with us.

After introductions, I reviewed SRC's new Urban Planning Project, telling of its intent and the services which might be of interest to Charlotte. These officials were reluctant to discuss Charlotte openly and freely, and their attitude was hostile. The city government appeared to have strong reservations about SRC and the project and to be sceptical as to any value Charlotte could derive from interchange and informal association. Shortly before the meeting ended I mentioned that were I to review their urban renewal plans as an informed third party SRC's opinion might have weight with the federal government in its assessment of Charlotte's compliance with federal directives on urban planning. This would mean that an impartial review, if affirmative, might help Charlotte when applying for more federal funds. At this point in the conversation the four of us encountered a sudden and marked change in attitude by the city officials. All at once they couldn't give us enough information; they instructed one another to send this or that semi-confidential report to me in Atlanta. (None of this material has yet arrived as of March 10, 1966.)

At lunch Dr. Wheeler, Mr. Wheeler, Mr. Alexander and I discussed this baffling change in atmosphere. All of us felt it, but none of us could spot exactly what made the difference. As far as I can tell

it appeared at the point where the mayor, et al, realized they would have nothing to lose and much to gain, including a better position for federal funding. And the whole service would cost them nothing more than the postage to send their information and plans to Atlanta for review.

I found a high degree of intelligence in the city government; it is confident, self-centered, aware, motivated by self-interest but willing to listen. My only criticism would be their attitude and outlook on regional planning.

Charlotte's importance is primarily that of a transportation center for its area, and regional planning is most pertinent for the continuing growth of the community in the future. Because it is a distribution point it draws people in a 60 or 70 mile radius into the city for services and goods. But there was no awareness on the part of the city government of any need for regional planning. Their attitude was that they had too many problems in the city to worry about without trying to develop a comprehensive plan for the entire region. Actually Charlotte and Durham-Chapel Hill-Raleigh are interdependent, and these cities need to realize this now and begin a far-sighted examination of how to solve their mutual problems and plan for their mutual growth. As yet this awareness is lacking; so are the federal incentives for such planning.

The mayor has an unusual understanding of business, commerce and the financial needs for the city. He is strongly influenced, however, by Arthur G. Odell, Jr., FAIA, Charlotte architect. Odell, while highly intelligent, is a pompous ass interested only in what will glorify Odell.

I was highly impressed and pleasantly surprised at the quality of the city manager and the other staff members I met.

Fred Alexander is a very able Negro; he is not looking out after self but has a broad and unselfish view. Alexander is faced with the problem of conflict and jealousy in his own community and among his own people. He told me that when he first became an alderman he was hostile and suspicious of all whites, including other aldermen, and their motives. After examining his attitude he realized that he was just as prejudiced as he accused them of being. With that insight he was able to destroy his own prejudice and in so doing has been able to work more effectively in the city government and make more gains for his constituents.

I took a tour of the Negro community. Some of Charlotte's slums are as bad as the worst in the South, but they are smaller in area and fewer in number of dilapidated dwellings. The better Negro homes were better than in other cities I've examined, and there was a large quantity of nice middle-income Negro housing. The middle-income housing was the typical type of developer sub-division housing financed under FHA and VA. This housing has only been available in the last four or five years. The physical facilities of the schools in this area were way above average for the South both school building structure and grounds.

It is interesting to note that there have been a number of improvements in conditions and services for the Negro community since the election of a Negro alderman. For instance, the Negro cemetery now has a fence around it like the white one and the interior roads there have recently

been paved. Streets in the poorest Negro sections have now been repaired.

I asked the city officials about the possibility of passing a fair housing law in Charlotte and was told it was very unlikely. The only housing integration in the private sector is along fringe areas where whites are moving out at the border of the Negro section and Negroes are occupying the newly available dwellings. The public sector is little better. Public housing has been built along this Negro-white border, and those units immediately adjacent to the Negro side are integrated while the other units are all-white.

Review*
Charlotte, North Carolina

Metropolitan Charlotte
Annexation Plan
Next Twenty Years
Master Highway Transportation Plan
Residential Blight in Charlotte
Review of Community Facilities

The above planning publications say that Charlotte has 210,000 people; more than one in five of them live in blighted housing. Three-fourths of the blighted housing could be brought up to par through code enforcement and neighborhood improvements. The rest of the housing isn't fit to repair, the reports say.

There are neighborhood improvement groups in Charlotte. There is also the Mayor's Citizens Committee for Urban Renewal. The information we have doesn't tell specifically what these groups are doing.

The rest of the information in the planning reports is technical and quatntitative: how many streets needed to serve the expected traffic volume, how many community facilities needed to serve the new population, and how much new retail trade the city can expect.

The planning reports don't tell how people play a part in deciding where they need streets, schools, and libraries. Instead, the reports use only such quantitative, technical criteria as number of people to be served by the fire station, number of cars travelling across town on the streets, and number of houses that aren't fit to repair. The reprts don't tell how people can take part in the planning decisions of Charlotte. So the planning studies aren't very useful for the Urban Planning Project.

Brooklyn Area is the only urban renewal project in Charlotte now. The project was under way in 1962 and set out to clear 238 acres over the next ten years.

The Charlotte-Mecklenburg (County) Planning Commission studied

*Information supplied by William E. McIntyre, Planning Director, Charlotte-Mecklenburg Planning Commission

at least four more possible renewal areas in the city. An area that is two-thirds blighted, lies in the path of needed street improvements, is a good place to put in public housing, is a good place to attract private investors, and has public investments that the city can use as credits toward its 1/3 share of a Federally aided urban renewal project--this is the type of area the planning commission recommends to the City Council for renewal.

Whether the people living in the renewal areas have a voice in renewal plans is something you can't tell from the information we have.

SUMMARY OF PLANNING AND ZONING EFFORTS IN HOUSTON

Year

1913 First comprehensive plan was prepared by Arthur Comey, City Planner from Boston, for the Houston Park Board. Plan was published, but there is little evidence of any attempt to carry it out. The need for some form of zoning was discussed in this report.

1922 First City Planning Commission was created, with Hare and Hare of Kansas City, Missouri, retained as planning consultants. Work continued until mid-1926.

1927 Texas Legislature passed zoning enabling legislation and other legislation favorable to city planning movement.

1927 City Council passed ordinance creating City Planning Department and re-establishing City Planning Commission. Work begun in 1924 continued.

1929 Report of City Planning Commission was published by the Forum of Civics. Report contained results of study begun in 1924 and recommendations for action on such items as park plan, major street plan, and zoning ordinance. Zoning maps and a completed ordinance were ready for presentation at public hearings, required by law. Economic conditions in following years caused the zoning proposal and most other aspects of this report to be neglected.

1937 The City Planning Commission, acting also as the Zoning Commission, was reconstituted and again worked with Hare and Hare as planning consultants to develop a zoning ordinance.

1938 Political pressure caused the City Council to withdraw funds for Zoning Commission work after the plan and ordinance had been completed. The Commission then resigned.

1940 City Council passed an ordinance re-creating the City Planning Commission and the City Planning Department.

1940 Annual Report of the City Planning Commission indicated awareness of the need for a zoning ordinance.

1942 City Planning Commission published 1942 Major Street Plan, based on 1929 plan which had been largely ignored. Many changes were necessitated by facts of uncontrolled building in intervening years.

1946 City Planning Commission proposed zoning. Zoning Commission was appointed, with Hare and Hare as planning consultants.

1947 Land use studies were made; zoning ordinance and maps were prepared; extensive public hearings were held.

1948 Zoning map and ordinance were mailed to all eligible voters. Zoning was defeated in a straw vote at a special election in which 20,697 votes were cast, 6,555 for zoning and 14,142 against it.

1957 Comprehensive Plan re-study was begun.

1959 Land use study was completed as part of Comprehensive Plan studies.

1960 Houston Commission on Zoning, which had been appointed by the Mayor to study and make a recommendation as to whether the City should undertake a zoning program, reported its conclusion that a zoning ordinance should be prepared and adopted.

1961 Proposed zoning ordinance text and zoning district maps were prepared.

1962 Extensive public hearings were held and final revisions of the proposed zoning ordinance and maps were concluded, and the recommendation to establish the ordinance was forwarded to the Mayor and City Council. On November 6 a straw vote election was held in which 128,869 votes were cast, 55,871 for zoning and 72,998 against it.

City of Houston, Texas

Gentlemen:

Since I came to Houston as your Director of City Planning, it has been my pleasure to review in considerable detail the past planning efforts for Houston, to study the many fine reports about Houston, to systematically tour the greater Houston area, and to talk with many people about Houston and its future. Those responsible for past planning efforts in Houston are to be commended for the fine achievements so evident in the physical pattern of Houston, particularly the major thoroughfares and freeways. City planning has paid rich dividends in making Houston a more attractive, efficient city.

In the planning program to date, much has been accomplished; however, I have found much to cause alarm. In recent years the task of planning for Houston has been seriously hampered by a most inadequate budget. The budget, surprisingly, has been reduced almost every year since 1959. If we are to continue to benefit from city planning--and, indeed, increase these benefits--it seems abundantly clear that we must critically review our city planning program and completely revitalize it.

The following report is submitted for your consideration. It reviews the need to revitalize our city planning program. It spells out a sound program and details staffing, budget, and work space necessary to carry the program forward. The recommendations are major; the future of Houston is the concern. As I have talked to Houstonians, I have sensed a growing awareness about the future of Houston and a sincere desire on the part of many that Houston plan well for its future.

I would urge that a policy decision be reached in the near future about the desired planning program for Houston. Currently the planning staff is moving forward with the planning program to the fullest extent possible with currently available resources.

Respectfully submitted,

Roscoe H Jones

Roscoe H. Jones, Director
City Planning Department

APPENDIX

A. Staff and Expenditures of City Planning Agencies of Cities over 700,000 Population	39

Summary

This report recommends a revitalized city planning program for the City of Houston. Section One spells out the need to revitalize the planning program, Section Two presents the recommended program, and Section Three details the staff, budget, and space necessary to carry the recommended program forward.

There is an urgent need to greatly expand and revitalize our city planning program. We, as a community, need to think ahead more clearly and in greater detail than ever before. In just 16 years the 1,400,000 population of greater Houston will grow to 2,500,000--some 70,000 additional population each year. By 1980, 180 square miles of urban development will be added to our city. We must realistically plan for the expanding future of our community. Sound city planning will help insure that public facilities will be adequate in size, proper in location, available when needed, and well related to the many other public and private improvements and developments. Realistic, long-range city planning is good, sound business which can save sizable sums, both public and private.

Houston needs a full-scale city planning program based on modern proven methods of rational city planning.

Houston needs a Comprehensive Plan to serve all as a meaningful, realistic guide to the evolving, dynamic future of our city. The plan must be based upon sound research, accurate forecasts, and careful analyses and must be designed to achieve community established goals. The plan

should facilitate and encourage the best efforts of private individuals and agencies in developing the city. The plan would serve as a focal point in coordinating the efforts of all in development of our expanding city.

Houston needs a Central Business District Master Plan. Downtown Houston is experiencing a resurgence of construction, both public and private. A downtown master plan would serve as a guide to properly coordinate the downtown investments and maximize the benefits to all. Over-all economic studies, floor space utilization studies and projections, and visual and functional design studies could well serve as a meaningful backdrop for more detailed planning studies by public and private agencies. The importance of the central area to all Houstonians is evident. The responsibility of the City to assume over-all leadership in the continued growth and well-being of the central area is clear.

Houston needs an adequate, continuing planning research program to provide a realistic, meaningful context to the preparation and revision of our comprehensive, master, and project plans. Continuous, accurate planning research is essential to good planning.

Houston needs to continue the development coordination programs of subdivision review, major thoroughfare alignment and building line studies, capital improvement programming, and a multitude of other activities directed toward the implementation of the over-all city plans. This development coordination effort calls for close liaison with other City departments, public agencies, developers, and many other private agencies and individuals.

It is time that Houston recognized the magnitude of its planning needs. Houston is a large, dynamic city. To make planning a more effective tool to assist the community and its leaders in coping with the increasingly complex problems and opportunities which come with bigness and fast growth will require a considerably more adequate sized planning operation than we have now.

Houston's efforts toward comprehensive planning in recent years have been seriously hampered--and last year were all but halted--by inadequate funds to do the job. If Houston is to have the planning it needs, the City Planning Department staff must be greatly expanded.

If Houston is to have the planning it needs, the entirely inadequate salary ranges for professional and technical positions must be brought into line with comparable positions in the planning agencies of other major cities in the nation. Qualified professional planners are in short supply, and we must be able to compete with other governmental agencies and private consultants for these highly trained and skilled planners.

As reported by the American Society of Planning Officials, Houston spends only 9.9 cents per capita per year for planning, compared to an average of 43.3 cents per capita per year spent by the other eleven major cities with over 700,000 population. San Francisco spends $1.10 per capita per year for planning. Yes, these are only rough comparisons;

but, rather pointedly, Houston spends less than half as much as any other of these major cities.

The budget for planning proposed in this report is considerably above what has been set aside for planning in recent years. Houston is no longer a small city with minor problems which can be ignored until a crisis precipitates action. Last-minute crash programs are expensive, and mistakes frequently result. Houston is a major metropolitan area which needs the calm, farsighted, objective planning approach brought fully to bear upon the dynamic, complex problems of a vast, growing urban area.

Pennies spent now upon sound planning will yield dollars saved in the future and will result in a more efficient, economic, attractive place in which to live, work, and play.

Now seems to be the appropriate time for Houston to embark upon a bold venture in city planning to create a vision of a great and noble city of tomorrow and to guide our community decisions of today in bringing to reality the vision of tomorrow.

Section One

The Need for a Revitalized City Planning Program

1. Houston Is Big...

This is no startling fact to the one million and more people who call Houston home. It is a fact that we must face up to when we talk about a city planning program for Houston. Now, in 1964, the city of Houston has a population of 1,055,000 and covers 359.7 square miles. The jurisdictional area of the City Planning Commission is even more extensive, covering some 2,030 square miles. Harris County, which is all within the jurisdictional area, covers 1,747 square miles and now has an estimated population of 1,405,000, of which 94.5 per cent is classified as urban by the U.S. Bureau of Census.

The 1963 assessed valuation within the city of Houston totaled more than $2.5 billion. The total investment value, both public and private, probably approaches ten billion dollars. The recent $87,000,000 bond issue, overwhelmingly approved by Houston voters, indicates the extensive public improvements required for a city of Houston's size. The vote also well illustrated the progressive spirit of Houston's citizens. The $83,797,351 budget of the City for 1964 indicates the tremendous task of providing for the municipal services and facilities called for by the citizens of Houston.

The 710,043 vehicle registrations for 1963, one vehicle for every two people in Harris County, help give dimension to the size of our traffic concerns and problems. However one measures it, Houston is big.

2. Houston Is Growing...

To those familiar with Houston, it is no startling fact that Houston is growing. Houston is growing and is growing fast, with no let up in sight. In fact, current developments suggest an acceleration of our growth rate. In 1963, there were 106 subdivision plats filed in Harris County. This represented 3,382 acres or 5.3 square miles of new urban land development, or space for 7,399 new residential lots and 25 apartment projects, with 78.8 miles of new public streets. In 1963, there were 19,642 new dwelling units constructed within Houston.

Past estimates of the City Planning Department project a 1980 population for Harris County of 2,500,000. From 1964 to 1980 the population increase will be 1,100,000, which means an average annual increase of 70,000. This is equivalent to 1750 new families each month or, expressed another way, is equivalent to the creation each year in Harris County of an urban area as large in population as the city of Galveston.

The tremendous increase in population for the greater Houston area, some 1,100,000, will require extensive additional resources. The following

list dramatizes the effect of our coming population growth by stating the need for land uses, facilities, and services.

1,100,000 NEW RESIDENTS WILL MEAN

1,650	MORE	POLICEMEN
1,500	MORE	FIREMEN
300	MORE	PUBLIC SCHOOLS
450,000	MORE	JOBS
333,000	MORE	DWELLING UNITS
210,000,000	MORE	GALLONS OF WATER PER DAY

THESE RESIDENTS WILL NEED

70 square miles for residences

35 square miles for streets and highways

50 square miles for public and private uses

25 square miles for industry and commerce

A TOTAL OF 180 SQUARE MILES OR 115,200 ACRES OF NEW DEVELOPMENT

Will we be ready as a community providing for and facilitating this tremendous growth? Will the needed public improvements be constructed in the right place at the right time and be of the most economical design? Will our community be attractive to live in and easy to move about in when we have doubled our population? Sound city planning, adequately undertaken, can help insure that these questions will be answered in the affirmative.

3. Houston Needs City Planning...

Houston is big and Houston is growing; we might add that Houston has problems, big problems and growing problems, but I had rather state that Houston has opportunities unlimited. To achieve these unlimited opportunities on a community-wide scale requires bold, dynamic planning for the future of our city on a scale commensurate with the bigness of our city and the tremendous growth facing our city.

What is this city planning we need? Simply a matter of thinking ahead! The following paragraphs may help to further describe the type of planning needed for Houston.

Planning is an Approach... a rational and systematic approach toward developing and maintaining a guide for the future economic, social, and physical development of our growing metropolitan area.

Planning is for the People ... the guide for the future development of the Houston area properly reflects the needs and desires of its citizens.

Planning is Comprehensive ... planning takes into consideration the whole picture, not just the component parts. It seeks to establish realistic goals and then provides the "tools" for doing the job. These "tools" include subdivision regulations, capital improvement programs, health and building codes and ordinances, and the comprehensive plan itself as an aid to citizen action. These tools strive to promote and achieve realistic objectives for the sound and orderly development of all elements of our physical environment.

Planning is a Process ... the formulation of a guide or comprehensive plan for the Houston area is just a beginning, not an end. The carrying out of planning programs is a continuous process that must be undertaken to reach the goals that our community has set for itself. Planning, therefore, is not merely the making of a plan. It is not just regulating new subdivisions, or preparing a capital improvements program and budget, or any individual project in itself. Planning is a coordinated and continuous effort which makes use of all the available resources and "tools" needed to effectuate those policies and programs which will lead to a realization of desired goals.

Planning is Good Business ... planning for the future growth and development of the Houston area is very good business because it permits savings which can be spent on other projects, thus getting more for the tax dollar. Such savings may be realized as a result of advance acquisition of land for public purposes, constructing projects in advance of apparent need but in time to meet the need, selling bonds at favorable times and under

advantageous conditions, and designing public improvements adequately sized and properly located for long-term efficient utilization.

Planning is NOT Zoning . . . some communities have utilized zoning as a tool to implement a comprehensive plan, and many more have had zoning without comprehensive planning, where it has sometimes become a device misused and changed so frequently that it lost all effectiveness. Houston may never have zoning, but it does need sound city planning.

In brief, the objective of city planning is to further the welfare of the people in our community by helping to create an increasingly better, more healthful, convenient, efficient, and attractive environment.

4. Past Planning Efforts.

One may ask, Doesn't Houston already have city planning? Houston has benefited from city planning from the very beginning, when the Allen brothers laid out Houston in 1836. The initial plan was excellent for its day; however, the following generation went wild in unplanned additions around the initial city. Even today, some of the problems created then are still with us.

In 1913, Arthur Coleman Comey presented plans for Houston. Early action in accordance with the 1913 Comey plan could have brought Houston greater attractiveness and saved the city vast sums of money. However, the plan apparently gathered more dust than attention.

In 1929, a new city plan was presented to Houston, with Hare and Hare as planning consultants. While some of the proposals were put into effect, many more were lost by the wayside.

In 1940, the City Planning Department was created, with Mr. Ralph S. Ellifrit being appointed as Planning Engineer. In 1942 the Plan for Major Thoroughfares was first adopted, and the fine major thoroughfare and freeway system we have today is impressive evidence of the value of city planning. Park plans were also prepared in 1942, and major revisions and extensions have been made over the years. School, civic center, and other master plans have been prepared over the years.

In 1958, a major effort was begun to develop a Comprehensive Plan for Houston. Lack of adequate budget and inadequate salaries to attract a full staff of professional planners frustrated this effort. In 1959 the City Planning Department budget was $176, 785 (this includes $25, 000 from Harris County). In 1963 the budget was $160, 210, a reduction of 9. 4 per cent. At the same time city population increased 9. 9 per cent and the cost of living went up 4. 3 per cent. Without adequate budget and without realistic salaries for professional personnel, the preparation of the Comprehensive Plan was not completed. Much of the basic data then assembled is now in need of major revision.

In answer to the question, "Doesn't Houston already have city planning ?" the answer is a qualified yes. Too often past city planning efforts have been

held down to a level barely able to cope with current problems and programs. Houston needs a greater emphasis on city planning.

Appendix A to this report, showing annual per capita expenditures by city planning agencies in the large cities of our nation, further underscores the inadequate size of Houston's city planning effort. As reported by a national agency, in 1963 Houston spent 9.9 cents per capita for city planning, while the eleven cities with more than 700,000 population spent an average of 43.3 cents per capita. Their annual per capita expenditures ranged from 20.8 cents to $1.10. Of course, per capita comparisons are only rough indications, but these figures suggest that we carefully examine our budget for planning. It appears clear that to adequately meet Houston's needs for planning, additional budget allocations are required. The budget needs are discussed in detail in a subsequent section.

Section Two

Recommended City Planning Program for the City of Houston

In the foregoing section we have set forth the need for a revitalized city planning program to enable our community to plan adequately for the rapid growth of the future. The general nature of the city planning called for was discussed.

This section presents in detail a work program for the City Planning Department. It is recommended that the Department undertake the following:

1. The preparation of a comprehensive plan,
2. The preparation of a central business district plan,
3. An active planning research program, and
4. A development coordination program.

These projects and programs are not new; however, the emphasis and scope of the undertakings may be somewhat different.

The following describes each of the proposed projects and programs.

1. A Comprehensive Plan.

The Comprehensive Plan would be a series of reports, maps, charts, and tables which, taken together, would be a guide to the future growth and development of the Houston area. The first phase would be concerned with background studies of population, economic base, and land use. Considerable work was done on such studies in the period 1958-1960. This work would be thoroughly reviewed, updated, and expanded as required.

The second phase would be the preparation of a Preliminary Land Use Plan for 1990. This would be a general look at the land use pattern of the future, based upon the analysis of the geographic, physical, and market forces which are shaping our community. Goals and objectives which we as a community are seeking would be spelled out and incorporated into the preliminary plan.

The third phase would involve extensive review and discussion of the preliminary plan by community groups and the public generally. Based on these reviews, the preliminary plan would be refined into the General Plan which would be adopted as the guide for more detailed planning by public and private agencies and individuals.

The fourth phase would consist of developing detailed master plans and implementing the plan and carrying on a continuous review and revision of the plan to keep it a current, meaningful guide.

A comprehensive plan as described above would give all Houstonians a clear look at the future of our community. The plan would be an accurate, realistic basis to guide and coordinate the many-fold public and private decisions made daily which are shaping the future of our community.

2. A Central Business District Plan.

Downtown Houston is experiencing a resurgence of building construction. The inner expressway loop coming closer to completion gives sharp definition to the center of Houston and evidences the increased accessibility of downtown.

To facilitate and assist the rapid growth and development, to help avoid costly mistakes, and to maximize the benefits from the sizable investments in downtown, there is the need for an over-all Master Plan for the Houston Central Business District.

The City would do well to take the leadership in over-all, long-range planning for the Central Business District. Such planning would include comprehensive studies in depth of the economic, functional, visual, and traffic aspects of downtown. Such planning would be undertaken on the basis of working closely with downtown and community-wide interests.

Comprehensive planning for downtown Houston at this crucial time would seem essential to insure the best over-all development of Houston's dynamic central business district.

A limited amount of study of the downtown area has been done in recent years by the City Planning Department. Lack of staff available for such studies seriously hampered these past efforts.

3. A Planning Research Program.

Sound planning requires intensive, capable research. The two plans discussed above will require considerable research. The background studies of population, economic base, and land use should be kept continuously current. Modern electronic data processing equipment and techniques have given us powerful tools to help us understand our community and to assist us in preparing accurate forecasts and plans for the future.

It is not proposed that the city planning research program duplicate the excellent community research being done by a number of agencies in Houston. The city planning research would evaluate, interpret, and supplement the other community research efforts for full utilization in the city planning program.

The availability of skilled planning research personnel, fully and continuously informed about the economic, demographic, and sociological structure of the Houston area, would provide important, daily support to the planning programs of the department and the City Planning Commission.

4. The Development Coordination Program.

This program is currently being carried on by the administrative planning division of the department, and an excellent job is being done. Here the efforts are directed toward translating plans into reality by working with other city departments, developers, and numerous citizen agencies and individuals. Work includes the processing of subdivisions within the city and its five-mile jurisdictional area, the refinement of the Major Thoroughfare and Freeway Plan by alignment and building line studies, and working with other city departments in preparing the capital improvement program. The proper and timely coordination of public and private efforts is vital to the achievement of the long-range plans of the city.

5. Aerial Photography, Base Mapping, and Special Planning Consultants.

Accurate mapping is basic and essential to good city planning. The latest available area-wide aerial photography of the greater Houston area is of 1962. Large metropolitan areas are increasingly finding that annual aerial surveys of their area is well worth the cost. In a fast-growing area such as Houston, up-to-date aerial photography appears essential, not only to city planning but to numerous other public and private agencies.

Initial investigations indicate that the base mapping for the greater Houston area is far from satisfactory. It seems essential that we fully explore the possible approaches to getting up-to-date, accurate base maps for our community.

As a part of all the above-mentioned projects and programs, there will arise the need and desirability of calling in some of the nation's most brilliant thinkers on urban planning matters and the top urban designers. It is well that as an integral part of our planning program we provide for calling upon these top men as special problems are brought to light in our city planning program.

6. Organization for Planning.

Effective city planning is best done as a continuing staff effort serving the chief executive of the city, with a citizen city planning commission to act as advisors to the chief executive, the governing body, and the planning director. Generally our planning effort is so organized here in Houston,

with the City Planning Commission having certain powers and responsibilities in connection with plans and subdivisions. The City Planning Commission is fortunate in having members who are respected civic leaders, qualified in many fields and intimately familiar with Houston. Their concern and dedication is most heartening. The membership includes representation of the County Commissioners' Court, well recognizing the overlapping concern of both City and County in the extensive area around the city.

Within the City Planning Department there have been two major divisions, Advance Planning and Administrative Planning, under the Director, with a Secretarial Section serving the entire organization.

In keeping with the recommended revitalized planning program, it is proposed that there be under the Director four divisions--Comprehensive Planning, Research, Development Coordination, and Central Area Planning--with the Secretarial Section serving the entire department.

The staffing of these divisions is discussed in Section Three of this report and would be dependent upon the schedule of work to be undertaken. The recommended work schedule is set forth below, following the detailed proposed work program.

7. The Proposed Work Program for 1964-1965.

The following outlines work items which are currently under way within the City Planning Department and describes new work items which are recommended. The work items are listed under the responsible departmental division. New, expanded, and/or reactivated work items are designated by an asterisk.

Office of the Director

1. Program preparation and supervision

- Work program
- Budget preparation, review, and revision
- Staff direction and supervision
- Coordination and control
- Continuing review and revision of policies and procedures

2. Program Coordination

- Coordination with City, County, other governmental agencies, and civic groups
- Public contact and discussions

Secretarial Division

3. Personnel Administration

- Record processing
- Office procedures

4. Fiscal Administration

- Payroll
- Statements and records
- Purchasing, collections

5. General Services

- Reception, receive and route calls
- Distribution of mail
- Stenographic, typing

Development Coordination Division

6. Land subdivision administration

- Processing subdivision plats
- Presentation of plats to the City Planning Commission
- Maintenance of subdivision map files

7. Park and school planning

- Recommendations for acquisitions of park and school sites
- Refinement of master plan of parks and recreation areas and master plan of schools

8. Thoroughfare planning

- Refinement of major thoroughfare plan
- Thoroughfare realignment studies
- Building line studies

9. Capital improvement budgeting program

- Coordination, preparation, publication, and maintenance of capital improvement budgeting program, in cooperation with other city departments

10. Project planning referrals

- Special studies of referral items, current planning projects, etc.

Research Division

11. Public information services

- Answer inquiries concerning the City's general plans

12. Statistical services

- Keeping current for ready use statistics on population characteristics and distribution, land subdivision, building permits, school census information, etc.

*13. Economic and population studies

- Supplement and coordinate with pertinent research efforts in the greater Houston area
- Conduct in depth research studies of the area's economy and population, past and present, and develop sound projections and forecasts of the future to provide a factual, realistic basis for the work of the Planning Department

*14. Central business district economic study

- An economic analysis and projections study of the central business district to provide a realistic basis for planning of Houston's central area by answering questions such as, What is the potential growth in office, retail, residential, and parking floor space in the central area? Just where can it best be developed?

Comprehensive Planning Division

*15. Comprehensive planning goals, policies, objectives

- Working closely with the City Planning Commission, City and County officials, community leaders, and interested groups and individuals, develop an acceptable set of general goals, policies, and objectives to guide the planning for the greater Houston area.

*16. Preliminary land use plan

- Based upon accepted community goals, policies, and objectives, prepare a broad, general, preliminary plan for the greater Houston area, showing the generalized land development patterns. This Preliminary Land Use Plan would be produced for the purpose of widespread community review and discussion. Following the community review, the Plan would be revised and refined accordingly, in a second phase.

*17. Land use survey and analysis

- A land use survey of the city was made in 1959 and extended to include all of the Houston Metropolitan Transportation Study Area in 1960. The original survey needs to be expanded and updated and the data developed to utilize electronic data processing methods for complete analysis. An accurate up-to-date land use survey and analysis is an important basis for the comprehensive planning program.

*18. Base mapping

- While a number of maps are available, the extensive growth of the Houston area requires new extended maps at usable scales, with a minimum of data shown, to serve as base maps for a series of information.

*19. Information map series

- The comprehensive city planning program will require the meaningful correlation of numerous data, political boundaries, topography, soil conditions, water courses, etc. The data can best be reviewed in a uniform-scaled series. These information maps would be also available to individuals and agencies throughout the area.

Central Area Planning Team

*20. Establishment survey

- Prepare a detailed inventory of current floor space usage in the Central Business District, to provide a sound basis for economic analysis and projections and for planning the Central Business District.

*21. Circulation and parking study

- In cooperation with appropriate agencies, study circulation and parking in the Central Business District and develop possible short- and long-range actions to insure continued adequate circulation and parking facilities to serve the Central Business District conveniently and economically.

*22. Central Business District Plan

- In cooperation with downtown and community-wide agencies and individuals, develop acceptable goals to guide planning for the Central Business District.
- Prepare a comprehensive, long-range plan for the Central Business District in cooperation with downtown and community-wide interests, to help guide the growth, development, and redevelopment of the Central Business District.

*23. Special Central Business District studies

- Assist developers, investors, and other interested persons and agencies in coordinating specific plans and projects with the over-all plans for the Central Business District.

8. Schedule for Work Program.

On the following page is presented a target schedule for the undertaking of the work items described above. The schedule goes beyond the current year and the coming year and extends to the middle of 1968. The undertaking of certain work items must wait until the results of other work items are available. In drafting the program, we have tried to keep continually in mind the costs and keep the necessary budget at the minimum consistent with doing a meaningful job of planning for the large and fast-growing Houston area. The next section discusses the ways and means for carrying out the recommended work program.

It should be noted here as we look at the work schedule that there are certain limitations on the minimum amount of work which should be undertaken and the maximum time within which that work is to be accomplished. If a planning program is stretched out too long because of inadequate budget, large amounts of data collected in the earlier basic study phases of the comprehensive planning program become obsolete and unusable. This is particularly true in an explosive growing situation which we have in the city of Houston. If certain elements of the planning program are omitted, or if these elements are done with reduced scope, the value and utility of the plan developed may be seriously jeopardized.

The recommended schedule is optimistic. It should be noted that delays in initiating the program, difficulties in recruiting professional planners, and decreases in budget allocations could lengthen the time required to complete the work items shown.

CHART NO. 1 PROPOSED HOUSTON CITY PLANNING WORK PROGRAM SCHEDULE

Section Three

Staffing, Budget, Space

1. Pennies or Dollars ?

The recommended city planning program set forth in Section Two is modest when compared with the extensive comprehensive planning programs under way in the large cities across the nation. Our planning problems are found more in rapid growth than in deterioration of age. Houston is indeed attractive in its youth, but what will it be in future years ? By proper planning now, many of the problems found in the older cities now requiring extensive planning and costly expenditures might well be avoided in Houston's future, or their impact greatly reduced. Our community will be investing hundreds of millions of dollars, primarily private funds but substantial public funds as well, each year in the future of Houston. The savings through sound planning of a scale in keeping with our size and rapid growth can be tremendous. The increased attractiveness, efficiency, and livability can be most important to our well being. To do an inadequate job of planning because of inadequate budget could well be the saving of pennies at the almost certain cost of wasted dollars in the future.

It is with the thought that good city planning with active community participation pays untold dividends that we have prepared the following recommendations on staffing, budget, and space.

2. Staffing

Perhaps the most crucial factor in a city planning program is personnel. The greater proportion of a planning department's budget is devoted to personnel. If the City is to maximize the results from this expenditure, it is well that we make every effort to recruit capable, well-trained personnel who will remain with the City. The present staff of the Planning Department is most capable and is doing a commendable job. There are, however, personnel problems that stem primarily from an inadequate budget. The following paragraphs review these problems.

1. The current authorized size of the planning staff is entirely too small to undertake an adequate planning program for a city the size of Houston, with its extensive jurisdictional area beyond the city. If the Planning Department were fully staffed as currently authorized, we would have a total of 24 employees in the Department, with six of these positions being only part-time. Major expansion of the staff will be required in order to undertake the work program set forth in this report, in all its phases. A comparison of the size of planning staffs in cities over 700,000 population is given in Appendix A.
2. The current salaries authorized for the Planning Department for the professional positions are entirely to low to attract well-trained and experienced professional city planners.

3. There has been too much turnover of personnel within the professional level. We cannot do an adequate planning job if we are unable to attract and keep professionally trained and experienced planners.
4. Heavy reliance on part-time personnel is not always efficient. There is a need to develop career technicians to support the professional planners.
5. In the past, because of the low salary schedule, it has been the practice to train professional planners on the job. While this procedure can be effective to a certain extent, on-the-job training of professional planners is a costly process, and with low salaries the trainee is too often lost to better paying situations once he is trained. Valuable professional time is expended in supervising and training the planning trainee. Even after years of planning experience in an office, the on-the-job-trained planner does not always have the opportunity to develop comprehensive planning skills that the university-trained planner gains through his graduate education program.

The success of our entire planning program will depend upon the quality and quantity of professional personnel we will be able to recruit. It is important that we recruit professionally trained personnel who have received their graduate degree in planning. The holder of the Master of

City Planning degree through his graduate training program has gained a broad, comprehensive view of planning, which is essential to the preparation of comprehensive plans. The holder of the Bachelor's degree who has received on-the-job planning training does not always have the broad view of planning and the experience in economics, sociology, government, public administration, and urban geography which the graduate planner receives in his training.

The challenge of the Houston city planning program will help to some extent in recruiting professionally trained personnel, but certainly other planning agencies face equal challenges and offer experience in large planning departments which have long histories of extensive planning activities.

There is at the present time and there has been for the past several years a nationwide shortage of professionally trained planners. Over 600 jobs are open each year for professional planners. The 29 planning schools across the nation have been graduating only some 200 MCP degree holders each year. In June, 1963, the average annual salary received by the graduating planners was $7,369. If we are going to attract the graduate planner, we must adjust our current salaries upward to a competing level. The size and importance of Houston, as the sixth largest city in the nation, with its most rapid growth, suggests that we should get not only graduates holding the Master of City Planning degree but graduates who have ranked high in their class. The quality of our program will depend in no small measure on the quality of planning graduates which we can attract and hold. Needless to say, the salary levels for professional planners with work experience in positions above the

entrance level will have to be competitive with other governmental planning agencies and private planning consultant offices.

The following recommendations on personnel, if carried out, would enable the Planning Department to effectively do the work set forth in the recommended work program:

1. It is recommended that we increase the size of the City Planning Department from 24 positions, which includes 9 professional planners, 10 planning draftsmen (6 part-time), and 5 secretarial positions, to 38 positions, which would include 20 professional planners, 12 planning draftsmen (6 part-time), and 6 secretarial positions. Chart No. 2 shows the proposed organization chart, with personnel assignments. Chart No. 3 presents the June, 1964, organization chart for comparison purposes.
2. It is recommended that we adopt high standards for the professional personnel and all supporting personnel within the Department.
3. It is recommended that we provide adequate salary ranges to recruit the requisite qualified personnel needed to do the job. The recommended salary ranges are shown in Table 1. Existing salary ranges are shown in Table 2 for comparison. The recommended salary ranges would be an important factor in enabling us to recruit and to retain the highly qualified personnel who are essential to the planning program.
4. It is recommended that we begin now in recruiting to fill all the proposed positions. There is a three- to four-month lead time required to fill professional planning positions.

(Vacancies as of October 1, 1964.)

3. Budget.

On the following page, in Table No. 3, is given the City Planning Department Budget for 1964. The approved budget is $163,257, which includes an amount of $25,000 from Harris County. Actually, the Department will not expend its full budget this year, because of the large number of unfilled positions and the reorganization of the Department. The work of the Department this year has been almost entirely that of development coordination.

To undertake the recommended work program with the organization and personnel recommended, we will need to add a considerable sum to the City Planning budget for the coming years.

The proposed City Planning Department Budget for 1965 is set forth in Table No. 4. The positions and salaries shown are in accordance with the proposed personnel schedule discussed in the preceding section. The total budget of City funds recommended is $249,220, which with the $25,000 participation by Harris County would be a total of $274,220, of which $216,720 is for personal services and $57,500 is for supplies, contractual, maintenance, and capital outlay. We have assumed that the Central Mapping Program, including aerial photography, will be adopted by the City. The adoption of the Central Mapping Program is most important to the planning program. There is included a sum of $25,000 for special planning consultants who may be called upon during the course of the preparation of the Comprehensive

*Three of these positions would not be filled until June 1, 1965.
**Salary adjustments may be made following City-wide survey by Civil Service.

Plan and the Central Business District Master Plan. Specific requests for consultants would be submitted as appropriate, detailing the need and scope of such special consultant work, for individual consideration, approval, and authorization.

This proposed 1965 budget is subject to some refinement when the formal budget for 1965 is prepared by the City Planning Department. The proposed budget has been set forth in preliminary form in this report to assist the reader to fully appraise the recommended city planning program.

In keeping with the city planning needs for a city the size of Houston, with its rapid growth and extensive jurisdictional area beyond the city limits, a much greater budget could be properly justified. Indeed, a much larger budget was seriously considered. The recommended budget has been held low. Even at the low level recommended herein, the increase proposed is sizable compared to the city planning budgets of recent years. The increase would represent a significant step forward in Houston's planning program. I strongly urge that this important step be taken.

4. Space.

Currently the City Planning Department is housed on part of the seventh floor in the City Hall. The 2,196 square feet of usable space now provides an average of 105 square feet per employee for 21 employees. If the proposed work program is adopted and a staff level for the Department of 37 persons is authorized, the Planning Department would need approximately

4,000 square feet of floor space. It is important that this floor space be not only adequate in size but that all of it be together in one place. The location of all the Planning Department personnel together permits the free interchange of information and ideas between the various Divisions of the Department. We feel that if the Department were divided, its efficiency would be hampered. In the location of space for the Department, it is most desirable that the space be located in the City Hall, where the other City Departments have their headquarters. The continuous liaison with the other City Departments is essential not only in the development coordination program but also in the comprehensive planning program, which involves many other City Departments in daily coordination.

Fortunately, the tenth floor may become available next year with the relocation of the Health Department into the Medical Center. The tenth floor of the City Hall would provide 4,131 square feet of usable space, or 112 square feet per employee with an employee strength of 37.

It is recommended that the tenth floor of the City Hall be assigned to the City Planning Department, to be occupied upon release of the space by the Health Department.

CITY PLANNING COMMISSION'S PURPOSE, SCOPE, AND AUTHORITY

Article 974a of the Texas Civil Statutes is the enabling legislation which permits municipal regulation of the subdivision of land within a city and within the unincorporated area five miles beyond its corporate limits. The City of Houston exercised its authority under this act in 1940 and created by ordinance a City Planning Commission and a City Planning Department to establish and maintain control of land subdivision activities and to provide other services as specified in the ordinance. The City Planning Commission is composed of ten citizen members who are appointed by the Mayor subject to confirmation by the City Council. The Commission membership also includes an ex officio member, being the Director of the Department of Public Works, and one alternate member, being the Harris County Engineer who acts in the absence of a member of the Harris County Commissioners' Court. The Director of the City Planning Department serves as Secretary to the Commission.

The ordinance establishing the City Planning Commission also authorizes and charges the Commission with the responsibility to prepare and recommend general plans for the physical development of the city, including plans for major thoroughfares and freeways, parks, parkways, transportation facilities, public buildings, and other municipal facilities, and to exercise the necessary administrative procedures relative to the control of land subdivision within the city and within the extraterritorial jurisdiction area as specified by the State Statutes. The jurisdictional area of the City Planning Commission at the end of the year covered approximately 2000 square miles and extends over most of Harris County and affects portions of Galveston, Brazoria, Fort Bend, Waller, Montgomery, and Liberty Counties.

To implement the Commission's work, the City Council also created in 1940 the City Planning Department which acts as the technical and professional staff to the Planning Commission and to the Mayor in the preparation of these general plans and the administration of land subdivision controls. The City Planning Department also acts with and assists all other City Departments and other governmental agencies in formulating and executing proper plans for the orderly development of the Houston metropolitan area.

LAND SUBDIVISION CONTROL ACTIVITIES

Land Subdivision Activity

During 1964 the City Planning Commission reviewed a total of 272 subdivision plats of various types, which affected 10,439 acres of land. Ninety-eight of these plats were filed in the County records and affected 2136.50 gross acres of newly subdivided property and contained 5,559 new residential lots. These recorded plats also accounted for the dedication of an additional 52.68 miles of local street right-of-way and 4.30 miles of designated major thoroughfare right-of-way which were located in conformance with the City Planning Commission's "Plan for Major Thoroughfares and Freeways."

Subdivision Development Trends

The development of new subdivisions in the Houston area continues to be very active, with 66.3 per cent of the 98 plats recorded being located within the corporate limits of the City of Houston.

Of the 65 plats recorded inside Houston's city limits, 82 per cent were planned to be developed with high-quality improvements such as concrete streets with curbs, gutters, and storm sewers, along with sanitary sewers. Thirty-three subdivision plats were recorded located outside the Houston city limits, and the demand for these high-quality development features is reflected in the fact that 79 per cent of these additions plan to be developed with concrete streets with curbs, gutters, storm sewers, and sanitary sewer systems.

Subdivision Control Regulations

The primary instrument for the control of land subdivision activity is the City Planning Commission's "Rules for Land Subdivision," which were adopted in 1957 and revised through February 11, 1964. These rules list the standards and procedures relative to the processing of a subdivision plat for approval by the Commission, and the standards involved are based upon nationally accepted planning criteria.

Under the provisions of the City Ordinance No. 2639, passed June 9, 1948, and amended by Ordinance 58-1357, passed January 7, 1959, the City Planning Commission must also review the plans of projects which are proposed to contain private streets.

For the past several years efforts have been made to formulate the City Planning Commission's "Rules for Land Subdivision" into Ordinance form in an effort to fully secure these regulations under the terms of state laws and city ordinances affecting the subdivision of land. Early in 1964, the City Planning Department with the aid of the Legal Department drafted a proposed ordinance adopting the City Planning Commission's existing rules, with added sections relating to variances to provide procedures for special handling of hardship cases and penalties for violation of the ordinance. In October, this proposed ordinance was transmitted to the local subdivision engineers, developers, and other interested groups for their study and constructive comments. The Houston Home Builders Association specifically asked that their organization be given an opportunity to completely review this proposed ordinance prior to its submittal to the City Council. The review by the Home Builders Committee was delayed by the holiday season. They have indicated that they will submit their report early in January. It is anticipated that this proposed ordinance will be submitted to City Council in 1965.

Income from Subdivision Control

The processing of subdivision plats through the City Planning Commission requires considerable staff time and departmental expense. To offset some of

these costs, minimum fees are charged to the subdivider, based upon the following schedule:

1. Preliminary plats - $10 plus 70 cents per residential lot, plus $2 per acre for land within the boundary of the plat which is not divided into lots but is intended for apartments, commercial, industrial, cemeteries, etc.

2. Final plats - $5 plus 30 cents per lot, plus $2 per acre for land within the plat boundary not divided into lots as described in (1) above.

During 1964, the City received a total of $14,144.52 in connection with the processing of subdivision plats. Previous years' subdivision fee income reflected $15,564.73 in 1963; $11,257.95 in 1962; $6,801.39 in 1961; and $7,829.37 in 1960.

MAJOR THOROUGHFARES AND FREEWAYS

Plan for Major Thoroughfares and Freeways

The Plan for Major Thoroughfares and Freeways adopted by the City Planning Commission has been the principal guide for the development of the Houston metropolitan area thoroughfare system since 1942. This plan, along with the administrative actions to implement it, is designed to prevent a street system from developing in a haphazard manner and to insure the development of an adequate and efficient vehicular transportation system throughout the metropolitan area.

To keep the Plan for Major Thoroughfares and Freeways current, it is necessary to revise and expand the map from time to time as new developments take place. In June the 1964 edition of this plan was published. By the end of the year, approximately 2000 of these plans had been furnished to the general public upon their request. To offset some of the printing costs involved in the publication of these maps, the policy of furnishing one map free upon request was continued, and additional copies are sold for 49 cents with one cent State Sales Tax. At the end of the year, the City had received $130.50 from the sale of these maps.

Official Changes in the Plan

It has been the policy of the City Planning Commission to hold public hearings relative to proposed major changes in the Plan for Major Thoroughfares and Freeways. On April 1, the City Council requested the City Planning Commission to hold a public hearing on the modification of the alignment of West Bellfort Avenue in the vicinity of the Southwest Freeway. The location in question lies outside the city limits and involved the approval of a subdivision plat known as Parkglen Addition, in which approximately one mile of West Bellfort Avenue was to be dedicated. A hearing was held by the

Commission on this matter on May 19, and the Commission determined that the revised alignment as previously approved within the plat of the proposed Parkglen Addition was in the best interest of the public and so approved the revision in the Plan.

In October studies were made relative to the modification of the proposed alignment of West Airport Boulevard between Chimney Rock Road and Almeda Road. The original alignment for this major thoroughfare was established by City Council, and a public hearing on the realignment of this thoroughfare was held by City Council upon the recommendation of the City Planning Department on November 4 and continued on November 18. The City Council on November 18 approved the relocation of the alignment of West Airport Boulevard as recommended. This change will allow a continuation of the development of this important thoroughfare in the very near future and will secure dedication of the right-of-way for a distance of approximately 1.5 miles through new subdivision activity.

Expansion of the Major Thoroughfare Plan

In November, 1963, the City annexed various 10-foot strips of land along prominent roads radiating from the City, in a move designed to take full advantage of the newly enacted state municipal annexation act (Article 970-A) and to bring the major portion of Harris County under the extraterritorial jurisdiction of the City of Houston. This annexation also automatically extended the City Planning Commission's jurisdictional area to cover approximately 2000 square miles of land and to extend over most of Harris County and portions of Galveston, Brazoria, Fort Bend, Waller, Montgomery, and Liberty Counties.

Since the present Plan for Major Thoroughfares and Freeways does not cover all of this area, it is necessary that the Plan be expanded to effectively continue the Commission's comprehensive planning work and land subdivision control activities. On May 5 the City Planning Commission authorized the Department staff to initiate work on an expanded plan which would cover all of the Commission's jurisdictional area.

Considerable staff time was spent during the year in the preparation of suitable base maps which cover this large area. Late in the year, arrangements were completed with a private map company to allow our use of their current copyrighted maps, which indicate major topographic features, property lines, survey lines, and other miscellaneous data, for the development of a revised and expanded Plan for Major Thoroughfares and Freeways for the Houston Metropolitan Area. It is anticipated that this mapping work will be completed during 1965.

Blue Ridge Prison Farm Major Street Plan

During May and June, the City Planning Department developed a detailed Plan for Major Thoroughfares and Freeways within the area of the Blue Ridge Prison farm. This study was initiated upon request of the Texas Department

of Corrections and was used as a part of their offering of this land for sale to the public. The strategic location of the 6800 acres of land within the Blue Ridge Prison farm necessitated the location of major streets in such a manner as to be compatible with the established Houston major thoroughfare and freeway system.

This plan was completed and furnished to the Texas Department of Corrections and is included in their invitation for bidders. The specifications of the invitation noted that the right-of-way for each of the proposed major thoroughfares shown on the plan would be reserved for road use and thus insure the development of this thoroughfare system throughout the Prison Farm area.

Houston Metropolitan Transportation Study

Under the provisions of the 1962 Federal Highway Act, all metropolitan areas in the United States with a population of over 50,000 persons must have a continuing transportation study process created and operating, and after July 1, 1965, any such area that has not developed such a program will not be eligible for federal highway funds and Bureau of Public Roads participation.

Fortunately, a continuing metropolitan transportation study for the Houston metropolitan area was initiated by the City in 1959. This study also included participation by the Texas Highway Department, Harris County, and several adjacent incorporated communities. Efforts through 1963 in this transportation study developed much factual information regarding existing conditions and projected transportation needs. Much of this information has been published in the following reports:

"Origin and Destination Survey" - 1960 (updated 1953 study)
"Freeway Phase Report" - 1961
"Designing a Transportation System with You in Mind" - 1962
"Land Use and Population" - 1963
"Public Transit" - 1963

Recent developments in the Houston metropolitan area such as the development of the NASA Manned Spacecraft Center in southeast Harris County and the development of the Houston Intercontinental Airport in north Harris County have a great impact on the over-all transportation system, and expansion of the basic transportation studies begun in 1959 is now necessary and appropriate.

To formalize and expand the existing transportation study efforts in conformance with the 1962 Federal Highway Act, the City entered into an agreement with the Texas Highway Department during 1964 to develop additional studies designed to cover the transportation needs of southeast Harris County and to update and re-evaluate data assembled in the 1960 study area. The City Planning Department, the Traffic and Transportation Department, and

other closely associated city departments will continue to provide basic data and personnel to implement the development of the various studies and forecasts as required. The City Planning Department will again be specifically involved in furnishing continued analysis of the economic factors, population distribution and projections, and land use and development trends within the study area. Elements of this work are anticipated to begin early in 1965.

Major Thoroughfare Alignment Studies

To implement the Plan for Major Thoroughfares and Freeways, it is necessary for the City Planning Department staff to develop more detailed and specific street alignment studies. During 1964 the staff prepared 33 major street alignment studies, which were utilized as the basis for recommendations to the Mayor and City Council.

PARK SYSTEM DEVELOPMENT

Plan for a Park System

The City Planning Department also has the responsibility of maintaining and implementing the Plan for a Park System which was developed in 1959 in cooperation with the Parks and Recreation Department. This plan acts as a general guide, similar to the Plan for Major Thoroughfares and Freeways, and is based on nationally accepted park site locational criteria. This plan indicates the general location for neighborhood parks (6-12 acres), playfields or community type parks (12-50 acres), and large parks (50 acres up).

Park Site Acquisitions

During 1964 the City purchased two complete park sites, composed of a total of 14.40 acres of land, at a cost of $88,086. The City also purchased additional properties for expansion of Brock Park, West 23rd Street Park, and Songwood Park, comprising a total area of 21.3 acres of land, at a cost of $73,749.

At the end of the year the Real Estate Department had authorization to purchase four park sites containing a total area of 58.4 acres of land. Each of these acquisitions was in general conformance with the City Planning Commission's adopted "Plan for a Park System."

TOTAL	58.4

GENERAL PLANNING ACTIVITIES

City Planning Commission's 1963 Annual Report

Under the provisions of the City Charter, all City Departments are required to submit to the Mayor by January 15 an annual report of the activities of that Department for the preceding year. The City Planning Department 1963 report was compiled and submitted on January 15, 1964, in conformance with the provisions of the Charter. However, it has been the policy of the City Planning Commission to prepare a more elaborate annual report, utilizing the basic text of the City Planning Department's report, adding more graphics and photographs, and producing the report for distribution to the general public. The Commission's version of the 1963 Annual Report was published in June of 1964 and was given wide distribution throughout the remainder of the year.

Subdivision Activity Quarterly Statistical Reports

With the ever-increasing volume of land subdivision activity within the City Planning Commission's 2000-square-mile jurisdiction area, there has been a constant demand by various governmental agencies, elected officials, private citizens, and organizations for detailed information relative to land subdivision activity. To meet this demand and to provide a useful tool for the City's planning research program, the City Planning Department during 1964 designed, published, and distributed such statistical reports on a quarterly basis. These reports include a map of Harris County showing the name and location of subdivisions recorded during the quarter and a list of all subdivision plats submitted to the City Planning Commission for approval. This list provides such information as type of addition, Commission action (preliminary or final approval), recording date, gross area in acres, number of lots, length of local streets dedicated or widened, length of major streets dedicated or widened, and location by census tract and Governmental unit. These quarterly reports also include a summary of the land subdivision activity inside and outside the city limits. The demand for these reports is increasing, and it is anticipated that the publication of these reports will continue as a regular activity of the Department staff in the future.

Acres Home Planning Study

The general area known as Acres Home is located in northwest Harris County immediately adjacent to the northerly Houston city limits. This community covers approximately eight square miles and has a population of some 21,380 persons. The area is predominantly residential in character, and according to the 1960 census data the median family income was only $3,134. Considerable interest by the local citizens in this area has been centered around the possiblility of forming a Water Control and Improvement District to provide an urgently needed domestic water supply and a sanitary sewer system. There have been efforts in the past toward possible incorporation of this area as a municipality, but the citizens there have rejected this proposal. Under the provisions of the State's Municipal Annexation Act, the formation of any new governmental unit such as a Water Control and Improvement District within the extraterritorial jurisdiction of a large city must be approved by the governing body of that city. Such a request was submitted to City Council during the year, and the Planning Department was requested to study this area in detail and develop a suggested plan for public improvements in the area.

Central Business District Report

A study of the Houston Central Business District was initiated in July, 1962, and was to be prepared by the Advance Planning Division of the City Planning Department. The purpose of this study was to develop a comprehensive understanding of the Houston CBD and to provide a meaningful guide for future public and private improvements in this important segment

of the city. This study was to be documented in three publications: "The CBD Today," a background report of past and present development trends; "The CBD North," a specialized report concerning the older segments of the CBD, with suggestions for revitalization; and "Proposals for the CBD," a report suggesting specific goals, general objectives, and principles which should influence the future development of the CBD.

Resignations of key personnel in the Advance Planning Division during 1963 and early 1964 forced termination of work on this study in January. In June, work again commenced on the publication of the "The CBD Today" report, and this work was completed late in December. Personnel shortages continue to delay work on the comprehensive plan of the CBD. Further study of the Houston CBD will be undertaken in the near future by the City Planning Department when additional qualified personnel can be secured.

Street Name Changes

During 1964, City Council authorized the changing of the name of 21 streets on the basis of recommendations by the City Planning Department and the Traffic and Transportation Department. The changes were necessary to eliminate confusing duplication. The duplication of street names is a major problem with respect to the delivery of mail, distribution of merchandise, and the dispatching of all types of emergency vehicles.

The City Planning Department, through its land subdivision control activities, requires that all street names in new subdivisions be either new names or logical continuations of the names of existing adjacent streets if they are not duplicates. This policy has prevented the establishment of more duplicate street names.

OPERATION AND ORGANIZATION

City Planning Commission

From January 1 through February 11, the membership of the City Planning Commission was as follows:

M. E. Walter, Chairman	Sol Laufman
Milton B. McGinty, Vice-Chairman	Otis Massey
Jas. J. Braniff, Jr.	V. P. Ringer
W. Kyle Chapman	Lester L. Tatum
M. A. Graham	E. B. Cape, ex officio
Alfred J. Knapp	Richard P. Doss, alternate

Ronald A. Heiser, Secretary

This Commission during its brief period of operation during 1964 held three regular meetings, and one meeting was held by the Subdivision Committee.

Late in February, Mayor Louie Welch appointed new members to the City Planning Commission, and this body is composed of the following citizens:

*M. E. Walter, Chairman	Jack Lander
Burdette Keeland, Vice-Chairman	*Sol Laufman
C. O. Beeler	Alvin S. Moody, Jr.
*W. Kyle Chapman	Earl J. Wood
John de Menil	E. B. Cape, ex officio
William N. Hollis	Richard P. Doss, alternate

Ronald A. Heiser, Secretary
January 1-June 30
Roscoe H. Jones, Secretary
June 30-December 31
*Members reappointed to the Commission

This new City Planning Commission held 23 regular meetings during 1964. At the meeting held on March 24, the Chairman appointed various standing committees designed to be available to undertake special projects and formulate recommendations for Commission action. These committees are: "Plats and Rules," Mr. Moody, Chairman; "Highways and Streets," Mr. Cape, Chairman; "Beautification," Mr. de Menil, Chairman; and "Land Program," Mr. Keeland, Chairman. The major activity of the City Planning Commission throughout the year was the review of a total of 272 subdivision plats which affected an area of approximately 10,439 acres of land.

Highlights of many of the Commission's meetings were the presentation of technical briefing sessions concerning specific areas of importance to planning. During the year seven such briefing sessions were held, which provided valuable information to the Commission. The first briefing session was held on September 8, with Mr. Howard N. Martin, Manager of the Research Department, Houston Chamber of Commerce, making the presentation on the Houston Area's Economy and the Port of Houston. On September 22, Mr. Russell Lokkeberg, Research Director of the Houston Community Council, presented the second briefing session, concerning Houston's Population and the factors which affect the rate of Houston's population growth. The third session was presented on October 6 by the Planning Director and consisted of the Director's recommended City Planning Program. The fourth briefing session was given by Mr. Gus H. Haycock, Director of the Parks and Recreation Department on November 3. Mr. Haycock outlined the scope of the operation of his Department and pointed out the need for continued effort to acquire parks and open space. On November 17, Mr. Cooper McEachern, Director of the Traffic and Transportation Department, provided the fifth briefing session, on the subject of current traffic operations, planning studies, and transit potentials in the Houston area. On December 1, Mr. Robert S. Braden, Vice-President of Turner and Collie Consulting Engineers, Inc., gave the sixth briefing session, on the subject of master planning for storm drainage in the Houston metropolitan area. The seventh briefing session was given on December 15 by Mr. W. E. White, Chief Engineer, Sewer Division, Department of Public Works, on the subject of sanitary sewer master planning.

City Planning Department

The City Planning Department presently occupies one half of the seventh floor of the City Hall and approximately one fourth of the second floor of the Old Criminal Courts Building. At the end of the year, the Department had a total staff complement of 18 employees, four of whom are part-time. During the year, nine employees resigned to enter private business. These resignations included a Senior Planner, a Planner, two Assistant Planners, and five part-time Draftsmen. The 1964 budget for the City Planning Department was $163,257. Of this amount $25,000 was contributed by Harris County for planning services accomplished in the unincorporated areas of the County. The City portion of the budget amounted to $138,257.

In April, Mr. Roscoe H. Jones was appointed by Mayor Welch as Director of the City Planning Department, and he assumed his duties as Director in June. Work was immediately undertaken to develop a revitalized planning program to meet the needs of Houston's growth. This recommended program was set out in a report which outlined details on staffing, budget, and work space requirements necessary to accomplish the goals of the work program. This recommended planning program was presented to the City Planning Commission in October and was adopted and was subsequently presented to the Mayor and City Council for their consideration in the approval of the 1965 City Budget.

City Planning Department Staff

Director	*Roscoe H. Jones
Assistant Director	Ronald A. Heiser
Planners	Carroll B. Brown
	John B. Raia
Assistant Planner	J. Stephen Crim
Planning Analyst	Mary Lou Sauer
Draftsmen	Esther F. McKean
	Lawrence J. Boudloche
	*Jack Williamson
	*Roy Jasso
Draftsmen (Part Time)	Clayton L. Nelson
	*William C. Murphy
	*Gary Willson
	*Clay H. Wellborn
Executive Secretary	Marguerite D. Aldrich
Secretary	Doris M. Garrett
Stenographer	Jayne Self
Junior Clerk	Linda L. Hubacek

*Employed in 1964

Resigned 1964

Vernon G. Henry, Senior Planner
Thomas R. Northrup, Planner
Tom Robinson, Assistant Planner
Robert D. Atkinson, Assistant Planner

John P. Stanford, Draftsman (PT)
Donald G. Jackson, Draftsman (PT)
John H. Johnston, Draftsman (PT)
Joe B. Reynolds, Jr., Draftsman (P
Gerald L. Williams, Draftsman (PT)

PROGRAM FOR THE PREPARATION

OF THE

COMPREHENSIVE PLAN FOR GREATER HOUSTON

AUGUST 15, 1965

Prepared by

Roscoe H. Jones, Director
City Planning Department
City of Houston, Texas

FOREWORD

In October, 1964, the City Planning Director presented a report entitled "Recommended City Planning Program for the City of Houston" to the Mayor, City Council, and City Planning Commission. This report recommended an expanded city planning program for the City and set forth detailed recommendations for budget, organization, and staff to carry forward the proposed program. This recommended program was approved by the City Planning Commission at its meeting of October 20, 1964, and forwarded to the Mayor and City Council. The 1965 budget request for the City Planning Department was in keeping with the recommended program. The 1965 Budget recommended by the Mayor and approved by the City Council included important increases in the City Planning Department budget to undertake the recommended city planning program. An important element of the program was the preparation of a Comprehensive Plan for the city of Houston.

In keeping with the above actions, this report outlines the work program currently underway for the preparation of the Comprehensive Plan for the greater Houston area. The report is prepared for the benefit of concerned agencies and individuals who may be desirous of knowing in detail the procedures in developing the Comprehensive Plan for greater Houston.

PROGRAM FOR THE PREPARATION

OF THE

COMPREHENSIVE PLAN FOR GREATER HOUSTON

OBJECTIVES

This program is aimed at the following objectives:

1. Defining the study area for the Comprehensive Plan for greater Houston.
2. Discussion of the agencies and groups which will be involved in the process of preparing the Comprehensive Plan.
3. Discussion of the organization and staffing of the City Planning Department.
4. The setting forth in detail of the approach and work program to be followed in the preparation of the Comprehensive Plan for greater Houston.

STUDY AREA AND TIME

The City Planning Commission of the City of Houston is responsible for the review and approval of subdivisions within the city of Houston and in the unincorporated areas lying within five miles of the city limits of Houston. This area, known as the five-mile jurisdictional area, represents the area in which the City Planning Commission is concerned with the future growth and development. The area of some 2030 square miles includes practically all of Harris County and territory beyond Harris County. It is well to remember that the five-mile jurisdictional area will expand as the City of Houston annexes more territory in the future. The Comprehensive Plan for greater Houston, therefore, should include at least the five-mile jurisdictional area for which the City Planning Commission is responsible for today, plus some additional area beyond. The study area, therefore, has been defined to include all of Harris County plus some additional lands beyond Harris County. A new base map of this area has been prepared and may be viewed in the City Planning Department.

The time period for which the Comprehensive Plan for greater Houston is to be prepared has been set for approximately twenty-five years into the future, or to the year 1990. While this may seem like some time into the future, it is well to remember that many of these public improvements which are now being constructed will have a useful life of forty or fifty years or more. It is well that we look ahead to be assured that the proposed public improvements are properly located and properly sized to meet the needs at the mid point of their useful life. It should be remembered that it will take from three to five years to complete the preparation of the Comprehensive Plan. It is therefore not unreasonable to make 1990 the target date for the Comprehensive Plan. Actually, we will prepare the plan for the anticipated population of greater Houston of 1990. Such long-range view will give us the proper prospective which we need to make developmental decisions today which are shaping the future of tomorrow.

In 1965, the five-mile jurisdictional area of the City of Houston included 2030 square miles and a population of 1,500,000. It is anticipated that by 1990 this population will have doubled to reach 3,000,000. The Comprehensive Plan looking forward twenty-five years for an area somewhat greater than Harris County will be an important guide to both private and public agencies as they face the task of building equal to a second Houston.

PAST COMPREHENSIVE PLANNING EFFORTS

The city of Houston has benefited from planning for many years. Even the original layout of the city of Houston prepared by the Allen Brothers in 1936 was an over-all plan which guided the surveyors as they staked out the city. There were even provisions for public spaces such as the courthouse square and the market square.

The first comprehensive plan for the City of Houston was prepared by Arthur C. Comey, the distinguished city planning consultant from Boston. This 1913 Plan

was prepared for the Houston Park Board. As we read the 1913 Plan, we might well wish that more of the far-sighted proposals had been implemented. Many dollars would have been saved.

In 1929 the Master Plan by Hare and Hare, Kansas City Planning Consultants, was published. This Master Plan report, full of significant proposals for the city of Houston, resulted from seven years of work following creation of the first City Planning Commission and the retention of Hare & Hare as planning consultants. Again in the late thirties, additional planning work was undertaken with Hare & Hare as planning consultants.

In 1940, the City Council passed an ordinance reactivating the City Planning Commission and creating for the first time a City Planning Department with a professional planning staff. The work of the department in the early forties resulted in the publication of the 1942 Major Street Plan. The results of planning stemming from that major thoroughfare plan and professional planning work over the past years is clearly in evidence as we travel the excellent major thoroughfares of Houston.

In 1957, the City Planning Department began the studies for the preparation of a comprehensive plan for the city of Houston. A number of reports were prepared at that time including background reports on scope and extent of the comprehensive plan study, the economic base study, population studies, and land use studies. This most recent comprehensive planning effort was diverted by the efforts on zoning in 1960 to 1962.

It can readily be seen that the planning history of Houston has been extensive. While many of the planning proposals were not followed, some were, resulting in many fine improvements to the city of Houston. The value of city planning has been well demonstrated. Today the plans of the past are outdated. A new Comprehensive Plan is urgently needed. It is to fill this gap that the present work effort is getting under way.

APPROACH

The general approach for the program envisions the preparation of a Comprehensive Plan for greater Houston which will coordinate the planning of many individuals and public agencies, with a firm basis in research of the economic, population, land use, and physical factors of the greater Houston area. The Comprehensive Plan will present a guide for the decision-makers, both public and private, as they face the many-fold developmental decisions which will shape the future of Houston. The Plan will give these decision-makers a sound basis upon which to decide what shall be built, where and when and of what size. It is hoped that the need for a Comprehensive Plan which coordinates into one set of documents the plans and hopes and aspirations of our city is well recognized.

The approach to be followed is indicated by Figure 1; here we see that the work program is organized into a number of stages as follows:

1. Staffing
2. Program Design
3. Collection and Analysis of Facts
4. Development of Goals, Principles, and Standards
5. Preparation and Evaluation of Alternative Plans
6. Preliminary Plan Review and Adoption
7. Final Plan Preparation, Review, and Adoption
8. Detailed Master Plan
9. Continuing Planning Program

The section on Work Program below will describe in detail these work elements. Let us here look at these quickly to get the over-all approach to the preparation of the Comprehensive Plan.

The preparation of the Plan will involve many people and agencies. No one agency is responsible for the future of Houston; there are many. All these separate agencies, public and private, will want to share in the preparation of the Comprehensive Plan. Every attempt will be made to incorporate the thinking of all concerned into the new guide to Houston's future.

FIGURE I

WORK PROGRAM FOR THE

COMPREHENSIVE PLAN FOR GREATER HOUSTON

The staffing of the City Planning Department in accordance with the approved 1965 Budget is well under way. The program design also in full process.

As it can be seen from the Figure, the collection and analysis phase deals with a number of improtant types of information. Information mapping will include a whole series of maps, putting in graphic form various data about the physical, geographical, and public facilities of the greater Houston area. The economic base and population study not only will review the past and present economy and population of the greater Houston area, but will project the future economic potentials and population characteristics. A new land use survey will be made which will give us an up-to-date, accurate picture of how we are using our land today and what are its potentials for future development.

The development of goals, principles, and standards will not be the work of only the professional staff of the City Planning Department, but will rely heavily on the knowledge and experience of the City Planning Commission members and other community leaders of the City.

With the facts about our area known and fully analyzed, with the goals and objectives for the future development of Houston agreed upon, we will prepare various alternative plans and evaluate these as possible development schemes for the future of Houston. These plans will seek to help coordinate both public and private efforts into building a better Houston, fully exploiting the potentials which Houston has before it. Upon review of the alternative plans, a preliminary plan will be adopted which in the subsequent stages will be refined into the final plan which after review and adoption will become the official Comprehensive Plan for greater Houston. The Comprehensive Plan will be a flexible guide to the future, ready to change and adapt to the unknown changes in technology and developments which will come. The Comprehensive Plan then will be subject to periodic review over the coming years in order to keep it a current vital guide for the decision-makers of our city.

Upon the completion of the Comprehensive Plan, detailed master plans for parks, major thoroughfares, community facilities, etc., will be prepared in greater detail to guide the detailed decisions for the various public improvements.

WORK PROGRAM

The following outline delineates the scope of the various elements in the work program. The work program will develop along the lines of the current professional city planning practices.

ORGANIZATION

Figure 2 sets forth the organization for the preparation of the Comprehensive Plan of greater Houston. It points out the various agencies which will be called upon to participate in making the plan. The following describes the role of each one of these agencies.

General Citizenry. At the top is the general citizenry of the city of greater Houston. It is to the citizens of Houston that we must look for continuous guidance in what Houston of the future shall become.

Mayor and City Council. The citizens elect the Mayor and City Council to represent them in the detailed matters of setting policy, to guide the growth and development of the city, and to implement plans and programs which will carry out the plans for the future. The Mayor and City Council, of course, have a prime leading role in the formulation and review of the Comprehensive Plan.

Local Concerned Citizen Groups. The citizens are represented through local concerned citizen groups. Among these groups is the Houston Chamber of Commerce, with its various committees which are continuously concerned with the coordination of both public and private developments to the enhancement of greater Houston. There are many civic associations and professional groups. We will be calling upon these citizen groups often in our comprehensive planning program to insure that the city's wants and wishes and desires are incorporated into the planning process.

FIGURE II

ORGANIZATION FOR THE PREPARATION OF THE

COMPREHENSIVE PLAN OF GREATER HOUSTON

Other Government Agencies. It is well to remember that the City government is only one of many local government agencies concerned with the future physical development of the city of Houston. Harris County certainly has a role to play in the development of greater Houston. The State Highway Department is another agency which has an important role in the development of the roads, the freeways, and a number of the major thoroughfares to serve greater Houston. The Harris County Flood Control District is concerned with the development of major drainage channels. The Port of Houston Navigation District is concerned with the development of the Port of Houston and with industrial growth and expansion along that important facility. The U.S. Corps of Engineers is concerned with navigation and drainage and flood control within our greater Houston area. There are many other government agencies which are concerned with the growth and development of greater Houston. Certainly we wish to incorporate the planning and work of these various government agencies into the preparation of the Comprehensive Plan.

Other City Departments. Under the Mayor and City Council we have other City departments which work alongside the City Planning Department: the Traffic and Transportation Department in the preparation of Plans for Major Thoroughfares, the Department of Public Works in the preparation of plans for utilities and major thoroughfares. Certainly these Departments must be continuously coordinated with the work of the City Planning Department if it is to be meaningful.

City Planning Commission. Playing a key role in the organization for the preparation of the Comprehensive Plan of Greater Houston is the City Planning Commission appointed by the Mayor and City Council. The City Planning Commission represents the community in the development of the plans for the future of Houston. We will be relying heavily on their extensive experience and intimate knowledge of this group of citizens as we progress in our planning program.

City Planning Department. The major staff work in preparation of the Comprehensive Plan for greater Houston will be by the City Planning Department (See Figure III.) Under the Director there are five units in the Department. While the task of making the Comprehensive Plan will be undertaken primarily by the Comprehensive Planning Division and the Planning Research Division, the entire Department will be involved. The assigned duties of the units of the City Planning Department are as follows:

> Public Information Section - Provides citizens and agencies concerned with planning matters with up-to-date information upon request.
>
> Secretarial Section - Provides the Department with secretarial and stenographic services. Maintains the central files. Maintains budgeting, accounting, payroll, and personnel records for the Department. Records minutes of the City Planning Commission.
>
> Comprehensive Planning Division - Conducts studies of land use in conjunction with the economic and population analysis and prepares plans for traffic and transportation, parks and recreation, schools, and sewer, water, and other community facilities. Coordinates Capital Improvements with Comprehensive Plan. Maintains liaison with other City Departments and planning units of other public jurisdictions in the coordination of long-range plans.
>
> Planning Research Division - Conducts economic research, population studies including demographic analysis and housing studies, and other general research related to the preparation and implementation of the Comprehensive Plan. Conducts special research and analysis for current project planning and development coordination. Provides and maintains data and reference library.
>
> Development Coordination Division - Reviews and processes subdivision plats. Prepares subdivision and related regulations. Prepares detailed alignment studies and building line drawings of proposed major thoroughfares. Provides routine planning services, special area studies, and current project planning studies. Maintains liaison with other City Departments, other public jurisdictions, and private developers and citizens in coordination of current developments. Prepares in cooperation with other City Departments a recommended capital improvement program. Maintains mapping files.

FIGURE III

FUNCTIONAL ORGANIZATIONAL CHART

HOUSTON CITY PLANNING DEPARTMENT

August, 1965

STAFFING

In the discussion of organization it is well to point out the difficulties in staffing the City Planning Department. The recent budget approval by the Mayor and City Council has given the Department the green light to move expeditiously forward in the comprehensive planning program. However, one of the major difficulties that we, as well as many planning agencies in the nation, are facing is that of recruitment of qualified professional planners. One year ago the City Planning Department had eighteen employees with an authorized strength of twenty-six positions. During the past year we have employed twenty people and have lost eleven, bringing our current staff of the Department to twenty-seven people with an authorized strength of thirty-three (See Figure IV, Position Organization Chart of the Houston City Planning Department, and Chart V, Houston City Planning Department Authorized Positions.) With our 1965 approved budget, we have six vacant positions to fill. We feel confident that these positions will be filled before the end of the year. The work program and work schedule are based on the assumption that we will have the Department up to full authorized strength by the end of this year.

PROGRAM DESIGN

This phase of the program already well underway will design in detail the techniques and procedures which will be followed and the detailed work schedule to guide the program. It will spell out in more precise terms what the program will include and how it will be conducted. This will assist the staff of the City Planning Department in moving along in the comprehensive planning program and will give opportunities to the City Planning Commission and other concerned groups to become familiar with the approach to the preparation of the Comprehensive Plan. The Planning Research Division and the Comprehensive Planning Division will be responsible for the further detailing of the work program and procedures to be followed.

COLLECTION AND ALALYSIS OF DATA

The collection and analysis of data, for convenience in discussion, has been divided into four major areas, each of which will be discussed separately.

Information Mapping - The preparation of the Comprehensive Plan for the complex metropolitan area of greater Houston attempts to collate a large array of facts, past and present, about the area. These facts, once collected, are analyzed and projected into the future so that we may realistically plan for the future of greater Houston. The information mapping program, already under way by the City Planning Department, will provide basic data on a uniform base map of 1" = 6000'. These information maps will provide data on school districts, school locations, park sites, open space, police and fire stations, drainage channels and areas, topographic data, political subdivisions, and a host of other data important to the preparation of the Comprehensive Plan and the Department's continuing planning program. Many departments and agencies will find these information maps helpful to them in their work efforts.

Economic Base Study - In 1959 an economic base study was made by the City Planning Department. Since that time there have been a number of major changes in the economy of the Houston region, and a detailed review will be made of these changes and the existing economic position. The following kinds of information will be collected and updated: (1) historical trends of various industrial categories, (2) a recap of the income analysis, (3) income consumption patterns, and (4) review of all relevant forecasts made for the greater Houston region. New analytical studies of Houston economic future will be made as needed. This study will be undertaken by the Research Division of the City Planning Department in close cooperation with the Research Department of the Chamber of Commerce, the Research Department of the Community Council, and other research agencies within the greater Houston area.

Population Studies - The City Planning Department made a population analysis in 1959, with detailed forecasts of population to 1980. These studies will be carefully reviewed, updated in conjunction with the economic base study, and extended to the year 1990. Particular emphasis will be placed on what has occurred in terms of population growth and distribution since the last study. Regional and state-wide forecasts will be reviewed to determine their appropriateness. The composition of the population will be also examined. Birth, death, and migration rates will be checked. The results will be compared with those obtained from the Economic Base Study. This work will be done by the Research Division.

Land Use Survey - In 1959 an area-wide study of land use was made by the City Planning Department. The results of this study were placed on a number of maps at 1" = 400'. The land use for the greater Houston area has changed considerably since the last survey. While the last survey will be helpful to the updating of this information, it is important that we conduct a new land-use survey. In addition, we are looking forward to the use of electronic data equipment and procedures to give us quick and easy analysis of the land use data to provide for the continuous updating of the land use survey.

DEVELOPMENT OF GOALS, PRINCIPLES, AND STANDARDS

It can readily be seen that the work described in the collection and analysis phase will extend to most of next year. While the collection and analysis of data is under way, we will proceed with the spelling out of goals and objectives of the city of Houston for the future. It is proposed that the development of goals and principles and standards will proceed by the preparation of what might be termed "policy reports" for review by the City Planning Commission, the Mayor and City Council, and other concerned groups. These policy reports will include:

1. Planning Objectives. A report will be concerned with the general objectives which planning seeks to secure for Houston in coordinating future development to achieve an efficient and economical urban environment. While this report will be general, it will help us as a city to focus our attention on what we wish for the future of our Houston area.

2. Urban Growth Pattern. This report will try to project ahead what the possible future pattern for the greater Houston urban complex might become and to what extent by the placement of transportation, industrial, and community facilities and by other efforts we can promote a more orderly, efficient, and economical urban growth pattern.

3. Proposed Planning Areas. In the planning for the vast urban complex of greater Houston, it is important that we try to understand the structure of this area and to identify those natural sub-areas of the urban community which have similar patterns and problems. An attempt will be made to identify major planning areas and within these areas, communities of 40,000 to 60,000 population. Within the communities, neighborhoods of from five to eight thousand population, or the service area of an elementary school, will be identified. This report will also discuss the problems of providing service to various types of urban areas.

4. Movement in the Metropolitan Area. This report will be concerned with the transportation pattern generally that serves the greater Houston area and will seek to identify problems both now and in the future and explore opportunities for developing an even better, more efficient transportation system to serve the greater Houston area.

5. The Use of Land and the Intensity of Land Use. This report will seek to summarize the results of the land use survey and apply the conclusions therefrom to general policy recommendations as to the future land development potentials.

6. The Developability of the Land. This policy report will review the drainage and soil conditions throughout the greater Houston area as they affect the potential for development of land and the utilization of that land for its highest and best use. It is important to remember that the natural geography of the greater Houston area plays an important role in the future urban development of this area. This report will seek to understand those natural geographic factors and the potential influence that they will have on the future development of Houston.

7. The Urban Environment. This policy report will seek to discuss the factor of amenity in our urban environment and the role that it can play in the future development of greater Houston.

PREPARATION AND EVALUATION OF ALTERNATIVE PLANS

With the data collected and analyzed, with the goals, principles, and standards established for the city, we will be in a position to, in effect, look into the future of greater Houston and see the various alternative development possibilities which we are faced with.

It is readily recognized that the future of Houston will be strongly determined by the Houston of today. Many of the buildings that are standing today will be standing in 1990. Many of the factors of urban growth which contributed so significantly to Houston's growth in the past will continue on into the future. It is with this understanding that there are many factors which are determining the future of Houston and that it is only within certain limits that we can alter some of these factors that we must look to the future of Houston. Each of the alternative development plans for the future of Houston should be subject to close scrutiny both as to the benefits which will derive from the plan and the cost which the plan would incur. In this way we can present to the citizens of greater Houston a choice of alternatives of what

the future of Houston should be, with the consequence of benefits and cost for each alternative and the degree to which each achieves the goals and objectives established in the earlier phases of the comprehensive planning program.

PRELIMINARY PLAN PREPARATION, REVIEW, AND ADOPTION

This phase of the program will look forward to the preparation of what could be termed the sketch plan or preliminary plan of the greater Houston of the future. This plan will not be complete in all detail; however, it will seek to show the projected development patterns of the future, projected land use pattern, the transportation facility pattern, and the community facility pattern and how they relate, one to the other, in a comprehensive plan. It is anticipated that several months will be taken in the review of the proposed preliminary plan by many concerned agencies within the community before it can be finally adopted by the City Planning Commission and the Mayor and City Council as an acceptable preliminary plan on which to proceed further in the comprehensive planning program.

FINAL PLAN PREPARATION, REVIEW, AND ADOPTION

This phase of the program will be concerned with the refinement of the adopted preliminary plan into a more finished product. This plan will seek to resolve a number of minor remaining conflicting items within the preliminary plan and seek to incorporate the comments and suggestions made during the preliminary plan review stages. It is this final plan which will be published in large numbers to provide the many civic leaders and concerned citizens the complete document for their review and guidance as they make the manifold public and private decisions which will shape the future of Houston.

DETAILED MASTER PLAN

The final comprehensive plan will serve as the basis for the further preparation of more detailed master plans for community facilities such as parks and open spaces and major thoroughfares, all in accordance with the Comprehensive Plan. Not all of these plans may be prepared by the City Planning Department, but the City Planning Department will stand ready to assist the City Departments or other local government agencies concerned in the preparation of the detailed master plan. It is well to remember that we already have a master plan for some of the elements and facilities of the community; however, it would be desirable to review these plans in detail in light of a new over-all, comprehensive plan. The planning process for a city is not like the planning process for a building, where the blueprints are prepared, the building is constructed, and the project is complete. The building of a city is continuous, as indeed the planning for that city must be continuous.

CONTINUING PLANNING PROGRAM

Recognizing that a city is never built and the planning must be continuous, this section of the work program has been included in our discussion here to fully recognize that planning is a continuing function of local government, as indeed it has been in Houston, as a continuing staff function since 1940. Only as a continuing program can the plans that have been prepared be continuously revised and interpreted to provide a meaningful guide to the day-to-day decisions that shape the future of Houston. In this phase of the work program the continuing planning program in its implementation phases and review phases will be scrutinized carefully and adjustments made as needed to provide an effective continuing planning program to insure that the Comprehensive Plan is ever meaningful, valid, and acceptable.

WORK SCHEDULE

The program design, of course, will be concerned with the development of a detailed work schedule to be followed. However, Figure VI gives a preliminary work schedule which it is anticipated we will be able to follow in carrying out the preparation of the Comprehensive Plan for Greater Houston. It deals with the various phases that have been described above and when they should be carried out. It should be pointed out that the schedule has been based on the adequate staffing of the Planning Department, with possibly some additional increases in the staff in the year of 1966 or 1967. It should be pointed out that the preparation of a Comprehensive Plan for a great city the size of Houston is not a fast process but is one which should be taken at such a rate as to permit the local concerned citizen groups, other governmental agencies, elected officials, and appointed officials to fully participate in the planning process. Only with this full participation, cooperation, and understanding, which indeed takes time, can the Comprehensive Plan of Greater Houston be the meaningful guide to a better, more efficient, more economical city of tomorrow.

The work schedule presents desirable target dates to accomplish the planning program within a reasonable period of time and yet provides ample opportunity for the coordination and cooperation process with all concerned groups.

FIGURE VI

WORK SCHEDULE FOR THE PREPARATION OF THE COMPREHENSIVE PLAN OF GREATER HOUSTON

December 22, 1965

Mrs. Al C. Ingersoll, III
3343 Parkwood
Houston, Texas

Dear Mrs. Ingersoll:

I won't to thank you so much for your hospitality on December 14th. The discussion with you and Mrs. Carman was most helpful and illuminating!

I am sure there were many moments of frustration and despair in your campaign for neighborhood awareness. However, the success which you were able to eke out in spite of the many odds should be most gratifying!

The information which you so kindly gave me is most helpful in trying to document this type of democratic action in a not too familiar area of potential service. I certainly commend you for your imagination and forthright action. Houston really needs this type of leadership in <u>every</u> neighborhood.

Hoping that I may have the pleasure of seeing you again and meeting your husband, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

December 22, 1965

Mrs. Max F. Carman
4409 Laurel Drive
Houston, Texas

Dear Mrs. Carman:

The discussion on the 14th of December was stimulating and I am most grateful to you and Mrs. Ingersoll. I hope this gem of an idea will not be allowed to die out but will spread to the whole community! This is truely democracy in action in the best sense of the term.

I hope you are successful in your effort of stabilization of the area containing the larger residential tracts which are unsuitable for today's economic position. If you meet a snag do not hesitate to drop me a note. I would be delighted to answer any questions or if you are not able to transmit clearly the thought concerning the ~~scientific~~ Schematic sketch to the planner you are able to get to work with you, I would be glad to hear from him.

With all of the best wishes, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

P.S. I note Mrs. Howard Barnstone is on the HCHR board, this is obviously your best source for a young planner. Please give my regards to Mr. Barnstone.

December 22, 1965

Mr. Roscoe H. Jones, Director
Houston City Planning Department
710 City Hall
Houston, Texas

Dear Mr. Jones:

I want to thank you very much for your hospitality on the 14th of December. Your comprehensive briefing of the Houston Plan was most stimulating. I was most impressed with what you are doing and with the tremendous potential of your undertaking. I trust you will get your Regional Planning underwey before long.

When you have a Recreational projection or a Rapid Transit proposal set up, I hope I will be able to see what they are. C@rrying the public along with you on the cities inevitable needs is certainly one of the most frustrating aspects of Urban Planning.

I hope also you will be so good as to forward me a copy of your study on the economic evaluation of property in relation to the Master Plan.

I was most interested in the work done in the past (1964-65) by the South MacGregor Promotion Committee instigated by Mr. and Mrs. A. C. Ingersoll, III and

Bcc: Mrs. Ingersoll
Mrs. Carman
Mr. H. Brown

Mr. & Mrs. Max F. Carman for the 3 civic groups in the MacGregor area. However, I wish this neighborhood pride would spread to other neighborhoods throughout the entire city. If this happened and there was a co-ordinating committee for all the groups, think of the potential of this educational means of creating the "public immage" of urban planning within Houston!

With all of the best wishes for your continued success and looking forward to seeing you in the future, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning

MGS/pf

December 22, 1965

Mr. Albert S. Golemon, FAIA
Golemon & Rolfe, Architects
5100 Travis St.
Houston, Texas

Dear Albert:

It was good to talk to you about the potentials of the Houston City Planning effort. I will keep you posted on my thinking as I get further into the matter.

If you care to write me concerning the Southern Regional Project, address me here. If it is a personal note, please use Post Office Box 494, Atlanta, Georgia, 30301.

I was glad to learn of the Houston Chapter, AIA's interest in the Urban Plan. Two elements found conspicious by their absence from the Houston Master Plan were: Recreation and Rapid Transit. I can see the logic of their not being in the Plan todate, but for this not to be projected in the needs for the future could stifle the future economic development of the city. Wouldn't the Houston Chapter, AIA, be the logical agent to bring this matter in focus. I am sure the fact of taxes will rear its ugly head but this is no excuse for facing these human needs.

I was disappointed that the Houston Chapter Exhibit

was not still on view. Is there any move to have this covered by the AIA Journal?

Looking forward to seeing you again, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

MGS/pf

SHA FOAM

December 29, 1965

Mr. John S. Chase, AIA
Architect
2916 Blodgett Avenue
Houston, Texas 77004

Dear Mr. Chase:

Thank you so much for your letter of December 20. I received the photostat of the April "Redbood." Thank you so much! I really appreciate you going to all of this trouble of getting this for me!

Again may I say how much I enjoyed your hospitality for lunch in Houston and the chance to discuss so many things.

Hoping you had a wonderful Christmas Season and will have a most prosperous New Year! Looking forward to seeing you in Washington, I am,

Sincerely yours,

Moreland Griffith Smith, FAIA
Director
Urban Planning Project

November 7, 1966

Mr. Moreland Smith
Southern Regional Council, Inc.
5 Forsyth Street, N. W.
Atlanta, Georgia 30303

Dear Mr. Smith:

Up to the present time we have not succeeded in getting together, so I am inviting you to visit Houston with the specific purpose of meeting with the Housing Committee. Mrs. Dukler has given you a copy of the outline that we presented to Mayor Welch and we would like the benefit of the experience that you and Mr. Chamberlain have had, especially in the large low-income housing in Atlanta.

I have a very exciting Housing Committee, and am turning the chairmanship of this Committee over to Mr. John Stewart immediately, due to my election to the Presidency of HCHR.

We have received $5,000 from the Houston Foundation, the Board of which is made up of some very erudite businessmen and philanthropist. There is very encouraging evidence that we will get further significant support from Urban America and the local OEO.

Our schedule calls for a Housing Committee meeting every Thursday at 5:30 p.m. Time is no object once the meeting begins and we would very much like you to meet with us. I would suggest that the first Thursday possible after the first of the year would be most satisfactory due to the ensuing holidays.

I look forward to hearing from you and especially to your meeting with our Committee.

Sincerely yours,

Stewart A. Wilber

Stewart A. Wilber, M.D.

November 9, 1966

GENERAL PLAN FOR A CREATIVE URBAN DESIGN FOR HOUSTON

with initial orientation on the development of a low income housing demonstration

Phase I - Preliminary Investigation

A. General Concepts

1) Approach to the problem will be interdisciplinary in an atmosphere receptive to innovation, without predisposition to any specific technical "solution", and with the intention that the ultimate demonstration not be limited to housing per se.

B. Purpose

1) To conduct a limited case study of successful and unsuccessful experiments in urban living and low income housing attempted by other cities. The survey will be in terms of answers to the following illustrative questions:

- What socio-economic groups were affected?
- What were the geographical and land-use considerations?
- How was it financed? Was it economically self-sustaining?
- What was the type of construction/architecture?
- Was there a development of any supporting commercial enterprise, recreation, schooling, transportation facilities, etc.?
- What was the general living style?
- What were the major areas of failure?
- What were the major points of achievements? Creativity?

2) To solicit the opinions of persons of various political, social, technical and business diciplines regarding effective and creative urban design.

3) To solicit the opinions of persons living in areas of substandard living conditions.

4) To review the results of the foregoing areas of possible applicability to Houston.

5) To create an experimental design for urban living which addresses itself to Houston's needs in terms of housing, transportation, eduction, recreation and supporting social and commercial institutions.

C. Deliverable Items

1) The output of Phase I will be a written proposal appropriate for submission to a foundation or government agency requesting financial support to develop final and specific plans for the implementation and construction of this urban design.

D. Period of Performance - 3 months

E. Sponsor - City of Houston, Mayor Louie Welch

F. Performers

1) Unpaid Contributors:

o Houston Council on Human Relations, Committee on Housing, operating under the aegis of the Mayor's Office, City of Houston.

2) Paid Contributors:

o The group will consult with well known experts on such subjects as Public Housing and Administration, Political Science, Sociology, Education and Transportation. These persons will have been intimately

involved in urban demonstrations and will be from various urban areas throughout the country, including Texas and Houston. Approximately eight to ten such key individuals will be either interviewed individually or asked to attend a two to three day conference in Houston.

- The group will hire a full time administrator who will coordinate all aspects of Phase I.

G. Funding Requirements

o	Travel, living expenses (2-days average) and consulting fees 10 consultants (out-of-town) @ $300 each	$3,000
o	Administrator's salary 20 hours/week for 13 weeks @ $5.00/hour	1,300
o	Reproduction, graphic work on proposal	500
o	Miscellaneous expenses	200
		$5,000

Phase II - Final Planning

This will be a comprehensive study and development of the implementation plan as noted in Item B-1 entailing four to five months and large scale financing.

Phase III - Construction and Inhabitation

Phase III entails the selecting of architectural and construction contractors, the awarding of contracts necessary to carry out the implementation plan created in Phase II, design and construction, per se, building completion and inhabitation. Period of performance, and the type of financing, cannot be accurately estimated at this time though it is intended that the project will be essentially self-supporting.

PRELIMINARY REPORT OUTLINE

	CONTRIBUTOR
1. Object of report and introduction	J. K. Stewart Chairman
2. Statement of problem (in terms of housing)	
a) Number families and locale at $3,000/year income (map)	Charlene Pittman/Jackson
b) Number families and locale--sub-standard housing (map)	Pittman/Jackson
c) Unemployment data (map)	Pittman/Jackson
d) Social cost of ghetto	John Sieber/Haas/Ainsley/Harwood
e) No public or low income housing being built	Tom Booker
f) No zoning--adverse and positive effects	Earl Britton/Tapley/Robinson
g) No housing code--adverse effects	Britton/Tapley/Robinson
h) Inconsistently enforced building code--adverse effects (inconsistently)	Britton/Tapley/Robinson/Wildenthal
i) No political tools:	
1) Citizens' Advisory Committee	Stewart/Wilber
2) Housing Development Corp. (revolving fund)	Shanahan/Deamer
3) Redevelopment Authority	Robinson Bill
4) Housing Finance Agency	Robinson
j) No comprehensive community plan	Stewart
k) No workable program (for reasons F-J above); therefore,	Stewart
1) No model cities money	
2) No workable program, e.g. low cost loans under 221-D-3	
3) No Title I Urban Renewal funds	
l) No involvement of "establishment"	Wilber
3. Recommendations (community council)	
a) Develop comprehensive community plan	Charles
1) Mixed land use--detailed proposal (exhibit)	Earl Britton/Tapley
2) Building, housing code--semi detailed proposal	Britton/Tapley
3) Population growth, transportation, education, capital expenditure, recreational factors--cursory	Seiber
4) Who does the study? length? cost?	Wilber/Stewart
b) Establish political and financial tools	
1) Citizens' Advisory Committee--who? (org. chart)	Wilber
2) Housing Development Corp.--funding (section 207) relationship to city? board? activity? (org.chart)	Shanahan John
3) Redevelopment Authority--eminent domain? relationship to city planning department? staff? board? budget? activity? (org. chart)	Stewart/Wildenthal
4) General obligation bonds--legal constraints	Stewart/Deamer/Wildenthal
5) Other--e.g. development of non-profit, limited dividend sponsors.	Stewart/Wilber
c) Low income housing projects--immediate implementation	
1) Rent supplement project(s)	
a) tentative sites and why (exhibit) (specification of not discrete)	Sieber/Maas/Harwood/Robinson
b) mixed land use schemes (microcosm of proposed new zoning?) [exhibit]	Britton/Tapley

Mr. John K. Stewart, Jr.
2735 Sunset Blvd
Houston, Texas

3 Feb 67

Dear Mr. Stewart:

It was a pleasure to meet you last night and also to have the conversation with you this morning.

I am forwarding to you my reactions and recommendations by this penned note rather than wait until I can get it typed Monday.

For all intents and purposes I think you are doing a splendid job. It is amazing considering how little is really known in this field in the entire country.

The best advice you can get is from Urban America, Inc and you are in touch with Mr. Twomey in this regard. SRC can be of some value in that we are in touch in an advisory capacity with approximately a dozen cities

throughout the Southeast. This gives somewhat of an orientation to the socio-economic pattern peculiar to this region. As discussed with you in person the SRC Urban Planning Project would be glad to serve as Advisors in your present efforts. If you will send us 2- Copies of all documents, we will react and give you our suggestions on one of the copies, retaining the 2nd copy for our files.

PLEASE SEND TO US THE FOLOWING AS AVAILABLE

1. Report on Trip (Boston, N.Y. City, Baltimore, Washington)
2. Redraft of Preliminary Report Outline as per 2 Feb. 67 Committee discussion.
3. Draft of Final Report due 15 Mar. 67
4. Minutes of Housing Committee meetings future and past (if available)
5. Membership of Housing Committee showing occupation or discipline as well as Race.

6. Informational copies on Urban America-
O.E.O. co-operative projection.
7. Copy of Final Draft of Report
scheduled for completion 15 March 67.
S.R.C. will forward to you as available

1. Atlanta
(a) data on Housing Resourses Committee
(b) Demonstrations City projections
2. Other city projections if pertinent
3. Urban Planning Project publications,

RECOMMENDATIONS

I. Legal Structure reference is made to
copies of correspondance left with you.
(a) for Metropolitan Scope.
(b). bring together presently available forces -
Political
Governmental entities
Commercial
Industrial
Financial
Construction
(c). Allow participation of existing or new
socially oriented non-profit organizations
Elemosinary organizations.

I could not over emphasise how strongly the
importance of this element could relate to your ultimate
success in:

A HOUSTON INTERNATIONAL HOTEL

The Warwick

symplifying imaginative solutions is:

Finance
Management
Welfare
Social Service
Code.
Zoning
Permanence

II. Multi-Racial Approach

Bring into active participation (see data left with you)
(a) Negro
(b) Mexican-Americans
(c) Indian-Americans

Consult the National Committee Against Discrimination in Housing.

Many years of experience in addition to their FOUR CITY* study culminating in their recommendation for a metropolitan approach. Specifically their thoughts on a FAIR HOUSING CENTER.

III. ZONING.

Your thoughts on the Mixed Land Use proposal. This is a very imaginative solution to your major technical handicap and could bait the Federal Government into co-operation, the real key to a potential "Break-through"

A HOUSTON INTERNATIONAL HOTEL

* Atlanta, Denver, Providence and Rochester, N.Y.

VIII. SITE

Develope a specification approach to Site Selection rather than a description which could be spotted as to location

IX ELDERLY

Consider High Rise approach located in Park with wellrounded neighborhood with families of children.

X GOALS

specify 1 year - 2 year - 3 year - 4 year and 5 year possibilities as well as minimal attainments (see Demonstration Cities pamphlet). This will emphasize vision for future as well as the practicality of the present public limitations. However, the minimal must be important enough to result in a good impact.

QUESTIONS:

Although the following were covered in the Committee's discussion I was not sure of the implications, would appreciate your clarifications.

1. Subsidy:
   (a) Source
   (b) Method
   (c) Ratio

A HOUSTON INTERNATIONAL HOTEL

2. Federal
Proposed use of
(a) 205
(b) 207
(c) 211
(d) Others

3. The relationship of:
(a) Multi-Purpose Neighborhood Facilities (H.U.D.-O.E.O.-H.E.W.)
(b) Comprehensive Medical Services (O.E.O.-H.E.W.) Denver?

To summarize, your projection is excellent. The above items are only suggestions for detail improvement other than II, which I believe to be essential approach to equal opportunity in housing and employment! Item I is the only innovative suggestion. I do believe it could materially accelerate you program once it was under way.

Although Houston does not have a history of good planning or acceptance

The Warwick

of future problems and their solutions, it is very likely that Houston's proverbially large, dynamic or "TEXAN" approach, could presage the exemplary U.S. solution to the bludgeoning metropolis as a good place for people to live and work. An effective demonstration of Democracy at work!

Looking forward to working with you, I am,

Sincerely,
Moreland Griffith Smith, F.A.I.A.

Atlantic, Georgia 30303

Dear Mr. Smith:

Thank you for your letter February 6, 1967 and our most informative meeting with the committee in Houston the previous week. Our company generally limits their operations to Texas, Louisana and Arkansas. The project in New Orleans is 200 units, cost of $3,200,000.00, Architectural Firm is Mouton and Mouton in New Orleans.

Constuction is to start within sixty (60) days on this project, the $11,000.00 per unit includes stove, refferiator and air-conditioning. Some cities have chosen to exclude this type project from their tax structure.

Sincerely,

Jake Murrell

Jake Murrell
President
Southern Mortgage Corporation

Note For File

MacGregor Estates* Planning Committee

A few individuals owning property in the MacGregor neighborhood met together in the spring of 1964 to discuss their concern with regard to property devaluation because of realty "block-busting" tactics they found themselves faced with.

On December 14, Mrs. A. C. Ingersoll, III, 3343 Parkwood and Mrs. Max F. Carman, 4409 Laurel Drive were both interviewed.

With the Kenwood, Hyde Park area, Chicago case, as covered in Harpers Magazine, to use as a blueprint, Mr. A. C. Ingersoll, III sent out letters to the approximate 1000 homes in this neighborhood. It should be noted that this neighborhood was comprised of 3 dormant civic associations which origionally had been formed to cope with deed restriction enforcement needed because of the lack of zoning within the City of Houston. An organization was formed with the name "MacGregor Estates Planning Committee" composed of concerned home owners and administered by a board composed of 2 members of each of the 3 civic associations. The sole purpose of this organization was the promotion of a stable neighborhood. This first letter was followed by 3 more, hand delivered, to the residents by Mrs. Ingersoll's and her friend Mrs. Max F. Carman's children plus countless personal calls by these ladies. Needless to say this total effort required much effort in "door bell ringing" in addition to the letters.

Another interesting feature was the creation of the Donham Real Estate Company, 7810 Wedgewood, to promote the sale of residences of "fleeing, panicing whites" to more stable whites. This venture was financed by Mr. Donham and Mrs. Ingersoll served as a real estate broker. There were no salaries, the venture paid for itself but with no profit, as might be expected because of its limited market.

The net results was that within 8 to 10 months the panic of integration was quelled and the realty values were stabalized. One illustration was a specific house appraised by FHA during the "panic" for $16,800.00 was re-appraised by FHA after the "panic" for $21,000.00.

The 3 civic associations were re-activated, are all integrated and their only problem is the problem of commercial blight (Mr. Martin) which will always be an ever present hazzard to residential neighborhoods.

This case of neighborhood civic association was reported in the April Issue of Redbook Magazine.

*MacGregor Estates, close to Texas Southern University and Houston University, was originally composed of 60% Jewish "Silk Stocking" neighborhood of residences costing from $150,000.00 to $25,000.00. At the time of the integration panic there had been some construction as low as $12,000.00 and the older residents, because of children being grown, didn't have the need for as large a home as they originally built.

Article 974a, Vernon's Revised Civil Statutes
As Amended by H.B. 158, passed in 1949, and H.B. 691, passed 1955

CONTROL OF SUBDIVISION PLATTING

An act to provide for the approval by municipal authorities before filing, and for the filing and recordation of plans, plats or replats of land lying in or within five miles of the corporate limits of cities, and providing for the adoption and promulgation by cities of general rules and regulations governing plats and subdivision, and making it unlawful and a misdemeanor in office for officials of such cities, unless said plans, plats or replats have first received the required approval, to serve or connect the land covered by such plans, plats or replats, or for the use of owners or purchasers of said lands, or any part thereof, with any public utilities, such as light, gas, water, sewer, etc., which may be owned by such cities, and making it unlawful and a misdemeanor in office for any county clerk to file or record such plans, plats or replats before same have received the approval required by this Act, and providing a penalty therefor; and providing for the repeal of laws and parts of laws in conflict therewith; and declaring an emergency.

Be it enacted by the Legislature of the State of Texas:

Section 1. That hereafter every owner of any tract of land situated within the corporate limits, or within five miles of the corporate limits of any city in the State of Texas, who may hereafter divide the same in two or more parts for the purpose of laying out any subdivision of any tract of land or any addition to any town or city, or for laying out suburban lots or building lots, or any lots, and streets, alleys or parks or other portions intended for public use, or the use of purchasers or owners of lots fronting thereon or adjacent thereto, shall cause a plat to be made thereof which shall accurately describe all of said subdivision or addition by metes and bounds and locate the same with respect to an original corner of the original survey of which it is a part giving the dimensions thereof of said subdivision or addition, and dimensions of all streets, alleys, squares, parks or other portions of same intended to be dedicated to public use, or for the use of purchasers or owners of lots fronting thereon or adjacent thereto; provided, however, that no plat of any subdivision of any tract of land or any addition to any town or city shall be recorded unless the same shall accurately describe all of said subdivision or addition by metes and bounds and locate the same with respect to an original corner of the original survey of which it is a part giving the dimensions thereof said subdivision or addition, and dimensions of all streets, alleys, squares, parks or other portions of same intended to be dedicated to public use, or for the use of purchasers or owners of lots fronting thereon or adjacent thereto.

Section 2. That every such plat shall be duly acknowledged by owners or proprietors of the land, or by some duly authorized agent of said owners or proprietors, in the manner required for the acknowledgment of deeds; and the said plat, subject to the provisions contained in this Act shall be filed for record and be recorded in the office of the County Clerk of the County in which the land lies.

Section 3. That it shall be unlawful for the County Clerk of any county in which such land lies to receive or record any such plan, plat or replat, unless and until the same shall have been approved by the City Planning Commission of any city affected by this Act, if said city have a City Planning Commission and if it have no City Planning Commission, unless and until the said plan, plat, or replat shall have been approved by the governing body of such city. If such land lies outside of and within five miles of more than one city affected by this Act, then the requisite approval shall be by the City Planning Commission or Governing Body, as the case may be, of such of said cities having the largest population; provided, however, that the governing body of any city having the largest popultaion may enter into an agreement with any other city or cities affected, or the governing body of the largest city may enter into an agreement with any other city within five (5) miles conferring the power of approval within stated portions of the area upon such other city; but any such agreement shall be revocable by either city at the end of twenty (20) years after the date of the agreement or at the end of such shorter period of time as may be agreed upon. A copy of any such agreement shall be filed with the County Clerk, and during the time the agreement continues in force he shall not receive or record any such plan, plat or replat unless it has been approved by the City Planning Commission or the governing body, as the case may be, of the city or cities upon which the power of approval is conferred by the agreement.

Any person desiring to have a plan, plat or replat approved as herein provided, shall apply therefor to and file a copy with the Commission or governing body herein authorized to approve same, which shall act upon same within thirty days from the filing date. If said plat be not disapproved within thirty days from said filing date, it shall be deemed to have been approved and a certificate showing said filing date and the failure to take action thereon within thirty days from filing date, shall on demand be issued by the City Planning Commission or Governing Body, as the case may be, of such city, and said certificate shall be sufficient in lieu of the written endorsement or other evidence of approval herein required. If the plan, plat, or replat is approved, such Commission or governing body shall indicate such finding by certificate endorsed thereon, signed by the Chairman or presiding officer of said Commission or governing body and attested by its Secretary, or signed by a majority of the members of said Commission or Governing Body. Such Commission or governing body shall keep a record of such applications and the action taken thereupon, and upon demand of the owners of any land affected, shall certify its reasons for the action taken in the matter.

Section 4. If such plan, or plat, or replat shall conform to the general plan of said city and its streets, alleys, parks, playgrounds and public utility facilities, including those which have been or may be laid out, and to the general plan for the extension of such city and of its roads, streets and public highways within said city and within five miles of the corporate limits thereof, regard being had for access to and extension of sewer and water mains and the instrumentalities of public utilities, and if same shall conform to such general rules and regulations, if any, governing plats and subdivisions of land falling within its jurisdiction as the governing body of such city may adopt and promulgate to promote the health, safety, morals or general welfare of the community, and the safe, orderly and healthful development of said community (which general rules and regulations for said purposes such cities are hereby authorized to adopt and promulgate after public hearing held thereon), then it shall be the duty of said City Planning Commission or of the governing body of such city, as the case may be, to endorse approval upon the plan, plat or replat submitted to it.

Section 5. That any such plan, plat or replat may be vacated by the proprietors of the land covered thereby at any time before the sale of any lot therein by a written instrument declaring the same to be vacated, duly executed, acknowledged and recorded in the same office as the plat to be vacated, provided the approval of the City Planning Commission or governing body of such city, as the case may be, shall have been obtained as above provided, and the execution and recordation of such shall operate to destroy the force and effect of the recording of the plan, plat or replat so vacated. In cases where lots have been sold, the plan, plat or replat, or any part thereof, may be vacated upon the application of all the owners of lots in said plat with the approval as above provided, of the City Planning Commission or governing body of said city, as the case may be. The County Clerk of the County in whose office the plan or plat thus vacated has been recorded shall write in plain legible letters across the plan or plat so vacated the word "Vacated," and also make a reference on the same to the volume and page in which said instrument of vacation is recorded.

Section 6. The approval of any such plan, plat, or replat shall not be deemed an acceptance of the proposed dedication and shall not impose any duty upon such city concerning the maintenance or improvement of any such dedicated parts until the proper authorities of said city shall have made actual appropriation of the same by entry, use or improvement.

Section 7. When any such map, plat, or replat is tendered for filing in the office of the County Clerk of any county in which any city of the above class may be situated, it shall be the duty of such Clerk to ascertain that the proposed plan, plat or replat is or is not subject to the provisions of this Act, and if it is subject to its provisions, then to examine said map, plat or replat to ascertain whether the endorsements required by this Act appear thereon. If such endorsements do not appear thereon, he shall refuse to accept same for registration. When same does not disclose whether the

land covered by said map, plat or replat, or any part thereof, is or is not within five miles of the corporate limits of a city of the class above mentioned, the County Clerk may require one offering said map, plat or replat for registration to file with him an affidavit setting forth such information. The filing or recording of any plan, plat or replat contrary to the provisions of this Act shall constitute a misdemeanor punishable by fine of not less than Fifty Dollars ($50.00) or more than Two Hundred Dollars ($200.00) and both the County Clerk and any Deputy filing or recording the same shall be guilty.

Section 8. Unless and until any such plan, plat or replat shall have been first approved in the manner and by the authorities provided for in this Act, it shall be unlawful within the area covered by said plan, plat or replat for any city affected by this Act, or any official of such city, to serve or connect said land, or any part thereof, or for the use of the owners or purchasers of said land, or any part thereof, with any public utilities such as water, sewers, light, gas, etc., which may be owned, controlled or distributed by such city.

Section 9. If any such plan, plat or replat is disapproved by the City Planning Commission or governing body of such city, as the case may be, such disapproval shall be deemed a refusal by the City of the offered dedication shown thereon.

Section 10. (Repealed by H. B. 158)

Section 11. If any clause, requirement, provision, or part of this Act shall, for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not invalidate the remainder of this Act, but shall be confined in its operation to the clause, requirement, provision or part thereof declared invalid.

Section 12. That all Acts, or parts of Acts in conflict with this Act, be and the same are, hereby repealed, to the extent of such conflict.

Section 13. The absence of any adequate law controlling the platting of property within and surrounding large, rapidly growing cities creates an emergency and imperative public necessity which demands that the constitutional rule requiring Bills to be read on three several days before final passage be suspended, and that this Act shall take effect and be in force from its passage, and it is so enacted.

Effective ninety (90) days after adjournment.

Passed by the Fortieth Legislature of the State of Texas.

Mr. Shriver and the Savage Politics of Poverty

By William F. Haddad

Behind the high-minded purposes of the Poverty Program, two groups are locked in a ruthless struggle for power. A report from the hidden battlefield, by an ex-general fresh from combat.

The War Against Poverty represents jobs and money, the historic cement of organizational politics. The federal agency in charge, the Office of Economic Opportunity (OEO), has over a billion and a half dollars this year to spend in cities, towns, and hamlets across the country in the first great surge of federal welfare largess since the New Deal.

Many of the nation's Mayors, Governors, and Congressmen remember the PWA, the WPA, and the other Roosevelt programs that lifted the dead weight of the Depression and, incidentally, built the great urban power bases of the Democratic party. When the War on Poverty was announced, here it seemed, was more of the same.*

To be sure, the vocabulary was new. In the 1930s, no one talked of dropouts, disadvantaged children, the problems of the aging, or school integration. But the ingredients of the program seemed familiar enough: contracts to be let; favors to be granted; jobs to be filled, ranging from the top $25,000-a-year administrative posts to thousands upon thousands of "subprofessional" slots designed to involve the poor themselves. It

*OEO has grown so rapidly that few Americans have been able to keep track of all its activities. The chart on pages 46-47 pictures the scope and variety of its programs as of late fall 1965. The cost of these projects actually represents only a small slice of the nation's poverty budget, which runs annually to some $35 billion in public and private expenditures. Established welfare programs, such as social security, unemployment insurance, and aid to slum schools, cost more than $18 billion a year in federal funds (see second chart on page 47).

was through such instruments in the 1930s and 1940s that the Democrats built a constituency among the poor and eventually wrested local and national political power from the business elite that had long run the Republican party and the country. In the Poverty Programs, today's city halls and statehouses see the means to reinforce their position.

If they should succeed—and the outcome is as yet by no means clear—then the Poverty Program will be a disastrous failure.

This is a many-front war. About half of OEO's funds have been allocated to programs in which the chain of command runs directly to Washington—such projects as the Job Corps; the preschool Head Start program; and VISTA, the domestic Peace Corps. These programs have gotten under way with no more than what might be considered a normal amount of political infighting.

The rest of the money is earmarked for something called the Community Action Program (CAP). It provides financial support for specific local anti-poverty efforts in rural and urban areas —everything from birth-control clinics to neighborhood law firms where the poor can obtain free legal service. In themselves these seem innocuous endeavors. But Congress wrote into the law a proviso which converts Community Action into a powder keg. Local programs, says the law, must be "developed, conducted, and administered with maximum feasible participation of residents of the areas and members of the groups served."

What this meant in political terms was soon apparent to members of Congress, to Governors and Mayors, and to the established social agencies whose power and influence had long been based on their beneficences to the poor. If now the poor were to be given not merely the money but a voice in expending it, would not their leaders become competitors for power?

The issue became concrete and explosive as the Poverty Program moved into the field. Typical was one West Coast Congressman who found himself besieged by two rival groups contending for control of the local Poverty Program. One included all the respectable social agencies of the area; the other was a collection of radicals—"people from the valley no one ever heard of." When OEO said the latter were more representative of the poor, the harassed Congressman exploded.

"I've known these Community Chest people all my life," he shouted. "They've been helping the poor for generations. They're the best people in town. Who the hell ever heard of the other group?" Nonetheless, OEO insisted on a merger of the two factions.

Philadelphia's Mayor Tate suffered a similar and even ruder shock. When the War on Poverty was announced, he organized a thirteen-man task force —of whom eleven were city officials—to direct it locally. As a starter he asked for $13 million in OEO funds and invited a hundred local civic groups to submit ideas on how to spend the money. The operating agency was to be the Philadelphia Council for Community Advancement, a group financed by the Ford Foundation which was about to close up shop and had already been sharply criticized for its lack of grass-roots support.

Soon Mayor Tate and his plan were under the same fire—from the ADA, CORE, the NAACP, and the press. It seemed, one writer cynically observed, that the plan was "for the poor to be on the payroll at election time." Mayor Tate, however, ignored the protests and took his proposals to Washington, confident that the Johnson Administration would smile on a Democratic Mayor who had moved so speedily to implement the program.

He was stunned when OEO coldly told him that not more than a third of his board could be made up of city officials. Tate pushed all the traditional political buttons but no one jumped. By October, a month before the 1964 election, it was clear that Mayor Tate was coming home empty-handed, and his plight was intolerable. He had promised to help the poor. Now he was charged with letting political and patronage considerations override his humanitarianism. Actually, Mayor Tate was only guilty of doing business as usual. No one told him the rules had been changed.

There was, in the end, nothing to do but compromise by setting up an independent board. It includes five Mayoral appointees, the Presiding Judge of the County Court, twelve representatives of religious, racial, and labor organizations and social agencies, and twelve representatives of the poor. The last were chosen through unique elections in which, as it turned out, only 3 per cent of the city's 500,000 poor actually voted. (The poor later complained that they were not informed about the election.) This was a feeble showing—no more than the token emergence of a new power bloc which has only begun to feel its political

---

William F. Haddad, who resigned this fall as assistant director and inspector general of the War on Poverty, was also a founder and associate director of the Peace Corps. Earlier he was a reporter for the New York "Post" and the "Herald Tribune" and special assistant to both Robert F. Kennedy and Senator Estes Kefauver. Recently he has worked as a computer designer.

identity and whose future direction is unknown.

Still it has an unpredictable potential. Sensing this, and smarting from OEO's support of the poor, the U. S. Conference of Mayors last June came close to adopting a resolution accusing OEO of "trying to wreck local government by setting the poor against city hall." (The resolution they adopted contained less explosive language, but the warning was clear.)

This is, in many respects, an ironic charge to be leveled at OEO, which is directed by Sargent Shriver—as political an animal as any Cabinet member in the Johnson Administration. He is, to be sure, many other things besides a politician.

Handshaker with a Vision

I have worked with Shriver for over four years—as his Associate Director in the Peace Corps and as his Assistant Director and Inspector General in the Poverty Program. And I still don't know precisely what makes him run.

Like President Johnson, he uses the levers of power with one eye on the press—of which he expects too much objectivity—and the other on Congress, whose moods and necessities he understands to perfection. In the Kennedy style, he dislikes weakness. Signs on his door at the Peace Corps read, "Nice guys finish last," and, "Good guys don't win ball games."

Shriver drives himself and his staff relentlessly. When someone suggested an early-morning meeting "about ten" he shook his head. "By ten o'clock the day is half over," he said.

His liberal social philosophy is rooted in Catholicism. He is both a devout Catholic and one of the Church's most prominent laymen. He is also a highly pragmatic politician, equally comfortable chewing a cigar with a Senator and delivering an inspirational talk to Peace Corps volunteers. He has an insatiable appetite for new ideas.

"That's a great program," he will say. "Now find me the man to run it." In this fashion, for example, the idea of starting in March a preschool program to involve over half a million children in 13,000 centers by July was woven into the incredibly complicated fabric of the Program. It promises to be one of its most popular ventures.

No one doubts that Shriver's concern for the poor is both deep and real. Yet one of his most faithful lieutenants only half-humorously told a reporter, "Shriver doesn't give a damn about people. He uses them. He uses me. When I can't produce, out I go. You don't get two chances here."

This was not said in anger. For Shriver's ability, personal charm, and his quick, Kennedy-esque humor command a rare loyalty. But he runs his office like a big-business corporation. Occasionally he may bestow lavish praise. More often he forgets who accomplished what.

These qualities made him the ideal leader of the Peace Corps. The cause was good, the time was right, and each worker was secure in his own talents. No one in the Peace Corps ever dreamed he could do the job as well as Shriver.

But the Poverty Program was something else again. In the Peace Corps, Shriver set up his own independent sources of information to keep him precisely informed about what was happening in the field, down to the lowest level. Now, in another highly controversial and visible program, he decided to do the same thing. This was my job as Inspector General. "I want to know about our problems before the press or Congress," he said. And, because in fact he so often succeeded in doing this, he was often able to deal with crises before they became catastrophes.

But the organization over which he presided was not made up only of tough, able young men fanatically devoted to their chief. The top layer of his staff were public figures chosen not merely for their competence but because they possessed the impressive credentials which would guarantee Congressional approval. Among them were some who soon had no hesitancy in saying to anyone who would listen that they could do a far better job than Shriver if given a chance. They told the press they resented his constant probing, his reversal of their decisions, his opening to overall staff debate their most sensitive issues. They fought his private line of information.

Shriver certainly appointed no one whose qualifications he did not respect. But personally he seemed more at home with his second-echelon staff—a group of young men in their thirties still full of hope and ideas. When he was working with these Young Turks,* trying to get a new project started or a program expedited, the sweet smell of the Peace Corps success lingered on. He is given to inviting the juniors to stir up a competition of ideas within his staff. For some, these methods didn't seem like orderly procedures. Nor were his eighteen-hour days and seven-day weeks conducive to the relaxed cameraderie which makes for harmonious relations on Capitol Hill.

"You know why I really voted for the Peace Corps?" a powerful member of the House Rules

*They included: Dick Boone, who was trained in Chicago's Back of the Yards; Edgar May, a young Pulitzer Prize-winning reporter; William Mullins, Edgar Cahn, Sam Yette, Chris Weeks, Bob Clampitt.

War on Poverty

Cost for First Year: $800 million
Estimated Cost for Second Year: $1.5 billion

	Activities	*Scope*	*Administered by*
Youth Programs			
Job Corps	Remedial education, job training for men and women, 16-21, who are out-of-school and out-of-work; provided in residential rural and urban centers where enrollees live, work, learn. The most successful centers are run, under contract, by major industries.	*First year:* 10,241 in 48 centers *Second year:* 50,000 in 121 centers	Office of Economic Opportunity (OEO): with staff help from Depts. of Agriculture and Interior
Neighborhood Youth Corps	Part-time hometown work for teenagers who are (1) out-of-school, or (2) in-school and need money to stay in. Work in newly created jobs in non-profit or municipal agencies. Out-of-school, about 30 hours; in-school, about 15 hours; both at $1.25 an hour.	*First year:* 278,000 *Second:* 280,000 (200,000 year-round; remainder in summer programs)	Dept. of Labor
College Work Study	Part-time employment for college and university students from low-income families; 15 hours, $1.25 an hour.	*First year:* 37,482 in 674 schools *Summer:* 46,000 in 766 schools *Second Year:* 105,000 in 1,100 schools	Office of Education (Dept. of HEW)
Adult Programs			
Adult Basic Education	Diversified programs for adults 18 and over whose illiteracy impairs ability to get or retain employment.	*Two-year total:* 105,000	Office of Education: to states
Rural Loans	Loan assistance, management advice to low-income and non-farm rural families and cooperatives not able to get credit elsewhere.	*First year:* 11,000 indiv. loans, 82 to cooperatives *Second year:* 15,500 indiv., 350 co-ops	Farmers Home Administration (Dept. of Agriculture)
Small Business Loans	Small Business Development Centers to provide loans and management advice to small businesses which cannot get conventional financing. Emphasis on minority groups.	16 SBDCs have been funded; 10-15 under way	Small Business Administration
Work Experience	Work and training for unemployed heads of families and others, to prepare them for regular employment and self-sufficiency. Usually for people on relief rolls.	*First year:* 88,700 (276,700 dependents) *Second year:* 109,300 (327,900 dependents)	Welfare Administration (Dept. of HEW)
Community Programs			
Community Action Program	The major component of the War on Poverty. Financial support for local anti-poverty programs in urban and rural areas, on Indian reservations, etc. Local programs vary but usually include child development, remedial education, literacy courses, day care, legal aid, neighborhood services, consumer education, services for aged. Some birth-control programs.	*First year:* 3,169 grants *Second year:* 4,200 grants	OEO: to local community

	Activities	*Scope*	*Administered by*
Community Programs (continued)			
State Technical Assistance	Community Action funds to states to assist smaller communities to plan programs.	*First year:* 47 states *Second year:* 50 states	OEO: to states
Head Start	Most successful undertaking to date. Summer preschool child-development centers providing education, medical care, nutrition. Will become year-round under local Community Action boards.	*Summer, 1965:* 561,000 children 13,344 centers *Second year:* no estimate	OEO: to Head Start centers
Migrant Program	Special needs of migratory agricultural workers and families: housing, sanitation, education, day care.	*First year:* 100,000 people *Second year:* no estimate, funds increased	OEO: to local community or organization
Indians	Programs for improving conditions on reservations.	Grants to 25 reservations	OEO: to tribal councils
Legal Services to the Poor	Neighborhood legal firms to provide free legal help to indigent. Will come under Community Action Program.	Being developed	OEO: to local community
Aged	"Foster grandparents" for infants, older children, and the retarded in institutions. Home health aides and home-makers for bedridden old people and broken homes.	18,000 old people in 20 states working average of 4 hours a day 5 days a week	OEO: to local community
Consumer Education	Provides information on how to shop, to avoid exploitation. Will come under Community Action Program.	Being developed	OEO: to local community
Research and Demonstration	Moneys made available for experimental ideas.	*First year:* $14,600,000 *Second year:* $75 million	OEO: to local community or university
Volunteer Programs			
VISTA	Domestic Peace Corps: one-year service for men and women 18 to 80.	*First year:* 1,000 in 59 projects *Second year:* 4,000 in 1,400 projects	OEO

Major Federal Welfare Programs Outside of OEO

*Estimated Annual Cost: $18,378,000,000**

Cash Payments *($14 billion)*	**Food** *($268 million)*	**Education** *($2 billion)*	**Housing** *($110 million)*	**Regional** *($2 billion)*
Social security	Stamps	Aid to slum schools	Rent subsidies†	Economic development
Old-age assistance	Distribution	Teacher corps†	Public housing	Appalachia
Unemployment insurance		Aid to impacted schools		
Aid to dependent children		Federal scholarships		
Medical		Manpower training		
Relief				

**Expenditures by state and local governments and private philanthropy run to an additional $15 billion annually.*
†No funds as yet appropriated by Congress.

Committee told me. "One night I was leaving at 7:30 and there was Shriver, walking up and down the halls of the House Office Building, by himself, looking into all the doors. He came in and talked to me. I still didn't like the program, but I was sold on Shriver. I voted for him.

"Now I can't get him on the phone and we don't see him walking the halls anymore."

The Fine Art of Saying No

Inaccessibility was, of course, only a minor reason for the inevitable hardening of Shriver's relationship with Congressmen and other political leaders. In the Peace Corps he was not dealing in any valuable political currency. None of the politicians showed any eagerness for jobs to teach in Malaya or to build roads in Tanganyika. But the Poverty Program could be translated into political power, if not for them, perhaps for their political opponents. Although Shriver was realistic enough to know he needed the support of the Congress, and could not stir up too many Mayors and Governors, he also knew that the program would fail in its goal if it became—or even appeared to be—a political pork barrel.

So he guarded the independence of his staff, many of whom took a certain pride in saying no to politicians. This was not easy for Shriver. One House leader, for example, sent over the names of thirty-nine "acceptable" candidates for high-level jobs. Not one was accepted. After repeated phone calls from the Hill, Shriver assembled his senior staff. "Isn't there at least one man on that list you can hire?" he asked. The answer was no.

Early in 1965 OEO authorized a grant of $132,000 to the state of Louisiana. Governor John J. McKeithen promptly announced the names of a half-dozen appointees who would run the program. Almost at once the OEO office in Washington was flooded with letters and phone calls from Louisiana complaining that some of the McKeithen appointees were mere political henchmen, and that many were rabid segregationists. White supremacists and civil-rights leaders, labor and business, Negroes and white citizens joined in the protests. But the Governor stubbornly defended his choices. There would be no changes, he said.

While other Southern Governors awaited the outcome with intense interest, Shriver—as is his practice—decided to find out the facts for himself. He sent to Louisiana a team of investigators borrowed from the Internal Revenue Service. These men do not have access to tax records while on a special assignment of this sort. But nonetheless McKeithen cried foul. He appealed to Congress, the White House, the Vice President. Finally he came to Washington to beard Shriver in person. Their appointment was on a Saturday. Because of a sudden heavy snowstorm, Shriver arrived an hour late, an accident which rubbed salt in the wound.

"He [Shriver] obviously didn't like me," McKeithen reported when he got home. "And within thirty seconds after we met, the feeling was mutual. . . . In the first place, he was ten minutes [*sic*] late. And when he got there, he started looking down his nose at me as if he were trying to shut out some odor that was offensive to him."

Shriver, of course, had no power to tell a Governor whom to appoint. But he was and is free to withhold a grant if he felt it would not be administered effectively. Shortly after their confrontation, McKeithen "reluctantly" sent his hand-picked staff home. A new group was appointed, and some of those most severely criticized were not on it. Poverty money has begun to flow into Louisiana and into other Southern states where OEO's policies have been similarly tested.

Where Is the Victory?

Though the War on Poverty can chalk up many victories in the cities and the more industrialized areas, it is stalemated in some rural counties of the South—notably in Appalachia, where the local politicians could teach big-city bosses a trick or two.

In one Appalachian county, for example, the "boss" is a woman Superintendent of Schools. (The school system represents one of the few sources of jobs and contracts in depressed areas.) She is also the wife of the Judge of the Circuit Court, an aunt of the County Court Judge, and mother of the Assistant School Superintendent and State Senator. Another relative runs the county newspaper. The chairman of the Poverty Program is a cashier at the family bank. The executive director of the program was fired recently and replaced by a nephew of the "boss."

This family, according to a local newspaper editor, controls not only school and courthouse patronage, but also highway, parole, probation, and welfare jobs. They also own some school buildings and the garage where the school buses are repaired. To pour poverty funds into this county would merely strengthen the status quo which needs a poverty-stricken constituency just as a Negro politician needs a Negro ghetto as a power base. Unless the Poverty Program can somehow

change this pattern, Appalachia will not break out of the cycle of poverty.

There is a dim prospect that this may one day come about. VISTA volunteers and others on the fringes of the Appalachian Poverty Program report that opposition is forming. Some men have lost their livelihood in retaliation.

Meanwhile, of course, the people of Appalachia need help. So do uncounted thousands of young and old, whose plight and existence the Poverty Program has brought to public view.

"I don't get to eat but one time a day," one young woman wrote. "I am so glad when night come [*sic*] I do not know what to do."

At Camp Catoctin, Maryland, a young Job Corps enrollee failed to eat for several days. When a counselor questioned him, the young man broke down and cried.

"My teeth hurt so much when I eat that I was afraid you would find out and send me home."

A dentist removed seventeen teeth. He found the infection had spread throughout the young man's body, affected his ears and eyes, his weight, his view of life.

In Jacksonville, Florida, the medical examinations for the Head Start (preschool) program revealed that 52 per cent of the 1,055 children tested were anemic; 45 per cent needed dental care; 31 per cent had hearing defects; 25 per cent had eye troubles; and 5 per cent were partially blind.

Programs that disclose needs like these and do something to remedy them are valuable of course. But they do not represent any major victory in the war against poverty. For the fact is that the poor have lost confidence in the traditional "servants of the poor." They no longer follow the leader nor graciously accept the dole society provides them. They intensely dislike the way they have been handled and are beginning to sense that, finally, they are in a position to do something about it.

Finding a Voice

This realization is the heart of OEO's Community Action Program. It holds that the poor themselves must identify their problems, devise solutions, and execute these decisions. The main advantage does not come from the school built, or the program successfully completed. It comes from participation, from the use of their own power. It also comes from making mistakes and learning from them.

The Achilles' heel of the Community Action Program is the concept of states' rights—a cliché beloved by aging politicians. For the poor don't fear federal control or centralization. In times of crisis, it has been the federal government that produced for them, not the local authorities. It was so during the depression decade and it continued to be so during the civil-rights decade. On the family farm, in Appalachia, on the Indian reservations, with the Mexican-Americans, with the Negro, with the migrant worker, what little has been done has been done by the federal government, after local authorities failed.

And now, it is only when the federal government—through OEO—injects itself into the local decision-making process, that the poor can again have a real voice in the Poverty Program.

Republicans, in general, find this doctrine wicked if not subversive. To them the Poverty legislation sounded like a computerized version of the New Deal, and they reacted accordingly. Equally bewildered though not hostile are the graying 1936 liberals who can't quite figure out what is happening. They still hold the charter of liberalism but, like the toothless Legionnaires of World War I, they have lost their troops. The Poverty Program has driven the final wedge between what is happening in the streets and what is happening in the plush offices of the labor unions, in the higher echelons of government, and in the remoteness of the university.

The 1936 liberal has learned to compromise with city hall. As far as the poor are concerned, he is as much a part of the Establishment as big business. And today the minority poor picket the blatant racial segregation of some unions.

The liberals still invoke the names of their heroes (my heroes). But there is little applause. Their children have their own heroes.

Not long ago, Shriver visited the Job Corps camp at Kilmer, New Jersey, and, as is his custom, he began inviting the enrollees to express their opinions. "Shriver was great," a reporter told me later. "He had a tremendous rapport with the kids. He lost them only once."

"When?"

"When he began asking them who they thought should come to visit their camps. They named Cassius Clay, the disc jockey Murray the K, and people like that.

"Shriver then suggested some well-known liberals. He asked if they would like to see A. Philip Randolph. 'Who's he?' the kids asked.

"Shriver told them, but it was obvious that they had never heard of the fight for unionism. Whitney Young. No. He kept naming people, but he lost the crowd. He was speaking a language they didn't understand."

Rejecting the liberal heroes of the past, the poor have so far not developed strong or noteworthy leaders of their own. Their society is wrapped in frustration and disappointment and they are cynical, hostile, turbulent. Many have been chased from slum to slum by the liberal Urban Renewal Program. Even young men who arrive hopefully at Job Corps camps feel the Poverty Program will disappear after the news stories have been written and the pictures are taken.

The poor are wary of new programs and offers of help. They've had their hopes raised before, only to find the liberal programs were for someone else. Now they're determined to make their own mistakes with their own leaders.

It is easy to romanticize the poor, but, in fact, poor Negroes can be exploited by their own as easily as by "whitey" downtown. Some are as reckless with power as were some of the Italian and Irish leaders who first captured the Democratic party at the local level. For example, this fall, when New York's District Attorney Frank Hogan subpoenaed the books of Haryou-Act, the multimillion Poverty Program in Harlem, and the New York *Herald Tribune* printed the story, Negroes from Harlem promptly picketed the newspaper, condemned Hogan, and threatened violence.

"There has never been a grand-jury investigation in Harlem when black babies were cremated in tenement fires," said Livingston Wingate, the program's highly paid director. "This investigation is a smear tactic by forces opposed to the War on Poverty. The only thing that stands between the black youth of Harlem and the guns of the outer society is Haryou-Act. Remove Haryou-Act and you're asking for a holocaust."

The poor are the newest minority, maybe the last minority, to be melted into the pot of democracy. If they follow history, they will first maintain a separationist policy. Next they will press against the Establishment. Soon they will have a wedge and later a slice. Eventually they will become part of the Establishment and defend its goals and their position.

For all the irritation the Poverty Program is causing, the social revolution it is bringing about has narrow, almost middle-class horizons. It has its roots, as Professor Richard A. Cloward of Columbia said, "in relatively moderate ideologies —self-help, local autonomy, democratic collective action, and the importance of ethnic separation. The struggle, in short, is in the tradition of urban politics and nothing more."

Shriver maintains that "involvement of the poor must mean giving them effective power, a respected and heeded voice, and genuine representation in all aspects of the program and at all stages in the significant decision-making processes."

In its first year, the Poverty Program has held off the other contestants of power so the poor could gain their voice, so they could become involved, so their needs can be met by their decisions. From here on in, it cannot aristocratically rise above politics and hope for the best. It must enter the struggle and win the battle.

How to Look at Other People's Poverty

Our foreign visitor's social conscience is tender and highly developed, and his first glances will be towards those miserable huts he sees wherever he drives in his taxi. . . . What sort of people live in them, what do they think about, how do they talk to one another, what do they eat, etc., etc.? If only it were possible to know! . . . But it is not possible . . . for even if there were no language difficulty, there would not really be much to talk about. There is not in the world's history any record of fruitful dialogue between those who have enough to eat and those who don't. Our foreign visitor turns away from the sight of those wretched hovels and feels sad. No longer quite as sad, perhaps, or as outraged as he felt when he first saw them—it never takes long to get used to other people's poverty—but the poor of Delhi will always be sure of his concern. He will often talk about them, and when he does so, he will make that special face we all make when we feel guilty about something (whether it is *apartheid*, political prisoners, or starving children) but are no longer sure that our feeling is still as deep as it ought to be.

—From "Letter from Delhi," by R. Prawer Jhabvala, in *Encounter* (May 1964).

MAKING AMERICAN CITIES MORE LIVABLE

Exclusive report and analysis presented with the Committee for Economic Development

TECHNICAL GUIDE 20

economic factors in urban planning studies

URBAN RENEWAL SERVICE

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT WASHINGTON, D.C. 20410

GET WITH THE ACTION

WHAT KIND OF CITY DO WE WANT?

A SPECIAL REPORT

REPRINTED FROM NATION'S CITIES

THIS is the most urgent question facing urban America today.

Everybody is talking about it, writing about it, making speeches about it. But the more they talk and write the greater the confusion about it seems to grow. Much of the talk seems to come from people who don't like cities and just want to get away from them; and too much of the talk comes from people who think the local needs and problems of our cities can only be solved from Washington.

In the hope of bringing some order into all this confusion the National League of Cities joined The American Institute of Architects, the Lincoln Foundation, and the Luce magazines in sponsoring a roundtable conference of 33 experts described by New York's Mayor Lindsay as "The Who's Who of Urban Development". Purpose of the conference was not to seek new ideas and new solutions, but rather to explore how broad an area of expert agreement already exists behind all the seeming confusion.

The roundtable panel represented many different disciplines and many different viewpoints. Perhaps surprisingly, perhaps not so surprisingly, the roundtable revealed a broad area of almost unanimous agreement on almost every urban problem.

No one panelist subscribed to every conclusion and every recommendation in the consensus. Nevertheless, this conference report reflects hundreds of comments and suggestions by the participants during the months which followed the original roundtable discussions. More than an expression of personal opinions and experiences, it stands as a collective document which attempts to confront honestly the widely diverse elements of the contemporary city.

PANEL

From the American Institute of Architects

MORRIS KETCHUM, JR., F.A.I.A., President 1965-66
WILLIAM J. CONKLIN, New York
BERTRAND GOLDBERG, Chicago
VICTOR GRUEN, F.A.I.A., Los Angeles
RICHARD W. SNIBBE, New York
MAX O. URBAHN, President, New York Chapter
NORVAL C. WHITE, New York

From the National League of Cities

JEROME P. CAVANAGH, Mayor of the City of Detroit—President 1965-66
PATRICK HEALY—Executive Director
HENRY W. MAIER, Mayor of the City of Milwaukee—President 1964-65
ARTHUR NAFTALIN, Mayor of the City of Minneapolis—NLC Advisory Council

From the American Institute of Planners

DAVID LOEKS, President 1964-1966

Moderator and Rapporteur

PERRY PRENTICE, Time, Inc.

Our urban problems would be hard enough to solve in a static urban economy with a static urban population, a static racial and social mix, and a static transportation method and system—but our urban economy and population are anything but static. On the contrary, our urban economy, society and technology are all undergoing great simultaneous changes; our urban population is doubling to a projected 1999 level well over 250 million-plus, and before 1999 our urban wealth will at least quadruple, as the average income of twice as many families doubles to a projected $15,000-a-year-plus-of-today's-purchasing-power. And even now, before these increases, our urban transportation system is already near the breaking point.

So within the next generation, our cities will have to be almost completely rebuilt twice as big and, we hope, at least twice as good. Within a generation we will have to erect and find the money for more new urban homes, business buildings and facilities than we have built in all the years since Jamestown and Plymouth Rock. We will have to replace at least half of all today's urban dwellings because they will no longer be good enough for anyone to want to live in when the average family has sufficient income to qualify for a $25,000 FHA-financed house. (This means we should build at least half as many new homes to replace decaying housing inside or close in to our cities as we add on the outskirts.) And we will probably have to replace half of today's business and industrial buildings because they will no longer meet the vastly different needs of 1999 business.

In addition, many of our cities will almost certainly have to be restructured to fit some new and radically different means of transportation. High-density cities like New York are finding that the additional facilities needed to bring in just one more car per day during commuter hours will cost $21,000; low-density cities like Los Angeles are finding the cost, in money, time and space, of relying solely on the automobile equally bad.

Most of today's cities "just growed" (and often "growed" too fast) in response to yesterday's different social and economic demands. This is one reason why most central cities are already in deep

trouble with problems they have neither the money nor the authority to cure—most of them problems that call for major rebuilding and/or restructuring. They are deep in problems concerned with slums, traffic, parking, sprawl, ugliness, housing; with recreation needs; with air and water pollution; with overtaxation and undertaxation.

They are stuck with far more than their share of the costs created by national problems like education, poverty and segregation. Their municipal costs are climbing twice as fast as their local tax base.

They are choked by obsolete political boundaries that 1) encourage both people and industry to seek tax havens in the suburbs and 2) make coordinated planning difficult and often just plain impossible. They are losing prosperous families and their money to the suburbs almost as fast as they are herding more poor families and their costs into the slums. They are losing blue-collar jobs to the outskirts almost as fast as they can add new white-collar openings downtown. They consume four times as much land as they use. They are stuck with a tax system that penalizes improvements and subsidizes obsolescence, blight, sprawl and the spread of slums, and they are stuck with a concept of landed property that lets landowners capitalize for their own private profit all the economies and advantages of urbanism, so city dwellers must pay twice over for the multibillion-dollar values they themselves create living close together—values they have already paid for once by an enormous investment of both public and private money.

North, south, east and west, big cities and small, new cities and old, all alike suffer in greater or lesser degree from all these problems. High-density cities like New York may have more trouble with congestion; low-density cities like Los Angeles may have more trouble with sprawl, but the latter has congestion at its center and the former has sprawl on its outskirts. The bigger the city, the bigger its problems have seemed to grow; the older the city, the more deeply they are likely to be entrenched. And the former president of The American Institute of Architects adds a word of urgent warning:

"We cannot remake our cities without solving their painful social problems. As blight, congestion and lack of good-enough schools drive middle-income residents from our urban centers, the poor move in, the gap between the rich and poor grows, and the suburban noose draws tighter. If the present trend continues, the untrained and undereducated poor will become the dominant population group in almost all our major cities within the next few years. The consequences of allowing our cities to become the poorhouses of America had better be recognized while there is still time to avoid them."

Despite all these troubles and problems, there must be something very good, very compelling and very magnetic about our cities because year in and year out more and more people are flocking to live in or near them. America's whole population growth in the next generation will be concentrated in cities and their suburbs; by the year 2000 they will add something like 150 million more people. Just when our cities seem to be suffering from more troubles than ever before, they are in fact enjoying the greatest urban and suburban boom the world has ever known.

Thus the building and rebuilding of our cities becomes an enormous problem and an enormously exciting challenge—a far greater opportunity than if there were less need to do almost everything over, new and better.

We will spend trillions

To meet this challenge and seize this opportunity, our cities will need all the help they can get—from architects and planners, from the upper-income families who have fled to the suburbs to escape the cities' problems, from the state governments and from the federal government, of course.

All of us applaud and welcome the growing interest in urban problems shown by the federal government, but, alas, this interest is still finding expression more in words than in dollars. The federal government is busy casting itself in the role of the great benefactor of cities and the great subsidizer of urban improvement; but the hard fact is that the federal government takes many,

many times more money out of our cities in taxes than it would dream of returning in subsidies.

In 24 years the Housing and Home Finance Agency and its successor, the Department of Housing and Urban Development, has not kicked back to the cities a nickel of taxpayer money for housing and urban development; in every year but two, its receipts from insurance and other nontax sources have exceeded its expenditures. For fiscal years 1966 and 1967, HUD actually budgeted *minus* $100 million of tax money for housing and urban development. City dwellers pay most of the federal taxes, but the farmers still get back from Washington eight times as much money as the cities; by some calculations, 13 times as much. And most of the money the cities do get back is earmarked, not to ease the cities' present financial burdens but to encourage new municipal spending by offering to share the increased cost of meeting responsibilities the cities are not yet meeting.

This is no time to think small about the money our cities will need. It will cost not billions but *trillions* of dollars to correct what is wrong with our central cities today, while they are doubling their metropolitan populations and their more-and-more affluent citizens are doubling their demands for better everything.

Between now and the year 2000, someone will have to put up close to $1,500 billion for new and renewal nonfarm housing alone (nearly half of it urban replacement housing); someone will have to put up at least another $1,000 billion for new and replacement commercial, industrial and utility construction; and someone will have to put up at least another $1,000 billion for all the new and better community facilities needed to go with the new and better housing: new streets, highways, parking; new and better schools and colleges; new park attractions, playgrounds, transportation; new smoke controls, sewers and sewage treatment, water supplies; hospitals, etc., etc., etc. (Metropolitan New York alone projects a need for 61 more college campuses for 1.3 million more students, 100 more hospitals with 45,000 more beds, etc.).

Over 33 years, the money needed to build and rebuild our cities twice as big and twice as good will average out to over $100 billion a year, and even in tomorrow's far more affluent economy, it is just plain nonsense to hope that even half that annual amount will be provided by any government: national, state or local. Governments will be hard pressed to find enough tax money to meet the $30 billion-a-year need for more and better community facilities.

The rest can be found only by harnessing the profit motive, much more effectively than now, to urban renewal and urban improvement, and making as much as possible of this enormous enterprise attractive and profitable for the investment of private capital. Private capital will get its money's worth only if we make good planning, good design and good building more profitable than bad. And it will be a lot easier to interest private capital in urban betterment if the local tax system is modified to encourage new construction and better land use, instead of (as now) penalizing improvements and subsidizing blight, slums and sprawl.

People can have fuller choice if we stop looking backward

"Tomorrow's cities can be designed to provide much greater efficency, much greater joy and delight than people have any notion of," says city planner Ballard.

Adds Mayor Naftalin: "Right now today few cities measure up to their greater opportunities for better living."

And Mayor Maier: "We can and must make tomorrow's city a far better place for its people. All our urban institutions must work together to make tomorrow's city a place where each citizen will have a chance to achieve his own full potential in an atmosphere of freedom, opportunity, openness, community and, let us hope, culture."

And ex-Parks Commissioner Hoving: "Cities should be much more fun for everybody—poor and rich alike."

With our fast-growing affluence and our fantastically expanding technology, there is no earthly reason why American cities should have

to be dull or ugly or dirty or polluted or traffic-choked or expensive to live and work in.

There is no reason why cities should sprawl far out beyond their boundaries to blight the countryside with leap-frogging and premature subdivision.

There is no reason why cities should let slums and other inadequate, obsolete or decrepit buildings clutter and pre-empt most of their good close-in locations.

There is no reason why our cities should waste most of their land, most of their streets, their parks, their open space, their waterfronts, their rooftops.

There is no reason why cities should waste most of the third dimension that could multiply their convenience and their livability at much less cost than sprawl.

There is no reason why people who like high-density living should not also enjoy open-space recreation quite near at hand, nor any reason why people who prefer low-density living should not enjoy it much closer to where they work and shop.

There is no reason why good urban planning should constantly be frustrated by obsolete political boundaries.

There is no reason why city governments should be kept too broke to make their services good and desirable instead of just cheap and tolerable.

There is no reason why our cities should not be good places to bring up children, with good schools and provision for safe outdoor play nearby.

There is no reason why our central cities should be abandoned to the poor and the disadvantaged, or why they should be stuck with so much more than their share of the problems of poverty and segregation.

There is no reason why all our thinking about cities and city living should lag 60 years behind our time.

Making our cities twice as livable for tomorrow's twice-as-big and twice-as-affluent urban populations will take a lot of money; it will take a lot of replanning, redesigning and rethinking—both thought and forethought.

But we are all agreed that tomorrow's city could, should and would offer its people far better, easier, healthier, more convenient living closer to where they work, shop and play, IF.

We are likewise agreed that tomorrow's city could, should and would offer its business far better and more profitable working conditions closer to bigger markets, closer to supporting services, and closer to more abundant and more specialized labor, IF:

If we accept the simple mathematical fact that for most people, urban living has to mean living close together, and *if* we focus our planning and spending on practical ways to make living close together more rewarding and less expensive.

If we stop looking backward and dreaming that tomorrow's urban life could be more like yesterday's village life, and relinquish the notion that low density is somehow better for everybody.

If we make good use of the new tools offered by today's fantastic new technologies—new tools so numerous that we can mention only two:

1. Airconditioning, which the ex-vice president of the National Association of Home Builders calls 'the greatest improvement for indoor living and indoor working since we brought the toilet indoors," an improvement that makes cities as livable in summer as in winter.

2. The electronic elevator, which—almost unnoticed—is changing the potentials of urban living almost as much as the automobile.

If we make sure the city has a vibrant downtown to draw people and business from far and near to live, work, shop and have fun.

If we give some governmental agency the responsibility, the authority and the money needed to coordinate and make sense out of today's chaos of conflicting urban and suburban planning.

If we stop asking local government to pay costs that are not essentially local—costs that are borne by the central government in almost all other lands.

If we restructure our biggest cities as radiating clusters of high-density land use.

If we persuade or compel city people and city industry to stop trying to get something for nothing at other people's expense, i.e., stop trying to save a little of their own money by choking the

city streets, polluting the city water, polluting the city air, etc.

If we harness the profit motive forward instead of backward to good land use and good planning, so private enterprise will find it profitable to assume, without subsidy, most of the cost of rebuilding our cities bigger and in every way better.

If we stop letting landowners make city living expensive by capitalizing, for their private profit, all the benefits of today's huge urban investment of other people's money.

If we stop waiting for massive state and federal aid before tackling all the little jobs that need doing first.

If we give more thought to making cities good places for rich and poor to live in and enjoy, and less thought to getting out of them.

If we can find a cure for the problems and costs of segregation and one-class neighborhoods.

For people, this means living closer together to maximize their freedom of choice in housing, career and employment opportunities, direct personal contact and confrontation, meeting people and making more kinds of friends. This closeness also increases freedom of choice in places to shop, and places to pursue leisure-time cultural and recreational activity.

The more people who live close together, the greater their variety of choices should be and the greater their chance of being able to get what they choose to want. The more people who share the cost of each choice, the smaller its cost to any individual, and the greater the combined ability of the group to support cultural activities and special services they could not otherwise afford.

Some people like to live closer than others. Some people choose high density because they want to be closest to the center of urban life; people who work downtown have an added reason for living close to downtown. Other people choose lower density because time-saving is less important to them than having their own little half-acre; people who work in an outlying research center, university or factory have an added reason for living farther out.

But these differences are only differences in degree. Cliff dwellers and suburbanites alike are drawn to the city to enjoy advantages only close-in living can offer, and most suburbanites wish they could enjoy their kind of living without traveling so far each day to get it.

For business, minimizing the handicaps of distance means easy access to more abundant and more specialized labor, to a greater variety of supporting services, to government offices, to low-cost mass transportation, to supplies in greater volume and greater variety, and to more customers and bigger markets.

For business as for people, the consequence of closeness and concentration should be greater efficiency, greater economy and lower costs.

Some kinds of business have to locate closer to the center than others. Some must locate downtown for maximum access to markets, to clients, to supporting service or to a great variety of labor. Other kinds of business are more self-contained and so find it more profitable to trade maximum access for greater space—to accept less accessability on the outskirts in order to get more space than they could afford at the center. Still others may find easy access to a freeway more important than easy access to downtown.

But once again, the difference is only one in degree. The advertising agency downtown and the factory in the suburbs are both drawn to the city for advantages only closeness can offer, and most suburban industry would relocate closer to the labor center and the transportation hub if closer-in land were cheaper.

The shape and pattern and density of our metropolitan areas are changing as cars and trucks lessen our urban dependence on mass transportation to a single center, and the telephone makes semipersonal contact fast and cheap over great distances. Motorized road transportation has made, is making and must continue to make an enormous contribution to ease and flexibility of urban movement and urban contacts. And it is no longer necessary to go to the transportation center for so many kinds of shopping, or to find employment in those kinds of industry that are least de-

pendent on quick access to markets or supporting services (notably big factories).

But however their pattern may change, the reason and purpose of cities remains unchanged and unchangeable—the same today as in the railroad age, the canal-boat age, and the stagecoach age—to bring people and businesses together for ease and variety of access and contact.

High central density would help preserve close-in amenity

Overcrowding is no problem at all on Park Avenue with up to 1000 people to the acre. Overcrowding had nothing to do with the explosion in Watts, where the density was not much more than 20 to the acre.

At the urban densities that command the highest rents from those best able to afford to live as they like (i.e., on New York's Park Avenue, Chicago's Gold Coast or San Francisco's Nob Hill), there are only three US cities whose entire population could not live, work, shop, skate, swim, play tennis, worship, attend concerts and go to the movies on the 18,000 acres within three miles of the center, leaving all the land outside that three-mile circle for heavy manufacturing, golf courses, market gardening, low-density living and acre zoning.

For example and specifically: At the density proposed for New York's new World Trade Center and Battery Park Addition, the biggest city's whole population could live and work and shop and play in Manhattan Island and the close-in quarter of Brooklyn, leaving most of Brooklyn and all of Queens, the Bronx and Richmond for open space. At the density which tenants seem to like in Chicago's Marina City, the whole population could live and work and shop and find plenty of recreation within two blocks of the Chicago River between Lake Michigan and the Merchandise Mart.

We are not suggesting that all our cities should be rebuilt for any such concentration. And most certainly we do not recommend that all the people of any big city should concentrate downtown, for many people would do better to live closer to some satellite density planned and developed around some activity that benefits from being near the city, but does not need to be right at the hub (such as a university, a big manufacturing plant or a shopping center).

Nevertheless, we think the simple geometric and mathematical facts about living close are important to remember. And we are all agreed that our cities should be planned for living and working as close together as is compatible with the other requirements of good business and the good life.

None of us is against low-density living with private outdoor space around each home. On the contrary, all of us wish people who want low-density living could enjoy it much closer to town than they can today, to save them the countless hours they now waste getting to and from their homes, and we all agree with landscape architect Halprin that "Low density offers people something that high density doesn't, especially for families with young children."

But we wish more people would face up to the obvious fact that as our urban population doubles, the only way to bring low density close in is to develop much higher density at the center, with much less land waste everywhere. Says city planner Ballard, "With rising population we will have to design our central cities to much higher densities to make any sense at all." Mayor Naftalin adds, "The test is how we combine high density and low density."

And almost all of us sympathize with the former AIA president who says, "Sprawl city—and by that I mean the great megalopolis spreading from Boston to Washington, from Pittsburgh to Milwaukee, from San Francisco to San Diego—is too wasteful because you duplicate your services, your streets, your utilities, all the civic functions people pay for in taxes. You spread them out thin; you use up your land. In the process you destroy the countryside and waste our heritage."

If the No. 1 reason and purpose for cities is to maximize the advantages of closeness and overcome the handicaps created by distance, it follows that sprawl is the direct denial of that reason and purpose.

1. CAVANAGH: Too many people fled to the suburbs to escape the cities' problems.

2. GRUEN: Our city boundaries are 100 years behind the times.

3. ABRAMS: The tax power has never been coupled with the planning power.

Urban growth will be vertical

Two generations of urban Americans have been obsessed, bewitched, dazzled and blinded by the outward explosion touched off by the automobile, which made millions of outlying acres newly accessible and deflated the price of close-in land by temporarily lifting the pressure to maximize its use.

Ninety years ago, the limit on urban spread depended upon how long it took to get to work by foot or by carriage. Sixty years ago the limit had been doubled, defined by how long it took to get to work by foot and train or trolley. Thirty years ago the spread limit had doubled again, to how long it took to drive to work on streets laid out for horse-drawn traffic. Today the spread limit has doubled once again, and now depends upon how long it takes to drive to work with an assist from our multibillion-dollar expressways.

We have been so obsessed with this two-dimensional explosion that we have given far too little thought to the third dimension. Average building height in every city except New York and Chicago is still only about two stories; average ground coverage is still only about 15 percent; in some central cities, nearly half the ground is preempted by streets and parking lots. Many municipal costs per family are multiplied as the urban radius sprawls farther and farther out; average families spend more than half as much money on their cars as they spend to eat, and almost two-thirds as much as they spend to own or rent their homes; and millions of workers spend a quarter as much time getting to and from their jobs as they spend actually working.

Making today's urban area twice as big horizontally for tomorrow's twice-as-big urban population would be impossibly costly in dollars, intolerably costly in wasted land, unbearably costly in added travel time to and from work and to and from open-space recreation. Doubling their area by growing *up* instead of *out* would cost far less and add only seconds instead of minutes to everybody's travel time.

Whether we like it or not, most urban growth in the next 30 years will have to be up, not out.

The problem is not whether we would like to

grow upward, but how to grow upward in a way everybody would like.

Even sprawling Los Angeles is finally learning this simple lesson and building three times as many new apartments as single-family detached homes; even in suburbia, the trend from coast to coast is to two-story houses instead of one.

Today's greatest land waste is not the vacant lots and underused acreage of suburban sprawl. It is our failure to put more high-value, close-in land to more than one use, on more than one level. For example, in Chicago only half the land inside the downtown Loop is profitably rented above the retail level, and right beside the Loop, land enough for half a million people to live and work and play on is used only for railroad yards that would better be covered over. Los Angeles actually squanders nearly a quarter of its downtown on single-level parking.

Architects, planners, builders and civic officials were all too slow to grasp the full significance of two great changes:

1. Today's high-speed automatic elevators make vertical transportation much quicker, cheaper and more convenient than horizontal and

2. Whereas most products can be used only once at a time, the new economy of vertical transportation makes it possible to use land simultaneously as often as a hundred times, with each repeated use apt to be more desirable than the use below (i.e., with the highest floors commanding some of the highest rents). The lower levels are best for stores, parking, schools and other places of assembly, but the upper floors are much more valuable for offices and apartments.

Just because land has been used once for a railroad yard is no reason why it cannot be used again for a sports arena or an office building or an apartment or all three. Land used once for a store on the lower floors can be used again for a residential hotel. Land used once for a block-size parking garage can also be used for a block-size city park. A school building site can be used again for a football field on the roof.

Now, at last, architects, planners and developers are beginning to correct this multibillion-dollar waste by learning the economics and applying the economics of horizontally stratified land use. They would have stopped the waste sooner had it not been subsidized by today's ubiquitous practice of underassessing and undertaxing underused land. Chicago's Loopside railroad yards and Los Angeles' one-level parking lots would have been built over for multiple use long ago had they been taxed at more nearly their potential multilevel land-use value, instead of a fraction of their actual single-level value.

Twenty years ago, examples of stratified land use were hard to find, except that in nonprestige neighborhoods people "lived above the store." New York had an office building built over a church; Chicago had a church perched on top of an office building. Chicago had the Merchandise Mart and New York had a dozen luxury apartments and the Waldorf-Astoria sitting over the New York Central tracks; New York had one luxury apartment with a small swimming pool and two tennis courts in the basement. Cincinnati had a new hotel terraced on top of a department store.

But now the change is coming with a rush. New York is tearing down its monumental Penn Station to make room for a new below-ground terminal under a new sports arena and a new office building; covering the Pennsylvania yards with an office building wrapped around a terminal warehouse; and getting set to recover the land cost of new schools by letting private builders erect high-rise apartments above them. Washington is wrapping high-rent offices around parking garages that occupy otherwise hard-to-rent interior space and seeking free land for public housing over new expressways. Philadelphia is running pedestrian malls block after block below street level. Bartlesville has a Frank Lloyd Wright tower —half apartments, half offices.

Chicago offers the outstanding example of stratification's potential in Marina City, which puts 40 stories of apartments on top of 20 stories of parking on top of two levels for shopping on top of a marina for 200 pleasure boats, all integrated with 16 floors of offices, a theater, bowling alleys, tennis courts and a swimming pool, thereby setting a precedent that New York, Denver, Pittsburgh and San Francisco have been quick to follow. Hartford has bridged two avenues to create a three-city-block open plaza, two

stories up on the roofs of the street-level stores, banks and garages. Apartments in many cities are including swimming pools and other recreation in space that would otherwise be wasted. And most cities are beginning (not always wisely) to require off-street parking under all new high-rise buildings, even in areas where more parking facilities can only serve to bring in more cars and create more congestion.

Examples of multilevel, multipurpose reuse of the land are still too few, but the trend is obvious and the potential for making high densities much pleasanter, more efficient, more economical and more convenient is enormously exciting.

This exciting potential includes the much broader use of many devices, such as:

- arcaded sidewalks to permit wider downtown streets
- decked-over streets to create pedestrian malls between one-floor-up shop windows
- nursery and primary school classrooms, day-care and babysitting centers built into every high-density apartment block (already standard practice in Russia)
- coed bachelor apartment houses with swimming pools and other recreational centers on the lower floors, to solve that most urgent middle-income urban problem—boy meets girl, girl meets boy
- outdoor play and recreation space high above the streets, either on the rooftops, on an open floor or in interior courts built over street-to-street lower levels
- underground sidewalks running for blocks, as in Rockefeller Center
- ample off-street loading facilities replacing the almost-unrentable ground floor under central-city loft buildings (like New York's now-almost-impassable garment center)
- highways decked over railroad and rapid transit rights-of-way.

Whenever land is put to stratified multipurpose use, human activities should get top priority on light and air; service functions should go underground (as in Victor Gruen's revolutionary plan for rescuing downtown Fort Worth).

Vibrant downtown is magnet

The essence of urbanism is variety, and only a vibrant night-and-day "downtown" (i.e., center of urban life) can provide and support the variety of shopping, services, contacts, job opportunities and culture and recreation needed to make the city a magnet, drawing people and business from far and near. Without such a magnet, there is no good-enough reason for people to want to live in the city instead of outside. And without such a magnet, it will be difficult, perhaps impossible, to persuade enough middle-class families to return from the suburbs to the central city.

Downtown variety needs thousands of people to support it; it takes great variety to bring in thousands of people. The bigger the crowds, the greater the variety they can support; the greater the variety, the bigger the crowds. To support this maximum variety, downtown needs people not just 9 to 5, but all day long and far into the night; and it helps to have people living and sleeping close in, as they do in most of the cities whose downtowns have the strongest pull: New York, Chicago, San Francisco, Denver, New Orleans, Washington, Boston and Philadelphia. The more attractions downtown can offer, the more people will want to live close; the more people who live

WHEATON: We must plan for a future when incomes exceed $10,000 and most people will be college graduates

close, the easier it will be for downtown to support more attractions, night and day.

The more compact downtown is kept, the easier it will be for more people to take advantage of its variety for business and pleasure. The easier downtown is to get to, the less pull it will need to draw people in, and the farther it will pull from.

A strong downtown magnet is well worth spending money to create, if the city has none. It is well worth spending money to preserve and strengthen, if such a magnet is already present and pulling. But there is a limit to how much public money should be spent to protect the real estate investment in pre-Depression buildings, in what used to be—but no longer is—the heart of town.

Downtown is not a location; it is an activity; it is where the action and variety are *today*—not necessarily where the action and variety *used* to be. New York's Wall Street area has not been a true downtown since before the Civil War. Today it is just a high-rent, one-purpose satellite in an off-center location, miles from the nearest railroad station, bus terminal or airport connection; miles from the shopping center, the amusement center, the cultural center and the fastest-growing commercial center. Likewise, what calls itself downtown Los Angeles has not yet been remade into a true downtown, even though the multimillion-dollar public investment in expressways has made it the easiest-to-reach spot in that hard-to-find-yourself-anywhere metropolis, and even though the multimillion-dollar investment in new office buildings shows promise of making it once again the business center.

Says architect Gruen: "In Los Angeles, if you want to find the best hotel, you don't go downtown. If you want to see a first-run movie, you never go downtown. If you want quality and variety of merchandise, you never shop downtown, for the stores there are just a shabby second-rate shopping center, catering to the low-income areas south and east. Everything connected with the better way of life has moved away. Until just recently, Los Angeles downtown has been supported mostly by the huge civic center, which employs 10,000 people on the public payroll, and by the political lawyers and financial lawyers and the like who feel they must stay close to the seat of government."

As for New York's Wall Street, there are no big stores there, for stores cannot live on the lunch-hour trade; there are almost no restaurants there other than quick lunches, for restaurants cannot prosper on one meal a day. There are no hotels there, no theaters, no movies; even the aquarium is gone; and after 6 p.m. and on weekends there are almost no people.

COLMAN: Parked cars dilute the central business district. This is self-defeating.

Urban responsibility is chaos

A more chaotic chaos would be hard to dream up than the chaos over what government should do what, and what government should pay for what, to meet our urban needs.

Responsibility is divided horizontally four ways between local, county, state and federal government. It is divided vertically scores and sometimes hundreds of ways, first between the central city government and all the surrounding town and village governments, and then again between all these governments and a still greater proliferation of special tax districts, administrations and authorities—bridge authorities, park authorities, water districts, sewer districts, fire districts, school districts, library districts, gar-

bage districts, hospital districts, etc. Within the local governments, authority is often divided still further, with the school board going its own way to spend more money than anyone else. In Washington the same confusion is repeated. Both the Senate and the House scatter responsibility for urban affairs legislation among half a dozen uncoordinated committees. Fifty different federal agencies are now working on the problem of water supply and water pollution (up from 25 found by the Hoover Commission in 1955). Grants for urban renewal come from one department, grants for roads come from another, grants for pollution control from a third. The Interior Department is spending $25 million to preserve and beautify the historic heart of Philadelphia, but the millions of dollars needed to cover over the expressway that will cut it off from the river will have to come (or not come) from the Commerce Department.

No city government collects anywhere near enough money of its own to take on the whole job of coping with all problems that confront it. One reason no city government has enough money is that few states let the cities collect enough taxes, even if they want to. The second reason is that few cities like to collect any more taxes than they have to; they would rather get grants-in-aid from the states or from Washington. The third reason is that most cities are afraid to raise taxes for fear of speeding the exodus of industry. The fourth reason is that the cities' only exclusive revenue source is the property tax, and most states make their cities collect most of their property taxes, not on land (which is undertaxed) but on improvements (which are already so overtaxed that the tax inhibits even some of the most needed improvements). The fifth (and perhaps the biggest) reason is that in this country, local government is stuck with enormous costs that in other countries are paid as a matter of course by the central government, so, paradoxically, the local tax burden in most cities is too high even though the tax take is too low!

One result of keeping city governments poor is that too few city services are good enough. A second is that few suburbs want to be annexed to cities that can't afford good schools and other top-grade services. The third result is the proliferation of special tax districts to pay for services the cities have no money to provide (Los Angeles has 246 of them). Fourth, cities are afraid to raise more taxes even if they could, for fear of driving still more people and businesses to tax havens in the suburbs. Fifth, many industries are moving to suburban tax havens anyhow. Finally, the sixth result is that nobody can tell just who is responsible for what. Schools, for example, are paid for partly by the local school district, partly by the state, a little by Washington, with the state setting the standards, the local authorities picking the teachers and the federal government decreeing the racial balance. Streets and highway costs are split four ways, and the city cannot control how new state and federal highways cut them up. (Says the past president of the AIA, "We rip our cities with motorways and delude ourselves that we are doing it in the name of progress.") Too many in-city expressways are allowed to split neighborhoods like a Chinese Wall; even depressed roadways like Detroit's divide the two sides like a river.

Most of us agree that the political boundaries of our cities are archaic and should be brought in line with today's realities by annexation, by metropolitan federation or otherwise. All of us agree that the tax limitations and tax policies forced on our cities are archaic and should be corrected.

Too many planners today are planning at cross purposes. Highway planners plan new roads and new interchanges with too little regard for the way they destroy neighborhoods and cut cities to pieces, and how many families they dislocate. City planners plan for urban growth while suburban planners too often plan to block it by large-lot zoning. Suburbs want upper-income families planned in, factory workers planned out, city money planned in, city problems planned out. New York's bridge authority plans $21,000 per car to bring more cars into a city already half-paralyzed by too many cars which nobody plans to park. San Francisco's Bay area plans a billion-dollar transit system that is sure to force rebuilding everything near each station, but nobody plans what to rebuild. Neighboring Oakland and Berkeley each make great plans so uncoordinated

that they leave streets dead-ending at the city line; plans that would put Oakland's heaviest industry right next to Berkeley's waterfront park.

And the minute any plan starts taking shape, speculators too often double its cost by skyrocketing the price of land needed to carry it out. "Good land planning is impossible in the face of land speculation," is the dismal dictum from the International Housing Center in Rotterdam.

Getting anything done about good plans is difficult and discouraging at best. It is doubly difficult and discouraging in urban America, where it is next to impossible for any government or government agency to get the clearly recognized responsibility, authority or money needed to coordinate scores and hundreds of conflicting plans and see that a coordinated plan is carried out.

Why must cities shoulder twin burden of poverty, education?

Perhaps the worst consequence of today's chaos and confusion over what level of government should do what is this: The federal government is being asked to get involved in a lot of local problems that could better be handled locally, while the local governments are being forced to pay a lot of not-really-local costs they cannot afford.

One big reason so many city governments are too poor to pay their full part in making their cities pleasant for people and profitable for business is that, in the US, most of the cost of public education is charged to local government (sometimes the city itself; sometimes the school district). These costs were small enough for local government to carry when few children went beyond eighth grade, and schooling meant mostly the three Rs; they are now far too heavy to charge against the revenues traditionally reserved for local government (i.e., the property tax), and they will soon redouble.

The United States is almost the only country on earth where the central government does not pay all the costs of free public education.

So instead of saying that our state and federal governments are helping our local governments pay for schools that are a local responsibility, it might be more correct to say that our local governments are crippling themselves financially to help our central governments pay for schools, whose support should be the responsibility of the central government.

A second reason why our city governments are too poor to make their local services good is that the local property tax is still being tapped for many of the costs of poverty and many of the costs required by today's much-more-generous spending for poor relief. These costs are set by state and federal policy, and most of us think they should all be paid out of state and federal taxes. Urban poverty is now concentrated in the central cities, so Professor Netzer's research for the Brookings Institution states flatly that "Before the tax differential between cities and suburbs can be erased, the cost of poverty services will have to be taken off the back of the property tax."

Poverty and education are not local problems or local responsibilities in the same sense, or to anything like the same degree, that police and fire protection, water supply, garbage collection, sewage disposal, parks and playgrounds, local streets, off-street parking, suburban commutation and urban mass transportation are local problems and local responsibilities. Half the people on relief in almost every city and half the ward patients in the city hospitals came there from somewhere else; half the children in the city schools came from somewhere else and will grow up to work somewhere else.

The director of the Advisory Commission on Intergovernmental Relations stated it: "Because welfare and educational programs have lost their essentially local character and have acquired critical importance for the well-being of state and nation, they should no longer be left to the vicissitudes of local boundaries, the geographic distribution of taxable properties, the policy leanings of tax assessors, or even the political courage of local governing boards."

Poverty and education now account for more than 60 percent of all local government spending. They cost local government more than all the revenue now provided by the only revenue source reserved for local government—the property tax.

If these not-primarily-local poverty and education costs were all paid by the state and federal governments that call the tune for them, our local governments would have plenty of money of their own to cover all their own, strictly local costs and make all their own local services good without sending their mayors to the state capital or to Washington, hat in hand, to beg for subsidies.

The first rule of good management is to fix responsibility (including financial responsibility) where it belongs. Instead of asking the state and federal governments to subsidize strictly local costs like parks and sewage disposal, it might be much wiser to ask the state and federal governments to face up to their own primary responsibilities—the states on education, the national government for poverty. With some 60 percent of the property tax load thus removed, cities and counties could pick up the difference and meet their own clearly local responsibilities.

Shifting the basic cost of education to the states would not necessarily require giving the states any more control over local schools than they now exercise, and communities that want better schools than the statewide standard could still afford to supplement what the state was willing to spend.

Attitudes must be broader

Living close requires more, rather than less, willingness to cooperate, to share the cost instead of trying to get away with something for nothing at somebody else's expense (usually the taxpayer's). The implications are enormous. For instance:

Industries, utilities and apartments should not expect to hold down their own costs by pouring tons of soot and garbage ash into the air to fall on somebody else's property, for someone else to pay for cleaning up. (In New York, this cleaning bill is officially estimated at $500 million a year; almost as much *each year* as it would cost to put smoke control devices on all the city's garbage incinerators and factory and utility chimneys.)

Towns and factories should not expect to save money by pouring untreated sewage and waste into our streams for someone else to purify for eventual reuse elsewhere downstream.

Drivers should not expect to foul up traffic by parking free or cheaply at other taxpayers' expense, on land priced up to $100 a square foot. As long as motorists can park free, or almost free, on busy streets, how can we expect them to pay by the hour for off-street parking?

If the primary reason for cities is to minimize the handicaps of distance and maximize the advantages of easy access, it is almost unbelievably foolish to subsidize traffic congestion by letting parked cars cut four-lane roadways down to two.

Transit riders should not expect to ride long distances for a fraction of the cost, by getting the city to subsidize most of the fare.*
(But all of us recognize that as long as commuting to the cities by expressway gets a subsidy running as high as 10 cents a car-mile, mass transportation will also have to be subsidized. It is much cheaper to subsidize mass transportation than to subsidize driving to work at the present scale.)

Most notoriously, upper-income commuters should not expect the state or federal government to subsidize their flight to the suburbs by paying half the cost of their commutation.

Urban landowners should not be allowed to get rich by getting other taxpayers to pay the cost of all the public facilities without which their land would be good only for market gardening, and not much good at that.

We all sympathize with the cities' money problems; we all agree that the cities need money relief from state and federal governments.

But too many of our cities' money problems are of their own making. Cities would need less money help from above if they could screw up their courage to stop subsidizing obsolescence, blight and sprawl by undertaxing valuable underused land, and subsidizing water waste, traffic jams, air pollution and water pollution by far-below-cost user charges. We could get much better cities much sooner if our cities would just stop subsidizing their worst faults.

The purpose of cities is to maximize the citi-

*Panelist Gruen dissents. Says he: "Mass transit is such an essential city service that it should not just be cheap; it should be free, like the sewers. And this would save all the money now wasted collecting fares, which can run more than a quarter of the total cost of the transit system."

zens' freedom of choice, but that does not mean citizens should be free to do as they choose at somebody else's expense (specifically, that of other taxpayers). Most of us think the best way to let people decide for themselves what they want and what they don't want is to let the market govern their choice, by letting them pay for it.

People who choose to drive to work should be willing to pay what it costs to park their cars. People who choose to burn their garbage should be willing to pay for adequate smoke-control devices; industries which choose to dump industrial waste into our streams should be willing to pay the cost of first purifying their own waste; landowners who want a neighborhood park which would increase the value of their property should be willing to pay an annual assessment to buy the land. (This neighborhood assessment policy is one big reason why Minneapolis citizens enjoy the best neighborhood park system in America.)

Advice for satellite towns

Metropolitan New York will have more than 30 million population within a generation; metropolitan Los Angeles will reach 15 to 20 million.

Small cities can and should be centered around a single high-density hub, but big cities must inevitably be structured or restructured as close-in clusters of high density, radiating from a still-higher-density hub, for obvious and complementary reasons.

There is no reason why low-density land users such as one-floor factories or suburban shopping centers should pay for central-city space. These land users benefit by being near the urban center but need not be right *in* it, for they are largely self-contained, i.e., they do not need maximum access to supporting services, markets, diversified labor, etc. (Central-city colleges should adapt themselves to central-city land use in compact buildings like those around them.)

There is no reason why assembly-line workers, shopping center customers, etc., should travel all the way downtown 200 times a year. For them it is much more efficient and economical to relocate their destination closer to where they live.

Low-density land use in a maximum-density center defeats the whole purpose of the center. There is no reason why lawyers or admen, for example, should have to waste time crossing a ruralistic college campus to reach a client's office.

Each of tomorrow's clustered satellites should combine good high-density living at the center with good low-density living between satellites. Each should make multilevel, multipurpose use of its most central land. Each should have a quick and economical connection to downtown by highway and/or mass transit. Each should include as great a variety of shopping, services and amenities as its area can support (but obviously this local variety will seldom be anywhere near as great as the variety made possible in downtown, which has the whole metropolitan area to draw on and serve).

Recognizing the need of high-density cluster development close in, Paris is planning six new suburban centers, each with 250,000 to 400,000 population, with a strong regional government overall. This French scheme of high-density subcenters close in is almost the direct antithesis of the not-too-successful British attempt to grow low-density, garden city "new towns" far out beyond the green belt. It follows quite closely the precedent set in Sweden, where Stockholm has already built two close-in model satellites, Vallingby and Farsta, both within nine miles of the center. Now New York's Regional Plan proposes rationalizing the metropolitan sprawl around 12 suburban subcenters, each of which will soon have a million people living within a 10 mile radius.

Sometimes whole new towns like Baltimore's Columbia and Washington's Reston will be needed. More often, existing centers (like Newark, New Brunswick, New Rochelle, Yonkers, Jamaica and White Plains around New York) will have to provide the nucleus for tomorrow's clustering satellites, for the costs of starting a brand new town are staggering. People hesitate to move there until jobs and shops are ready; shops and jobs try to wait for people; and the developer of a medium-size town may well have to sink $60 million before he turns his first profit.

Brand new towns can profit by one great advantage: They can be coherently planned to offer

better living in tomorrow's world than older communities handicapped by having "just growed" to meet yesterday's needs.

But—to those who would sponsor new towns or new suburban centers, we offer these three bits of caution and criticism:

• Too many of today's new towns are too far out to give people easy access to the variety only the central city can provide. And each passing year makes it harder and costlier to assemble a big enough acreage close enough in.

• Too many (if not all) of today's new towns are planned just to siphon off what is best in the central city, leaving behind all the problems like poverty and segregation. The greater the success achieved in this escapist maneuver, the greater the danger that the new towns will destroy themselves, by destroying the central city on which they must all depend for many essential services and attractions.

• Too many of today's new centers are planned too small, and will soon be a mess. For example, the Northland Shopping Center on Detroit's city line was such an outstanding success that what was planned for a million square feet of stores is now 1.4 million, and around it has grown a whole new urban complex of high-density apartments, hotels, laboratories, restaurants and even Detroit's only legitimate summer theater—all requiring parking and sitting in a lake of parking five times as big as the building it surrounds. People living in the high-rise apartments can see the shopping center nearby, but they cannot get there on foot because they find it unbearable to walk through these vast parking areas and cross the multiline highways constructed to make the center accessible.

This development now sprawls over 450 acres. It could have been achieved with much greater convenience and economy on a hundred acres, if only the planners of Northland could have foreseen what a magnet their model shopping center would be and had had the means to implement that foresight.

As for new cities (as distinct from new *towns*), all of us think they are a fine idea, for there is a limit to how much population today's metropolitan areas can accommodate pleasantly, and how much industry they can accommodate efficiently. When, as and if a new city is built, we hope it will escape all the mistakes our older cities have made. But the hard fact is that no new community big enough to be called a city is being built and only one is being planned; and Bill Levitt, who ought to know, says it will require at least a billion dollars to finance the development of a new city of 100,000 population.

No quick cures for congestion

Big old cities like New York, Philadelphia, Boston and Chicago, tightly structured by railroads and mass transit, find it hard and perhaps impossible to adjust to the street parking needs of the automobile. Whether New York elects to spend another $21,000 per car for new approaches to bring more cars into lower Manhattan, there is no room on the streets for more cars, and no parking space off the streets for them, and the more people who come in by car, the more people who decide just to stay out to avoid the congestion.

Conversely, new cities, loosely structured by the automobile, will find it hard and perhaps impossible to adjust to reliance on mass transit, which is efficient only if many thousands of people want to get to a reasonably small number of destinations from a reasonably small number of points of origin. Los Angeles shelved its mass-transit plans when a traffic survey showed 230 points of destination, some of them spread over a three-mile diameter and few of them important enough to justify track-bound transportation to reach them.

In Washington, Gruen's transit survey for the National Capital Planning Commission projected a need of first restructuring the District around a dozen new urban subcenters at the major stations of the proposed transit system, each incorporating a bus terminal and a big parking garage to make the station an easy point of interchange from other means of transportation, and each providing the incentive for a 150-acre high-density development incorporating housing, retailing, cultural entertainment and employment facilities.

Meanwhile, the Bay area around San Francisco is going ahead regardless, with an $800 million,

75-mile mass transit project that could have some startling results. For one thing, it will give landowners around the 30 stations a windfall profit of more than $800 million, i.e., an unearned increment that could (but won't) be recaptured to pay off the entire cost of the system. (Most of the cost of the Erie Canal 140 years ago was paid off by a special tax on the lands whose value it multiplied.)

BART will also start a building boom around each station that could, for example, rebuild San Francisco's Market Street 30 stories high, with something like an eight-square-block platform providing direct access to 2 million square feet of office space and shopping. (Nothing so coherent will happen, because no one is planning for it.)

Some kind of subcentered restructuring will probably be necessary anyhow to make big cities livable as they redouble their population, but it is foolish to think mass transit can replace the private car (especially on the periphery), or that any single means of transportation can meet all the needs of tomorrow's big cities. The Bay area transit system is not expected to absorb more than 10 percent of the trips now taken by auto. Says economist Wheaton: "People accustomed to the convenience of driving direct to their destination will take a lot of persuading before they will walk to a bus, bus to rail transit, ride to their station, and then bus and finally walk again to where they want to get." But others cite examples in New York, Chicago and Philadelphia where better mass transportation has brought thousands of commuters back to the rails.

Moving jobs to the outskirts is no cure-all for highway congestion in commuter hours, for there is no use expecting people to make nearness to their jobs the No. 1 consideration in choosing where to live. In New York thousands of commuters from Westchester ride the subway from Grand Central to Wall Street, passing on their way thousands of commuters from Staten Island and Brooklyn who work near Grand Central. In Los Angeles, thousands from the valley jam the freeways on their way to work in Orange County and vice versa. Almost everywhere, morning and evening rush hours find some freeways traffic-jammed in both directions.

The bigger the city, the bigger the cost of put-

1. HOLMES: Suburbanites don't want the same things as city dwellers.

2. URBAHN: Central city parking lots should be underground.

3. SNIBBE: FHA incentives made it possible to destroy Long Island.

ting primary reliance on automobiles to handle the commuter rush. A three-lane expressway, costing up to $95 million a mile, can carry no more workers to their jobs in an hour than a single seven-car train, and New York's estimate of $21,000 for the capital cost for bringing in one more commuter car is exceeded by Washington's $23,000. Neither figure includes any money for adding more parking facilities, though each added mile of expressways requires seven times as much space to park the cars it brings in. Already parking lots and local streets give over to the automobile 54 percent of the downtown area in Atlanta, 50 percent in Los Angeles, 40 percent in Boston, 44 percent in Denver.

Sooner or later—and we hope sooner—most big cities will have to work out their own new balanced solution to their traffic and transportation problems. This solution will almost certainly involve some return to much more use of man's original means of locomotion: walking. It will also involve much more reliance on high-speed vertical transportation, and wide acceptance of moving sidewalks and the revolutionary new low-cost systems for automated mass transit that are already well past the design stage. It will also reflect some equally revolutionary but still visionary changes in cars and trucks.

In many cities, traffic and transportation will probably entail keeping cars off some of the busiest streets and reserving them for pedestrians, as in Gruen's very successful reshaping of downtown Fresno, California.

One part of the realty tax is the tax on improvements. The other is the tax on the unimproved value of the land on which the improvement stands. It would be hard to imagine two taxes whose impacts on urban development are more different.

Tax policy cries for revision

Heavy taxes on improvements are bound to discourage, delay or even deter owners from making improvements; the bigger the improvement tax, the smaller the owner's incentive to spend good money to improve his property, instead of investing the money somewhere else or putting it to some other use.

Contrariwise, heavy taxes on unimproved land values (more correctly, site values, or perhaps still more correctly, *location* values) tend to encourage, speed or sometimes even compel improvements. The bigger the land tax, the bigger the leverage on owners of underused property to do something to increase its earning power—or sell it to someone who will.

Heavy taxes on improvements are bound to lower the supply and raise the cost and rent for improvements, but land taxes heavy enough to bring more land on the market are bound to lower the price of land.

The dualism of property was recognized by the classical economists, and few students now question the conclusion reached long ago by Turgot and Adam Smith that taxes on unimproved land values cannot be passed on (except under rent control, which survives only in New York State), so it is nonsense to suggest that heavier taxes on the land under slum properties would make the poor people who live in slum buildings pay more rent.

Almost all of us agree with the conclusion reached by Dr. Netzer's research for the Brookings Institution that "the present property tax tends to discourage investment in new construction and rehabilitation. A change to the site-value tax will encourage building and rehabilitation. . . . Heavy taxation of land values would increase substantially the holding costs of land, and thus encourage more intensive utilization." More than two-thirds of today's property tax now falls on the improvement, less than one-third on the land. So shifting the whole weight of a 3 percent-of-true-value property level to the site would require a 10 percent rate on the land to produce the same revenue.

Nothing less than a 10 percent rate would be adequate to make the owners of underused land release it when it is needed for more intensive use, instead of holding it off the market waiting for higher and higher prices. And with the federal government absorbing more than half the local levy as a tax deduction, and the present euphoric expectation that land prices will continue to soar 15 percent a year compounded, many believe that

the land-tax rate would have to be even higher than 10 percent to be effective.

If we want private enterprise to make its maximum contribution to rebuilding our cities bigger and better, it is foolish to penalize and discourage that contribution by overtaxing improvements. As all bankers can figure, but too few tax men seem to realize, a 3 percent-of-true-value tax on improvements actually costs improvers almost as much as a 50 percent sales tax paid off on the installment plan over 60 years at 5 percent interest. And it should be obvious to everybody that, in an economy where every business decision must first be checked against its tax consequences, the equivalent of a 50 percent sales tax can be a mighty powerful and effective deterrent.

An improvement tax like Boston's 6.1 percent-of-true-value is the installment plan equivalent of a 10 percent sales tax, and such a levy can make improvements so unprofitable that even prime building sites will have a negative value (i.e., be worth less than nothing). So the only way Boston could induce Prudential Insurance to pay $3.7 million for 28 prime Back Bay acres for Prudential Center was to cut the maximum tax on new buildings to about half the tax on existing structures—a concession worth much more than $3.7 million to Prudential. No other industry's products—except liquor and tobacco—are taxed as heavily as the building industry's product.

If we want to get rid of slums, it is foolish to subsidize them by assessing and taxing slum properties only half or a third as heavily as good housing with the same market value (i.e., by tying the land assessment to the building assessment and assessing the land as almost worthless because the building on it is almost worthless, instead of assessing the land high because the location could be valuable if put to a better use). In the words of New York City's 1961 adviser on housing and urban renewal: "No amount of code enforcement or tenement rehabilitation can keep pace with slum formation unless and until the profit is taken out of slums by taxation." Almost all of us agree with the Joint Economic Committee of Congress, which found that "state and local governments have failed to make maximum use of the enormous potential inherent in the property tax for either the prevention or the cure of poor housing and other blight conditions. In fact, since today's property tax is based mostly on the value of the improvements, those who permit their property to deteriorate, reducing area property values, are rewarded with lower property taxes. Landlords who enhance the value of their property have their assessments raised."

If we want to speed up the replacement of obsolete buildings such as now pre-empt most of the land in and around most central business districts, it is foolish to keep them standing and profitable by taxing not only the aging buildings but also the land under them, less and less as the buildings get older and more and more rundown. Tract-by-tract research conducted by the Urban Land Institute, with the cooperation of the Milwaukee tax commissioner, showed that it would be profitable for private enterprise, *without any subsidy,* to tear down and replace practically all the obsolete buildings downtown if the property tax were all on the valuable land they cover, so the tax burden on the replacement would not be many times heavier than the tax burden on the relic. Says Professor Gaffney, who conducted the research: "Today's property-tax practice is slowing down the replacement of obsolete structures by 20 to 30 years."

One very big reason so many cities are in trouble downtown is that they "growed" like Topsy without, at the same time, cleaning out the decay of age at the center.

The horses and carriages of our grandfather's day are gone with the wind, along with the cobblestone streets, trolley cars, steam trains and coal stoves, but most of the buildings our grandfathers knew are still standing today. Nearly a third of all the people of Manhattan still live in railroad flats that were banned before 1900, and these slums are so underassessed and undertaxed that it has cost an average of $486,000 an acre to buy them up for demolition!

Too often, renewal has come too late. Too many cities have let old buildings stand so long that their neighborhood has died around them. St. Louis is not the only city whose core is ringed with rubble because it waited too long for the bulldozer to force a renewal that should have

gone on year by year and piece by piece while the area was still alive.

If we want to minimize suburban sprawl and stop blighting the countryside with premature subdivision, it is foolish to assess and tax pressure to release their land at a reasonable price when it is needed for orderly urban growth. Too many assessors seem to confuse the property tax with the income tax; they assess valuable land far below its asking price as long as it is producing no income. On Long Island, idle land priced at $20,000 an acre is commonly assessed as low as $500 an acre.

If we want to lessen the cost of slum clearance, it is almost unbelievably foolish to inflate the price of land needed for urban renewal by undertaxation. Once again, consider how New York has had to pay an average of $486,000 an acre for the slum properties condemned and demolished for public housing. One reason for these high prices is the low tax these properties had been paying. At land costs like that, how can anyone expect private enterprise to provide good housing for low- or even middle-class families without enormous subsidies?

If we want to check the land-price inflation that threatens to price good new homes out of the market, it is foolish to subsidize that inflation by assessing and taxing land lightly, and then penalize the homebuyer who has just paid too much for his land, by taxing him too much on his house. Since 1954, while all other homebuilding costs have been held steady or actually lowered, land costs have been soaring 15 percent a year compounded, and before the 1966 tight-money crisis, a three-to-one majority of homebuilders voted this their most urgent problem.

Likewise, if we want to make low-density living possible closer to downtown, it is foolish to subsidize the waste of central-city land by undertaxation. The Urban Land Institute research referred to before showed that full utilization of the land within three or four miles of the center of Milwaukee would satisfy most of the demand that is now proliferating sprawl, thereby making land available for low density less than half as far out as now.

If we want to hold down the cost of municipal services, it is foolish to undertax underused urban land and so encourage sprawl right inside the city limits, for almost all these costs—water supply, sewage disposal, garbage collection, streets, fire protection, police protection, as well as gas, electricity, telephone connections and other utilities —are multiplied by distance.

In brief, there is hardly an urban problem today that is not aggravated by today's practice of undertaxing land and overtaxing improvements.

State governments must take much of the blame for the undertaxation of land and the overtaxation of improvements, for most states presently compel cities to apply the same tax rate to land as to improvements, and most states condone the practice of assessing land half as heavily as improvements.

States deserve much of blame

The states must take full responsibility for the shocking proliferation of suburban tax shelters, where the tax rate is sometimes only one-tenth as high as the city rate because the suburbs can get away with bringing in industry while keeping out industrial workers with children to educate.

Local assessment inequalities are made worse by state-sponsored exemptions. These include the limit of a few hundred dollars which some states impose on the assessment of any land that is farmed (even when it may be held for development at many thousands of dollars per acre), and the homestead, veterans' and senior citizens' exemptions, by which some state governments have sought to subsidize favored voters at the expense of local tax revenues. The limit on homestead exemptions is usually set at or below $5,000 of assessed value, but where assessments run to only 25 percent of market value, this means that a home worth $20,000 may be completely tax-exempt.

Federal tax policies (or practices) likewise make urban problems worse:

- Speculative land profits are taxed not more than half as heavily as ordinary income, *provided* the landowner does nothing to improve his property for sale (i.e., provided he does nothing to earn his profit).

• The 25 percent capital-gains tax makes land assembly for large-scale development difficult, for a locked-in owner can often mortgage his property for almost as much as he could realize on a sale after deducting the gains tax.

• Letting each new owner depreciate the same building all over again is one more serious deterrent to replacement. The older and more decrepit the building, the shorter its life expectancy for tax purposes, and the bigger the depreciation the new owner can take.

• Shoddy construction is encouraged by the accelerated depreciation-allowance which makes it advantageous for the builder to sell out within seven years.

• Neighborhood assessments are denied the income tax deductibility enjoyed by local taxes. This is just about the most serious deterrent to neighborhood financing of neighborhood improvements.

• Federal corporation and income taxes dilute the impact of the property tax by letting corporations deduct 52 percent of the local levy from their federal tax bill, and letting individuals deduct up to 80 percent. (On the good side, it should be recorded that this helps make the tax on improvements tolerable by cutting its impact in half.)

But on the bad side, it should also be recorded that it helps inflate the price of land, by absorbing more than half the tax cost of holding idle land off the market.

With the federal government absorbing 50 percent of the local land tax, and assessors assessing idle land at not more than 20 percent instead of the theoretical 100 percent, the effective yearly tax cost of holding a $100,000 tract off the market is not the $3,000 it is supposed to be but a quite negligible $300.

Good living in the city should be inexpensive, because there are so many people to share the cost of the multiplicity of community services, amenities and attractions that the city offers.

Actually city living is more expensive than country living, and one big reason is that we let landowners capitalize all the economics of urban cost-sharing for their private profit. The greater the saving achieved, the more the landowner can add to his ground rent. Of this, the simplest example is cited by Winston Churchill: When London abolished the penny toll which workers had to pay for crossing the Thames to reach their jobs, rents on the workers' tenements were promptly raised a shilling (12 pence) a week.

By definition, the unimproved value of urban and suburban land derives, not from anything any past or present owner has done to improve it but from an enormous investment of other people's money to create the community around or near it. Some of this investment is made by private enterprise; some is made by those who support hospitals, museums, colleges, etc.; much of it is made by government.

No matter who makes the investment, the landowner cashes in on it. When New York extended the subway beyond Spuyten Duyvil, land prices in Riverdale zoomed upward. When taxpayers spent $350 million to bridge the Narrows to Staten Island, landowners there got a much-bigger-than-$350-million windfall. Spending $800 million taxpayer dollars for Bay area rapid transit will almost certainly enrich landowners around its stations by at least an equal amount.

For a smaller-scale example, consider the prediction by the New York Regional Planning Association that taxpayers will have to invest $16,850 in highways, schools, water, sewers, etc. for each family added to the metropolitan population. Change that "per family" to read "per lot" and it becomes clear that *other* taxpayers will have to invest $16,850 in community facilities to enable a landowner to sell his suburban lot for $8,000.

What all this adds up to is that citizens and suburbanites must pay twice over for all their community facilities. First they pay for them on their tax bills, their charitable donations or their business investments. Then they pay for them all over again, in higher ground rents to landowners who have been allowed to capitalize all this investment of other people's money into the price of their land.

Under today's tax and assessment policies, the owners of idle and underused urban and suburban land make only a minimum contribution to the huge community investment needed to make their land reachable, livable and richly salable.

The less they do to improve their property and the longer they keep it idle or underused, the less they are taxed to help pay for the community facilities needed to multiply its value. Said Winston Churchill: "The landowner's profit is often in direct proportion to the disservice he does the community by holding his land off the market until other people's investment has multiplied its price."

Many municipal costs are multiplied by distance, and correspondingly reduced by reducing distance. Consider, for example, water distribution. If demand for water doubles in a fixed area, all we need is to expand pipe diameters. But if demand doubles by doubling the service area, we must double our pipe mileage; increase the cross-section of our old system at its base to transmit the extra load to the new extension; increase pressure at the load center to maintain pressure at the fringes; and increase the allowance for peaking.

Or consider the far more urgent problem of streets and highways, which now cost local taxpayers more than any other item except schools. The greater the sprawl, the more miles of streets needed to get from A to B, and the more cars that will have to travel more miles along those streets. Fewer people can get where they want to go on foot, and fewer can get to and from where they want to be by mass transit. Residential sprawl does not take cars out of the traffic centers; on the contrary, it brings in more. Sprawl is not a flight from traffic congestion but its principal cause.

Multipurpose high density can even out the peaks and valleys of demand and utilize municipal services seven days a week around the clock; conversely, specialized areas waste these costly services most of the time. For example, New York's Lincoln Center for the Performing Arts comes to life only from 8 p.m. to midnight and during matinees; New York's Wall Street area is alive only from 9 a.m. to 6 p.m. five days a week. The rest of the time it is so dead that the girl arrested for posing nude on the Sabbath on the steps of J. P. Morgan was acquitted because there was no one within blocks whose morals could be corrupted!

With high-density stratification, private enterprise seeking tenants and customers can be expected to absorb many costs that are otherwise borne by the taxpayers. For example, private enterprise pays *all* the costs of transportation and utility services above the street level (a cost that runs close to a third of the first cost of high-rise construction); and private enterprise is beginning to find it profitable to offer built-in amenities and recreation (swimming pools, etc.) that might otherwise have to be provided by additional facilities in public parks.

High-density stratification often permits major savings through round-the-clock use of facilities. For example, Chicago's Marina City owes much of its $200,000-a-year garage revenue to triple use of part of its parking space for apartment tenants by night, for business tenants by day, for bowling alley and theater patrons in the evening.

The renaissance that saved Pittsburgh started when its business and political leaders decided their city was worth saving and took on the job of saving it. The first thing they did was tackle a local problem no one else could correct for them —the air pollution that had made Pittsburgh almost synonymous with smoke.

The same kind of civic leadership made Fresno the model of what small cities can do to revitalize their downtown—a model which is bringing visitors from all over the world to study, praise and imitate. The same kind of civic leadership inspired (but alas could not execute) the plan for saving downtown Fort Worth, and the same kind of civic leadership explains the award-winning project for clearing the oil derricks out of downtown Oklahoma City to create the most beautiful, the most practical and the most fun downtown in mid-America.

Some of our cities' problems may be too big for the cities to meet without outside help (most specifically, the problem of poverty, which is a national rather than a city problem); but most of our cities' problems are too small and too local for any outsider to take on. Consider, for example, the first six things the slum dwellers in Pittsburgh's notorious Hill District asked the Redevelopment Agency to get done for them. They requested that the city:

- collect our garbage

MADDEN: Some manufacturing can move to the suburbs; some kinds can't.

CONKLIN: We need a performance specification for the urban environment.

- repair our streets
- put in more street lights
- tear down 357 vacant and boarded-up buildings as a neighborhood nuisance
- provide safe playgrounds for our children (perhaps on the boarded-up building sites)
- give us a voice in determining what is to be done with our own neighborhood instead of having all the decisions made for us by somebody else—perhaps somebody in Washington.

Only the city itself can clean the streets. Only the city can stop the multimillion-dollar waste of free-for-all air pollution (much of it from the city's own chimneys). Only the city can stop the multimillion-dollar waste of make-work and conflicting building codes—a waste that adds at least 10 percent to the cost of building and rebuilding. Only the city can ease downtown street congestion by coordinating traffic lights, designating one-way streets, requiring all street and under-street repairs to be done at night, banning on-street parking and otherwise discouraging the downtown use of private cars. Only the city can lower the foolish minimum ceiling height for parking garages to cut their cost and maximize their car capacity per cubic foot. Only the city can make streets and parks safe at night. Only the city can end the scandalous and underassessment and undertaxation of slums and other ill-used and underused land.

There are hundreds of other small things our cities could and should be doing to help themselves without waiting for outside help—small things whose cost could be proportionately small, but whose cumulative value could be very big indeed.

Better recreation in the city

Everybody talks about the need for open space, but most of the talk is about special tax concessions to help farmers keep on farming on close-in land that has become too expensive for farming, or to help golfers keep on golfing on close-in land that has become too expensive for private links.

Some of us think farms and private golf links belong a few miles farther out, where thousands of people won't have to drive added miles past their "no trespassing" signs on their way to work.

All of us support the movement for wildlife preserves, state parks, national seashores, etc., but all of us wish there could be more talk, more

action, and more private and public spending for the kind of *close-in* urban open space without which only the rich can enjoy the good life in our cities.

The open space our cities need most of not just something green and shady to look at. The open space our cities need most is open space people can use and have fun in, and its use-value will depend on how many people can use it how much, how often, how safely and how near home.

Every neighborhood needs its own neighborhood park and playgrounds. The denser the neighborhood's population, the greater its need for nearby outdoor recreation; and the poorer the neighborhood, the more urgent this need is apt to grow. A dozen small parks close to home can often be more important than one big park too far away.

Neighborhood parks must always be tailored to neighborhood needs. One that would be fine in a high-class residential area might be no good at all in the slum. Good neighborhood parks need not be expensive to equip or maintain; imagination and clear thinking about what kind of park facilities the neighborhood needs can sometimes make a small budget go a long way toward both first cost and maintenance cost. New York is budgeting only $37,500 apiece for 200 small new parks in crowded areas, most of them on tax-defaulted lots the city already owns.

Neighborhood parks are beneficial in other ways than merely providing recreational space close at hand. They are also good indeed for neighborhood property values, so property owners petitioned for one and volunteered to finance its first cost by a special neighborhood assessment at so much per front-foot. (This plan may need some subsidy in the poorest sections.)

But neighborhood parks and playgrounds can meet only part of the urban need for outdoor recreation. There are many activities and enjoyments for which only the bigger central parks can provide the needed space and draw the crowds needed to support them. For example, only a big central park can support frequent outdoor concerts or a zoo or a large skating rink or space enough for riding and hiking, etc.

For city children, safe outdoor space to play in is almost as important as good schools to learn in, but most cities spend 50 times as much for schools as for parks and playgrounds. New York, for example, allocates only seven-tenths of 1 percent of its budget to parks and recreation.

As for city adults, those who can afford it show how much they want open space and open space recreation by moving to the suburbs or by jamming the expressways for their weekend exodus; either way, they spend far more money to get to open space and open space recreation than it would cost to provide good open space and open space recreation close at hand right inside the city—private open space for those who can afford to be exclusive, public open space and recreation for everybody. In a recent survey in Milwaukee, most people put better recreation facilities in that city's fine park system first on their list of desired civic improvements.

We all agree with the director of the Institute of Public Administration that "Instead of spending millions of tax dollars for highways to help people escape from the city to find outdoor recreation, we should pay more attention to providing recreational facilities inside the city." In San Francisco, enormous numbers of suburbanites drive *into* the city to enjoy the city's parks and beaches; some say that as many suburbanites drive in as citizens drive out for recreation. More cities should study and follow San Francisco's lead.

New York could serve as a good example of what needs to be done (and has recently begun doing something about it). New York has more waterfront than any other city in the world—540 miles, much of it city-owned, with 35 miles of beaches—but the city pours in nearly half the untreated sewage that makes almost all its waters unsafe for swimming and even kills off most of the fish. New York has 37,750 acres of park land, most of it underdeveloped and way out where few people can enjoy it. Says the former park commissioner: "Most of the people of New York have to get their recreation on vacant lots that are stinking with garbage and littered with old cars and mattresses. The ball fields our kids have to play in are ridiculous and disgraceful."

Until last year, New York has wasted most of

its billion-dollar-plus investment in Central Park; says the former president of the AIA: "Central Park has been a big wasteful space that people couldn't use, a beautiful dead spot in the daytime and a dangerous place at night." New Yorkers still get less use and fun out of Central Park's 846 acres than the Danes get out of 22 acres in Copenhagen's Tivoli Gardens, among whose trees and flowers are six big restaurants, an open-air theater, a dance hall, two bandstands providing almost continuous afternoon and evening music, a lake and an amusement park complete with miniature railroad, etc.

In Russia the government builds all the new apartments around big hollow courts that provide safe play space for the tenant's children (as well as nursery schools and shared baby-sitting and day-care facilities). In America it is hard to find examples where the open space around new high-rise apartments is widely used.

Sooner or later, as urban population swells, the logistics of moving millions of people out of the city for weekend outdoor enjoyment will become intolerably costly. It is high time to start giving much more thought and spending much more money to make our cities good places for outdoor as well as indoor living, instead of devoting so much thought and money to getting out of them.

We need to develop a whole new urban package that will give people with children what they need inside the city, instead of making parents who can afford to go move out. And we need to give much more thought to making city life pleasant and rewarding for the poor, who are now pouring into our cities, not so much because they want to but because they have no other place to go for jobs.

The ghetto: a national problem

Racial segregation is not a local problem; it is a national problem. In origin it is not an urban problem, but it has been dumped on our cities to solve, with nearly 95 percent of all Negroes outside the South urbanized. It is now many cities' No. 1 problem, and one city governments cannot cure without many kinds of help, including all-out cooperation from state and national governments. It is a problem nobody can solve until millions of people, both white and nonwhite, understand it better and pitch in to play their own large or small part in the solution.

And unless somebody solves it, many great cities like Washington, Philadelphia, Detroit, Baltimore and Chicago may find themselves deserted by the white middle-class and abandoned (except for small enclaves of luxury housing for the rich) to the nonwhite poor, trapped in the slums by their poverty, and the nonwhite middle-class, trapped on the border of the slums by segregation and the lily-white suburbs' refusal to let them in. Already Washington has become 63 percent nonwhite, Detroit 39 percent, St. Louis 37 percent, Philadelphia 30 percent, Chicago 30 percent. Between 1950 and 1960, as everyone knows, Washington offset a growth of 181,000 Negroes with a loss of 226,000 whites; Chicago, a growth of 321,000 Negroes with a loss of 399,000 whites; New York, a growth of some 700,000 Negroes and Puerto Ricans with a loss of some 800,000 other whites.

Racial segregation is not a single problem but the sum of many different ones—a different community problem for almost every city and neighborhood, a different personal problem for every segregated nonwhite. Different as all these are, they are all parts of two basic problems—one almost new and seething with new bitterness, the other old and deep rooted in old prejudices.

One problem is the plight of the 5 million-odd urban nonwhites who are almost desperately poor—the plight of the 45 percent of all Negroes the 1960 census found living in "deteriorating" or "delapidated" housing.

The other problem is the frustration of the other 5 million-odd nonwhites who are no longer poor—5 million-odd urban nonwhites who, against great handicaps, have earned their way up to family incomes over $6,000 (up from 4.74 million indicated by census in 1963). These million nonwhites have adjusted their lives to middle-class aspirations but still find themselves denied middle-class acceptance and status.

These two very different problems call for equally different housing solutions, money solutions, opportunity solutions, timing solutions—

and nothing but more confusion can result from confusing the two.

It is just plain nonsense to think all nonwhites are alike and to act as though their problems could be solved in the same way. The fact is that there are more differences among nonwhites than among whites because on top of all their other differences is superimposed a wide range of difference in how many white ancestors they have and what social, educational and financial advantages this white blood may have given their grandfathers. Caste lines among nonwhites are at least as strong as among whites, not just in lands like Haiti and Jamaica whose population is nearly 100 percent nonwhite but in this country too.

College-educated nonwhites (and there are more Negroes in US colleges today than white men in English universities) have the same aspirations as college-educated whites, and have good reasons for feeling they should be accepted for what they are, instead of being rejected for what their great-grandfathers were. Middle-class nonwhites (and nonwhites have to work a lot harder to achieve middle-class incomes and values) have the same aspirations as middle-class whites, only more so. After long years of frustration they are more eager for status; market surveys show that they spend more of their incomes to be nicely dressed, spend more for "personal care," buy more expensive shoes, spend more for their home entertainment equipment. They limit their families to fewer children, work harder on their lawns and planting, and seem to have made good neighbors in every tract where they are accepted, from Levittown on the East Coast to Eichler on the West.

These people do not need special relief or special subsidies. They do not need special schools for their children, for their children have little trouble keeping up with white classmates. What they need now is recognition of their past achievements, freer access to better-paying jobs (Negro incomes still average 47 percent lower than white), a wider door to escape their present segregation on the edges of the nonwhite slums, and a better chance for further progress toward assimilation into the rest of our social and economic life.

These nonwhites moving up have little in common with the poor nonwhites sunk in the slums except their color and their common resentment of segregation. They have so little in common that when New York tried to speed desegregation by moving poor Negroes out of Harlem's slums into new public housing in middle-class areas, the middle-class Negro owners of nearby homes protested as angrily as their white neighbors.

Most of the Negroes now crowded into urban slums are newly arrived fugitives from the farm mechanization that wiped out a million field hands' jobs in the South, and sent them fleeing to the cities to seek jobs for which they had neither skills nor training. On top of this came a mass migration of 700,000 penniless Puerto Ricans, mostly to New York, and a mass migration of Mexican peons that made Los Angeles the world's sixth largest Spanish-speaking city. For this huge and sudden influx, the cities—north, south, east and west—were completely unprepared, without jobs, housing or schools ready to receive them.

The newcomers were equally unprepared for urban living. Old established urban Negroes wel-

SIMONS: Cities, suburbs must provide better opportunities for leisure.
HEALY: The city is still the generator of our national wealth.
NAFTALIN: Ease of communication is first essential of urbanism.

comed the Negro newcomers with little enthusiasm, and the Spanish-speaking newcomers with even less. Poor whites greeted them with open bitterness and hostility, for they threatened their low-pay unskilled-labor employment just at a time when automation was eliminating millions of cheap-labor jobs.

Poor nonwhites need much better housing, but the sad fact is that as long as there are 6 million fewer decent homes in the urban housing inventory than there are urban families in need of homes, it is inevitable that 6 million urban families will have to live crowded into substandard units. Most of these 6 million victims of the urban housing shortage are bound to be the poor, and a disproportionate number of the very poor are nonwhite.

So we agree with HUD Secretary Weaver that the best answer to the nonwhite slum problem and the housing segregation problem is to build enough good housing so there will be a good home available for everyone. Some of this new housing will have to include building new low-rent units, but most of the low-rent need could be met better by trickle-down work, just as the auto needs of low-income families are better met by second-hand cars than by cheap new models. With today's land costs, today's building-trades wages and today's code and labor restrictions, private enterprise cannot hope to build good enough new homes cheaply enough for poor people to buy or rent without big subsidies. Two of the wisest contributions government could make to better housing for the poor would be to help finance the purchase and resale of sound used dwellings, and to help finance low-cost modernization.

But more good enough housing is only a small part of the answer.

Poor nonwhites need freedom to move out of their racial ghettos and live closer to available jobs—but when all restrictions are ended, most nonwhites still will prefer living with their own people, just as almost every other ethnic group has tended to stick together for a generation or more; often for three generations.

Poor nonwhites need better schools and better education, but bussing white children to nonwhite-neighborhood schools cannot be a good enough answer, when it means holding white children back because poor nonwhite parents cannot give their children the advantages needed to start even and stay even. School buildings in nonwhite-neighborhoods are notoriously inferior, partly because they are old buildings in old neighborhoods; teaching in nonwhite-neighborhoods averages below the white-neighborhood level, mostly because the teacher's work is harder and the pay no more.

But in all fairness it should also be realized that New York, for example, spends as much per pupil (well over $1,000) to educate nonwhite children in the public schools of Harlem as the tuition charged by the city's most exclusive private schools—quite a bit more money than most lily-white suburbs pay to educate their own. Furthermore, in Philadelphia and elsewhere the drive for school desegregation is tending to turn segregation upside down, with more and more white children taken out of public school, and more and more desegregated public schools getting to be almost 100 percent Negro. How will this affect the willingness of the white population, which car-

ries some 95 percent of the local tax load, to pay increased taxes for better schools that few of their own white children will be attending?

Nonwhites need more human contact with the rest of the community. The primary cause for the trouble in Watts was *not* that the housing in Watts is so bad (it isn't; not so long ago Watts was a fairly good middle-class white neighborhood). It was not because the area is overcrowded (it isn't; the density in Watts is not much more than 20 per acre). The primary cause of the trouble in Watts is the fact that it had been allowed to become an island apart. Not enough people outside had any contact with their fellow citizens walled off inside Watts. So it took a riot that cost $40 million and 34 dead to make outsiders realize that Watts had no good hospital for 87,000 people, no modern schools for more than 30,000 children, no movie house, only one public swimming pool and almost no public transportation to let people get to the kind of jobs they could hold. No wonder 30 percent of all the job seekers in Watts are unemployed; no wonder its residents felt forgotten, bitter and almost hopeless.

But most of all, poor nonwhites desperately need more money, more jobs and more job opportunities, particularly more jobs for male heads of families and for young people, both boys and girls. Everybody knows that unemployment among nonwhites is more than twice as heavy as among whites, averaging out to 8.2 percent, but too few people seem to understand the peculiar pattern hidden behind the 8.2 percent average—a pattern which helps explain the bitterness of Negro youth, and also accentuates the matriachal character of Negro home life which, in turn, accentuates the school problem of poor Negro children. An unemployment rate of 8.2 percent is bad enough, but what the "average" conceals is a jobless rate that often exceeds 30 percent among some of the nonwhites most in need of jobs.

Unemployment among college-educated Negroes is actually much less than among college-educated whites, because so many companies are making a special effort to find qualified nonwhites to hire. Unemployment among middle-class Negroes has to be small almost by definition (otherwise they could not enjoy middle-class incomes); unemployment among adult Negroes with less than a grade school education is also low, probably because they seem willing to take menial jobs that nobody else wants. And one-third more Negro women than white have jobs outside the home—despite a 34 percent unemployment rate among teen-age Negro girls (three times the unemployment rate among teen-age white girls).

In other words: Negro unemployment is concentrated among Negro men who were high school dropouts, and is heaviest of all among young Negro men, who are most likely to have young children. In big city slums, their unemployment rate often runs higher than 30 percent.

A tragic consequence of this unemployment pattern is that the No. 1 breadwinner in too many slum-trapped nonwhite families is a working mother, and in some 40 percent of these poor families there is no man at all because the working is either deserted or unwed (in Harlem 43.4 per-

PEASE: We should pay more attention to what city people say they want.
FITCH: Market pricing principle should be applied to city services—including parking.

cent of the children are illegitimate). So there is no one at home all day to care for and bring up the children. Of all Negro children, 36 percent live in broken homes; in the slums this percentage is much higher.

What all this adds up to is that the hard-core problem of nonwhite segregation is very largely a poverty problem, and it cannot be solved until employers, labor unions and the government (mostly federal) work out a good way to let nonwhites escape from poverty and male unemployment. Says Philadelphia's Joseph V. Baker: "A Negro does not need a college degree to put gasoline in an empty tank, or to turn a wrench as far as the threads have been cut, or to collect tickets on trains."

Desegregation, in the sense of living next door to white neighbors, is mostly for upper- and middle-class nonwhites. For the great mass of poor nonwhites, desegregation means mostly a chance to escape from poverty, slum housing and male unemployment, plus a chance for better education to help their children work their way up.

Things that only cities can do

No local government can solve all the problems of the nonwhite poor, but few of their problems are likely to be solved unless and until local governments take an active part in their solution. For example and specifically:

• Only local governments can deflate the bootleg price of slum housing by code enforcement and/or taxation. Dean Abrams' block-by-block research shows that in Philadelphia, vigorous code enforcement has so deflated central-city housing prices there that a large percentage of the 14,400 row houses now vacant can be bought (or put) in decent move-in condition for $4,000 cash or less. (Compare this with an average cost of $20,500 for new public housing, and $12,300 now budgeted by the Housing Authority to buy units and do them over completely, regardless of how much fixing up they really need.) If FHA or other special financing is made available, this $4,000 cost would make it possible for even relief clients, black or white, to buy or lease decent used homes. Pittsburgh, on the other hand, has been fearful

MAIER: A good city is where people can get together for the good life.
GAFFNEY: We subsidize sprawl by subsidizing horizontal transportation.

that strict code enforcement might leave the 10,000 families homeless, and in New York the mayor's special housing adviser declared in 1961 that "no amount of code enforcement can stop the spread of slums unless and until the profit is taken out of slums by taxation."

• Only local governments can locate some of their own employment centers where they will be easy for the nonwhite poor to reach.

• Only local governments can tear down the obsolete and decaying school buildings found in most nonwhite slums, and replace them with up-to-date plants less likely to encourage high school dropouts (the average nonwhite boy quits school after the ninth grade).

• Only the local government, with financial support from Washington, can provide the nursery schools and the day-care centers needed to keep the preschool slum children of broken homes and working mothers off the streets, giving them some of the care, attention and mental stimulation middle-class children get from their families, so these slum children will be ready to keep up with their classes when they reach school age. This kind of need is already met by the state in Russia (another case where most mothers work outside the home) by including day-care centers, playgrounds, nursery schools and primary schools in the center of every new apartment block. In this respect it is high time for American cities to catch up with Russian ones. In New York, 80 percent of the

600,000 relief recipients whose support costs local, state and/or federal taxpayers $700,000 a year belong to no-male-breadwinner families.

• Only the local government can provide or encourage the kind of bus or jitney service poor nonwhites need to get from where they live to jobs they can hold.

• Local government can provide neighborhood centers to help slum owners who want to improve their property understand and take advantage of all the various state, federal and foundation grants and aids available to them.

• Local governments can pressure the state to stop forcing them to discourage and penalize improvements with increased assessments and taxes. (Personal interview surveys in Newark and elsewhere make it clear that fear of higher assessments is a prime reason why slum property owners won't spend money to maintain or improve their properties.)

• Finally, the job needs of the nonwhite poor will not soon be met until local government cooperates in attracting and encouraging not just high-wage industries but also the kind of lower-wage industries and services in which unskilled workers could expect to fiind steady jobs.

Racial segregation is the worst kind of segregation because it is so rigid, so hopeless and so humiliating; but we deplore all one-class neighborhoods big enough to segregate their people from the larger community.

Suburbia is the great segregator, segregating not only white from nonwhite but also the lower-middle-class from the middle-middle-class, and the middle-middle-class from the upper-middle-class and the wealthy. We think this is as bad for those who are segregated *in* as for those who are segregated *out*. For example, it makes it harder for those who are segregated *in* to employ the kind and variety of help they need, while at the same time making it harder for many of those who are segregated *out* to get the kind of service jobs they need and could fill.

Small enclaves of people with the same background and about the same income are perfectly natural and no problem at all; there is no reason why millionaires should live next door to relief clients, and no reason why relief clients should want to live between millionaires. But there are many good reasons why rich and poor, white and nonwhite should live close enough together to know how the other half lives, and to share the community of life and the openness of opportunity whose sharing is the first essential of urbanism. Big one-class or one-race neighborhoods frustrate ease of contact and ease of accesse; they deny variety, opportunity and the exchange of services; and the bigger the one-class or one-race ghetto, the more complete the frustration and denial.

Middle- and upper-income families pay in more ways than one for their flight from the city to one-class enclaves in the suburbs. They pay in travel time and all the extra hours they spend getting to and from the center. They pay in lost leisure, doing household chores they could otherwise find someone else to do. They pay in loss of variety and stimulation because they live too far from town. (Says the former AIA president: "One-class neighborhoods are just plain dull.") And they pay in higher prices and heavier state and federal taxes for supporting on relief millions of people who, in a better-integrated metropolitan society, might be self-supporting and helping to meet the labor shortage and up the gross national product in our full-employment economy.

It is more than a coincidence that the most underprivileged people in urban America must also be the most heavily subsidized (in Philadelphia, for example, 80 percent of the relief clients are nonwhite).

LOEKS: We are building a very static environment for a very changeable society.

This report is a digest of a 3-day conference on urban development attended by 33 outstanding experts in the field.

Compliments of

ROBERT SCHALKENBACH FOUNDATION, INC.

50 East 69th Street, New York 21, N.Y.

Unfortunately, nobody has ever seen or experienced a city that comes anywhere near measuring up to today's potential. Nobody has ever seen or experienced a really good city—a city that takes full advantage of today's better technology, design and planning. □ Nobody has ever seen a city planned so almost everybody could walk to work in less time than it takes to get there now by car, train or subway. □ Nobody has even seen a city planned for all the convenience and economy of three dimensions instead of two. Nobody has ever seen a city where full utilization of the center at high density lets the people who prefer low density enjoy it close to town. □ Nobody has seen a city whose best close-in locations are not cluttered with obsolete and inadequate old buildings that should have been torn down long ago—old buildings that live on and on only because urban decay is now subsidized by underassessing and undertaxing obsolescent properties. □ Nobody in our generation has seen a city whose busy streets are not choked with parked (and moving) cars; or a city whose air is good to breathe and whose water is good to swim in. □ Nobody has seen a city that provides plenty of usable open space for fun and recreation where open space is most needed; where all the children could safely play outdoors within two blocks of home—often without even leaving their own building. □ Nobody realizes that with today's technology such a city could cost much less to live and work in than the anachronisms that urban Americans live in today. □ What's wrong with today's cities could be cured a lot faster if people could be given a better understanding and a clearer vision of what kind of city to demand and insist on getting. □ Computers can now predict quickly and quite correctly all the effects of changed planning, zoning, transit and highways. This is an important development that should be a great help to city planners and city officials in choosing wisely between alternative programs, but it cannot close the communications-gap between planners, with their eyes fixed on the future, and average citizens, with their understanding stuck in the past. □ Perhaps what our cities need now is a new Hugh Ferris to give their citizens a fresh vision of what tomorrow's cities and tomorrow's city living could and should be like.

SHAPING THE CITIES WE WANT

220. Thirty-three urban experts discuss the American urban scene during a seminar co-sponsored by the NLC, American Institute of Architects, Lincoln Foundation and Time, Inc. The report of this roundtable is presented in this special 32-page NATION'S CITIES report. .35

200. America's leading tax experts discuss ways real estate tax policies can be improved to benefit hard-pressed communities in the search for more tax revenues. This is NATION'S CITIES' most popular article: over 11,000 reprints sold. 16 Pages. .40

Community Development

300. NEW DEVELOPMENTS IN RESIDENTIAL ZONING
How to make less space do more work in creating satisfying environments. "Clustering", etc. .30

301. THE ENTERPRISE CITY
City Hall must take the lead in pushing for community-wide progress and become a strategy center. .25

304. WHAT TO DO ABOUT MORE MOBILE HOMES
The boom in mobile homes means cities must re-examine their traditional zoning ideas about them. .30

308. INDUSTRIAL DEVELOPMENT: WHAT IS CITY HALL'S ROLE?
Municipal decisions have a direct bearing on industrial thinking about locating a new plant. .20

309. THE CHURCH REDISCOVERS THE CITY
Urban churches attack social problems but sometimes wind up in the role of "fighting City Hall". .30

310. AIRPORTS AND THE NEW JETS
Short haul aircraft are opening up new markets but LBJ's budget cuts hurt construction. .25

311. BRIGHTER BULBS CAN BE A BARGAIN
Lighting technology improves the economics of a city's street illumination program. .25

312. WHAT EVERY CITY GOVERNMENT SHOULD KNOW ABOUT ECONOMIC DEVELOPMENT
Expert Harold Williams gives cities of all sizes some advice: future growth requires perspective, action. .25

219. PROPERTY TAXES IN THE METROPOLIS
Research by the Urban Land Institute outlines the impact on regional land use by local property levies. .30

Public Relations

600. PUBLIC RELATIONS: A 170-CITY SURVEY
How cities feel about public relations activities is reviewed in a special NATION'S CITIES report. .25

601. HERE COME THE HATE GROUPS
Anti-everything, extremists pose a threat to orderly discussion. Here are pointers to cope with them. .25

602. PUBLIC RELATIONS IN SMALLER CITIES
Imagination, innovation and understanding can guide a successful PR program in smaller cities. .20

603. ACHIEVING BETTER PRESS-CITY RELATIONS
A newspaper editor looks at ways to improve vital relations between city officials and press. .25

604. TAKE YOUR CITY EDITOR TO LUNCH
The "forgotten man" on your newspaper often is the key to press relations. Here are some helpful tips. .20

Public Works

400. NEEDED: MORE FACTS ON WASTE DISPOSAL
Landfill, incineration and composting compared as decisions in waste field become tougher. .25

ATLANTA REGION METROPOLITAN PLANNING COMMISSION

RAPID TRANSIT FOR METROPOLITAN ATLANTA

A SPECIAL SUMMARY REPORT

NOVEMBER 1967

THE CITY
m S
ES
AU
Phes

In August 1965 Los Angeles exploded.

"We are on top and they are on the bottom."

Los Angeles Police Chief William H. Parker during the August riot.

"The cities have numerous problems—mass transit, inadequate schools and hospitals and polluted air—that would exist if Negroes had never left the rural South. But the Negroes are the dynamic, unstable element in the cities. If their special needs are not met, there can be no peace and orderly progress for the entire society."

From a **New York Times** editorial, December 12, 1965.

"The biggest battle we're fighting today is not in South Viet-Nam; the toughest battle is the battle in our cities. . . . If we can spend $25 or $30 billion to put a man on the moon, we ought to be able to spend enough to provide an environment here on earth that will let a man stand on his feet."

Vice President Hubert H. Humphrey

"So serious and so explosive is the situation that, unless it is checked, the August riots may seem by comparison to be only a curtain-raiser for what could blow up one day in the future."

Report by the Governor's Commission of the Los Angeles riot.

On March 15, 1966 there was a smaller upheaval in Los Angeles. Two died and 25 were injured.

"My idea is to confront these people with overwhelming force. We know what these people are capable of."

Los Angeles Mayor Samuel W. Yorty, March 15, 1966.

To overcome the accumulated and intricately interrelated miseries and problems of these urban ghettos is going to require an enormous investment of money, energy, and imagination.

"This is the country's most serious domestic responsibility. The antipoverty program is too small. The proposed 'demonstration cities' program is almost ludicrously inadequate. The Administration in Washington has failed to bring to bear upon the urgent needs of the cities the zeal, dedication, high-level interest and financial expenditure that it has lavished upon the space program. Is there not something wrong with the priorities of a nation that races to send a man to the moon . . . and can only send a police car to the troubled center of a great city?"

From a **New York Times** editorial, March 17, 1966.

THE EQUAL RIGHTS MOVEMENT IN AMERICA HAS DEVELOPED TO THE POINT WHERE IT NOW CONFRONTS THE NATION WITH SOME DIFFICULT AND PAINFUL DECISIONS. HAVING PRODDED THE NATION INTO ABOLISHING AND OUTLAWING LEGAL FORMS OF RACIAL SEGREGATION AND DISCRIMINATION, THE MOVEMENT NOW CONFRONTS AMERICA WITH THE CHALLENGE OF MAKING REAL THE DEFERRED COMMITMENT TO AUTHENTIC EQUAL OPPORTUNITY FOR ALL OF ITS CITIZENS.

THE CORE OF EQUAL OPPORTUNITY IS EQUAL ECONOMIC OPPORTUNITY. THE NEXT STEP OF THE EQUAL RIGHTS MOVEMENT MUST INTRODUCE MANY-SIDED ECONOMIC DEVELOPMENT AS A NEW FOCUS: JOBS, HOMES, SCHOOLS, AND HEALTH CARE ARE THE INDISPENSABLE MINIMUM REQUIREMENTS.

ESSENTIAL PROGRAMS FOR ECONOMIC DEVELOPMENT WILL BE FULFILLED ONLY IF MILLIONS OF AMERICANS GIVE THIS PURPOSE THEIR UNSWERVING COMMITMENT, DECLARING THAT THIS WORK AND THE NECESSARY MONEY MUST HAVE *FIRST PRIORITY*: FIRST FOR THEIR OWN FUTURE; FIRST FOR THE FUTURE OF OUR CITIES; FIRST FOR THE FUTURE OF OUR COUNTRY.

Between 1964 and 1965, it became clear that a settlement of this nation's racial problems could not be secured entirely through enforcement laws and the courts. The new Civil Rights Bill and the Voting Rights Bill were enacted and thus became important indicators of policy for the nation because they represent the intent to extend democracy to a broad segment of the American public. As a result, thousands of non-white Americans are free, for the first time in their lives, to perform many acts white citizens have long taken for granted: to register and to vote, to use public accommodations, and to attend a non-segregated school.

But these results have occurred primarily in the South. In the ghettos of massive urban areas throughout the nation, the effect of this new legislation has been practically negligible. De facto segregation of schools and communities is actually on the increase in most major metropolitan areas. And while unemployment continues to drop among whites, it has grown to crisis proportions in the Negro ghettos of our large cities, in the impoverished black belts of the rural South, and in the Puerto Rican and Mexican-American and Indian communities, North and South, East and West.

As a result, correction of these inequities is indicated along two lines. First, **the search is no longer principally for new definitions of legal rights. The primary demand now is for vigilant enforcement of existing civil rights statutes.** Yale historian C. Vann Woodward has pointed out that *Americans have developed over the years a curious usage of the law as an appeasement of moralists and reformers. Given sufficient pressure for a law that embodies reputable and popular moral values, the electorate will go to great lengths to gratify the reformers. They will even go so far as to unlimber the cumbersome machinery of Constitutional amendment. But having done this much, they are inclined to regard it as rather tedious of the reformers to insist upon literal enforcement. Under these circumstances, the new law is likely to become the subject of pious reference, more honored in the breach than in observance, a proof of excellent intentions rather than the means of fulfilling them.* It is already apparent that the administrative and institutional decisions required to support and enforce the new civil rights laws at all levels of American society will not be forthcoming without the intelligent, vigorous, and sustained efforts of those outside the established centers of national decision-making.

Second, the problems of racial discrimination are being regarded as a concommitant of the problem of economic scarcity in a society of abundance. **Begun as a protest against segregation, the denial of the franchise and other elementary civil rights, the equal rights movement is broadening into a full-scale assault on unemployment, inferior education, and inadequate unsanitary housing.**

In this shift, the movement follows an historic pattern of development: The more democracy is extended, the more glaringly evident become the social inequities that remain, and the more determined their victims are to be rid of them. In ancient Rome, as the French historian, Fustel de Coulanges observes: *Democracy did not supress poverty but, on the contrary, rendered it more perceptible. Equality of political rights made the inequality of conditions appear still more plainly.... The poor man had equality of rights but assuredly his daily sufferings led him to think equality of fortune far preferable.* Today's victims seek some sign that the new constitutional-legal definitions of equal opportunity are being made into flesh and blood realities. **THE EQUAL RIGHTS THAT HAVE BEEN COUCHED IN LAW ARE NOW BEING SOUGHT IN LIFE.**

Our task now must be made crystal clear. It is, in the words of President Johnson: ***To fulfill these rights.*** But what does that mean and how can it be done?

More than a century ago, America was faced with the same question by its newly-freed slaves. But the nation had too-recently emerged from a shatteringly divisive war to preserve the Union and to end slavery. That generation left the challenge for later generations of Americans, and the problem has by now grown much bigger and more complex in a much more dangerous world. This generation of Americans is coping with aggressive competitors for the loyalty of the new nations of Africa, Asia, and Latin America. **What was long ago the moral course to follow clearly has become the expedient course of action in a predominantly poor and non-white world bent on revolutionary social change — with or without our support.**

In 1877, the United States could renege with impunity on its obligations to the freedmen. White America dare not postpone its obligation any longer. The shameless rationalizations of the 19th century that covered the provision of economic assistance to white peasants from Europe in the form of free land and ample job opportunities, while claiming that giving "forty acres and a mule" to its emancipated Negroes would be "discrimination in reverse" – such rationalizations, in their modern guises, simply will not be accepted today by a far more alert, intelligent, and determined Negro community. **Today's disinherited millions will not accept the pathetic dribble of welfare checks as real equal opportunity when they see, for example, billions spent to provide a preponderantly white suburbia with superhighways on which it can have equal access to the cities from which it has taken flight.**

Failure "to fulfill these rights" in the very near future will bring disaster upon our homeland. Predictably, recent events in our cities and in our rural hinterlands have brought us an unequivocable message. In 1964-65, eight riots occurred in major metropolitan areas across the nation. (In mid-March, 1966, the warning was renewed in Watts.) John McCone, former head of the Central Intelligence Agency and chairman of the commission appointed to study the causes of the 1965 riot in Los Angeles, drew this conclusion in his report: ***These riots were a symptom of a sickness in the center of our cities,*** a sickness rooted in a scarcity of jobs, education, and a lack of understanding between the police and the inhabitants of the riot area. The *Wall Street Journal* reports that there are at least 21 major urban areas that can be described as "high tension" cities, liable to explode at any moment because of problems similar to those discovered in Los Angeles.

Of course, the problem relates to failures and maladies manifested not only "in the center of our cities," but also in the patterns of social and moral illness expressed in rigid forms of segregation supported by people who live mainly in suburbia. That is, the problem involves not only the sickness of the inner-city poor but the disease of the total city, including the suburbs, which fails consistently to make its goods and services equally accessible to all of its people.

Even the depressed rural areas have boiled over with discontent and are pressing for long overdue solutions to their problems of unemployment and wage losses caused by a combination of mechanization and discrimination on the farms. So desperate is the plight of poor black farmers in the Mississippi Delta region that, knowing of at least two deaths among their numbers from inadequate shelter and sheer starvation, more than 100 of them moved into a recently-closed Air Force Base at Greenville, Mississippi, in order to dramatize their plight and to secure warmth and shelter. The State Employment Service of Mississippi estimates that more than 30,000 persons, representing approximately 6,500 families, will be evicted from farms this spring in that state because of farm mechanization and racial discrimination. Similarly, the situation of California's 500,000 agricultural workers, many of them Mexican-Americans and Oriental-Americans, had so deteriorated that thousands of them went on strike recently against California's massive grape industry.

If the social discontent evidenced in these occurrences is to be addressed adequately, Americans must understand more clearly and become committed more surely to a conception of equal opportunity based on socio-economic factors as well as on the law. **When people are ill-housed, ill-fed, uneducated, unemployed or underemployed, and suffer health and medical needs that go unattended, then millions of our citizens who live in such circumstances are being discriminated against unfairly just as surely as if anti-bias laws had never been written.** As Whitney Young has well said: *There is at present a great danger that people will quickly and easily read into the establishment of new civil rights laws and into the removal of signs and symbols that so disturb them the conclusion that the problem is solved and all is well . . . The real danger is that people may mistake what is basically a change of vocabulary for a change in behavior, practices, and attitudes.*

To avoid this danger, **AMERICANS NEED TO THINK MORE CLEARLY ABOUT AND DISPLAY MORE REAL OBEDIENCE TO THE NOTION THAT GENUINE EQUALITY DOES NOT LEVEL MEN TO THE LOWEST COMMON DENOMINATOR BUT ELEVATES THEM TO THE HIGHEST COMMON DIGNITY.**

Therefore, the core meaning of President Johnson's eloquent phrase, "to fulfill these rights," achieves significant expression when steps are taken that do, in fact, elevate all of our citizens to the highest common dignity.

The new moral commitment must be to a concept of equal opportunity which recognizes that, however equal we may be in the eyes of the law, such equality is not meaningful because channels of equal opportunity are blocked to large groups of American citizens in major spheres of our society. Equality before the law, still very important, becomes progressively less relevant the poorer one is. Racial and ethnic factors are even more restrictive in preventing equal access to employment, education, housing, and medical care.

The moral challenge is *not* to move "from opportunity to achievement" or from equality of opportunity to "equality of results." Such phrases confuse the ethical problem and distort and falsify the social situation. THERE IS NO REAL "EQUAL OPPORTUNITY" TO MOVE *FROM!*

Our task is precisely that of equalizing the channels by which our citizens gain access to opportunities. Our focus must be on opening these channels (the so-called "ability to achieve" problems of minorities is quite a secondary matter). It is the discriminatory functioning of the former that produces the latter. Our major efforts must be directed to eliminating the causes of the problem and not to manipulating symptoms.

In order to go about our task, it is now necessary to emphasize economic development, especially in the metropolitan centers of our country. **The problems of metropolis, racial justice, and underprivilege cannot be separated. They are now one problem and the way we respond to this problem will have a decisive influence on the quality and the shape of America's future.**

Economic development within America means capital investment to fill the need for more jobs, homes, education, and health care. Economic development does not mean helping people to adjust to slum living, to second-rate education and health care, or to the bitter prospect of unequal opportunity in employment. Economic development means new physical environment and upgraded personal capability, coupled with equal opportunity. **ECONOMIC DEVELOPMENT MEANS BASIC CHANGE IN THE HUMAN CONDITION.**

Focus on metropolis means that the community in each great city should take responsibility for blueprinting its own development program and for organizing and arranging the financing. By blueprinting and organizing the work in each city, the economic program can be made most responsive to the particular requirements of the community. Financing for metropolitan economic development begins with reassessing local funds, private and public, then state financing and, finally, federal grants. City-by-city initiative can provide the best assurance for democratic control and grassroots influence on all phases of economic development. Then the American reality will be, in the words of President Johnson, *not just equality as a right and theory, but equality as a fact.*

All of the disinherited, white and black, Spanish-speaking Americans — all those who have been robbed of their birthright of authentic equal opportunity in America — all religious leaders and laity of every faith — Protestant, Orthodox, Catholic, Jewish, liberal religious dissenters, business leaders, trade union leaders, civic groups of every sort — professors and students in universities throughout the land — all those who believe that human dignity is a primary moral commitment must lead the country on this next step.

Taking this next step will contribute to the security of American society. A society with millions of unemployed is not a secure society. A society that dismisses, in effect, tens of thousands of youth from its school system is not a secure society. A society in which millions live with the daily problem of infestation by rats is not a secure society. A society that has a diminishing number of physicians per thousands of its citizens year by year is not a secure society.

There is a continuous rise in our gross national production. We have an infinite variety of specialty talent in our communities. We have also the experience of the multitude of our people. Our goals are rooted in our basic belief. Our planning can be as flexible as a broad variety of talent and experience can make it. We are actually placing a priority on the use of our great resources and experience toward its potential in the lives of people.

To say that such a utilization of our resources is first priority for our country means that it is not placed somewhere on an agenda. It must be first! And first priority means exactly what it says. It means we have moved beyond discussion about priority. The process is negotiable, but the goal cannot be. The demand and justification for economic development programs must be made with this simplicity and clarity and force.

DEVELOPMENT FOR EQUAL OPPORTUNITY

THE NEXT STEP

Urban Planning Project

TOWARD INTEGRATION IN SUBURBAN HOUSING

THE BRIDGEVIEW STUDY

by Eleanor Leacock, Ph.D./Martin Deutsch, Ph.D./Joshua A. Fishman, Ph.D.

GATEWAY CENTER

Pittsburgh, Pennsylvania

Urban Redevelopment Authority of Pittsburgh

April, 1967

GATEWAY CENTER

Pittsburgh, Pennsylvania

Gateway Center, Pittsburgh's "showcase" of urban rebuilding, derives its name from the historical fact that the city, in its early days, was gateway to the undeveloped continental frontier lying to the west of the Allegheny Mountains.

Contemporary history underscores the propriety of that name; for Gateway Center rates top seniority in the nation as gateway to another vast American frontier -- that of urban redevelopment and renewal.

It was conceived and in active planning a full three years before the Title I provision of Federal aid-to-cities became a reality under the Housing Act of 1949. Its record of practical and legal experience helped open the door to more than 1,700 Federally-aided renewal projects now underway in some 800 cities and towns.

Gateway Center was the first redevelopment venture to direct action to the critical post-war problem of commercial blight pressing in on American downtowns. It was the first to induce private capital to invest on large scale in public plans for downtown redevelopment.

Even while the concept was foreign and radically new to most people, urban renewal's massive potential for changing the face of aging, trouble-ridden cities was being demonstrated by Gateway Center through concrete-and-steel accomplishments.

Symbol of Cooperation

To Pittsburgh in particular, Gateway Center has been and continues to be a visible trademark of a community-wide renaissance which to date has resulted in private and public improvements valued in excess of $3.5 billion. It also symbolizes the working partnership between government and private industry which has been the community's main source of strength.

Today Gateway Center is a full-blown and vital part of Downtown Pittsburgh. Completed and in service within Gateway Center's 23 acres extending from the Allegheny River on the north to the Monongahela River on the south are:

Seven office structures containing more than two million square feet of rentable space, and an eighth scheduled for construction.

An 800-room Hilton Hotel; a 27-story apartment residence with 311 luxury units.

Four underground parking garages.

Four landscaped plazas, where the "Three Rivers Arts Festival" is staged annually with outstanding success.

An assortment of restaurants, cafeterias, lounges and other such facilities.

In accord with plans prepared and controls imposed by the Urban Redevelopment Authority, only about 30 per cent of the land is covered by buildings. The remainder is devoted to streets and park-like settings.

Some $135 to $140 million has been invested thus far in the development of Gateway Center, most of that by the Equitable Life Assurance Society of the United States, developer and owner. The total public investment -- by the City government only -- adds up to a relatively negligible sum of $600,000.

Gateway Center was in final planning before the Federal Housing Act of 1949 was enacted by Congress, and thus was not even considered for Federal urban renewal funds.

Assessed Valuations Rise

By 1966, Gateway Center's assessed property values restored to taxable rolls had risen to over $48 million, nearly $5 million more than projected in the planning stage. In 1947, taxable assessments in the same area were less than $9 million.

Gateway Center occupies only about five per cent of the total land area of Downtown Pittsburgh -- popularly known as the "Golden Triangle" because of its natural triangular shape formed by the confluence of the Ohio, Monongahela and Ohio Rivers.

Yet, through redevelopment, Gateway Center has become the employment center for nearly 20 per cent of all persons working in the downtown business district. Today, the redeveloped area contains more than 21,000 jobs, compared with fewer than 4,000 in 1947, and attracts upwards of some 15,000 visitors daily.

Historical Role

Gateway Center's "front yard" is the "Point," currently in the final phase of development as a State Park to memorialize Pittsburgh's key role in the Seven Years' War between the British and French, and in the westward expansion that followed. The park consists of 36 acres of historic ground where were situated Fort Duquesne and Fort Pitt, and where the city had its origin in 1758.

The Gateway Center and Point State Park projects together removed 59 acres of skid rows, elevated railroad trestles, freight warehouses and other obsolescence which dominated the Point area. This mixture of deterioration had depressed downtown property values, discouraged business investment and real estate development, and it typified the low state of affairs to which the City as a whole had fallen by 1945.

Dense smogs were almost a daily occurrence, often so black that street lights had to be turned on in the morning hours. The three rivers, which throughout history had overflowed regularly to cause disaster, were still a constant threat to life and property.

In downtown, grass and trees were a rarity, and not a single new structure had been constructed in about 15 years. Some companies contemplated moving office headquarters elsewhere because executives and other employes were reluctant to live in Pittsburgh.

Property assessments, declining at a rate of $18 million a year, hit an all-time low. The City government was $64 million in debt; its remaining borrowing capacity was down to $17 million.

Allegheny Conference In Action

But in 1945 a new force was at work in the city to breach political and self-interest differences which had hampered progress. It was the force of cooperative action, and the mechanism for it was the Allegheny Conference on Community Development, which proceeded to involve the city's corporate wealth and to break down party lines in matters relating to local community betterment.

In the same year, the late David L. Lawrence, whose birth in 1889 took place in a house near the Fort Pitt Blockhouse in the Point area, was elected mayor on a platform pledging his administration to "the future of Pittsburgh."

Between his Democratic administration and the Republican sector backing the Allegheny Conference, there developed an alliance which produced a rapid succession of meaningful events.

Adequate flood control became a certainty. Anti-smoke ordinances were enforced and strengthened and, within three years, dramatically effective in cleansing Pittsburgh skies of heavy smoke.

Essential state legislation was passed to permit the city to engage in redevelopment and other community improvement programs.

Early in 1946, shortly after assuming office, Mayor Lawrence announced plans for Gateway Center, and then created the Urban Redevelopment Authority to do the job. Four months later the City Planning Commission certified the Gateway Center area for redevelopment in its first action of that type.

The Equitable Life Assurance Society was induced by financial and governmental leaders to develop the area and that firm subsequently committed itself to an initial investment of $50 million. Two railroads consented to remove rail and freighthouse roadblocks, including the ruins of a two-block-long terminal hit by two fires in March of 1946.

The State Supreme Court upheld the legality of both the State's 1945 Redevelopment Law and legislation allowing insurance companies to invest in Pennsylvania real estate.

A development plan, geared to the expanding demand for modern office space, was completed by Equitable in the fall of 1949 and approved by City Council early in 1950.

Nine Firms Sign Leases

A month later the heads of nine of Pittsburgh's largest firms gathered with public officials in City Council Chambers to sign leases for office space and conclude what newspaper accounts described as the "biggest real estate deal in the City's history."

Such nationally-prominent concerns as Jones & Laughlin Steel, Westinghouse Electric and Pittsburgh Plate Glass were among the corporations involved in the transaction. Even before the area was cleared for new construction, more than 60 per cent of the total office space initially proposed by Equitable was under lease.

In the process, the City obtained property needed for development of a mid-town plaza, Mellon Square Park, and the Redevelopment Authority acquired title to the 14-story J&L Steel office headquarters, which later was converted into a civic headquarters for public and semi-public agencies.

Demolition of some 40 structures in the redevelopment area started in June, 1950. By April of 1952, the first of three office skyscrapers were being occupied by business tenants. As a result, some 30 different companies were involved in major office relocations in the Golden Triangle.

Upheld in Courts

Repeated attempts were made by a group of property owners to block the project. In all, some 60 lawsuits contesting condemnation proceedings and compensation awarded property owners were filed in local courts.

Two test cases were argued through the State and Federal Courts. Both the State Supreme Court, on two occasions, and the United States Supreme Court sustained district court rulings which held the project to be in the public purpose and thus not in violation of either State law or the Federal Constitution.

Gateway Center's three original buildings, completed in 1953, were among the first in the nation to employ the now widely-used technique of stainless steel exterior panels. In subsequent years, six additional structures were built, two by Equitable itself and four by other concerns on sites leased from Equitable.

-- The Commonwealth of Pennsylvania built a 16-story State Office Building in 1957, and the Bell Telephone Company added a 12-story office headquarters in 1958.

-- The 22-story Hilton Hotel, financed by Equitable, went into operation in 1959.

-- Gateway Towers, apartment house built and owned by the Tishman Corporation of New York, was opened to tenants in mid-1964.

-- Along with Gateway Towers, the newest additions to Gateway Center are Equitable's Four Gateway Center, a 22-story glass-curtained office building completed in 1960, and the 13-story IBM Building, identified by its uniquely-designed diamond shaped truss walls. Occupied in 1964, that building is shared by the IBM Corporation and the U. S. Steel Corporation.

-- A tenth building is scheduled for construction by Equitable Life in 1967 on the last available site.

The only pre-redevelopment building remaining in the area houses the City's two daily newspapers, the Press and Post-Gazette. It has been completely modernized to harmonize with the new environment of Gateway Center. Nearby, the Hostetter Building, at First Avenue and Stanwix Street, has been acquired by Equitable Life and was razed in the spring of 1967.

Three other buildings were removed in 1966. They were the City's Central Police Station, the Heyl & Patterson and Acme Window Cleaning buildings. Gateway Six, a 30-story structure overlooking the Monongahela River, will rise on the site of those buildings.

Strategy For Action

Pittsburgh's decisive moves leading to Gateway Center were part of an emergency reaction to a community crisis, and not pre-determined by a master plan of development. But they dictated a strategy for community action, starting with a three-pronged attack on downtown blight:

(1) Redevelopment of the Point of the Golden Triangle, almost entirely with private funds.

(2) Removal of business obsolescence in the center of the Triangle through City development of Mellon Square Park, made possible through a $4 million gift from Mellon family foundations.

(3) Redevelopment of the adjacent Lower Hill area at the eastern base of the Triangle, this through combined use of private, Federal and local public funds.

These actions were producing visual achievements by the time a Golden Triangle master plan was completed in 1962. As the result, Downtown in 1966 was approaching many of the master plan objectives, as projected to 1980. The fundamental objective is to re-shape Downtown's traditional functions and expand its all-important role in the economic transition taking place in the overall Pittsburgh industrial region.

During the past 15 years, the Downtown skyline has been drastically altered by more than 55 major new buildings. These contain the new kinds of employment opportunities needed in management, research, training, cultural, entertainment and other white-collar fields to offset loss of jobs in traditional heavy manufacturing fields.

With this, Pittsburgh has retained and currently is strengthening its position as one of the nation's foremost centers of corporate headquarters. Within an 18-month period, the decisions of six companies to consolidate administrative operations in Pittsburgh added more than 3,200 persons to Downtown payrolls exceeding $700 million a year.

Several thousand additional jobs are anticipated as the result of the United States Steel Corporation's decision to further consolidate and expand office operations in Pittsburgh.

Ground has been broken in the Upper Triangle for a 64-story office building to accommodate U. S. Steel, rapidly outgrowing its 42-story office headquarters, erected in the early 1950's.

A 40-story office structure is rising on a site bounded by Liberty Avenue, Wood Street and Sixth Avenue. Several other developments of nearly comparable magnitude are also pending. More than three and one-half million square feet of new, private office space will have been added to the Downtown in the 1966-1970 period, exceeding the total amount of space built in the previous 16 years.

Further, the Downtown area has started to emerge as one of Pittsburgh's strongest residential markets. In three years, 1,380 apartments have been completed or placed in construction. At the end of 1966, the Downtown area, which in 1950 had only a few hundred residents, accounted for 1,805 apartment units over 90% rented, with 288 more in construction and 450 in design.

Urban Redevelopment Authority
200 Ross Street
Pittsburgh, Pennsylvania

Robert B. Pease
Executive Director

(Revised April, 1967)

Fact Sheet

SHERADEN PARK
(PITTSBURGH, PENNSYLVANIA)

General Description:

Sheraden Park is one of a series of joint public-private efforts to develop desirable in-city housing for families of moderate income.

Through the use of publicly-owned tax-delinquent land, special financing and other techniques, 188 Sheraden Park homes were built and sold for about 20% less than comparable housing built under conventional methods.

This housing is privately-financed and privately-built. Land was assembled by the Urban Redevelopment Authority. All non-housing land within the renewal project area remains in public ownership for park and recreational use.

Total Renewal Area: 45.88 acres

Housing Area: 12.1 acres overlooking Chartiers Creek and the City of Pittsburgh-McKees Rocks boundary line.

Reuse:
11.2 acres -- 188 town houses (all completed and sold).
.9 acres -- New public streets serving houses.
33.7 acres -- Public open space, parkland and other recreational facilities, including relocated Little League baseball field.

Ownership: The 12.1 acre housing site is owned by the Urban Redevelopment Authority and leased to ACTION-Housing, Inc., non-profit sponsor of the project, for $1 a year for 55 years. (The remainder of the total area was returned to the City's ownership for public recreational use).

Developer: ACTION-Housing, Inc. then sub-let site to Revenue Properties Company, Ltd. of Toronto, Canada, but maintained direct control over design, construction and charges. Revenue Properties paid back-taxes, penalty and interest totaling approximately $16,000, and installed streets and utilities at no expense to the City. The Urban Redevelopment Authority retains ownership of the land.

Present Status: In June, 1967, after the required number of units had been sold, control of Sheraden Park was transferred from ACTION-Housing and Revenue Properties, Ltd. to a private cooperative agency, Sheraden Park Development, Inc.

Average Monthly Carrying Charge:	Four bedroom house - $141 Three bedroom house - $125 Two bedroom house - $108
Occupants:	- 60% of the occupants came from inside the City of Pittsburgh, and most of the remaining 40% formerly lived in Suburban Allegheny County. - Average monthly income: $5,878. - Occupations: Factory workers; municipal employes; teachers; retired families.
Investment:	Estimated private investment - $2.7 million City of Pittsburgh: $120,000 for Little League Baseball field. Mellon-Scaife Foundation: $10,000 for landscaping.
Tax Yield Prior to Development:	None
Present Estimated Tax Yield:	Approximately $65,000.
Special Financing Features:	-- ACTION-Housing's $2 million development fund provided a loan covering 70 per cent of the land improvements cost making equity capital available to the private developer. -- Federal National Mortgage Association purchased mortgages under special middle-income housing program available to non-profit groups. This made possible an interest rate as low as 3 1/8 per cent. -- Normal FHA mortgage insurance premium of 1/2 per cent waived in connection with use of special housing program. -- As it did in its East Hill Park development ACTION-Housing entered into a special labor agreement with the Pittsburgh Building Trades Council. The contract fixes rates for union labor, permits use of labor-saving techniques, prohibits work stoppage resulting from jurisdictional disputes and rule out premium wage rates.

Summary of Rehabilitation Activity
East Liberty Renewal Project

Efforts to conserve structurally-sound buildings in the East Liberty Renewal Project began in 1963. Since then, steady progress has been made in the rehabilitation of commercial and residential properties. Thus far, these activities have prevented the displacement of 350 East Liberty families.

Urban Redevelopment Authority architects, construction analysts, loan specialists and other trained personnel provide information and assist homeowners and businessmen. With the aid of a trailer, the residential rehabilitation staff moves its services from street to street. The staff surveys homes and buildings, and suggests different means of financing necessary improvements. Similar services are available to businesses in the area through another Authority field office working on development of three pedestrian shopping malls. Businessmen consult with this staff on storefront improvements, interior remodeling and financial resources.

Facts About Residential Rehabilitation

Of a total of 304 residential structures remaining in the East Liberty Renewal Area:

- 285 properties containing 1,083 dwelling units were scheduled for rehabilitation; 19 others required no rehabilitation treatment.
- 245 residential buildings have been surveyed inside and out.
- 129 have been improved or are in the process of being improved.
- Of these 129 homes, 79 containing 557 dwelling units now meet renewal standards while the remainder meet local code standards.

Total expenditures of private funds to date amounts to $549,673:

- 27 homeowners have obtained special low-interest loans and direct grants in Federal funds totaling $82,605 to assist them in improving their properties. These loans and grants, as authorized by the U. S. Department of Housing and Urban Development, are processed by Urban Redevelopment Authority specialists.
- 102 other homeowners, using conventional financing and savings, have expended $467,067 in home improvements.

In addition, a total of $286,000 in public funds has been expended in improved streets, lighting, sewers, parks, playgrounds and other facilities serving residential blocks undergoing rehabilitation treatment.

Facts About Commercial Rehabilitation

Most commercial structures scheduled for rehabilitation are located on major streets being converted to three pedestrian shopping malls.

Improvements are planned or in progress for 144 commercial structures housing approximately 195 businesses:

- 25 buildings have been surveyed to date.
- Modernization of 20 structures is either complete or underway.

Total investment in commercial rehabilitation to date is $2,871,400.

Description of Regional Units By Definition of Terms

Trade Area: Includes southwestern Pennsylvania, northern West Virginia, eastern Ohio, with population of approximately six million within 100-mile radius of central city.

Industrial Region: Nine southwestern Pennsylvania counties (Allegheny, Westmoreland, Beaver, Butler, Washington, Armstrong, Greene, Fayette and Lawrence), as defined by Regional Industrial Development Corporation, non-profit agency based in Pittsburgh. Total land area: 6,239 square miles. Population (1960): 2.9 million.

Planning Region: Six counties (Allegheny, Westmoreland, Washington, Beaver, Butler, Armstrong), as defined by Southwestern Pennsylvania Regional Planning Commission. Land area: 4,501 square miles. Population (1960): 2.6 million.

Standard Metropolitan Statistical Area (SMSA): Four counties (Allegheny, Beaver, Washington, Westmoreland), as defined by United States Census Bureau. Same counties comprise Pittsburgh Labor Market. Land area: 3,051 square miles. Population (1960): 2.4 million. Nation's eighth largest SMSA.

Allegheny County: Residential urban core of region; second largest county in Pennsylvania; ninth in national rank. Comprised of 129 independently-governed municipalities. Surrounding City of Pittsburgh are three smaller cities, 82 boroughs and 41 townships ranging in population from under 150 to over 55,000. County also contains 109 separate school districts with independent elected boards and autonomous taxing powers; 131 local public or quasi-public authorities; 210 major non-profit private agencies operating in voluntary fields of community service. County land area: 730 square miles. Population Trends: 1950 Census, 1,515,200; 1960 Census, 1,628,600; 1965 Census Bureau projection, 1,587,000; 1970 projection, 1,640,000. Governmental structure: Three-member Board of Commissioners (elected) with both administrative and legislative powers.

Central City: City of Pittsburgh, governmental seat and employment nucleus of Allegheny County; urban base of Western Pennsylvania; regional center of trade, banking, management, transportation, higher education, health services and other enterprise. Land area: 55 square miles characterized by same topography prevailing throughout Western Pennsylvania; steep slopes and three major waterways confine buildable area to approximately 38 square miles. Population trends: 1950 Census, 676,806; 1960 Census, 604,332; 1966 projection (Department of City Planning), 574,000; 1970 projection, 557,000. Governmental structure: Mayor-City Council (nine elective members).

General Background

Condition-Outlook

Over the past four years, Pittsburgh, in both City and regional context, has been in an ascending state of general prosperity. Business investment, employment and personal earnings have steadily risen toward new heights, and economists foresee a continuing and even faster rate of increase in 1967.

The main stimulus, obviously, is the high level of the national economy. Serving national and world markets as it does, the Pittsburgh region has reacted dynamically to extraordinary circumstances affecting those markets. This follows a pattern of the past 150 years of development influenced by market demands for iron, steel, coal and glass. All segments of the regional economy -- from urban center to smallest village -- are deeply rooted in these dominant industries.

Because of that, the regional economy, since 1910 and in direct contrast to the previous 50 years, has not grown at the same rate of the nation as a whole. While other major urban centers were diversifying job opportunities in both manufacturing and white-collar fields, the region continued to follow rigidly in the path of its big, specialized industry. Employment opportunities in Pittsburgh-identified industries have diminished primarily as result of decentralization of plant operations and introduction of new technologies.

Between 1910 and 1960, as the population grew by one million persons, fewer than 300,000 new jobs became available in the region. Production employment declined largely because of loss of over 75,000 coal mining jobs, and non-manufacturing employment did not increase sufficiently to compensate. In 1960, Pittsburgh had fewer jobs to offer in service, business, professional and other non-manufacturing fields than any other metropolitan area of comparable size.

This is a consequence of its early predominance in basic industry. Since the start of the steel era after the Civil War, Pittsburgh essentially has been a workers' community, provincially limited in opportunities for those inclined toward varied enterprise not directly dependent upon steel and coal. By the very nature of its industrial growth before 1900, the Pittsburgh economy developed weaknesses which, even in most prosperous times, have perpetuated conditions of poverty among a disproportionately large sector of the population.

In the current round of booming economic activity, the same inherent weaknesses are more apparent than ever in public attention focused on such persistent community problems as: chronic joblessness; under-employment; a high proportion of untrained and unskilled persons; inadequate job opportunity for women; large concentrations of deteriorating housing; an aging population resulting from a continuing rate of population net-outflow (mostly younger adults) since 1930.

However, the present situation contains new elements which have the potential of giving the general economy a measure of balance previously lacking. In the years since the end of World War II, many significant strides have been taken in improvement of the community environment to modern urban standards more conducive to business, industrial and residential growth.

With impetus derived from an unprecedented degree of joint action by public and private enterprise, two major deterrents to economic development -- dense smoke and regularly flooding rivers -- have been removed. Redevelopment of Pittsburgh's historic Point area, a pioneering effort starting prior to 1950, has led to reconstruction of approximately one-third of the Downtown business district. From the early ventures has come a succession of broad-based planning and action programs in economic, social and physical development throughout the City and region. The rate of progress toward community goals is indicated, in part, in the text that follows.

Summary of City-Regional Trends And Actions

Employment And Earnings:

- In 1966, over one million persons were gainfully employed in the nine-county industrial region. This represents nearly 38 per cent of the total population, highest level in history. Less than three years ago, the entire region, part of the Appalachia belt, was classified as economically distressed by the U. S. Department of Commerce. Presently, only two of the nine counties are so classified. Fayette County, where unemployment prior to 1963 exceeded 26 per cent, recently reported an acute shortage of skilled workers. Unskilled labor, the result of declining coal mining operations, is still in surplus.

- Unemployment in the four-county Pittsburgh Labor Market dropped to its lowest point on record in November, 1966 - 2.3 per cent of the labor force. This represents a consistent decline from record highs of 9.8 per cent in 1958, still over 9 per cent in 1961; and 4.4 per cent in 1964; 3 per cent in July, 1966. Both City and regional unemployment rates were below national and State averages reversing a pattern of many years.

- Unemployment among Pittsburgh Negroes was estimated at 15 per cent in 1964 by a National Urban League study, but reported by the Federal Equal Opportunity Commission to have dropped below the national average of 7.9 per cent in November, 1966. Unemployment in the Middle Hill District of the City was estimated in 1964 at approximately 26 per cent of the labor force, and currently is believed to be about 18 per cent.

- In four years more than 7,000 idled workers in region have been retrained for new jobs through manpower training programs aimed at easing chronic unemployment and meeting expanding demand for technically-skilled persons. Over 80 per cent have been placed in jobs. Expansion of training programs, directed primarily to unskilled persons, is taking place in connection with local and regional anti-poverty efforts under the Economic Opportunity Act and Appalachian Development Program. At least four new vocational-technical schools are planned in Allegheny County.

- Since June, 1966, eight anti-poverty employment centers in the City have placed more than 5,000 adults and youths in regular jobs and work projects of the Jobs Corps and Neighborhood Youth Corps.

- Prior to 1964, approximately eight per cent of SMSA residents filing income tax returns reported gross incomes over $12,000 yearly; 58 per cent earned under $6,000.

Capital Investment and Industrial Development:

- Capital investment in manufacturing expansion in nine-county region has exceeded one billion dollars in four years, and is expected to reach higher levels in 1967, according to the Regional Industrial Development Corporation.

- Administrative consolidations by major companies within the past three years, involving substantial expenditure in construction of new office and related facilities, have improved Pittsburgh's stature as a national center of corporate headquarters and industrial research.

- Since 1962, industrial development efforts have expanded substantially. Primary emphasis is directed to expansion of existing manufacturing plants (nearly 8,000 within a 100-mile radius and over 2,700 within a 50-mile radius of Pittsburgh) and to new growth through regional research resources. New production methods and techniques have resulted, for example, in modernization and expansion of several of the region's oldest steel-making facilities, which in 1962 had been expected to be phased out of operation.

- The Regional Industrial Development Corporation (RIDC), a non-profit agency backed by Pittsburgh business and government, was instrumental in 1966 in formation of the Southwestern Pennsylvania Economic Development District to function as the agency for both the Economic Development Act and Appalachia programs. In addition, some 54 private lending institutions have committed over $9 million to RIDC's own industrial development fund. RIDC has participated in expansion and relocation decisions involving over 900 companies and more than 6,000 jobs. Also operating within the region are 50 local industrial development organizations.

- Business, institution, foundation and governmental expenditures have accelerated expansion of education, health and social services, research, corporate administration and other of the region's fastest-growing sources of white-collar employment within the City. In large measure, this has been generated by a high degree of public-private inter-action in aggressive planning, development and urban renewal oriented to economic and social growth.

- Industrial research continued its dramatic growth of the past 15 years as an increasingly important source of (1) new and well-paying jobs, and (2) technological advancement leading to development of new products and industrial diversification. Within the region are some 150 major laboratories employing more than 15,000 scientists, engineers and technicians, plus several thousand clerical, maintenance and service workers.

Pure and applied research, as related to the region's major potentials for industrial growth, is producing significant results in such areas as nuclear physics, space engineering, new uses of primary metals and coal, electronics, chemicals, data processing, rapid transit. In part, the region's recent resurgence in steel-making is attributed to development of new basic oxygen processes.

Regional Planning:

- The Southwestern Pennsylvania Regional Planning Commission was organized in 1962 to develop economic unity through an inter-county approach to regional problems. This officially-recognized commission consists of elected officials and community leaders representing each of six counties (in which are located a total of 196 separate municipalities with 1960 populations of more than 2,500). Staff services are provided by the Pittsburgh Regional Planning Association, non-profit pioneering agency which in 1959 initiated the region's first comprehensive economic study in cooperation with the University of Pittsburgh's Center for Regional Economic Studies, also engaged in Appalachia regional studies. A recently-completed study proposes land uses of open space, including outdoor recreation (187,000 acres) and reclamation of land (69,000 acres) blighted by abandoned strip mines, slag and coal dumps. Highway, water and other studies are underway.

- The Pittsburgh Area Transportation Study, projecting highway and transit routes and priorities, has been expanded and incorporated in regional planning activities.

- The Allegheny Seminar, for past several years a forum in which all segments of the community have been represented, gained permanent status in 1966 to promote coordination among the 129 municipalities of Allegheny County.

Population Growth:

- Between 1950 and 1960, the region's population increased by 8.7 per cent, as compared with the following averages: State-wide, 13 per cent; nation-wide, 18.5 per cent; all Standard Metropolitan Statistical Areas, 24 per cent; 24 largest urban centers, 45 per cent. Provisional estimates by the U. S. Census Bureau indicate out-migration of about 130,000 persons between April, 1960, and July, 1962, as well as a net decline in total population. More recent projections point to a leveling off of this trend and an overall population increase by 1970. The central City population is expected to continue its decline,though at a much slower rate than in the 1950-60 decade.

Municipal Operations:

- Multiplicity of local governing and taxing bodies within Allegheny County (239 separate governmental and school district units) is believed to be more extensive than in any other U. S. county. This has raised crucial questions as to the community's capacity to keep pace with increasing urban needs for services and amenities.

A recent study of public finance, however, showed that combined governmental revenue is sufficient on a community-wide base but not at various local levels. Municipalities have found it increasingly difficult to meet governmental operating costs rising at an average rate of over 5.6 per cent per year since 1957. The problem is particularly severe for 50 older industrial communities with declining population and narrowing tax base.

- The City of Pittsburgh's operating budget for 1967 (at $74 million) represents an increase of 285 per cent in the past 20 years. Its capital improvement budget, mainly supported by bond funds, was, in 1966, approximately 700 per cent higher than in 1946. To meet rising costs and provide new and improved services demanded of an expanding regional center city, the City government has increased the real estate tax rate by nearly 50 per cent in 20 years and adopted eight major new tax measures. Limitations in State law prevent the City from deriving other than a negligible amount (through such measures as parking and occupational taxes) of revenue from suburban dwellers who hold approximately one-third of all jobs located in the City.

- Allegheny County, though 93 per cent urbanized, remains under a governmental structure politically and philosophically tuned to the rural past. A few City functions, such as public health, have been transferred to County jurisdiction; efforts are continuing toward coordinated action and joint fiscal responsibility for major regional services based within the City.

The City As A Regional Center

The City of Pittsburgh occupies less than eight per cent of the total land area of Allegheny County. But it is the location of nearly half of a total of some 600,000 jobs within the county. It also is the centralized base of major facilities and activities directly serving banking, business, educational, health, entertainment and other needs of nearly 1.8 million suburban dwellers within and beyond county borders.

In the past 15 years, through public and private programs in planning and renewal, the City has steadily moved forward in the two-fold role to which, geographically and historically, it is best qualified: (1) Serving the region on a day-to-day basis; (2) generating industrial and other economic development through such major areas of activity as:

Corporate Administration: Pittsburgh, one of the nation's three largest corporate headquarter cities, is home base of more than 100 major companies principally oriented to national and world markets. Among these are 23 of the nation's 500 largest corporations. World-wide invested capital of the 23 Pittsburgh-based companies aggregates $13 billion, exceeding that of every other city except New York. By comparison, the 38 largest Chicago-based corporations have invested $9 billion in world markets.

Downtown Development: The City's compact central business district (350 acres) is the site of one of every eight jobs in the region and a growing resource of white-collar jobs. Indicative of that is the rate of construction: Since 1950, more than three million square feet of new, non-governmental office space has been constructed. This is about 85 per cent of the increased market demand projected to 1980 by the 1962 Downtown master plan. Presently under construction and scheduled to begin in 1967-68 are six major developments which by 1970 will account for an additional three and one-half million square feet of new, private office space.

Total employment in the Downtown area is estimated at over 105,000 persons. In three years, office employment has increased by more than 3,000 to a total in excess of 70,000. A related facet is the emergence of a Downtown residential market. In 1962, Downtown had about 850 permanent residential units, mostly in hotels. Since then, 955 new apartment units have been completed, 288 are currently in construction and an additional 450 are in design.

Higher Education: Three universities and five major colleges located within the City (including four in or near Oakland and two in the Downtown area) are expanding facilities and curricula to meet educational needs. Total enrollment currently is approximately 35,000 students. In increasing number, teaching and research programs are being oriented to community service fields, such as social work, urban affairs, business development, local government, public health.

In addition, the eight institutions,with about 7,000 jobs between them, represent an expanding source of employment. Total expenditures by Pittsburgh universities and colleges are increasing at an average rate of more than 12 per cent a year, faster than in any other field of local community service. Major 1966 developments:

- University of Pittsburgh, previously a private institution, became State-related, enabling it to reduce student tuition and at same time regain financial means to further develop its physical facilities, teaching programs and wide-range of research projects.

- Carnegie Institute of Technology, privately-supported, joined with Mellon Institute of Industrial Research to form a major new university. Much of the research carried on at company centers in the region originated at or is now related to activities of Mellon Institute. Current anti-smoke laws are based on pioneering air pollution studies conducted at Mellon Institute in 1914.

- A county-wide Community College system was established to accommodate City and regional students otherwise without means to attend college. The first of five campuses is in operation in North Side Pittsburgh.

Health Service: In its rising rate of expenditures (about 10 per cent a year), this field is second only to education. One of the nation's largest complexes of hospitals, clinics, medical laboratories and related facilities has developed in the Oakland district of the City, in connection with the Pitt Health Center there. Since the early 1950's, more than 20 major new health buildings or additions have been erected in the Oakland Center. In addition to numerous public and private facilities, Oakland is the office center for more than 300 physicians. Hospitals and medically-related activities account for most of Oakland's 22,000 jobs.

Light Industry: Mainly through City planning and urban renewal programs, large amounts of vacant, uneconomically-used and publicly-owned land are being converted to industrial park sites for light manufacturing, distribution and service industries. Many in-city companies with congested and obsolescent physical operations thus have been enabled to modernize and expand. A special land reserve fund was established by the City government in 1965 to assist companies in relocation problems. Under a non-Federally-aided renewal project, 280 acres of mostly vacant land at the western extremity of the City are being developed into an important center of food and other types of distribution. This, coupled with other such renewal projects in Pittsburgh's North Side, is permitting the City to more effectively handle the region's trucking, wholesaling and warehousing requirements.

History of Physical-Economic Development And Problems

Pittsburgh - City and Region

The present industrial character of the Pittsburgh regional community was shaped by two basic factors:

(a) Strategic location interspersed by three major inland waterways (Ohio, Allegheny and Monongahela Rivers) providing access routes to other sections of the country.

(b) Vast quantities of land rich in soil and plentiful in timber, coal, iron ore and other natural resources.

Development of the region -- from wilderness and Indian territory under Iroquois jurisdiction to foremost center of manufacturing industry -- follows four distinct cycles of economic growth and change:

1. 1750 - 1800: After advent of early trappers, traders and land settlers, development centered at the fork of the three rivers, known later as the Pittsburgh Point; focal point of the British-French struggle for control of western continent, and of subsequent trade activity serving civilization's westward movement over Allegheny Mountains.

Eastward from the Point, site of England's Fort Pitt, the topography rose gradually into sharper grades. As development progressed, grades were lowered, ponds and creeks filled in, and Point land raised.

The original town plan of streets, in 1783, embraced the river-formed triangular area now the City's central business district (Golden Triangle). Directly across the Allegheny River to the north, a separate community (Allegheny City originally and now North Side Pittsburgh) concurrently came into being as the result, primarily, of extensive land grants to Revolutionary War soldiers. Its growth impetus stemmed from extensive agricultural enterprise (farming operations may still be seen today within that in-city area) and industrial activity.

In early years, Pittsburgh's prime economic pursuits were farming, livestock and grains, and accommodation of westward-bound traffic, but beginning to turn to manufacturing. As early as 1792, cannonballs were turned out by the region's first iron furnace. Other early industrial activity included whiskey, glass, boat-building and saltworks. At the close of the century, the City had 63 stores and 1,565 residents.

2. 1800 - 1860: The War of 1812 provided additional incentive to manufacturing. By 1816, the year in which Pittsburgh was elevated from borough to city status, dozens of iron smelting furnaces and glass factories, burning charcoal made from native timber, were operating in the region. Dense smoke was already a community problem. Development of the steamboat turned Pittsburgh into a major coal port and transportation terminal. In 1815, the City, with a population of under 4,000, received some 6,000 Conestoga wagons with goods from the east and returned them with Pittsburgh products. Such trade activity expanded for a time, after the Pennsylvania Canal reached the city in 1829, but then declined because of high wagon freight costs and the rise of new frontier towns in the Midwest and Great Plains.

Initiation of rail service to eastern cities in 1851-52 gave new momentum to Pittsburgh, and as railroads moved westward vast markets opened for Pittsburgh-made goods. In 1859, three-fourths of the region's people still derived their livelihood from commerce and farming, but the number of factory workers had grown to 23,000. Metals production accounted for 64 per cent of those jobs. The remainder were among many different types of manufacturing, including: textiles, tobacco, food, leather goods, rope, chemicals, brick, tile, glass, ship-building.

As manufacturing increased, the paradox of extreme poverty amidst growing prosperity became imbedded in the Pittsburgh economy. When adversely affected by tariff and other market conditions, business owners reduced minimal pay levels even further. Iron workers formed their first union and frequently went on strike for long periods. During these years, long bread-and-soup lines were not uncommon sights in Pittsburgh, particularly in recession years such as 1857. Even when employment was regular, most families lived in flimsy wood houses close to rivers and plants. Floods, disease and fire were a constant threat.

The City's first water reservoir, built in 1828 on a Hill District site still devoted to that purpose, soon became inadequate. In 1845, fire destroyed 24 blocks of property in the heart of the City. Afterwards, brick and iron came into wider use as structural materials, replacing wood, and citizens crusaded for better water supply, fire protection and sanitation.

In the 1840's and 1850's, Pittsburgh also was grossly deficient in social and cultural life. For the largest part, literary, musical and other cultural events were centered in Allegheny City, which also was a hotbed of anti-slavery and other social protest activity. The region's wealthiest families lived in Allegheny City - in elegant mansions built on ridges high above unpredictable rivers. The poor lived in river bottoms and atop the steepest hills or in other isolated areas lacking vehicular access.

To create more space for business and residential construction, the City, in 1847, undertook the first of a series of excavation projects to ease steep grades restricting growth. Grant's Hill (lower portion of the Hill District) was lowered 20 feet. In the hills just beyond the City's eastern boundary (present Hill District), separate rural communities, chiefly geared to farming and coal-mining, had started to form. Affluent citizens moving outward from the City established homes in the area, and the City's first two permanent hospitals were built there. Fugitive slaves found refuge in the Hill District, though in lesser number than in Allegheny City.

3. 1860 - 1910: In the first three years of the Civil War, wage rates tripled for iron puddlers as Pittsburgh industry expanded to meet most of the Union's needs for cannon, caisons, armor plate, warships and other iron products. But the war-time level of such manufacturing was only a small portent of what awaited the region over the next four decades of industrial revolution, as illustrated by population growth in that period:

	1870	1890	1910
City of Pittsburgh	86,076	238,617	553,905
Allegheny County	262,200	552,000	1,018,463
Six-County Region	485,400	888,100	1,612,400

Job opportunity obviously was the magnet which attracted hundreds of thousands of European emigrants to the Pittsburgh region. In the 50 years to 1910, the supply of jobs increased at an average rate of over 40,000 per decade, with the overwhelming proportion of new jobs in steel plants, coal mines and glass factories. By 1910, those three industries employed upwards of 260,000, or more than 43 per cent of all persons working in the region. The prime reasons for growth were:

(1) Expanding railroads requiring ever-increasing quantities of rails and locomotives, and also making national and world markets more accessible to Pittsburgh industry.

(2) Technology leading to faster mass production of steel - e.g., the Bessemer converter, rolling mills and use of coke instead of charocal to fire blast furnaces. These and other innovations, applied by such pioneers as Andrew Carnegie and Henry Clay Frick, greatly speeded up steel-making processes.

In the late 1880's, some 10,000 "bee-hive" ovens in the Connellsville area were producing coke to feed growing numbers of steel mills built on river sites. From under 4,000 in 1860, miners increased in number to about 75,000 in 1910. In rapid succession, hundreds of new mill towns and mining villages were established on riverfront and farming land near plant operations. While some later were annexed by the City of Pittsburgh, most remained separate and developed into independent municipalities, many with strong ethnic traits.

In response to the demands of growth, the City broadened its land area from two to 27 square miles through annexation of five townships in 1868 and 11 boroughs in 1872. The first embraced what is now Pittsburgh's East End, including Oakland and the Hill District, and the second, South Side and West End areas then containing large concentrations of glass factories and iron-making facilities. Within two decades after 1880, the rural atmosphere of the Hill District was displaced by ethnic and racial concentrations largely comprised of families of lowly-paid and frequently laid-off workers.

Steel production increased at accelerating pace, but, because of new processes, workers were more plentiful than jobs. Competition for jobs led to reductions in pay to laboring rates as low as $1.40 for 10 hours, while personal fortunes of factory owners grew. Class conflict erupted frequently in strikes and mass violence. In 1877, railroad riots in the City left 61 dead and 150 injured; in 1892, strikers held control of the Homestead steelworks for one week following a pitched battle with a force of 300 Pinkerton detectives. During these years, a heavy pall of black smoke from plant chimneys shrouded the area, and repeated floods caused extensive property damage and loss of life.

Meanwhile, the ascending steel-and-coal economy stimulated physical and cultural development in the City. Structural use of steel was demonstrated in a dozen office skyscrapers which rose in the downtown area. Extensive philanthropies by industrial leaders, chiefly Carnegie, resulted in development of libraries, city parks, music, art and other cultural and educational facilities, with Oakland the prime center. In this period also, the Pittsburgh region gained new industrial enterprise through discovery of petroleum and natural gas deposits, and development of aluminum, electrical machinery and food processing industries. But steel became more dominant than ever in 1901 when nine leading companies were combined into the gigantic United States Steel Corporation.

In 1907, Pittsburgh ranked as the nation's sixth largest city as result of a voter-approved merger with Allegheny City, which had fallen into economic deterioration. In 1910, the Russell Sage Foundation published the six-volume Pittsburgh Survey, the nation's most comprehensive sociological study to that time. It found factory, living and other community conditions generally at a critically low level, and noted that in 1907-08: "The better neighborhoods offered no amelioration to the lot of people who lived on the Hill, in Woods Run or along the river fronts. Geographically and financially, they were and are out of the reach of the thousands."

4. 1910 - 1960: The steel-iron-coal economy of the Pittsburgh region reached its peak of industrial predominance in the years just prior to World War I. Since then, it has been in a continuous state of "relative decline," as reported by the 1959-62 Economic Study of the Pittsburgh Region. Throughout this period, in other words, economic growth in the region was consistently slower than that of the nation as a whole, in contrast to the 50-year cycle prior to 1910, and the average rate of unemployment substantially higher.

While retaining its reputation of long standing as the "steel capital of the world," the region no longer could look to steel and coal production as a primary source of new blue-collar jobs. All of the region's 11 largest basic steel manufacturing plants were erected on their present sites prior to 1911. These have been expanded and modernized; and secondary operations and small specialized fabricating plants have been constructed at other locations. But, the steel industry, decentralizing since 1911, has shifted to other sections of the country for construction of all-new, totally-integrated steel plants of major size. Thus, except in periods of war and other national emergencies, employment opportunities for steelworkers have steadily narrowed. In the meantime, production jobs in the coal industry, after reaching a peak of 82,000 in 1914, decreased to a total of 11,638 in 1960.

Further, mainly because of traditional over-dependence on steel and coal, the region's economy did not fully develop to urban requirements for diversity in career and job opportunities. Not enough new white-collar jobs, including low-skill occupations, were created to offset 50 years of absolute decline in manufacturing jobs. On a per capita basis, the region's employment rates, in 1960, were below those of other metropolitan areas of comparable size in retail and wholesale trade, transport and communication, business, insurance, real estate, professional and educational services; public administration; domestic and other personal services. Linked to that is the region's low proportion of total employment in relation to total population -- 34.6 per cent in 1960, lower than the national proportion and that of all of the other largest metropolitan centers.

The net effect can be readily seen in population trends: In the three decades prior to 1910, the region's rate of population growth was substantially higher than that of the nation as a whole; since 1910, the regional population has grown at a substantially slower rate than the nation's. Since 1930, the most productive segment of the population -- those in younger age groups (20 to 40 years)-- has been in consistent decline because of out-migration.

Thus, the region's economy failed to acquire sufficient strength either to maintain its population, or to cushion the impact of economic recession at the national level. This was most apparent in the depression decade of the 1930's when thousands of residents were forced into free food lines to avoid starvation. It was from Pittsburgh that a jobless army of 15,000 men marched to Washington to appeal for relief. However, even in the preceding boom years of the 1920's, as in earlier periods of high prosperity, a large proportion of workers' families lived in conditions far below standard.

> Within the City proper, an absence of general prosperity was especially evident in the largest part of the Hill District, which by then had grown into the region's largest ghetto of under-income and over-crowded families. One-fourth of the population then was Negro and 62 per cent was foreign-born, chiefly of Jewish, Italian and Irish descent. Home ownership was low (14 per cent); raw sewerage was discharged from houses; disease and infant mortality rates were excessive; most houses were without central heating and many did not have inside toilets. Mixed with these conditions was an extensive amount of prostitution, gambling and speakeasies. After 1930, the area became predominantly Negro.

On momentum of the post-war boom, a dozen or more major office buildings, hotels and other structures were built in Downtown Pittsburgh and Oakland in the 1920's. In that decade also, the City, in a move to relieve its pressing problem of land congestion, annexed several more areas, still largely undeveloped, in the adjacent South Hills section. In 1929, a metropolitan area plan for Allegheny County was approved by popular vote but failed to obtain two-thirds of the vote in each of the county's 62 municipalities, as required by State legislation. Thereafter, the City remained confined to 55 square miles, while the number of surrounding suburban municipalities increased to a total of 128 within the county.

In 1936, Pittsburgh and the entire region suffered the most disastrous of 112 floods of record since 1852. After flood waters receded, Pittsburgh and communities throughout the tri-state area joined in an appeal for Federal construction of nine flood control dams. Along with that, other community efforts were initiated, but suspended with the start of World War II. During the war, the Pittsburgh region produced 95 million tons of steel, one-fourth of the nation's total, and $19 billion worth of munitions and other war goods. In 1943, business, governmental, labor and educational leaders formed the Allegheny Conference on Community Development. At the end of the war, this organization, unique in Pittsburgh's history, united governmental and business interests in a highly successful drive for accelerated flood control,smoke control, industrial development and urban redevelopment.

Population Migrations and Concentrations

Foreign-Born: The earliest immigrants (traders, farmers, ex-soldiers, boatmen, frontiersmen and imported indentured servants) were of English, Scotch-Irish and German origin. After 1800 and continuing into the 1870-1910 era of industrial growth, natives of the United Kingdom, Ireland and Germany led the migration waves. Starting in the 1880's, they were joined by eastern Europeans -- chiefly from Poland, Czechoslovakia, Austria, Russia and Hungary -- in such rapidly increasing numbers as to comprise, in aggregate, nearly half of the region's foreign-born population by 1910. From 1910 to 1930, immigrants from southern Europe, primarily Italy and Yugoslavia, accounted for the region's last major increase in foreign-born population.

In the peak year of 1910, foreign-born persons numbered more than 400,000, one-fourth of the total population of the region, but from then on in steady decline. The 1960 Census shows six per cent of the total population as foreign-born and another 23 per cent as American-born of foreign parentage. The largest single nationality group is Italian, followed, in order of numerical size, by Polish, German, Irish, Czechoslovakian and Austrian. Jewish residents comprise a substantial proportion of the Polish, German, Russian and Hungarian populations of the region.

Negro In-Migrations (other races excluded, inasmuch as their combined total of persons is less than one per cent of non-white population): First Negro settlements appear to have been established outside Pittsburgh, principally in the Uniontown area to the south. By 1830, the City population of 12,500 included 453 free Negroes and an unknown number of runaway slaves. Slavery was still actively practiced, as indicated by the Allegheny City 1830 Census showing eight slaves apart from 2,801 citizens. With growth of the abolitionist movement, Pittsburgh, in the 1840's, was a major receiving station for fugitive slaves arriving by riverboat. Passage of the 1850 Fugitive Slave Law increased movement of Negroes into Pittsburgh, many continuing onward to Canada. Most of those remaining settled in the Hill District or Allegheny City (North Side). Many operated barber shops and other businesses, or worked in hotels serving river trade.

In 1860, a total of 5,400 Negroes lived in six counties of the region, with about two-thirds in Pittsburgh and Allegheny City. The Pittsburgh census of that year showed 2,725 Negroes, of whom many were single men subsisting in squatter villages subject to attack and burning by white citizens. Largest of these was "Haiti" (in the vicinity of present Crosstown Boulevard where Downtown extends into the Lower Hill). Just beyond (in Middle Hill area) was "Lacyville," site of some of the City's finer homes. After the Civil War, Negro migrations followed in the pattern of the European migrations, though at slower rate. Large numbers were imported from the South to lay track and work in railroad yards. The fastest rate of increase was in the 1890-1900 decade, when the Negro population grew by 85 per cent to a total of 36,000 in the region.

The last major inflow of Negroes was stimulated by the South's sagging cotton economy in 1915 and the North's World War I industrial surge. In 20 years the region's Negro population more than doubled, reaching 108,000 in 1930. Since then, Negro in-migration has been at a relatively low level and, in large measure, the result of overflow from Detroit, Cleveland, Chicago and other Northern urban centers offering substantially greater job opportunity.

In 1960, the four-county metropolitan area population included 161,500 Negroes, with 100,692 of those in the central City and 33,430 largely concentrated in Braddock, Rankin, Homestead, McKeesport and a few other industrial communities of Allegheny County.

Prior to 1950, over three-fourths of the Pittsburgh Negro population resided in the Hill District, East Liberty and adjacent Homewood sections embracing four of the 32 City wards. Of the remainder, most were part of smaller concentrations in North Side, Beltzhoover (South Hills) and South Oakland. Half of the 1950 Negro population lived in the constricted Hill District area between Downtown and Herron Hill-Schenley Heights (Upper Hill neighborhoods which until the 1930's were closed to Negroes as well as Jews). In the 1950-60 decade, nearly 1,900 families (one-third white) moved out of the 95-acre Lower Hill redevelopment area. Of 1,239 Negro families originally in that area, 788 were traced in initial moves to the Middle and Upper Hill, nearby Bluff and Soho area -- most (447 families) going into low-rent public housing communities. In the same decade, the Middle Hill population (not including Lower Hill redevelopment area) decreased at a rate of 2.2 per cent per year. From 1960 through 1964, the rate of decline, according to an Urban Redevelopment Authority survey, increased to 5.2 per cent per year.

Population Mobility: As noted previously, Pittsburgh neighborhoods and, in many cases, entire towns developed along ethnic lines. Slavic people of differing national origins populated mill, smelter and coal-mining communities throughout the region. Within the central City, they formed solid and relatively stable concentrations in such sections as Lawrenceville, Bloomfield, South Side, Hazelwood and parts of the North Side. Germans settled in the North Side and later Mt. Washington. The lower two-thirds of the Hill District, after having been sparsely populated by more affluent families and Negroes, was the largest reception area for European Jews and Italians arriving in the 1880-1910 migration waves. Though scattered throughout the City, a large segment of the Irish population, including those forced out of the Point area by developing business, could be found in the Hill District and Oakland neighborhoods.

In the early 1900's, the Jewish population was predominant in the Hill District, where some 35 synagogues were located at one time. In 1895, the Irene Kaufmann Settlement was established there and rapidly developed into a major center of educational, health and social services (including "free baths") primarily geared to needs of the new Jewish immigrants. The City's oldest settlement, Kingsley House, had moved from the Hill to East Liberty to serve the growing population there, including many Italians. Beginning in the 1920's, as income levels rose, Jewish families departed the Hill District in increasing numbers. Prior to 1950, they were restricted in their choice of housing, essentially, to four City neighborhoods -- the Hill, Oakland, Squirrel Hill and a section of East Liberty. While Squirrel Hill is its largest residential-business center, the present Jewish population (approximately 10 per cent of the total) is scattered throughout East End and a number of suburban communities, mainly in the East Hills and South Hills.

The Italian population, for some years confined in large part to the Hill District neighborhood contiguous to Downtown, Oakland and East Liberty, is also now widely diffused among newer suburbs. Considerable movement of Italian families was stimulated in the mid-1950's by the Lower Hill redevelopment project, followed by the Bluff Street (adjacent to Lower Hill) and East Liberty renewal projects.

Racial Migrations: In the meantime, larger Negro concentrations developed in two East End wards (comprising Homewood-Brushton and part of East Liberty). Between 1950 and 1960, the white population in those two wards decreased from 41,427 to 20,845, while the Negro population more than doubled, rising from 14,314 to 28,845. These changes resulted from large-scale population exodus from the central City. In the 24-year period from 1940, over 135,000 residents, mostly white and of middle-class status, left the central City, while the City Negro population, doubling in proportion to the total, increased by 40,000. Forty-nine other older, industrial municipalities within Allegheny County also suffered major losses of white population. These declines were accompanied by a 24-year increase of 300,200 persons in the overall suburban population of Allegheny County, obviously reflected in the growth of new suburbs with plentiful supply of undeveloped land to convert to housing sub-divisions. Among the fastest growing suburbs are Monroeville, Penn Hill, Bethel, Whitehall and a number of North Hills communities.

With rare exception, the new residential sub-divisions have real estate lines firmly drawn against Negro buyers and renters. Where housing has become available to Negroes, including those in middle and upper income ranges, new concentrations of racial segregation have developed. Within the central City, approximately 80 per cent of the Negro population resides in eight of 32 wards. Yet, a pattern of diffusion is apparent in Census data which shows the following:

- In 1960, Negroes resided in all 32 wards; half had less than 1,000 Negro residents; and seven had fewer than 500; 10 had Negro populations ranging from 1,000 to 4,000.

- In the 1950-60 decade, 14 of the 32 wards increased in Negro population by more than 25 per cent, while 11 showed decreases.

Since 1960, it is apparent that movement of the Negro population is expanding primarily in two directions: (1) northward, through most sections of the North Side; and (2) in larger numbers, eastward from the Hill District, into Oakland, East Liberty, Garfield and Lincoln Place, throughout Homewood and Brushton, and into neighboring sections of suburban Wilkinsburg and Penn Hills. A few City neighborhoods (in the South Hills and at the eastern extremity of the City), after maintaining racial balance for some years, have become entirely or predominantly Negro since 1960.

Population Characteristics

Racial Distribution	White	Non-White (a)
Pittsburgh	502.593	101,739
Allegheny County	1,492,763	135,834
(b) SMSA	2,241,909	163,526

Housing Summary
City of Pittsburgh

	1960	1970 Projection
All Housing Units	196,500	187,500
* Vacancy Rate (gross)	4.1%	6.7%
Owner-Occupied Units	92,000	90,000
Renter-Occupied Units	96,500	85,000
White Owner-Occupied	52%	55%
Non-White Owner-Occupied	30%	37%
Median House Value	$ 11,000	$ 12,100
Median Gross Rent	$ 68	$ 81
Median Income (all persons)	$ 4,625	$ 5,600

(* Includes sub-standard dwellings.)

Other Facts Relative to City Housing Supply

- 62% more than 45 years old.
- 22% deteriorating or dilapidated.
- 74% of owner-occupied dwellings changed hands between 1940 and 1960.
- 75.5% of City dwellings in 1960 had central heating (compared with 33.2% in 1964 in largest portion of Hill District).
- 19,500 units overcrowded by 1960 Census definitions.
- As result of 1950-60 population loss, trend has been toward consolidation of dwellings to larger units within older structures previously converted to multi-family use; overcrowding is thus being reduced.
- Building Permit records indicate that 20,468 private dwellings and 3,698 low-rent public housing units were constructed in 16-year period through 1965. Largest proportion was apartment units; most single-family houses built in that period are owned by families in higher income group.
- Between 1960 and 1964, annual rate of residential construction dropped from 1,660 to 1,325 units per year (905 private and 430 public). (By comparison, the new construction rate in the overall Hill District was less than 10 new dwellings per year from 1940 through 1964.)

POSITION STATEMENT

RELOCATION ACTION MOVEMENT

Presented to:

Spiro Agnew, Governor of Maryland

Thomas D'Alesandro, 3rd, Mayor of Baltimore, Maryland

Jerome Wolfe, Director of State Roads Commission

Robert Weaver, Secretary of Department of Housing and Urban Development

Alan Boyd, Secretary of Department of Transportation

Lowell K. Bridwell, Federal Highway Administrator

William Shaeffer, President, City Council

Paul Dorf, Senator of 5th District

Eugene Feinblatt, Chairman BURHA

Edgar Ewing, Commission Director, Baltimore Model City Program

Joseph D. Buscher, Deputy Attorney General for State Roads Commission

David Barton, City Planning Commission

Russell Allen, City Solicitor

Walter Lively, Executive Director of Urban Coalition

Relocation Action Movement
520 North Monroe Street
Baltimore, Maryland 21223

Chairman: John Wells
Co-Chairman: Clarence Landrum
Secretary: Mrs. Marie Mister
January 16, 1968

Statement approved by Executive Committee of the Relocation Action Movement. Prepared with assistance of Stuart N. Wechsler, Associate Director, CORE Target-City, Mary Alice Risser, VISTA Volunteer, and Carol Anderson, VISTA Volunteer.

INTRODUCTION

In the name of progress various expressways and highways are being planned for the city of Baltimore. Rivers of concrete are to be pushed through parks, areas of historical significance and most importantly serve as a source of destruction for many residential areas.

It is no coincidence that most of the neighborhoods slated for destruction are black. For too long the history of Urban Renewal and Highway Clearance has been marked by the repeated removal of black citizens. We have been asked to make sacrifice after sacrifice in the name of progress, and when that progress has been achieved we find it marked "White Only."

The members of RAM are residents and homeowners who live in the Expressway path and adjacent areas. We have united not to stymie progress but to demand justice; we do not ask for patronization but for an end to victimization.

We are presenting this position paper in the hopes that the city will wake up to its responsibility and avoid the damaging effects that thoughtless renewal projects can have. The city of Detroit stands as an example of what happens when massive numbers of people are uprooted for a prosperity they are not permitted to participate in. We will make our stand in the streets and the doorways of our homes. Unless black people's demands are satisfied the Expressway WILL NOT be built.

I. RAM seeks an end to the financial victimization by the State of tenants and owners-occupants whose homes will be condemned for the proposed East-West Expressway.

Engineers, Highway builders, Councilmen and city officials concerned with meeting a budget and a timetable are adept at citing figures and percentages. To justify the acquisition of property at the ridiculously low price they are offering now the advocates for the present method would call on their legions of numbers and figures providing "infallible" proof, in their estimation, of the necessity for quick acquisition and condemnation regardless of the human cost involved. We reject this "proof" out of hand. There can be no justification for the amount of misery and deprivation that has resulted and will continue to result as long as poor black and white people are victimized in the name of progress.

Proof of this victimization can be found in a letter from Acting Director of BURHA, Edgar Ewing to the City Solicitor's office dated November 1, 1967.

> "The average replacement cost was found to be approximately $3,000 over and above the amount received from the City for the old property. Significantly, however, the average additional cost was different in the two areas. In the I-70 (Negro) area, it was $3,900; whereas in the I-95 (White), it was $2,500. In addition we found that each owner had to pay settlement costs, refinancing charges, increased interest, etc. These costs add eight to ten percent of the value of the replacement property to the cost of obtaining replacement housing. In summary owner-occupants displaced to date by the current Expressway program have had to pay an average of $3,500 for comparable replacement housing in addition to the amount they received from the purchase of their former homes by the City.
>
> ". . .the above figures are based on our expressway experience dura period in which the supply of housing has been adequate. With the substantial relocation workload which is contemplated during the next few years, we can expect the supply of standard houses available for purchase to diminish sharply, increasing the cost of purchasing comparable property."

The facts cited above do not in themselves give an indication of the extent to which the financial loss reaches. They cannot indicate the loss that a man undergoes after purchasing a house in 1948 for $6,500 and skimping and slaving for 20 years to make the mortgage only to have the state offer a pitiful $4,000 for it in 1968. Another owner paid $6,950 in 1949, the actual sum of money paid on the mortgage amounted to over $13,000 and now the state is coming up with the"munificient"sum of $5,200 to take his home.

What do these figures mean in children deprived of education, in "dreams deferred", in the quickening erosion of the belief that America is a land of opportunity? By stealing our homes you also steal our faith in America.

In addition to the owner-occupants those of us who are tenants also suffer. We do not receive an adequate amount of money to move and the cost of searching for new and decent homes is a lost expense for us.

RAM therefore proposes that:

1. A formula be worked out that would provide all homeowners relocated from the Expressway area with enough compensation so that they can relocate in equivalent housing without any increase in debt and without having to forego any other necessities.

2. Regardless of the final route, the State buy the homes of all those residents in the proposed route who wish to sell. To accomodate those people who have already made plans to move.

3. As a supplement or alternate to the above we suggest the development of plans and programs that would allow homeowners to trade their present homes for equivalent homes. This could be done by utilizing condemnation payments in the form of financing for housing development under 221(d)3.

4. In regard to tenants; expenses for tenants should cover the complete cost of moving. Included in this would be transferring of furniture expenses incurred while looking for a new home, baby sitting services, etc.

II. RAM seeks assurance of decent housing for all residents who will be relocated if and when the Expressway is built.

Standing in the way of the Expressway are upwards of ten thousand people. Although the engineers view people as just an other obstacle, like a hill to be leveled or a valley to be bridged, the fact is that those of us in the route right of way shall not

be moved until we can be guaranteed decent housing. At this point because of a variety of reasons, the low rate of compensation we are receiving and the lack of housing available, this guarantee is not forthcoming.

The problems are not insurmountable. The former reason can be eliminated by an act of the Maryland Legislature; the solution to the latter is more complex but still attainable.

The housing market for black people is limited by segregation; infested by deterioration in many areas and over priced in others. Realtors stand ready to boost the price of present housing as a result of the shortage that is bound to result from the widespread dislocation now envisioned. Inner-city housing suffers from old age and lack of upkeep by absentee owners. Vacant houses line the streets, untaxable and adding to the marked decline of many areas. The city appears unwilling or unable to do anything about adding these structures to the depleted market.

The efforts made by the city to alleviate the plight of the residents have been feeble and ineffective. The BURHA relocation trailer has been unable to deal effectively with renters or homeowners, giving locations of homes that are either overpriced or substandard. The lack of city controls have put people who are seeking to relocate at the mercy of greedy real estate men and money grubbing landlords. We feel that our confort and well-being is as necessary to the construction of the Expressway as is the safety factors being planned for motorists.

RAM therefore proposes that:

1. Further condemnations be halted until a open housing ordinance is passed through both the City Council and State Legislature.

2. A survey be made immediately to determine:

   a. Sights for new housing
   b. Areas for possible rehabilitation, paying specific attention to housing presently vacant.

3. New housing and rehabilitation work be contracted as much as possible to local private sponsors in much the same way as is being done in the Gay Street I area. The emphasis shall be on home ownership.

4. The State and City utilize existing housing programs and develop others to provide for financing homeowners and new construction to place it in reach of residents who will be relocated.

5. Automatic rent subsidies be given those people who do not wish to buy their own homes. That this subsidy amount

to the difference between 20% of the family's income and the amount of rent they will pay for the gross rent in a standard housing unit of their choice.

6. The plan formulated by the Attorney General's office to have high-rise projects built above the Expressway be scrapped unless people who are being relocated express a desire to live in such structures.

III. RAM demands an end to the practices that are destroying homes and heighborhoods within the Expressway route and adjacent areas.

The Expressway will cut a wide swath through the City of Baltimore. Present plans and methods will lead to an ever increasing area of deterioration, as the conditions that breed slums radiate out from the Expressway. The vacant houses, haphazardly boarded up, serve as a target for vandals, a breeding place for rats and other vermin and a source of lowered property values for homes in the surrounding area. Sanitation services, that should have been increased, appear to have been reduced.

The destruction of two elementary schools in the corridor will add to problems, already considerable, of the other area schools. A post office has been removed. Echo House, which has made great strides toward developing a sense of community, will be forced to relocate into another area. Coupling this with the loss of the many commercial establishments in the corridor it is safe to say that the State of Maryland is in the business of community destruction.

Furthering the march of deterioration has been the refusal of the BBI to issue repair permits for homes in the proposed route. We view this refusal as a means by which the city hoped to lower our property values and our resolve to stay in the area.

The route itself is open to question. Why is the area that is passes through 89% black? Why does it veer northwest, west of the Pennsylvania Railroad tracks, thus taking the heart out of one of the most stable communities in Baltimore, a community that is well over 95% black? These homes could be saved if the route continued due west. If the present route inequities are not changed then Baltimore, the City that prides itself on having remained calm when violence was flaring up all over the country, opens itself to charges of discrimination and thus issues the invitation for violence.

RAM therefore proposes that:

1. The present route, from Pulaski west to the City Line be changed. We recommend the following alternates:

a. The PRR tracks from Pulaski into Leakin Park and through Leakin Park to the City Line.
b. Travel due west, south of Franklin, going through Western Cemetery using a tunnel or the cut and cover method.

2. The Expressway be built below grade with a cover. The cover to be used as a means of unifying the community through such methods as outlined elsewhere in this position paper.

3. City services such as police and sanitation be upgraded to combat ever spreading deterioration. Particular attention should be payed to the large number of rats now present in areas in and around the Expressway area.

4. The moratorium, now in effect, be extended to eliminate any and all contact including visits, letters or phone calls from State accessors and agents from the State Roads Commission.

5. If the above recommendations can not be acted upon, the plans for the Expressway be dropped and the area already cleared be designated an urban renewal area.

6. Efforts be made to save areas of historical importance in the Expressway path.

IV. RAM seeks to provide a vehicle for citizen participation in the policy formulation and planning of the proposed Expressway.

Like many other government programs, the Expressway is surrounded by a great deal of rumors, myths and misconceptions. Lack of knowledge abounds on both sides of the issue. The community waits pensively for the roar of the bulldozer and like Adam and Eve turned their backs on the Garden of Eden, so will long time residents be forced to vacate their homes when the vengeful finger of government points the way. On the other side government officials dealing from the limited vantage point afforded by entrenched bureaucracy manipulate, negotiate and then regurgitate forth plans and programs that are as necessary to the needs and wants of the community as a diet would be for Twiggy.

A specific example of this approach is the high-handed method that the Attorney General's office used to decide that black people wanted high-rise apartment houses built over the Expressway. Other indications are: the failure of the 1962 engineering study to take into account any of the community's needs; the lack of communication between State and community ever since the highway was first planned in the late 40's; and now the unwillingness of the engineers and highway planners to allow the Design Concept Team

which appears to be the one group interested in the effect that the Expressway will have on the communities it passes through the necessary flexibility to make changes in the route.

It is a shame that men in such powerful positions are unaware of the fact that the day when white folks downtown can dictate policy for the black community are over. Unless government officials become aware of this fact then the results of white paternalism and exploitation can lead only to the bloody field of civil disorder.

RAM therefore proposes that:

1. The government recognize the legitimate interests of the community and involve the residents in policy making. Groups like RAM should have a voice in all decisions concerning the Expressway and related programs.

2. The Design Concept Team be granted the power to make a route study, taking into consideration the effect that the road will have on neighborhoods it posses through.

V. RAM proposes that the Highway System be used as a means to involve the black community in a program of economic and social development.

The early economy of our country was based on the wealth accumulated by the plantation system of the South. An accumulation that was made possible through the use of black slave labor. As time progressed the economy changed, till wealth was accumulated through the factories of the growing northern cities. In the earlier stages of the growth of industry the wealth was made possible through the exploitation of immigrant labor. But being white these immigrants were able to escape the sweat-shops and were replaced by black citizens who had become victims of a technolocical revolution on the farm.

Today the exploitation exists on all levels. Fat contracts from Urban Renewal Programs and Highway Programs go to the contractors, invariably white and with connections in City Hall and the State House. Though the City glories in its progress, the black community is treated like a defeated foe. Homes seized, communities razed and residents forced to pay indemnification to the victor, in the form of money lost through unfair compensation allowances.

This does not have to be the case. With a little bit of foresight and imagination the local, state and federal governments can take advantage of the manpower and brain resources that remain untapped in the ghetto. If the Expressway is built, it should be designed in such a fashion that it can serve as the base for the

construction of badly needed community services such as recreation centers, small neighborhood shopping centers, banks, post offices, etc., and other services desired by the surrounding community.

RAM therefore porposes that:

1. Special consideration be given black contractors in all poases of Expressway construction. . .from demolition to reconstruction.

2. Federal and State job training programs be developed in conjunction with Expressway work; with unemployed and under-employed from the area receiving priority in enrolling for such programs.

3. Local economic development corporations, consisting of community residents, construct and operate shopping centers, and necessary community services on the Expressway cover.

Mass Transportation

Although many of the city authorities and advocates of Expressways have trumpeted the benefits of the Expressway; it is quite obvious that these concrete rivers benefit only whose who have the wherewithal to purchase and maintain automobiles. The ease of travel on the highways providing confort on the trip to work and speed on weekend journeys acts as a palliative obscuring the deficiencies in transportation that many of our citizens face. For there are many who can not afford the luxury of an automobile, who are limited to their immediate surroundings by the inefficient, obsolete system of mass transportation here in Baltimore. The daily trip to work becomes an exercise in complex logistics subject to constant mechanical breakdown and obstructions due to the weather. At best mass transportation in Baltimore is comparable to an inefficient livestock hauling operation and at worst little better than walking.

Working people in general and the poor and Negroes in particular have been deprived of many work, recreation and social opportunities because of the failure of public mass transportation to fulfill its purpose.

We therefore urge that the building of the Express (if and when it is constructed) in no way hinder the development of an integrated mass transit system for Baltimore. We further urge that the current study under the governor's steering committee on Mass Transit include the specific needs in Baltimore, of the inner-city residents, and that implementation of the transit plan be considered as one of the main priorities in the improvement plans for the city of Baltimore and the State of Maryland.

URBAN RENEWAL SERVICE

TECHNICAL GUIDE
16

design objectives in urban renewal documents

URBAN RENEWAL ADMINISTRATION, WASHINGTON, D.C. 20410

The comprehensive publications program of the Urban Renewal Administration consists of four parts:

URBAN RENEWAL MANUAL Official Federal policies and requirements essential to implement the Federal urban renewal law. Intended for persons responsible for various phases of local renewal programs. Available on a subscription basis from the Superintendent of Documents, Washington, D.C., 20402.

THIS IS A TECHNICAL GUIDE Advice and recommended procedures for carrying out local urban renewal programs. Intended primarily for professional, technical, and administrative staffs at all levels of government; consultants; and others actively engaged in the urban renewal process. *NOTE: Specific examples, cited as exhibits in Technical Guides, are by way of illustration only. Appropriate modifications may be necessary to make them applicable to other situations.* Available from the Superintendent of Documents, Washington, D.C., 20402.

URBAN RENEWAL BULLETIN Primarily helpful informational and experience reports, directed to various urban renewal audiences or combinations of audiences, depending on the subject material. Most will be designed for the nonprofessional concerned with or involved in the urban renewal process. Available from the Superintendent of Documents, Washington, D.C., 20402.

URBAN RENEWAL NOTES A bimonthly digest pointing to good techniques and unusual local approaches and success, and including summaries of pertinent URA program developments and publications. Articles will be brief paragraphs, often noting source of further information. Serves as a fact and idea exchange for technicians and novices alike. Available free from the Urban Renewal Administration, Washington, D.C., 20410, if you ask to be put on the mailing list.

All the last three of these publications are issued as a part of the Urban Renewal Service authorized by the Housing Act of 1954 to provide guidance for communities carrying out urban renewal activities.

May 1965

This Technical Guide for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402. Price 25 cents.

DESIGN OBJECTIVES IN URBAN RENEWAL DOCUMENTS

The role of design objectives in urban renewal
Design objectives in the Urban Renewal Plan
Design objectives in the disposition documents
The content of design objectives
Illustrative site plans
Design and development plans
Design objectives and re-use value
Preparation of design objectives
Appendices

Design objectives in urban renewal documents specify a community's goals for the design of an urban renewal project. They form the necessary link between the hopes and intentions of a locality and the physical outcome of its renewal efforts. Design objectives provide this link by governing the quality of architecture, site planning, and urban design within the project area.

All of the devices open to Local Public Agencies (LPAs) for achieving good design are based on design objectives set forth in the Urban Renewal Plan and the disposition documents. These statements implement design oriented urban renewal planning by guiding many aspects of project execution. Their most important function occurs in the selection of redevelopers and in the review of construction plans.

This Technical Guide considers both the substance of design objectives and ways in which they come into play during the renewal process. It is intended to provide guidance during all phases of renewal work from the beginning of project planning to the completion of project execution.

The role of design objectives and their relation to the urban renewal documents is discussed first because their uses largely determine what they will cover.

the role of design objectives in urban renewal

Design objectives in urban renewal documents have a variety of important, specific purposes:

- Design objectives which appear in the Urban Renewal Plan officially inform property owners, residents, prospective redevelopers,and the public at large,about the locality's goals in the urban renewal area.

- Design objectives stated in the Urban Renewal Plan may authorize additional, more detailed objectives and criteria to appear later in the disposition documents.

- Design objectives in both the Urban Renewal Plan and the disposition documents establish criteria for use in the selecting of redevelopers and in the disposition of land by competition on other than price basis. See URA Technical Guide on design competitions for explanation.

- Design objectives in both the Urban Renewal Plan and the disposition documents provide the basis for review and approval or disapproval of redeveloper's plans and proposals. This process is covered in detail in URA Technical Guide No. 15, "Design Review in Urban Renewal".

- Design objectives also provide a basis for advisory services extended to redevelopers. Again see URA Technical Guide No. 15, "Design Review in Urban Renewal," for further information.

- Design objectives set forth area-wide goals to guide design advisory services furnished by LPAs to property owners in conservation areas. The value of design objectives in rehabilitation projects is described in the URA Technical Guide covering design services.

- Design objectives in the Urban Renewal Plan can establish, in part, the basis for eligibility of certain design features in the provision of project improvements.

- Design objectives can assist the LPA in achieving design goals for public buildings and other construction not directly controlled by the Urban Renewal Plan or design provisions of the disposition documents.

In order to understand and properly frame design objectives it is necessary to consider their relationship to the two types of urban renewal documents in which they may appear: the Urban Renewal Plan and the disposition documents.

design objectives in the urban renewal plan

In the Urban Renewal Plan design objectives serve two distinct purposes.

I. Design objectives provide controls on development tailored specifically to the demands and opportunities of urban renewal. They are controls responsive to *qualitative* rather than only quantitative goals.

II. Design objectives establish criteria governing certain project execution activities.

These two functions, land use control and project execution criteria, usually overlap so that a single design objective tends to serve both purposes at once. A typical provision—for instance, a requirement providing that a commercial development include a traffic-free, landscaped pedestrian mall—controls land use in that it places limits on the use of a particular redevelopment parcel. At the same time it governs project execution activities by providing a criterion for use in redeveloper selection and approval of his construction plans.

Another type of design objective provides for architectural or design review of all redevelopment plans. This too is both a control and an execution criterion. Its influence on project execution is clear. As a control such a provision seems less familiar, and it is in fact a departure from traditional planning practice. But it is a control in that it limits or restricts land use to development designs which meet review criteria. Experience shows design review to be an effective direct control over design quality.

In the past, land use controls in the Urban Renewal Plan drew largely from the conventionalized "minimum standards" familiar to planners from zoning practice. Experience with this type of control in urban renewal indicates that it may prove inadequate in two important respects. First, it may be too rigid to meet the real needs for flexibility during execution of a project. Second, and most important, it provides no clear and positive influence on design quality; it may actually be

negative. Properly drawn design objectives, however, establish controls which deal effectively with qualitative goals. At the same time they permit maximum flexibility to adapt to the legitimate and unforeseen problems of project execution.

Many past problems with urban renewal land use control stem from a lack of understanding of the special opportunities for creative regulation afforded by the renewal process. Experience with the public regulation of land use is limited largely to "police power" controls under zoning and subdivision regulations. Such controls are founded upon the twin principles of uniformity of application, and withholding development rights—and thus influencing land value—only where public health, safety, morals or general welfare is threatened.

Land use control in urban renewal starts from a sharply different premise. The requirement that land be valued for its planned uses automatically recognizes the impact of Plan controls on potential development rights. The appraisal and disposition processes take into account any effect on land value. Thus the nature and intensity of controls need not be limited by a concern which restricts the exercise of "police power" zoning and subdivision regulation. For the same reason, there is no requirement for uniform application throughout a project area. Each parcel may be controlled independently and its value determined accordingly. Thus, Urban Renewal Plan controls and design objectives may be tailored to fit the specific purposes and goals of each project and each tract within the project.

Design objectives afford great leeway for new and imaginative ways of guiding urban renewal development. In many cases LPAs find "mechanical" limits on height and bulk, specifications for yards and set backs, even the detailed spatial location of listed uses can be discarded. Instead, they may use direct statements controlling only the relevant aspects of the intended development. Flexibility is built in. Site planning and architectural quality are regulated through design review

in a way analogous to the administration of planned unit zoning, where control is based on the merits of the design rather than adherence to a set of arbitrary minimums.

Control through design objectives may follow either of two approaches to the questions of flexibility and degree of regulation. On one hand, the controls may be very specific and tied to clear, detailed plans tightly governing eventual development. On the other hand, with controls limited to matters of community-wide importance, an open plan results which provides maximum opportunity for determining the details during redevelopment. There is a broad range of intermediate levels which combine both "tight" and "open" approaches. If the two extremes of "tight" and "open" control are clearly understood, the intermediate possibilities are readily formulated.

A comparison between various aspects of the two approaches to controls further explains the nature of design objectives in the Urban Renewal Plan.

OPEN	TIGHT
Design objectives limited to large scale community planning considerations.	Design objectives geared to the specific features of a thoroughly worked out site plan and architectural scheme.
Maximum freedom to develop the design during project execution and redevelopment.	Little freedom to vary from the established design during project execution without amending the Plan.
Much flexibility to adapt to changes and new opportunities in the land market.	Little flexibility to meet a changing market situation.
Little or no architectural study needed during Plan preparation. It comes later.	Requires costly and detailed architectural studies.
Standard land use and marketability studies provide an adequate basis for planning.	Market analysis must be sophisticated and detailed, and it may be extremely difficult because of the time lag involved.
Controls and design objectives concentrate on performance standards and other types of flexible limits.	Controls and design objectives are complex and highly specific. Land use plan establishes an actual architectural layout.
Public interest in good design assured by special procedures during project execution such as design review and design competition for redeveloper selection.	Public interest in good design spelled out by a detailed design built into the Urban Renewal Plan.

The open approach is appropriate in most project situations. The tight method is appropriate in few situations, most notably in projects which include important civic and government centers.

Clearly most Urban Renewal Plans and their design objectives will fall somewhere between the two extremes of "tight" and "open." APPENDIX A illustrates "open" design objectives in an Urban Renewal Plan, and APPENDIX B illustrates "tight" ones.

Design objectives in the Urban Renewal Plan have another purpose beyond the control of development. As stated at the beginning of this section, they serve to establish the criteria governing certain project execution activities. This means that they should spell out the factors to be used and the general procedure to be followed in design review and the evaluation of design competition submissions. Details of these procedures should not be set forth in the Plan. These are best handled in the disposition documents.

Design features of project improvements must be found to be in scale with the stated objectives of the project contained in the Urban Renewal Plan. This refers to the design elements of streets, street-furniture, park, playground, and right-of-way improvements specifically exempted in the Urban Renewal Manual from conformance with local standards.

Better design standards for supporting facilities and public buildings outside the purview of the LPA may be encouraged by Plans which include design standards stating desired goals for these developments. While stated objectives do not actually "control" such development, the official approval of all Plan provisions gives them a powerful effect even though based on persuasion.

Design objectives may provide a basis for advisory services to property owners in conservation areas, and for the coordination of private actions with public improvements. In informal contacts with redevelopers and potential redevelopers, design objectives provide a useful frame of reference.

Often the payoff in good design from persuasion and advisory service exceeds that from such formal processes as design competitions. Explicitly stated objectives will make these contacts even more fruitful.

LPA experience demonstrates a great range of opportunities for building good design into the renewal process through design objectives in the Urban Renewal Plan. Although much has been accomplished, the field remains open. New and creative approaches await exploration.

design objectives in the disposition documents

Design objectives supplemental to those appearing in the Urban Renewal Plan may be incorporated in the disposition documents when necessary to effect the objectives of the Plan. These provisions may refine and extend the Plan objectives and make them more explicit. Disposition documents must not conflict with the Urban Renewal Plan.

Disposition document design objectives closely parallel the types used in the Urban Renewal Plan. They too may be "tight" or "open," or combinations of the two.

Competition criteria and design review principles are design objectives which must be made clear and explicit in the disposition documents. Prospective redevelopers have a right to know what to expect. Furthermore, simply stating substantial design goals tends to elicit high performance.

Disposition documents may include *design and development plans.* These are specialized types of flexible but "tight" design controls. They receive more extended treatment in a later section of this Guide.

In most cases the design objectives should appear in a separate statement accompanying the other disposition documents in the developer's packet or the bidding documents furnished to all prospective redevelopers. This statement may be combined with an extract from the Urban Renewal Plan controls and design objectives for the tract in question. This has the advantage of providing in a single, easily handled document all relevant controls, regulations, design objectives, and criteria governing the disposition parcel in question.

the content of design objectives

Design objectives incorporate a very broad range of content from overall functional requirements and development intensities to details of architectural quality and street furniture. No short discussion can cover all the possibilities. This Guide simply suggests their range.

Design objective content varies fundamentally depending upon whether the objectives are used within the framework of "tight" or "open" controls. Generally speaking, within a "tight" format design objectives deal directly with matters of substance while under an "open" format they work indirectly by establishing special procedures for controlling quality during

project execution. Examination of the following categories of design objectives, and the various examples drawn from actual practice, will demonstrate this point.

OPEN	TIGHT
Functional Requirements	
Uses listed in the broadest possible terms and located only where the location within the project concerns the interests of the whole community or has important repercussions on the area outside the project or parcel in question. In any case, final use and location details subject to LPA approval. *Example:* Neighborhood shopping in a residential tract left floating in the Plan, its final location determined by the redeveloper with the LPA's approval. Approval details set forth in disposition documents.	Specific uses spelled out and tied down to specific locations, even to definite locations within building areas. *Example:* A particular parcel required by the Urban Renewal Plan to contain a department store complete with specific parking, loading, and pedestrian facilities. Disposition documents set forth for each parcel an order of preference among uses allowed in the Plan.
Intensity of Development	
Simple, direct measures of development intensity tailored to each parcel, tract or project and coupled with LPA design approval. *Example:* Intensity for a residential parcel controlled by simply stating the allowable number of dwellings on the parcel; commercial development limited by stating the allowable floor area.	The number of buildings, their type, size, shape, height, and coverage stated in detail along with any desired use limits such as dwelling size and allowable occupancy. *Examples:* (1) the allowable size and capacity of a high rise building set forth in the Plan, along with all the usual limits on density, coverage, floor-area-ratio, etc. (2) Site plan and typical unit design given in the disposition documents for a moderate income residential tract.
Note that such controls as coverage and floor area ratio, used to control intensity indirectly, often need not be used when direct controls are combined with design review in the Urban Renewal Plan. Indirect controls are often less flexible than direct ones and may impose unwanted and unforeseen limits on architectural design.	
Site Layout	
Functional, performance and qualitative goals stated but the actual site plan left to the redeveloper, subject to LPA approval. *Example:* Exposure, privacy, circulation, access and outdoor living criteria for a residential parcel set forth as the basis for design review of the redeveloper's site plan.	A site plan presented graphically states the design objectives. *Example:* A shopping center site plan fixed all principal building locations, pedestrian spaces, malls, parking, major landscaping, and similar details.
Circulation	
Only those circulation elements required by off-site considerations actually mapped, internal circulation covered by performance requirements. *Example:* Urban Renewal Plan leaves frontage streets and access easements to redeveloper to locate subject to LPA approval.	Complete circulation system laid out in the Urban Renewal Plan. *Example:* All elements of the subdivision plat for a residential project contained in the Plan.

OPEN	TIGHT
Building Bulk and Massing	
Objectives emphasize off-site considerations and provide maximum architectural freedom within the site. Redeveloper free to do design subject only to LPA review and approval. *Example:* The buildings in an in-town, high-rise apartment tract required to have tower profiles creating a distinctive silhouette; to form a visual terminus to certain main streets; to be a cohesive architectural group yet allow each building to be separately identifiable; to take advantage of the panoramic views from the site; to relate to one another in such a way as to insure privacy, light and air for each dwelling. Height, set backs, side yards and all indirect controls on building massing omitted. Design review required.	Building form established more or less specifically in the design objectives. *Examples:* (1) Scattered site row houses required to line up with neighboring existing houses and continue wall line and cornice height. (2) Urban Renewal Plan objectives require three story continuous buildings of set height to line a small public square; they are required to have apartments over arcaded stores with set back fronts.
Architectural Quality	
Architectural quality measured by an expert design review panel which recommends action to LPA. This process is spelled out in the URA Technical Guide on design review.	No satisfactory approach to specifying architectural quality exists. "Tight" controls attempting to do so should be abandoned in favor of the design review process. Such phrases as "design must reflect the most advanced architectural expression and technique so as to signify great esthetic quality" have little meaning and should be avoided.
Building Materials, Signs, Street Furniture and Details	
These items handled by design review in the same manner as architectural quality.	Materials may be indicated in disposition documents. Signs limited to certain dimensions, materials, alphabets, and letter sizes. Street furniture and site details worked out.

This list covers only a small fraction of the possible types of design objectives. Actual conditions obtaining in each project and on each disposition will govern the objectives and the way in which they are drawn up. It follows that an "objective" framed in such generalized terms that they might apply to any project ordinarily can be considered inadequate or without significant meaning. Whatever the situation in a given project, four basic principles must always guide preparation of design objectives.

- *Clarity, Precision, and Lack of Ambiguity*
  The whole effort rests upon achieving these qualities.
- *Relevant Limitations*
  Superfluous limitations serve no purpose and actually may restrict the scope for creative design and unncessarily reduce re-use value.

- *Flexibility in Matching Objective to Purpose*
  Uniformity of control has no intrinsic value in urban renewal. Adjoining parcels may be treated differently. Tight and open approaches may be combined in different parts of the same project.

- *Realism in Meeting Market Demands*
  A design objective has no meaning unless acceptable to the development market. Realism in assessing the market is essential to the preparation of attainable and successful design objectives.

If these principles are observed, and design objectives shaped precisely to need, good urban renewal design can readily become a practical accomplishment.

illustrative site plans

Illustrative site plans graphically represent the intention of the design objectives and controls contained in the Urban Renewal Plan. By showing a desired site arrangement, and an acceptable architectural composition, such plans make objectives clear in unmistakable terms. Furthermore, during project execution, the illustrative site plan provides a guide for use in design review, redeveloper selection, and in working out certain aspects of project improvement and supporting facility design.

Since a complete site design must be prepared in developing a "tight" Urban Renewal Plan, the illustrative site plan simply portrays this definitive design. It illustrates the application of the controls and design objectives of the Urban Renewal Plan and it shows how the project is intended to look when complete. Clearly such a plan rests upon detailed and complete market and re-use information, careful study, and the highest order of professional design skill. Since the illustrative site plan is simply the graphic expression of specific design objectives, on which the Urban Renewal Plan is based, it requires relatively little additional effort to prepare once the Plan itself is complete.

"Open" Urban Renewal Plans may require no illustrative site plans. They can serve a useful function however, by providing a benchmark in design review and redeveloper selection. When an illustrative plan is prepared for this purpose, it is derived from the controls and design objectives. Such a plan accompanying an "open" Urban Renewal Plan may require only a modest effort and expense in addition to normal planning activities.

Under circumstances which justify preparing an illustrative plan for an "open" Urban Renewal Plan, often the task may be deferred advantageously until the project is in execution. The more realistic market information available then makes the plan a more realistic guide. By working concurrently with other project execution operations, and dealing on a parcel by parcel basis as well as with the project as a whole, useful flexibility and precision are introduced into the illustrative plan. Such a plan, developed for use in disposition, may be modified from one offering to the next as new factors come to light.

Beyond the formal function in renewal operations, many LPAs have discovered that illustrative site plans can play a useful informal role in setting a general standard for site design. They serve a persuasive rather than regulatory function.

design and redevelopment plans

Design objectives can be in graphic form on drawings as well as verbal terms. A design plan does this. It states design objectives rather than illustrating a possible outcome of their use as is the case with the illustrative site plan. Design plans provide the clearest, least ambiguous way of stating many types of design objectives. But they have a crippling disadvantage: they tend to be too tight. The unavoidable detail of a drawing does not hinder use of illustrative site plans since they show only a *possible* scheme. But each line of a design plan is a *controlling* design objective. The difficulties are self-evident. The slightest change in market, architectural considerations or consumer preference, demands amendment or change. Only in the rarest cases can design objectives in the Urban Renewal Plan be represented by design plans. It is possible, however, to use design plans only in disposition documents. Amendments to these can be made with comparative ease. The design plan itself can be drawn for only a single tract and modified from disposition to disposition within a single project. Actually, the use of design plans, or development plans as they are sometimes called, provides a happy combination of precise definition and practical flexibility.

In common with "tight" Urban Renewal Plans the design plan represents a major cost addition and heavy extra effort beyond that required in more "open" approaches. For these reasons its use is limited to occasions where it will pay real dividends. One type of dividend from design plans is market

development, particularly in complex and unfamiliar situations such as multi-level downtown projects and some types of moderate rent housing.

When used in disposition documents, the design plan is prepared during project execution. Since the design work occurs so close to the actual moment of land disposition, and to the maximum public effort on project improvements and rehabilitation services, the market information on which it is based is relatively complete and reliable. This gives a great advantage over the "tight" Urban Renewal Plan prepared usually years before the actual land sales take place.

Design or development plans enable the LPA, as a part of a disposition offering, to set a specific design standard for the redeveloper. He is expected to build what the plan calls for; or, if he chooses, he may offer a substitute design of his own for the LPA's approval. In the latter case, the design plan forms a comparative scheme against which the redeveloper's proposal is evaluated. Herein lies the important flexibility which gives this approach—the design plan—its commanding advantage over the "tight" Urban Renewal Plan, which requires cumbersome amendment to incorporate any redeveloper improvements in design.

In use, the LPA specifies in the offering that, as a condition of sale, the redeveloper of the land will be expected to adhere to the design plan as presented in the disposition documents, except as he—the redeveloper—can demonstrate to the Agency's satisfaction a clearly superior alternative design. Normally the designer or consultants who prepared the design plan advise the LPA in conveying to the redeveloper the features implicit in the design plan and assist in the review of alternative designs submitted to the Agency by the redeveloper. This approach has been pioneered by only a few LPAs, but it promises high quality results.

design objectives and re-use value

Design objectives may influence land value. Conventional appraisal principles assert that increased control lowers value by withholding or restricting development rights. On the other hand, an emphasis on good design tends to increase value by stimulating market interest and enhancing the value of each parcel through decisive control of neighboring parcels.

Re-use appraisals must consider all controls and design objectives, including those in the disposition documents as well as

those in the Urban Renewal Plan. LPAs should so instruct their appraisers.

preparation of design objectives

Preparation of design objectives imposes heavy responsibilities on the LPA. Whether incorporated in the Urban Renewal Plan, the disposition documents, or both, whether "tight" or "open", whether stated in graphic or verbal terms, the public agency must shoulder the fundamental responsibility of bringing to bear the highest possible design skill, and professional experience with urban renewal design, to support its efforts. It must shoulder a share of the costs too. Good design costs money as well as time and effort. But the results will speak for themselves in finished project design of which the whole community can be proud.

The effort, cost, and professional team needed to prepare the design objectives vary with the approach used. In all cases, the work of the designers needs to be supplemented by advice from specialists who can appraise the marketing effects of design proposals.

- A simple set of design objectives contained in an average project under an "open" Urban Renewal Plan can be drawn up by the LPA staff or its planners. The design objectives should be checked out by an architect and a developer to insure that they meet the four tests of *clarity, relevance, flexibility,* and *market realism.* An architect, landscape architect, or urban designer may be asked to draw up an illustrative site plan without involving major additional work. This is the most generally appropriate process. A general form for scope of service in this situation appears in APPENDIX C.
- A "tight" Urban Renewal Plan and its elaborate and detailed design objectives require greater effort. Such plans should be prepared by designers with demonstrated skill and experience in large-scale development design. They should be familiar with the intricacies of urban renewal and with the problems of implementing a design through the Urban Renewal Plan, its controls and design objectives. Obviously, such efforts are costly. "Tight" plans require the LPA to withstand short-range market pressures and to provide vigorous public leadership in behalf of good design. "Tight" Urban Renewal Plans should be limited to situations of great civic importance,

where there is a clear mandate for maximum effort in behalf of good design.

- Development of design objectives refining and articulating the Urban Renewal Plan, but set forth outside of the Plan in the disposition documents, requires a modest effort of the same general dimensions as that used in preparing the design objectives in an "open" Plan. Again, the statements should be checked for *clarity, relevance, flexibility,* and *market reality.* Architectural, marketing, and development advisors should be consulted. A particularly attractive opportunity for coordination of project design work occurs when preparing design objectives during the execution phases. This work may be combined into a single continuous responsibility which includes design review, advisory services to redevelopers and property owners, design of certain project improvements, and the possible development and evaluation of design competitions. Such a combined operation may permit employing a very high order of design talent.
- Design and development plans demand efforts and expenditures of the same scale as those involved in the design work connected with producing a "tight" Urban Renewal Plan. The LPA must assume responsibility to secure the most experienced and skilled professional talent. The teams involved in preparation of design plans have usually involved real estate, marketing, and financing specialists in addition to the architects, landscape architects, or urban designers.

These operations may be combined and modified in almost limitless ways. Often it is not necessary to invest the same design attention in all parts of a project area. For instance, in a typical neighborhood the LPA can prepare a careful design plan for the community center and shopping center, but leave the surrounding residential area open with only minimum controls and design review. Design objectives must be tailored to fit each area and each project, and they should reflect local skills, markets, traditions, and ambitions.

All LPA actions in support of good design rest on the foundation of design objectives stated in the documents which guide and regulate the renewal effort. These design objectives provide the key to unlocking the creative possibilities in urban renewal.

Illustrative Site Plan

APPENDIX A—"Open" Controls in the Urban Renewal Plan

Design objectives excerpted from the Urban Renewal Plan for the Bushnell Plaza Project in Hartford, Connecticut (Conn. R–51).

Note: Land use map shown in Figure A.
Illustrative Site Plan shown in Figure B.

ILLUSTRATIVE SITE PLAN

The Illustrative Site Plan, designated as Map Number 7 (Part of the Redevelopment Plan), is included as a graphic indication of preferred land use arrangements and as an indication of a physical development consistent with these criteria and controls.

The Developer and his architect are encouraged to indicate any variations and modifications of this Plan as may appear to them to facilitate the development of a more salutary project consistent with the objectives of the City.

The Illustrative Site Plan illustrates a preference for a group of buildings and uses on the site as distinguished from a single multi-purpose building.

The organization of the site and the location of all buildings and open spaces must be designed to develop the full potential of the site consistent with the scale and character of the adjacent public and private institutional buildings, while at the same time harmonizing with, and enhancing public views of an access to Bushnell Park from Main Street.

The conception and design of all structures and open spaces, furthermore, must reflect the most advanced architectural expression and technique so as to signify quality and permanence in an over-all development of great aesthetic quality.

DESIGN PLAN (required for tract #2, only)

The Developer of the Bushnell Plaza Area will be selected on the basis of his experience, financial ability and upon the quality of his specific proposal for the site as detailed elsewhere in this Plan in Method and Land Disposition.

In the second stage of the two-stage competition for selection of the Developer he will be required to submit a Preliminary Design Plan consisting of maps, plans, profiles, a model, specification and supporting documentation necessary to indicate the general nature of his proposal with respect to the following elements:

(a) the Site
(b) the Building(s)
(c) the Specifications

The actual requirements for this Preliminary plan submission will be the subject of an Agency Memorandum entitled: "Information to be Submitted by Developers Interested in Tract 2, Bushnell Plaza Project" which will be circulated to all interested developers at an early date.

The selected Developer will be required to prepare a Final Design Plan in cooperation with the Agency, its staff and its consultants during the period following his selection and prior to conveyance of the land. This Final Design Plan will closely follow his approved Preliminary Design Plan unless specific variations therefrom are requested by the Developer, reviewed by Agency staff and consultants, and approved by the Agency.

The Final Design Plan shall consist of maps, plans, profiles, specifications and supporting documentation necessary to indicate the actual construction of the improvements on the site.

LAND USE

(a) Tract 1

Church, cemetery or park, all landscaped (grass, shrubs, trees and walks), and subject to a public utility easement along the line of Gold Street as it exists.

(b) Tract 2

The following uses are required:

Residential

The project shall contain a residential building or buildings, and the predominant use of the site shall be residential.

Public Park

The project shall contain a public park to be designed by the Developer's designer as an integral part of the over-all development. The area of this park will be retained by the City and all development costs and maintenance responsibility assumed by the City.

Sub-surface Parking Facility

Sub-surface parking facilities will be an integral part of the project and may extend beneath the Public Park. Space requirements for these facilities are a function of the intended uses and are outlined elsewhere in these Controls.

Such area shall generally be located below the elevation of Main Street although limited space on the surface of the project area above this elevation may be permitted at the discretion of the Agency .

Space assigned for such parking as may be required shall be computed at the rate of 180 square feet per vehicle exclusive of access and maneuvering areas.

All parking spaces shall be suitably paved, drained and lighted.

Landscaped and Paved Areas

The unbuilt-upon land in the project area (including paved areas) shall be designed and organized to compliment the buildings and the entire development site, and shall contain landscaped and paved areas, appropriately lighted, of individuality and quality and may include a larger urban square or plaza.

Other Uses

In addition to those uses listed for Tract 2, which are required, any justifiable combination of the following uses will be permitted, to be limited only by the over-all consideration of the development design and the land coverage; floor area ratio; and parking requirements of these controls:

1. Office Building, preferably designed for single occupancy and specialized use. Limited office space will be permitted in residental structures.
2. Theater and/or Concert Hall.
3. Retail commercial space, primarily for service-type uses such as specialty shops, coffee shop, drugstore, barber shop, etc.
4. Restaurant—A restaurant may be designed either as a part of another use or in a separate structure specifically designed for this use.

(c) Tract 3

State Highway and local street widening.

Note: a portion of this area lying south of the present line of Wells Street may be used for an interim period for the parking of motor vehicles.

SIZE AND INTENSITY OF USES

(Note: Inasmuch as no buildings will be permitted on Tracts 1 and 3, these requirements will apply only to Tract 2.)

1. The residential structure or structures shall contain not less than 275 units nor more than 325 units of residential apartments. (The zoning ordinance requires 450 sq. ft. of site per apartment.)
2. Public Park

   The public park shall be not less than 40,000 sq. ft. nor more than 60,000 sq. ft. in area and shall be designed to serve as a link between the cultural and civic complex of Main Street and Bushnell Park. The design of this park shall be such that it is clearly and obviously a public space. A pedestrian bridge between the park and the Bushnell Park, to be constructed by the City of Hartford, shall be designed as an integral part of the project. The City of Hartford will purchase this area and will construct and maintain the park.
3. Sub-surface Parking Facilities

   These facilities will be a direct function of the uses to be constructed on the site and shall have sufficient spaces to conform to the following requirements:

(a) Residential	eight spaces per each 10 apartments
(b) Retail	one space per 1,000 sq. ft. (to provide parking for employees)
(c) Office	three spaces per 1,000 sq. ft.
(d) Theater or Concert Hall	no spaces required

Note: The Redevelopment Agency recognizes that the requirement for underground parking is a heavy financial responsibility for the developer. The term "sub-surface parking facility" is used here to describe any type of parking facility whose roof would not extend more than 4 ft. above the elevation at Main and Mulberry Streets, which is 51 ft. Given the need for parking, and recognizing the financial handicap, the Agency will entertain any solution which fulfills the design and quality intent of these controls.

4. Office Building

   This use shall not exceed 50,000 sq. ft. of gross floor space.
5. Retail

   These facilities, which may be constructed either as an individual structure or as a part of other uses shall not exceed 15,000 square feet of gross floor space.
6. Restaurant

   The restaurant shall not occupy more than 10,000 square feet of gross floor space.

FIGURE C
Proposed Land Use

FIGURE D
Illustrative Site Plan—Weybosset Project

APPENDIX B

"Tight" Controls in the Urban Renewal Plan

Design objectives excerpted from the Urban Renewal Plan for the Weybosset Hill Project in Providence, Rhode Island (R.I. R-7).

Note: Locations of reuse parcels indicated in Figure C. Illustrative Site Plan shown in Figure D.

REQUIREMENTS FOR SPECIFIC REUSE PARCELS

Parcel No. 1

PERMITTED USES

(a) Principal Use: Arena
(b) Accessory Uses, including:
  (1) Auditorium or exhibition hall
  (2) Parking, surface and structure
  (3) Landscaped open areas
  (4) Pedestrian tunnels and arcades
  (5) Access roads
  (6) Accessory uses customarily incidental to the above principal use, provided such uses do not include the open-air storage of materials, equipment or merchandise, other than automobiles.

BUILDING CONTROLS

(a) Floor Area Ratio: No restrictions
(b) Building Coverage: No restrictions
(c) Height: No structure to be more than 150 ft.
(d) Setback: No restrictions
(e) Building Envelope: No additional requirements
(f) On-Site Parking: One parking space for every 10 permanent seats.
(g) Vehicle Access: Except for the temporary loading or discharging of passengers, no vehicular access way may be permitted for off-street parking or loading purposed directly from Sabin Street.
(h) Planning and Design Objectives:
  (1) The creation of an enclosed urban civic space centered on LaSalle Park with the Arena the dominant building facing upon it. To achieve this enclosure, the principal structure on this parcel should, except for that area taken up by access roads, extend fully across the parcel opposite LaSalle Park, and its height should be greater than those buildings on other parcels facing the Park. To further emphasize this building, it is desirable that its building line on Sabin Street be set back far enough to create a suitable entrance plaza to the building, related in scale to LaSalle Park.
  (2) To further achieve this enclosure, any accessory structure fronting on Sabin Street on this parcel should visually restrict the width of Sabin Street by being sited near the Sabin Street frontage and its height should be held below that of the Arena.
  (3) A secondary objective is the creation of pedestrian access from the Bus Terminal to the Arena. To achieve this, any accessory structure sited between these two structures may be arcaded along Sabin Street.

Parcel No. 12

PERMITTED USES

(a) Principal Use: Auditorium For a Private Institution

(b) Accessory Uses, including:
  (1) Offices
  (2) Exhibition facilities
  (3) Pedestrian arcades
  (4) Landscaped open areas
  (5) Accessory uses customarily incidental to the above permitted uses, provided such uses do not include the open-air storage of materials, equipment or merchandise.

BUILDING CONTROLS

(a) Floor Area Ratio: Maximum—3
(b) Building Coverage: No restrictions
(c) Density: Not applicable
(d) Height: No restriction
(e) Setback: No setback permitted along the full frontage of the Jackson Street Public Walkway.
(f) Building Envelope: No additional requirements
(g) On-Site Parking: None required. If provided must be entirely enclosed within the building.
(h) Vehicle Access: Access for loading and, if provided, parking shall be permitted only from the new street off Franklin and entering the building only along northwest side of this parcel.
(i) Design Objectives: First, the creation of an enclosed pedestrian and urban civic space—Cathedral Square—and the channeling of that space down the Jackson Street Public Walkway (of first priority) and out Fenner Street (of second priority). To achieve these objectives, it is desirable that the structure be sited near or exactly on all of the parcel lines. Secondly, to complement the existing Cathedral by the structure's use, height and building envelope. Its design must clearly establish that this is a building of importance in the Square, second only to the Cathedral itself. It is most desirable that the design, details and materials of this structure be of the highest order.

APPENDIX C

Scope of Services for Preparation of Design Objectives

The following items represent some of the possible work items of a design nature involved in preparation of a set of design objectives within the framework of an "open" Urban Renewal Plan. These should be modified as necessary to fit the specific project: items not pertinent to the project should be omitted.

1. A survey and analysis of existing design conditions including, but not limited to, the following:
   a. relationship between the project area and surrounding areas.
   b. special characteristics of topography, climate, soils and other natural factors.
   c. architectural and historical characteristics of buildings and groups of buildings.
   d. design and utilization of open spaces, streets, and other rights-of-way and public areas.
   e. identification of positive and negative environmental factors.
2. A review of existing studies and plans, local ordinances and codes, and proposed plans in terms of their design implications.
3. Studies of alternative architectural and urban design possibilities for the project area including, but not limited to, the following:
   a. over-all design organization of the area.
   b. relationships and connecting links to surrounding areas.
   c. relationships and connecting links among redevelopment tracts, conservation areas and buildings.
   d. functional, spatial, height, bulk, coverage and architectural quality of buildings and groups of buildings.
   e. functional and design characteristics of open spaces, rights-of-way, and public facilities.
   f. landscaping.
   g. street furniture and signs.
   h. comparative analysis of the various alternatives (including consultation with real estate, marketing and financing specialists) as to advantages, disadvantages, costs, benefits and revenues as these factors are appropriate.
4. A project design report (in preliminary form for Local Public Agency approval and in final form upon approval) in (state number) copies. The report includes, but not limited to, the following:
   a. summary of findings from surveys, analysis and studies of existing situation.
   b. summary (and sketches, diagrams or other graphic material—state type and number) indicating the alternative design possibilities, and including summary of the comparative analysis of the alternatives.
   c. recommended alternative and reasons for recommendation.
   d. recommended design objectives for use in the Urban Renewal Plan.
   e. recommended design objectives for use in the disposition documents (and recommended methods of land disposition).
   f. recommended design objectives for use as criteria in design review.
   g. recommended design objectives for guidance in the design of project improvements and public reuse areas.
   h. recommended design objectives for use and guidance of field office operations providing rehabilitation advice to property owners.
   i. sketches (or renderings, diagrams, plans, and models) (state which and state number required, sizes, and types) illustrating the above recommendations.

U.S. GOVERNMENT PRINTING OFFICE : 1965 OF—764-349

THE CHARTERED SURVEYORS ANNUAL CONFERENCE

GOLD MEDAL PAPER, 1965

DEVELOPMENT AND REDEVELOPMENT IN THE UNITED STATES

BY WILLIAM L. SLAYTON
COMMISSIONER, URBAN RENEWAL ADMINISTRATION
HOUSING AND HOME FINANCE AGENCY
FEDERAL GOVERNMENT OF THE UNITED STATES OF AMERICA

PRESENTED AT THE
LADY MITCHELL HALL, UNIVERSITY OF CAMBRIDGE
ENGLAND

JUNE 30, 1965

URBAN renewal is simple in concept ; it is somewhat complex in operation ; and it is highly charged emotionally and philosophically when viewed in terms of its impact on the structure of the city and its inhabitants.

The objectives are simple : to clear or rehabilitate slum and blighted areas ; to rehouse those displaced into standard accommodations ; and to rebuild the cleared areas for productive and desirable uses.

It has, of course, other important objectives : to stimulate the city's economy and its fiscal status ; to improve the physical environment aesthetically and socially ; to provide for the expansion of urban colleges, universities, and hospitals and to improve their environments ; and to enable the city to control and direct its own reconstruction.

Its overriding purpose, however, is the improvement of housing conditions through the elimination of substandard areas and the provision of land for the construction of new housing as well as other uses. It is, therefore, a physical tool, albeit a tool with important social consequences. As a physical tool, it is successful. As a tool with social consequences, it is the centre of major debate—a debate generated by the argument that the tool should not be used unless it is used for particular, social objectives.

This debate has modified and will continue to modify the character and thrust of the urban renewal programme. In the extreme, it might conceivably result in the programme being limited to low—and moderate—income housing, but the present orientation is toward increasing the programme's social objectives and lessening its emphasis on altering the physical environment. Today's debate may well mould the form and character of tomorrow's urban concentrations.

In this paper, I shall first describe the way in which urban renewal operates, its impact on the character and appearance of our cities, and the extent of our commitment to it.

Second, I shall trace the development of urban renewal, primarily through the legislative process, discussing its genesis from earlier programmes and indicating the trends and reorientations over the past 16 years.

Third, since considerable interest has been evidenced in our use of private enterprise to carry out the public objectives of urban renewal, I shall describe the workings of our public-private systems, indicating what we have learned as we have experimented with and refined this approach to rebuilding urban areas.

Finally, I shall discuss the urban renewal programme in the context of the shape of things to come, or the shape of things that should come, to our urban areas with particular emphasis on the present social structure of our cities. Urban renewal has been instrumental in revealing not only the need for physical improvement but also the need for massive social improvement particularly in the field of poverty. Our debates these past few years on the urban *milieu* have changed our approach to the problems of urban areas. We have begun to recognise that the basic solution is one that enables the family to participate in the main stream of urban life on its own initiative rather than one that provides physical goods and assistance to compensate for non-participation. This approach does not diminish the need for change in physical environment ; in fact it may enhance the impact of the programme on the external form of our urban environment.

THE URBAN RENEWAL PROGRAMME

ITS OPERATION AND IMPACT

Urban renewal is a slum clearance programme. Its objective is the clearance or rehabilitation of slum and blighted areas. This is the legal and philosophical basis on which the programme rests. This is its paramount objective.

In the United States, three levels of government are involved. The Federal Government provides financial and technical assistance ; the state governments provide the authority for cities to undertake renewal ; and the local governments operate it. Urban renewal is a federal programme only to the extent that the Federal Government provides the major share of the cost, establishes standards for its operation, and offers technical assistance.

Urban renewal is operated by cities under authority received from the state government. It is the city that has the authority to determine that an area is eligible for urban renewal ; it is the city that exercises the power of eminent domain[1] in acquiring land in an urban renewal area ; it is the city that relocates displaced families ; it is the city that determines to whom land will be sold for redevelopment. The Federal Government has no authority to undertake an urban renewal project ; only the local government has that authority.

This is important to remember ; for under this system the Federal Government cannot take direct renewal action, it cannot dictate which areas should be renewed, and it cannot prepare plans for redevelopment. It can only prevent certain events from occurring ; it can only require that certain standards be met. This is the character of our " grant-in-aid" programmes. They are means of encouraging states and local governments to undertake certain activities.

Local governments zealously guard their " rights " under such programmes and resent bitterly what they regard as undue " federal interference." Federal review procedures, consequently, are frequently under attack as representing unwarranted interference in the local decision-making process. This is a built-in friction of grant-in-aid programmes.

At the same time, Congress holds the Federal Administration responsible for the operation of the urban renewal programme and has no hesitancy in being critical where local accomplishment appears inadequate or unwise. And it is Congress that tends to add additional check points and review procedures to the Federal law as additional assurances that the programme is meeting established objectives.

This governmental relationship is important in understanding the operation of the urban renewal programme, for it will help explain the limitation of the Federal Government's involvement.

Urban Renewal Operations

Urban renewal operations can be divided into six major activities : planning, relocation, land acquisition and preparation, land disposition, rehabilitation, and financing. I shall discuss each of these separately.

Planning—An urban renewal project is initiated by the appropriate local government, usually a city, although urban renewal authority does reside in other local governmental entities such as counties, townships, towns, etc. The action to initiate is relatively simple. A municipal governing body, the city council, makes a determination that a particular area is slum or blighted, basing its determination on evidence from surveys of the condition of the structures in the area. At the same time, it authorises the filing of an application with the Federal Government for financial assistance to plan the renewal area. This application is reviewed by the Urban Renewal Administration[2] to see that it meets the standards established by federal law. If approved, money is advanced to cover the cost of making additional surveys and preparing a renewal plan.

This planning operation requires more than the preparation of a simple, land use plan. Many elements are involved, and it takes, on the average, about two years to complete. The elements generally included are :

1. A detailed survey of the structures to document conclusively that the area is in fact slum or blighted. There must be a local legislative finding that the area is slum or blighted ; and state laws, as well as the Federal statute, require that it be adequately documented since this is the legal basis for urban renewal.
2. A survey in sufficient depth to determine the size and rent-paying ability of the families who will be displaced. The city must be able to demonstrate that housing accommodations for these families are available or will be provided. Since financial assistance is given to such families, the survey will also indicate the estimated costs of such assistance.
3. A survey of the businesses to be displaced, since they too receive financial and relocation assistance.
4. A physical plan for the rebuilding of the area, showing land uses, development controls, new street patterns, new utilities, etc.
5. A land use and marketability study showing that there is a market or will be a market for the uses proposed in the renewal plan.
6. Appraisals of the land to be acquired to establish estimates of the cost of land acquisition.
7. Estimates of the value of the land to be sold.
8. Cost estimates of readying the land for sale under the renewal plan, including such items as new streets, utilities, demolition of structures, etc.
9. Cost estimates of constructing new public facilities to serve the renewal area, such as schools, libraries, fire stations, and the like ; for to the extent that these facilities serve the area, their cost will be credited toward the city's share of project cost.
10. An illustrative site plan showing the city's conception of how the area will look after redevelopment.
11. A description of the methods the city will employ in selling the land to private developers.

This when assembled becomes a rather formidable package. It must be reviewed and approved by the Federal Government if federal funds are to be involved. But before the Federal Government agrees to financial assistance, the city must itself take positive action in support of the proposed project. It must hold a public hearing on the renewal project, and the city council must take legislative action approving the renewal plan.

With approval by the city council and the Federal Government, the city is ready to proceed with the project. A contract between the city and the Federal Government is executed under which the latter obligates itself to provide the necessary monetary assistance. The exact nature of this assistance will be discussed under " Financing."

Relocation.—The city is responsible for the relocation of families, individuals, and businesses. The federal requirements are most stringent for displaced families, but financial assistance is available for all three categories.

In the relocation of families, the city interviews each family being displaced to determine its needs and financial situation.

Families are told not to move until they have first conferred with relocation officials but are encouraged to seek housing accommodation on their own. Actually, about 70 per cent of the families displaced do find accommodations on their own.

Every housing accommodation to which a family moves must be inspected by local relocation officials to determine whether the accommodation actually meets the minimum requirements of "decent, safe, and sanitary" housing. These minimum standards are adequate space, private bath and toilet, adequate kitchen facilities, hot and cold running water, and structural adequacy. If the housing to which the family has moved does not meet these standards, the city is required to offer that family a standard housing accommodation. Only after the family has been offered and has refused such a standard accommodation is the city discharged of its responsibility to see that the family is properly rehoused. In addition, no family may be evicted from an urban renewal site until it has been offered and has refused such a standard accommodation. The Urban Renewal Administration requires detailed, quarterly reports on what happens to these families and also periodically inspects the local operation to see that families are actually rehoused in standard accommodations.

The city is also expected to offer assistance to individuals, but federal requirements are not as stringent as they are for families.

Financial assistance for families and individuals covers moving expenses and rent adjustments. Every family or individual is entitled to reimbursement for moving expenses up to a maximum of $200. In addition, all families and elderly individuals (62 years or over) are entitled to rent adjustment payments based on the difference between 20 per cent of their income and the rent of a standard housing accommodation in the community. This rent adjustment payment cannot exceed $500 and cannot cover more than a one-year period.

Businesses displaced receive counselling service and financial assistance. Moving expenses are paid; the maximum is $25,000. In addition to moving expenses, those businesses that have annual earnings of less than $10,000 receive a flat payment of $1,500. Businesses are also entitled to 20-year low interest loans (currently 3¾ per cent) from the Small Business Administration to help them re-establish in new locations.

All relocation payments are paid by the Federal Government. The city bears none of the cost.

Land Acquisition and Preparation.—Urban renewal would be impossible were it not for the power of eminent domain. The assembly of land is essential to the renewal operation. In most instances, however, the city is able to acquire property through negotiation. Eminent domain is necessary only where agreement cannot be reached on price, where the owner contests the legality of the taking, or where necessary to clear up the land title.

Since the sums involved in land acquisition are large, the Federal Government has procedures to assure the payment of fair prices. No land may be purchased until the Federal Government has agreed upon the price and a Federal representative has viewed the parcel.

Land Disposition.—Once the land has been acquired, the occupants relocated, the structures demolished, the new streets and utilities installed, it is then ready for sale or lease to redevelopers. This is the end product of the redevelopment process and an extremely important one. A separate section of this paper deals with this subject, so here I shall describe it only briefly.

The key requirements in selling or leasing land are: (1) that the redeveloper build in accordance with the renewal plan, (2) that the property be sold or leased for its fair value under the limitations and controls of the renewal plan, and (3) that the redeveloper enter into a firm and binding contract to build in accordance with the plan and begin construction within a reasonable period of time.

Urban renewal provides the instrument through which the city decides how a blighted area is to be built. This a central concept of the programme: that the renewal plan represent a statement of public objectives with respect to the re-use of an area. The plan has the force of law and cannot be modified without action of the city council and approval of the Federal Government. Since the plan has special legal status, it is essential that the redeveloper be required to adhere closely to it.

Another major element of the renewal process is the sale of the land at a price based on its economic value rather than on the cost of its acquisition. The "write-down" provision of the renewal programme is basic. The use of the cleared area is not dictated by the cost of its acquisition but by the decision of the city as to the best use to which it should be put. Once that use is determined and the limitations of its development established, the price is set accordingly. It is a price that the Federal Government must approve, and it is a price that represents market value for similar property subject to similar development limitations. In short, the value of the improvements of the land prior to acquisition and the previous intensity of use do not have to be added to the permissible future development in order to make development economically feasible. Price is set on the basis of the economics of that which is to be built. Without the "write-down" provision, cities would lack the freedom of determining the re-use of cleared land.

Where housing is the re-use, the redeveloper is provided special financing assistance through the Federal Housing Administration. By meeting standards established by FHA, he is able to obtain a long-term (40-year) loan at an interest rate of 5¾ per cent either through the device of having such a loan insured as to repayment by FHA or, if there is no private lender willing to make such a loan, by having the Federal Government through the Federal National Mortgage Association make such a loan to him directly. If he is to build housing for moderate income families, he is entitled to a reduction in the price of the land and may obtain a 40-year loan at an interest rate of 3⅞ per cent.

Rehabilitation.—Not all urban renewal projects result in clearance. Where existing structures are basically sound, it is wiser to rehabilitate than to demolish, at the same time providing the needed new public improvements and clearing out those pockets of slums that are too far gone to rehabilitate. Also there *are* areas in the United States that have historic and architectural value that should be preserved. Rehabilitation has the additional advantage of reducing the number of families to be displaced and, where it exists, preserving a viable community and its social institutions.

Under rehabilitation, the city establishes minimum, physical rehabilitation standards for the renewal area. These standards are a part of the renewal plan, and each property owner is expected to improve his property to meet these standards, hopefully voluntarily rather than through the force of law.

There are problems, however, in this operation. Families

of low income usually lack funds to rehabilitate their homes ; and many families are unsophisticated in the ways of obtaining loans, dealing with contractors, and managing their financial affairs in a prudent fashion.

Thus special kinds of assistance are needed in helping property owners in rehabilitation areas. The city must deal on an individual basis with many property owners, providing tailor-made plans if the owner is to be persuaded to undertake the necessary repairs. Consequently, cities with successful rehabilitation projects have been those with a staff of expert technicians who rendered such services. The technicians make sketch plans for the improvements, help obtain the loan, and work out a budget demonstrating how the improvements can be financed.

Property owners in these areas are eligible for liberal loans through the auspices of our Federal Housing Administration. Where an owner agrees to rehabilitate to the standards of the renewal plan, he can obtain a loan to finance the improvements or a loan to cover the refinancing of existing mortgages plus the cost of the improvements. These are long-term loans (25 years) at the standard rate of interest (5¾ per cent).

Where the property owner has insufficient income to carry such loans, he may receive a direct loan from the Federal Government for 20 years at 3 per cent to cover the financing of the improvements. The loan may not exceed $10,000 per dwelling unit.

Business establishments also need loans to rehabilitate their property. No special rehabilitation assistance is available to such a property owner, however, unless he can demonstrate that he is unable to obtain a loan on reasonable terms and conditions in the regular market. If he can so demonstrate, he is eligible for a 3 per cent, 20-year loan. The maximum amount is $50,000.

A rehabilitation project follows the same process as does a clearance project and thus has an urban renewal plan. An important element of rehabilitation projects is the building of new public facilities such as streets, playgrounds, parks, and the like ; for frequently these areas have been neglected in this respect, and the demonstration by the city of its interest in the area by such installations encourages the property owner to rehabilitate.

Financing.—The formula by which the Federal Government provides financial assistance to cities for urban renewal is relatively simple. It is provided on the basis of individual projects—not upon a distribution formula based on population, extent of blight, or the like.

The Federal Government pays two-thirds of the net cost of a renewal project. In cities under 50,000 population, the proportion is three-fourths. The gross cost of a project is the sum of all of the costs of the project, including the initial planning, the cost of the administrative staff, land acquisition, demolition, new streets and utilities, and new schools and other buildings to the extent that they serve the project. From this gross cost is subtracted the proceeds from the sale of the land. The result is " net project cost." Of this, the Federal Government pays two-thirds or three-fourths.

The city must make up the difference. This it may do either by direct appropriations to the project or by spending money itself for such things as streets, utilities, parks, playgrounds, schools, and other such " supporting facilities."

The Federal Government will, in addition, provide the city with working capital—the capital for planning, land acquisition, site improvements, demolition, etc. The city pays interest on these loans at the rate it costs the Federal Government to borrow money. The Federal Government will not, however, provide working capital for the construction of any public building or structure ; this the city must finance itself. The Federal Government pays 100 per cent of all relocation costs for moving, rent adjustment, or business displacement.

This is a description of the operation of the urban renewal programme. It is simple in basic concept, but it is somewhat more complex in operation.

Impact and Commitment[3]

Statistics, I know, can be deadly ; but a few statistics on the urban renewal programme can give one a quick grasp of its size and impact. From a programme with small beginnings, it has grown to one of considerable size. At the end of 1964, there were roughly 800 cities with some 1600 urban renewal projects. As you can imagine, both cities and projects range from very small to very large ; from cities of around 1000 population to New York with its millions. Projects range from less than an acre to over 2,500 acres, and the character of these renewal projects varies from providing a parking lot for the downtown area of a small city to the rebuilding of the central business district of a major city. Housing as you would expect is a major renewal activity ; large areas have been rebuilt with housing for all income groups, and entire new communities are in the process of development.

In terms of dollars, since 1949 Congress has authorised $4.725 milliard for federal capital grants. Legislation now being debated would authorise an additional $2.9 milliard, for the programme will soon be without funds.

We find that our average urban renewal project requires about $2.6 million in federal subsidy and averages some 70 acres in size.

The aggregate statistics on our urban renewal projects are interesting. If we examine those renewal projects that were in what we call the execution stage ; i.e. those that had received authorisation from the Federal Government to acquire land, relocate families, etc.—if we examine these 970 projects as of the end of 1964, we find they total 66,000 acres —over 100 square miles. Not all of these acres will be acquired, however—only 36,400 acres, or 57 square miles. The rest, of course, consists of those areas to be rehabilitated and those areas where it is unnecessary to acquire the land such as streets, public spaces, and the like. We find also that of the 36,400 acres to be acquired, 27,026 or 42 square miles, had actually been acquired. It takes time to prepare this land for resale—families must be relocated, structures demolished, utilities installed, etc.—so the land for which redevelopers had been selected was a good deal less than that actually acquired, 16,318 acres or 25 square miles.

These statistics take on a good deal more meaning for the layman when one realises that the area of the land to be acquired in these projects is greater than Edinburgh and 11 times the size of Cambridge.

During this period, the urban renewal programme has been responsible for the demolition of about 300,000 dwelling units, the relocation of 185,000 families, and the rehabilitation, completed or in process of some 66,000 dwelling units.

As a tax generator, we find from experience to date that the real estate tax return from the areas redeveloped or in the process of being redeveloped will be about 4½ times the tax return prior to redevelopment. We find also that for each dollar of federal capital grant funds invested in a renewal project, we can expect about $5 in private funds to be invested. This is a considerable economic generator.

These are the statistics. What has been the impact of the renewal programme on individual cities? Statistics can hardly give this kind of picture.

There are so many cities with excellent examples of what renewal has accomplished that it is difficult to select from among them. So let me pick and choose at random.

New Haven, Connecticut, a city of around 150,000 population, has invested heavily in urban renewal and has achieved tremendous success. New Haven tore down its central business district, built a parking garage adjacent to it and a major expressway, and after some delay, persuaded two department stores to build in the cleared area, one a local store that had been in New Haven for many years, the other a national chain of some fame, Macy's. Both stores are doing a thriving business. A new hotel and office building adjacent to these stores are under construction, and downtown New Haven is now a vigorous commercial centre. But this is not all New Haven has done. Several apartment houses have been built close to the downtown area, an industrial park for small industry has been developed, major areas are in the process of rehabilitation, and housing for moderate income families has been built and is under construction. New Haven has been remade by the renewal programme.

Or we can move to the west coast—to San Francisco, a city of over 700,000. Here three major projects are under way and several more are being planned. Western Addition, an area of former slum housing, is being rebuilt with housing for a variety of income groups. A major Japanese cultural and business centre was placed under construction just recently. In an area adjacent to the famous San Francisco Ferry Tower, high-rise apartment houses have been built and others are under construction; a large office building has been started, and a new park in front of the Ferry Tower will be created.

Our capital city of Washington has one of our most outstanding renewal projects. Southwest, as it is called, covers more than 500 acres. When completed it will contain around 6,000 housing units, consisting of high-rise apartments, walk-up apartments, and town houses. It is the location of Washington's famous Arena Stage, the home of a repertory company that presents theatre in the round. Already several large federal office buildings have been built in Southwest along with new churches, a shopping centre, a motel, food establishments, etc. The waterfront portion of the Southwest is soon to be developed with restaurants, boat supply houses, and other water-oriented functions. The area includes over 1,000 units of public housing.

In Chicago, a city with many, many renewal projects, it is difficult to describe just one. The Hyde Park–Kenwood project, however, illustrates the impact renewal can have on the environment of a university, in this case the University of Chicago. Because of urban renewal, the area around the University has been rebuilt and rehabilitated, providing new accommodations to faculty and to those associated with the University. From an area that was rapidly deteriorating and as a result having an adverse impact on the University, it has become once again one of the most desirable places to live in the City of Chicago. An interesting portion of this project, called Harper's Court, has been built specifically to house artists and craftsmen who were in the area before it was renewed but who could not afford to pay standard rent for space in the new structures being built. A special corporation was formed, money was raised, and a small commercial complex was built to provide space at reasonable rents for these artists and artisans.

There are many more projects of great drama ; Hartford's Constitution Plaza, Baltimore's Charles Centre, Philadelphia's Society Hill, Pittsburgh's Lower Hill, Little Rock's Live Stock Show Area, Fresno's Downtown Mall, and on and on. Sometime, perhaps, we shall have sufficient resources to provide descriptive material on all our renewal projects.

The impact has been great. Our mayors feel that the renewal programme offers them hope for city salvation, the hope of revitalising the city and remaking it into a really desirable place to live and a desirable place to be. It takes time for the end-results to become visible, but becoming visible they are ; and to one who has been in the programme from the beginning, it is very gratifying.

DEVELOPMENT OF HOUSING AND URBAN RENEWAL PROGRAMMES

In the United States, legislation in this field has been generated by concern for slum housing conditions. The United States citizen and his elected representative have responded favourably to programmes aimed at improving the lot of the unfortunate.

The beginnings of such legislation were in New York City where social reformers such as Jacob Riis protested at the wretched slum conditions of those living in tenements.[4] The result of his campaign was a New York City law adopted in 1901 governing the design of tenement structures ; and to this day, structures built according to these standards are known as " new law tenements " to distinguish them from " old law tenements." A sizeable quantity of both " new " and " old " still exist in New York City to-day and continue to plague us.

But the major foundation of our present legislation was laid during the depression of the 1930s. As part of the government's programme to stimulate the economy, the Public Works Administration developed a programme to accomplish three objectives ; namely, stimulate the construction industry, clear existing slums, and provide housing for low income families. The programme, adopted in 1935, was operated directly by the Federal Government. Slum areas were acquired by eminent domain if necessary, the existing slum areas were cleared, new housing was constructed, and occupancy was limited to those families earning less than a specified amount. This was the forerunner of our present public housing programme.

Public Housing

The Federal public housing programme was adopted by Congress in 1937. It took over the three basic objectives and the initial PWA programme which had been experimental in nature. Its operation, however, differed in one major respect ; and this difference has been a basic element in all national legislation dealing with local public programmes of housing and urban renewal. This was, and is, the principle that the Federal Government is not the direct agent for housing and urban renewal programmes. The Federal Government provides financial and technical assistance and establishes standards under which these programmes must operate, but the decision to undertake and carry out such programmes is left to the municipal government.

Thus under the public housing programme of 1937,[5] the Federal Government in effect said the following : For any city that wishes to clear a slum area and rebuild it with housing for low income families, we shall provide the capital cost of acquiring the site, clearing the slums, designing the housing project, and building it. The city in turn will agree not to tax the housing project (although the housing project will make payments to the city in lieu of taxes for municipal services provided the project), to limit the occupancy of the

project to families with incomes below a specified amount, to establish rents on the basis of the income of each family housed, and to operate the project on the income from these rents.

Under this system, no city was required to build public housing. Assistance was offered to those cities that wished it.

Federal Housing Administration

At about the time the public housing programme was initiated, another new housing programme was established by the Federal Government. This programme, known as " FHA " since it is administered by the Federal Housing Administration, has had a greater impact on housing and community development in the United States than any other. Adopted in 1934,[6] it revolutionised the housing industry and housing financing. By the device of providing mortgage insurance, lenders were protected from loss of their investment and consequently were willing to lend on more favourable terms. The result was acceptance by the lenders of long-term mortgages (they may now run as long as 40 years in some instances) and an equal monthly instalment repayment schedule covering principal, interest, local real estate taxes, and fire insurance. Thus the home-owner was able to budget a fixed amount for his entire housing expense except for utilities and maintenance.

The result, although not immediate since there is always a lag between adoption of a new programme and its acceptance by practitioners, was a greatly expanded home-building industry and availability of credit for home-building in amounts much greater than before. As part of this mortgage insurance programme, minimum construction and design standards—assured by FHA inspections—were required.

This kind of financing and the assurance of minimum standards encouraged the housing consumer to purchase rather than rent ; and home ownership increased tremendously. In 1930, 48 per cent of the families in the US owned their homes. By 1965 the figure was 63 per cent. The increase in numbers is, of course, much more dramatic—from 14·3m. to 35·5m.

An additional impact of the FHA programme was the tremendous expansion, particularly after World War II, of single family, free-standing houses in the periphery of urban areas. The suburban areas expanded at an unprecedented rate, creating what we now label " urban sprawl." It was not the purpose or function of the Federal Housing Administration, however, to direct or control the growth of urban areas. Its function was to provide a mechanism to encourage the construction of housing.

Urban Renewal

At the end of World War II, the United States found itself with a relatively small public housing programme, a private housing programme under FHA that had demonstrated its ability to stimulate the housing industry, and a concern for future economic conditions. It was at this period that Congress began its major debate on slum clearance and urban redevelopment, as it was then called, and it was at this time also that Congress adopted a special housing programme for veterans of World War II.

The major debate,[7] which began in 1946 and resulted in the passage of major legislation in 1949,[8] was oriented heavily towards the stimulation of the post-war economy and was based on the early experience with the public housing programme. It was this legislation that created urban renewal, a programme which, although only 16 years old, has developed very rapidly in concept and operation. It is important, therefore, to have some background on the attitudes and experiences that shaped the 1949 legislation.

One must first return briefly to public housing. This was not only a programme to house low income families; it was also a slum clearance programme. Slum clearance was a major selling point and had a sympathetic response in Congress. It was also during this early period (1940) that our decennial Census first reported on the condition of housing. Cities relied heavily on these statistics to demonstrate the need for clearing slums and developed statistics on their social and economic costs.

It was natural, therefore, that the emphasis of the urban redevelopment debate was on slum clearance and housing although not necessarily on housing for low income families. Cleared areas were to be rebuilt for those uses specified in the city's comprehensive plan ; and " maximum opportunity " was to be given to private enterprise. Housing was emphasised by requiring that an urban redevelopment project be predominantly residential in character either before it was cleared or after it was rebuilt. And Congress, again drawing upon its experience in the public housing programme, established the slum clearance and urban redevelopment programme as a local programme, a programme to be run by the city at its initiative rather than by direct federal operation.

The legislation included a new and major requirement—relocation. A slum clearance project could not proceed until the city demonstrated that there were or would be available " decent, safe, and sanitary dwellings " for the families being displaced at rents the families could afford.

This relocation requirement has become one of the most widely-discussed aspects of urban renewal and one of the most criticised aspects of its operation. It is important to realise that until 1964 the urban renewal programme was the only federal programme involving the displacement of people where relocation assistance was required. In 1964, this requirement was added to both the mass transportation and public housing programmes.

There were two provisions in the slum clearance and urban redevelopment legislation of 1949 that deserve mention as being somewhat ahead of their time. They are the provisions establishing " Predominantly Open Land " projects and " Open Land " projects.

The first is defined as " land which is predominantly open and which because of obsolete plotting, diversity of ownership, deterioration of structures or of site improvements, or otherwise, substantially impairs or arrests the sound growth of the community. . . ." Congress had in mind those developments, frequently labelled " dead subdivisions,"[9] that had been laid out in the land development boom of the 1920s but which had been but partially developed because of lack of market or poor design. Urban redevelopment funds may be used to acquire the land, install the necessary utilities and site improvements, and prepare a plan for development. Like any other redevelopment project, the area is then sold or leased to private developers who build in accordance with the plan. Because of this provision, several " dead subdivisions " have been acquired and successfully developed into attractive residential areas.

The debates and discussion of the " Open Land " project provision are interesting to read some 16 years later, for they reflect a concern for central city congestion and a recognition of the need for controlled, peripheral, residential development to increase the housing supply and thus provide additional dwellings for the relocation of families from slum areas. Thus even in 1949, Congress gave recognition to the principle embodied in your " New Town " legislation.

Under the " Open Land " provision, the Urban Renewal Administration may make loans, but not grants, for the acquisition and development of undeveloped land so long as such land is to be used for predominantly residential purposes. The project operates as does any other redevelopment project ; the building is done by private enterprise, with the public agency acquiring the land (by eminent domain if necessary), installing the streets and utilities, and preparing the development plan. It was assumed that this operation would not require a subsidy, just working capital.

Although the law did not require that such open land developments have some relationship to displacement by redevelopment operations, the " legislative history " (the debates and discussion of the law by Congress prior to its passage) clearly indicate that such should be the case.

This provision of the Act has had little application, primarily because those cities with urban renewal programmes do not have authority to acquire land beyond their political boundaries, and there are few cities with undeveloped land areas of any size within their borders.

This was the basic legislation adopted by Congress in 1949 establishing the " Slum Clearance and Community Development and Redevelopment " programme, to use its precise name. The Act also provided for an authorisation of $500m. for federal subsidies for urban redevelopment projects.[10]

The Housing Act of 1949 did more, however, than establish the urban renewal programme. It also expanded the public housing programme ; for in addition to reaffirmation of the need for this programme, it was recognised that in the process of relocating displaced, low-income families it would be necessary to provide additional public housing.

Finally, the 1949 legislation established a national housing policy—a policy designed to guide and direct future housing and renewal legislation and to delineate clearly the intent of Congress in adopting such legislation. The import of this policy is such that a part should be quoted—

> The Congress hereby declares that the general welfare and security of the Nation and the health and living standards of its people require housing production and related community development sufficient to remedy the serious housing shortage, the elimination of substandard and other inadequate housing through the clearance of slums and blighted areas, and the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family, thus contributing to the development and redevelopment of communities and to the advancement of the growth, wealth, and security of the Nation.

Broadening Amendments

Of major importance among the amendments to the basic legislation have been those that have moved the programme from a project orientation to an orientation of larger areas and a programme of meshing urban renewal into a city development programme.

Thus in 1956,[11] the concept of the General Neighbourhood Renewal Plan was established—a concept for the planning of slum or blighted areas too large to be undertaken as single projects. The purpose was to encourage the planning of logical geographical units and the renewal of segments of such areas as separate projects.

The second major amendment in this sphere and of considerably greater importance was the provision in 1959[12] for Community Renewal Programmes. Under this provision, the Federal Government pays two-thirds of the cost of a city-wide survey to delineate those areas that need some form of remedial urban renewal treatment and to establish a time schedule for such treatment. The city coordinates its capital improvements programme with this schedule and in effect produces a comprehensive development programme for a stated period of years. It also takes into account factors such as population changes both in number and kinds, the needs for housing of various types, the changing economic conditions of the urban area, and the impact these factors may have on migration and fiscal status.

The Community Renewal Programme concept is rather sophisticated, and it is only recently that cities have made any real use of it.[13] The eventual impact, however, should be considerable. In this year's proposed legislation, the Community Renewal Programme would be required for all cities over 50,000 population.

Related to these amendments is the workable programme requirement adopted in 1954.[14] This amendment requires the city to demonstrate that it is undertaking programmes that will prevent the increase and lessen the extent of slum and blighted areas. Here Congress took the position that cities should not receive federal assistance if they were not doing as much as they could on their own to prevent the conditions for which financial assistance was being sought. The city must submit for federal approval " A Workable Programme for Community Improvement," which includes such basic elements as housing and building codes, a general plan, and evidence of citizen participation.

The most impressive impact of this requirement has been the great increase in the number of housing and building codes, their modernisation, and their enforcement.[15]

Amendments Expanding Renewal Activities

Another group of amendments permitted the expansion of urban renewal activities. The most important was the change in 1954 establishing rehabilitation projects.[16] The rationale for this expansion is clear. The amount of substandard housing in the United States is considerable ; the costs of acquiring and demolishing such housing are astronomical. Much of this housing is basically sound ; it needs only to be rehabilitated. Many areas of such housing are viable communities ; they should be strengthened rather than destroyed. Such housing represents a large investment ; it should be maintained and preserved wherever possible.

Thus was born the concept of rehabilitation and conservation to augment—not supplant—slum clearance and urban redevelopment.[17]

But enlarging urban renewal's authority did not automatically result in an immediate and effective rehabilitation and conservation programme.[18] In many instances, state-enabling legislation had to be amended to expand the authority of cities to undertake such renewal projects, and amending state legislation is not always an easy or rapid process. In addition to this impediment, cities soon learned that rehabilitation was a much more difficult process than clearance and redevelopment.

Obtaining loans for rehabilitation also proved to be difficult even though they were available under FHA. Much of the difficulty stemmed from FHA's lack of experience in dealing with property to be rehabilitated. FHA's experience was basically with new construction, and local FHA offices tended to require the same standards for rehabilitation loans. Therefore, the cost of rehabilitation, if FHA standards were to be met, was frequently greater than the pocketbook of the property owner could afford.

This problem was met in several ways. First the law was amended in 1961[19] to make rehabilitation loans easier to obtain by liberalising the FHA valuation formula and authorising FHA to accept secondary liens or mortgages.

The first amendment has helped considerably ; the second has had little impact, primarily because in actual practice the property owner found it to his advantage to refinance all existing indebtedness and include the cost of rehabilitation under a single, long-term mortgage. Existing indebtedness is frequently in the form of two or more mortgages of short term and high interest rates. By recasting the mortgage under FHA to cover the existing debt as well as the cost of rehabilitation and extending the loan over a relatively long term (20 to 25 years) and at a lower interest rate ($5\frac{3}{4}$ per cent), the property owner found his monthly payments, in some cases, actually lower than before.[20]

Perhaps of even greater importance, however, has been the administrative coordination between FHA and the Urban Renewal Administration. FHA and URA must now agree on rehabilitation standards for a renewal area. Thus a property owner knows he can obtain an FHA loan if he improves his property to the standards in the renewal plan.

Even with these changes in the law and administrative procedures, there were still cases where the inadequacy of the property owner's income prevented him from obtaining a loan. In addition, there were no special loans available for non-residential property, and many small business concerns were unable to obtain loans from conventional sources.

So in 1964, the legislation was again amended by providing for direct federal loans for rehabilitation at a 3 per cent interest rate for those property owners unable to obtain financing on reasonable terms in the private market. Loans were limited to $10,000 per dwelling unit for residential property and to $50,000 for a non-residential structure. Thus for the first time, special rehabilitation loans were available for non-residential structures in rehabilitation areas.

But even with these greatly expanded aids, there are still areas where additional assistance is needed. Thus the Administration this year had proposed rehabilitation grants, not to exceed $1,000, for owners too impoverished to finance such improvements.

All these developments indicate a growing interest in rehabilitation as an important renewal operation. In fact, the Administration and the Congress both feel that rehabilitation should be emphasised, and some go so far as to propose that clearance activities be cut back. Much of this stems from a concern for the families that must be displaced and from a feeling that clearance may be destroying viable communities.

Non-Residential Projects

Another important 1954 amendment expanding renewal activities was that permitting 10 per cent of the urban renewal grant funds to be used for what are called " non-residential projects." In the original legislation, a redevelopment project had to be predominantly residential either before clearance or in development of the land after clearance. Several cities felt that this limited their operations in clearing non-residential slums and developing the cleared area for logical, non-residential uses, and Congress was persuaded to permit the use of this small percentage of funds for such non-residential projects. This exception was increased to 20 per cent in 1959 and to 30 per cent in 1961. A proposal by the Administration in 1964 that this be increased to 35 per cent was rejected by Congress on the basis that the urban renewal programme should not lessen its emphasis on housing.

Many of these " non-residential projects " have been dramatic, central business district developments are frequently pictured when the renewal programme is describe by the press.[21]

Colleges and Universities

A third expansion of urban renewal activities came in 1959. It stemmed from a growing interest in expansion and environmental improvements by urban colleges and universities landlocked by slum and blighted developments. Since most such institutions do not have the power of eminent domain and since land assembly is costly and sometimes impossible without such authority, they have had the choice of abandoning their plants and moving to the undeveloped countryside or looking for devices to acquire needed adjacent land. As a solution, a group of universities developed a most ingenious proposal, one that gave them leverage to persuade the city to undertake urban renewal projects for university expansion or university housing and the elimination of blight in surrounding areas.

The device allows the city to take credit as its share of the cost or an urban renewal project for a university's expenditures for land acquisition, relocation and demolition of blighted areas where three conditions are met ; namely, the land acquired is to be used for educational purposes, it is adjacent to or near an urban renewal project, and it is in accord with a publicly approved plan for the area.

This provision enabled universities to persuade cities to undertake adjacent renewal projects since the university's expenditures were sufficient to meet the city's share of project costs. Universities may also purchase land in these renewal areas, but these expenditures do not count as a city credit since such land is sold at a write down.

The result of this provision has been phenomenal. Colleges and universities have enlarged their campuses, and the surrounding areas have been improved.

In 1961 this section of the legislation was amended to cover hospitals as well.

Special Housing Financing

By 1954 urban redevelopment experience indicated that it was not always easy to persuade developers to rebuild on cleared sites. There had been several instances where land had gone begging. The FHA financing tools were not geared for rebuilding on close-in, cleared slum sites but rather on established, in-town sites or on peripheral, raw land. Prospective developers found it difficult to obtain mortgage financing for housing they proposed to build in renewal areas.

Consequently in 1954, Congress amended the FHA legislation to provide mortgage insurance for housing developments in urban renewal areas. Mortgage amounts and terms were liberalised, and valuations were based on the projected redevelopment rather than on pre-clearance reputation.

But of even greater importance was the establishment in the same year of the special assistance programme under the Federal National Mortgage Association. Congress authorised this agency to buy mortgages on housing developments in urban renewal areas when the developer could demonstrate that private lenders had refused to make a mortgage loan and FHA had issued a commitment for mortgage insurance. Thus a developer could obtain liberalised financing terms under FHA ; and if a private lender would not lend on these terms, the Federal National Mortgage Association would.

With this guarantee, the financing bottleneck was broken ; developers showed increased interest in cleared renewal areas. Although developers relied heavily on FNMA in the

early years, one now finds private investors anxious to place mortgages in renewal areas ; and the number of mortgages that are actually purchased by FNMA is very small. In fact, a reverse trend now exists. FNMA has been selling urban renewal mortgages from its portfolio.[22]

Relocation

The most significant developments in urban renewal legislation have had to do with the relocation of families, individuals, and businesses. Relocation in urban renewal has drawn the most fire and criticism and has received the most attention from Congress.

The 1949 urban renewal legislation reflected a particular housing concern in requiring that there be a feasible plan for the relocation of families into decent, safe, and sanitary housing that they could afford. The intent was to make sure that those living in redevelopment areas would not be disadvantaged by the clearance process and that standard housing would be available to them. The renewal programme in its housing orientation, therefore, has a two-pronged attack ; one, the rehousing of families into standard housing and two, the clearance of areas of slum and blighted housing.

The result of this relocation operation, based upon these periodic reports from the cities, are very good. Of the 185,000 families displaced through 31 December 1964, 80 per cent were relocated into standard housing, 7 per cent moved out of the city and therefore could not be assisted, 7 per cent disappeared in spite of intensive tracing activities by the city, and 6 per cent moved into substandard housing on their own even though they were offered standard accommodations. Thus of those families whose whereabouts were known after displacement, 93 per cent were in standard accommodations.

In spite of this statistical record, many have questioned the effectiveness of the relocation operation, challenging the reliability of the statistics on the basis that they are reports from cities rather than independent appraisals. Consequently, the Administrator of the Housing and Home Finance Agency, Robert C. Weaver, felt an independent check should be made of these statistics. He employed the United States Bureau of the Census to make such a survey in 132 cities where 2,300 families had been displaced in a three-month period. The results supported the official statistics.[23]

Thus the urban renewal programme has accomplished the objective established by Congress ; namely, the rehousing of displaced families in " decent, safe, and sanitary dwellings."

The 1954 legislation was also amended to provide special housing for families displaced because of urban renewal and other governmental action. This programme (known as 221 housing) generated a good deal of rental and sales housing at prices somewhat below the prices of current construction by limiting the amount of mortgage per dwelling unit and extending the mortgage period for sales houses to 40 years.[24]

Even with these special devices, however, moderate-income housing was not being built in sufficient quantity to meet the need ; and in 1961, the Kennedy Administration proposed an additional moderate-income housing programme, a programme based on a below-the-market interest rate. This programme became the 221 (*d*) (3) programme and has had phenomenal success in producing rental housing for moderate-income families. Such housing must be built by public agencies, non-profit organisations, cooperatives, or limited-dividend corporations. The interest rate is based on what the Federal Government must pay to borrow money and was set originally at $3\frac{1}{8}$ per cent. Since then the interest rate has increased to $3\frac{7}{8}$ per cent. Under this programme, rents could be reduced some 20 per cent below what would have had to have been charged at the regular FHA mortgage interest rate of $5\frac{3}{4}$.[25]

In terms of financial assistance to displaced families and individuals, the Urban Renewal Administration early decided that moving expenses should be paid to the extent legally authorised. Congress in effect ratified this decision in the 1956 legislation (primarily because of a complicated legal limitation on such payments under some state laws), providing for payments of up to $100 per family or individual for actual moving expenses. In 1959 this limit was raised to $200.

In 1964 the Johnson Administration proposed, and Congress adopted, additional assistance to persons displaced because of urban renewal and public housing by providing for the payment of rent adjustments. These rent adjustments are the difference between 20 per cent of the family's income and the average rent in that community for standard but modest accommodations. The subsidy is provided to each family for only one year, and the total subsidy may not exceed $500. The total cost is borne by the Federal Government.

Both the Administration and Congress have also been concerned over the fate of businesses displaced because of urban renewal, and several legislative proposals have been adopted to ease their lot. Many of the businesses in urban renewal areas are small, and it is frequently difficult for them to re-establish themselves in new quarters. On the whole, about 30 per cent of the businesses displaced go out of business although in many instances the dissolution of the business is a choice of the proprietor rather than the result of displacement.[26]

In the United States, the government does not pay for " goodwill " or the business itself when property is acquired under eminent domain. The position of the courts has always been that it is only the real estate that is being acquired ; the business as such is not compensable.[27]

The 1956 legislation provided that moving expenses not to exceed $2,000 could be paid for displaced businesses. This amount was raised to $2,500 in 1957, to $3,000 in 1959, and the limits removed completely in 1961. Administratively, however, the limit has been set at $25,000.

In 1964 an automatic payment of $1,500 was provided for displaced businesses earning less than $10,000 per year.

There was also interest in helping businesses re-establish in new locations. In 1961, the Federal Small Business Administration was authorized to make below-market-interest-rate 20-year loans to businesses displaced because of urban renewal.

I have spent some time in describing these developments in the urban renewal programme for they indicate the way in which the programme has been modified and improved and the direction in which it has moved and is moving. They also reflect the programme's growing complexity and Congress's and the Administration's increasing concern with rehabilitation and with the programme's impact on those being displaced, on poor families generally, and on small businesses.

Although the programme is still a city rebuilding operation and is so considered by many cities, there is interest by some in directing the programme towards building for low or moderate income families. This is frequently reflected in the use of the term " human renewal." I shall return to this aspect of the urban renewal programme in the last section of this paper where I discuss the social situation in our cities

and the social and human development programmes that are now emerging as important supplements to the urban renewal programme.

PUBLIC-PRIVATE PARTNERSHIP IN URBAN RENEWAL

Before delving into the public-private partnership in urban renewal, it is necessary to dwell at least briefly on the local governmental structure that guides the development of cities and towns in the United States. Our experience with governmental control or direction of development has been considerably less than yours. It is also incipient since it is being practised in a sophisticated way by only a few cities. Urban renewal has always had the potential of a positive development tool, but it has been used infrequently by local governments in such a positive way.

Land Development Controls

Control of land development in the United States rests with the municipal government—the city, the town, the county, the township—not with the state or the Federal Government. Except for direct public works, such as public buildings, civic centres, roads, parks, etc., the control over land development has been exercised through two devices—the zoning ordinance and the subdivision regulation. The subdivision regulation governs the design of streets, utilities, etc. The land use is determined by the zoning ordinance. Approval of subdivision design can control the design of an area ; and in some instances approval can also control the placing of community facilities, such as schools, parks, playgrounds and the like since in some jurisdictions the large land developer is required to set aside certain portions of his land for such community facilities.

Zoning determines the use and intensity of use. These regulations are in the form of a municipal law which may be modified in case of individual hardship. Zoning controls the development of areas by means of mathematical, universally applicable standards such as height, families per acre, setbacks, side and rear yards, land coverage, floor area ratios, etc.

To change the zoning classification for any parcel of land, the zoning ordinance itself must be amended ; and this requires action by the municipal legislative body, the city council. Such changes are made, with varying frequency, upon the request of the proposed developer who wishes to develop the land more intensively or for a more productive use.

The zoning map is intended to reflect the objectives of the city's general plan. Often it reflects existing conditions instead. Since in most cities where urban renewal is operative most of the land has been developed, there is not much that a zoning ordinance can do to reshape the development of the city.

Of necessity, the zoning controls are negative in character. They limit uses, height, densities, etc. They cannot of themselves generate a development of a particular kind or character. They can to some extent prevent improper land development and to some extent they can and have guided development. But often a zoning classification must be attacked and changed if the developer is to develop his land in the way he wishes. The onslaught is heavy ; resistance frequently crumbles. Zoning thus has characteristics that make it a difficult tool to control development.

The planning agency for the local municipality is usually advisory in nature, and influence varies considerably among cities. Generally it does not have much control over developmental decisions. School location, park location, major highway location, etc., are influenced more by the department responsible for the function than by the general plan prepared by the planning commission. The planning commission is frequently on the periphery of hard, developmental decisions and at times retreats to a position of non-political involvement, standing righteously on the purity of the advice submitted to, and often rejected by, the elected officials.

Of late, however, two programmes plus a stronger planning operation have begun to expand the control that a municipality can exercise over development. These two programmes are the urban highway programme and the urban renewal programme. With the advent of our urban expressways, cities now realise that highway location can have a major impact on the development or disruption of the city. Location and design decisions can influence the development and redevelopment of major portions of the city. Until not so many years ago, these locational decisions were exercised by the state highway departments, often riding roughshod over objections of local governments and planning commissions. Since the cost of these expressways is borne not by the city but by the state and Federal Government, the city often was fearful of losing the roadway altogether if it blocked the proposed location.

Within the past few years, however, the interest of cities in the location of urban expressways has greatly expanded. Some cities, San Francisco for example, have ordered the cessation of expressway construction pending a decision on location and design that meets the city's objectives. In San Francisco, one finds expressways ending in mid-air.

Other cities too have expressed such opposition, and the result has been an increasing influence of cities on design and location. Cities have analysed the development impacts of these major transportation routes and have begun to mould them to their development objectives.

For example, New Haven designed a major expressway to serve the central business district urban renewal project. Cincinnati designed an industrial renewal project so that the ramps from an adjacent expressway would provide the best possible access. In Philadelphia, a major controversy arose over a proposed elevated expressway because it would cut off the Society Hill renewal area from the river. It is now to be below grade. In Washington, D.C., expressways have been postponed because many feel a rapid transit system should be built first and the city should not rely on expressways for commuter traffic.

Studies in depth have been made of the relation between land use and traffic generation ; proposed highway developments in the more sophisticated cities and states are no longer based upon projection of land use trends but upon development models reflecting area development objectives.

Urban renewal is the second programme that provides the city with greater control over development. Under urban renewal, a city decides what it wants built ; it determines the design, the relationship with other areas, and the location of public facilities ; it makes the development decisions. The city, however, does not itself construct ; it relies upon private enterprise.

This is the essence of the urban renewal programme ; namely, public decision on development, private execution—a partnership between government and private enterprise.

What is the relationship, what are the inducements, what are the frictions, what have we learned, what are the trends ? These are the questions I should like to answer.

The relationship is new. It is not different in degree ; it

is different in kind. This is not the usual public administration process in dealing with the private sector. A standard community is not being bought or sold. A portion of the city is being recreated, and the city cannot do it alone. It must find, through new public administration procedures, a means of persuading the private sector to rebuild the city in the image the city desires. It cannot leave such decisions to private enterprise alone, and it is not equipped to build itself what private enterprise is geared to build and finance.

Land Sale Process

To lay the framework for the relationship between public direction and private execution, it is best to describe the process, albeit briefly. The city prepares a development plan for an area it has cleared. Such plans vary greatly among cities as to detail, but basically the renewal plan determines the location of the major roads system and the location of public improvements such as schools, libraries, police and fire stations, etc. It also delineates the different land uses—high-rise apartments, terrace housing, churches, commercial facilities, etc. It also establishes controls in terms of density, floor-area ratios, set-backs, height, etc., although the sophisticated plan sets design objectives rather than using standard zoning controls.[28]

With this renewal plan, which has been adopted by the municipality and which has the force of law in controlling development, land is offered for sale or lease, in whole or in sections, to private developers.

The offering may take one of three basic forms. One is based on competitive price, either by auction or sealed bids. The developer who bids the most for the land is awarded the contract. He must of course build in accordance with the urban renewal plan.

This land disposition method is generally the least satisfactory, for it in no way gives the public official any real say over the design of the development. It emphasises maximum return for the land rather than best quality development. In these competitive situations, the prospective developer is frequently so anxious to acquire the land that he is unrealistic in calculating his costs and bids more for the land than prudent economics would indicate. Subsequently he may have to seek financial relief in some other form, such as asking for a lowering of the standards of the renewal plan. Generally it is not in the public interest to treat maximum return from the land as the sole or all important criterion in selecting redevelopers.

A second method is negotiation. Here the city negotiates directly with a redeveloper of its choice, either seeking him out or selecting from among those who have evidenced interest in the redevelopment project. Negotiation covers all aspects of the development—land price, design, financial ability of the developer, construction schedules, etc.

This method has the distinct advantage of placing the city in the position of selecting the developer of its choice rather than having to select from among those who have submitted a proposal. The negotiations can frequently exact more rigorous requirements than other land disposition methods and result in greater public control over the development.

It is subject to abuse, however ; redevelopers might be selected on a political or personal preference basis. Federal regulations require that where this system is used the city must announce in advance that it is to negotiate the sale of the land and permit interested redevelopers to discuss the possibilities of developing the land being offered. Also a public hearing must be held on the terms of the contract after a redeveloper has been selected.

A third method, which has been used very successfully, is fixed price competition. The price of the land is established at the outset and a competition is held on a basis other than price. Usually the factor, or the major factor, in such competitive dispositions is the design of the development. The public agency responsible for making the selection calls upon an advisory jury of architects, developers, and planners to recommend from among the designs submitted. This method has the considerable advantage of calling upon the creative talents of several architects and developers for preliminary design concepts. Where this method has been used, the results have generally been very good.

It does have some limitations, however. There is a tendency, unless prohibited by the public agency, for developers to submit quite elaborate design exhibits since elaborateness of submission may be influential in determining the winner of the competition. It may also discourage developers from participating in future competitions because of the money that must be invested in the submission itself. There should, therefore, be strict limitations on the material to be submitted.

Another caveat in this disposition method is the need to hold the developer to the design submitted, permitting deviation only on the approval of the public agency and then only with good cause. There is sometimes a tendency for the developer to be over-ambitious in indicating what he will build ; and when the cost comes in somewhat higher than anticipated, he may ask for relief. The design submitted must become a part of the land scale contract. He must be obligated to build that which he submits.

These are the principal ways that land in urban redevelopment areas has been sold in the United States. In the early stages of urban renewal, developers were sceptical and in a few instances there was little or no interest in available redevelopment land. Since then, however, the proven success of many redevelopment projects has encouraged developers to enter the redevelopment field, and there is no dearth of interest on their part.

A major reason for this favourable attitude is the location of the land available for redevelopment. Developers must seek locations farther and farther from the centre of the city. Close-in locations are virtually non-existent in most major urban centres, and the economic principle of scarcity comes into play. Closing-in urban renewal areas have a built-in value as a long-term investment.

There are, however, some negative aspects of renewal areas that cannot go unconsidered. They have been the slum and blighted areas of the city. Their reputations have not been attractive ; they have been labelled a " bad address." It takes time to overcome the former reputation and to establish a favourable, new reputation. Thus these areas do not attract crowds of eager renters or buyers during the early phase of their development. Metamorphosis takes time. Developers have learned this the hard way by having their housing developments rent-up over a longer period than originally expected. The area is undergoing metamorphosis.

Public-Private Partnership

The inducement to the private developer then is the opportunity to develop a tract of land in a desirable location, with development standards set by the local government so that he does not have to seek zoning changes to make his development possible, with public facilities such as roads and utilities installed or to be installed by the local government, and with controls that apply to other property in the project as well

as his own. He realises the difficulty of changing the character and reputation of the area ; he knows this will take time ; and he knows that he must deal with a greater bureaucracy and be subject to greater plan review than would be the case in a normal standard, non-renewal development.

Within this framework some frictions are bound to occur ; but our experience can teach us much about the reduction of these frictions and the establishment of a public-private relationship that results in the achievement of the public objectives and at the same time makes it possible for the private entrepreneur to make a reasonable profit—for that, of course, is why he is in business.

Each side must recognise certain truths about the other. On the private side, the developer must recognise that he is, in effect, an instrument of public policy. The renewal plan under which he has agreed to build and which he has examined prior to entering into a contract to buy or lease the land is a statement of public objectives. He is obligated to carry out these objectives. He may have suggestions for change and improvement ; but if they are not accepted by the public officials, he has no right to object.

Also the private developer must recognise that he has an obligation to build what he has proposed ; he should not expect approval of proposed design changes merely because he requests them. He may feel his requests are reasonable and the rejections unreasonable, but he has no basis for objection.

Finally the private developer must realise that the process is public. He will be in the public eye, his activities will receive considerable public attention, he will be subject to public criticism, and he must follow prescribed public procedures. It sometimes comes as a shock to a developer in an urban renewal area to find himself the object of public criticism. While public exposure is a way of life for the official, it is at times deeply upsetting to the private developer.

The public official also must adjust to a new relationship. His most difficult adjustment is to understand, not completely but in part, the operation of the private sector. He must have some knowledge of and sympathy for what the private developer has to do and is unable to do if he is to stay in business. The public official's requests, his demands, his reactions to unpredictable situations—and there are bound to be some of these—must be based on informed knowledge of the needs and interests of the private developer. Since public decisions and processes are not judged in terms of profit considerations, he is often hard put to understand why a delay in the city's meeting its commitments may create financial problems for the developer.

Unfortunately cities have been known to be somewhat cavalier in meeting their commitments. A delay in street improvements, sewer installations, school constructions, etc., can seriously damage the ability of the developer to build or rent his project. I recall one incident where a developer was criticised publicly for not building shopping facilities quickly enough when in fact the public agency was in no position to deliver the land on which the shopping facilities were to be built.

The public official must also understand and respond reasonably to those situations in the private market over which the developer has no control. Public construction, of course, is not geared to market demand. Private construction in a renewal area is. What the developer builds in the renewal area must compete with all other construction and offerings in the market place. If the market does not develop as rapidly as the projected construction schedule in the developer's contract, he should not be expected to commit economic suicide by being required to adhere rigidly to the time schedule and build when there is no market. But the public official must also expect and be able to recognise those situations where a request for delay is not based on market considerations but on factors within the control of the developer.

These are the problem areas in this public-private relationship of urban renewal development. Basically they require a mutual understanding by both the public official and private developer of the affairs of the other—not to the extent of expertise but to the extent that each understands the fundamentals of the way in which the other must operate to achieve his objectives. We have had our disputes, our misunderstandings, and even our law suits, but in the process we have learned a great deal. I would say that we are well along in the development of an operational and understanding relationship with perhaps a bit farther to go on each side. The local public agency needs to be more conscientious in meeting its commitments to the private developer ; the private developer needs to recognise more fully that this is still a risk enterprise and not all adverse developments are caused by public action or should be bailed out by public action. It is a relationship that is rebuilding major portions of our cities ; it has proved successful.

There are a few additional comments I should like to make. They are based on observations I have made over the past several years on the best way to produce the best possible developments. They have to do with the character of the plan itself, the characteristics of the developer, and the urban design quality of the developments produced.

The Urban Renewal Plan

As to the plan, we have learned much from the early days of renewal. We have experimented and innovated and as a result can point to much that is good (and in some cases some that is not so good). Renewal areas have been the few places where there has been the opportunity to design areas rather than individual structures that have little or no relation to their surroundings.

We are still struggling with the problem of the substance of the plan itself. I say we are struggling, for we are seeking a plan that provides for flexiblity and built-in incentives for good urban design and yet one that does not give too much licence to the developer. Although many urban renewal plans still consist of delineated parcels by land use with the usual zoning type controls, we are beginning to use two types of design oriented renewal plans : the very tight, detailed development plan and the flexible "design objectives" plan.

The former is a precise statement of the way the area is to be developed. It is a three-dimensional document, stating in visual terms what is to be built rather than relying upon the usual zoning type controls. Such a plan requires a competent urban designer. Its execution calls for careful and enlightened supervision by the public agency, for it tends at times to be unrealistic about what it is possible to build. Almost a *sine qua non* of such an approach is the availability of the urban designer to oversee the actual development of the plan, to provide interpretation, and to make the adjustments that are bound to be required in the execution of the plan.

A variation of this type plan is one where interested redevelopers submit proposals based either on building what the plan dictates or on a design of their own. The city

judges which is the best—its own design or that of a redeveloper.

The design objectives approach is not dissimilar to the specific design plan, but it has a built-in flexibility. Here the objectives of the plan—social, economic, and aesthetic—are stated and translated into a visual concept. But the developer is given greater latitude in meeting these objectives and is judged on the basis of how well his design fulfills the stated objectives. Here too, of course, the continuing presence of the talented urban designer is essential, for it is he who must pass on whether the proposed development meets the design objectives.

The basic principle, however, is clear. The plan must not end up as a listing of zoning type controls ; it must have a design sense, a design objective, and its execution should not be judged on the basis of whether it meets certain mathematical measurements but on whether it meets the objectives stated by the community. Good design is seldom produced on the basis of rigid templates. It depends upon judgment. The public official in urban renewal must be willing to have his judgment tested.

Kinds of Redevelopers

As to the character of the developer, we have found an interesting shift in the kinds of developers interested in renewal. In the early days of the programme, the speculative developer was the one most often attracted. This was to be expected ; speculative development is responsible for most construction in the United States. But the renewal process turned out to be too slow and the seasoning period too long for most speculative developers ; for he is by definition one who works with little equity, who depends upon creating value quickly, and who expects to make his profit on the sale of the property once it is built and rented. Some of the early speculative developers found themselves inadvertently becoming long-term investors.

To-day, it is precisely the long-term investor who is taking a major interest in urban redevelopment. Such investors have staying power since they have large financial resources and are interested in a long-term, moderate rate of return. The speculative developer must depend upon a higher rate of return, for he must get his equity back quickly in order to get on with other speculative developments. He is likely, therefore, to be more interested in the immediate attraction of what he builds and thus is inclined to produce a design that has current acceptance and which consequently may be somewhat on the jazzy side. He is not as concerned over long-term economics and thus is more likely to choose less costly initial construction even though reduced maintenance costs over the long pull would justify a greater initial expenditure. For the same reason, the speculative developer has less concern than the long-term investor for the competitive position of the building in future years. Therefore, he may not pay sufficient attention to those design elements that will improve the building's chances of competing with one built some 15 or 20 years hence.

The long-term investor sees the close-in location, the built-in protection of the controls in the urban renewal plan (which run from 20 to 40 years), and the increasing demand for space in convenient locations as sound justifications for his long-term investment.

These are not the only inducements to the long-term corporate investor. There are also tax advantages, related primarily to depreciation allowances, which constitute an additional, important incentive.

Urban Design

A major advantage of urban redevelopment is the opportunity it presents for large-scale urban design. Such opportunities were infrequent in the United States prior to urban redevelopment. It is not often that a developer is able to assemble a tract of land as large as or a centrally-located as urban redevelopment projects, and thus there has been little need for, or interest in, the design of such areas. Rockefeller Centre in New York City is one of the few large-scale developments prior to urban redevelopment. The other examples have been primarily in the field of public housing, but the restrictions in terms of costs and limited land use prevented such developments, except in a few cases, from contributing significantly to large-scale urban design.

As a result, there were few really qualified urban designers in the United States when urban redevelopment projects made their appearance. Thus we fell back on the standard planning and zoning concepts developed in the 1930's. They were antipathetic to mixed land uses and mixed types of housing and drew upon the only large-scale design example extant—or so we thought—the Corbu towers in the park.

To-day, as a consequence, some early urban redevelopment projects are criticised as sterile, monotonous, and unimaginative ; but for the time in which they were built, they were considerably better than most structures being built outside renewal areas. But concern for urban design and public awareness of it has grown apace. Old concepts of building relationship, of land-use relationship, of building-type relationship have been rigorously questioned ; and new urban design concepts have been advanced and built.

Because of urban redevelopment, to a considerable extent therefore, the art of urban design has advanced rapidly ; but because of the low level from which it started, it still has a long way to go. We are still short of top-notch urban designers, and we are still examining urban design concepts very critically. We have a tendency to go with the innovation—the new concept—and to reject at times some urban design forms that have stood the test of time very well. But that is the nature of experimentation and exploration, and urban redevelopment has provided the needed crucible. As such, it has created and is creating some of the best urban spaces I have seen—not that I can't point out some bad ones as well, for we have them too—but the best of what we have produced is very good indeed.[29]

This, then, is our working relationship between government and private enterprise in the rebuilding of our cities. It is a mechanism that has worked well even though it still has some flaws. It has required the education of both government officials and redevelopers, but that process has also proceeded well. The relationship is still undergoing development, but I feel we have hit upon an arrangement that works to both the public and private advantage and in the process will produce, and is producing, a much improved quality of urban living.

THE SHAPE OF THINGS TO COME

Up to this point I have dealt primarily with the physical and legal aspects of urban renewal, its legislative development, its operation, its relationship to the private sector, etc. In this concluding section, I shall deal with its broader implications, its broad-scale impact rather than its immediate impact. I shall discuss urban renewal as part of a broader programme dealing with the function and structure of urban society ; and from the trends already discussed, I shall try to extrapolate its future role and character.

This rather ambitious approach is best handled by

examining three major aspects of our urban society. The first is the social or people-oriented aspect of the urban milieu. The second is the control and direction of physical development by government institutions. The third is the growth problems of our metropolitan areas and the governmental structure for dealing with them.

Urban Renewal and the Social Milieu

Except for my reference to relocation, I have not touched on the social impact of urban renewal. Renewal's impact on people, the character of their housing, and the extent to which it improves their living conditions have received increasing attention these past few years ; and trends clearly indicate that this emphasis will continue to increase rather than diminish.

This social impact must be viewed, however, in the context of the social situation that exists in most major cities in the United States since these conditions are not found to any great extent in the cities of Great Britain or other European countries.

Social Environment.—In most large urban areas of the United States, the poor inhabit the central portion of the core city. They live in housing built originally for the affluent or specifically as "workers' housing." Consequently it is either old and not particularly suited to the needs of these families or is not of generous size or quality construction. Such housing is located in what have become our slum areas.

The same areas also house large concentrations of Negroes. These ghettos developed because of the economic status of a large proportion of Negro families and because of racial discrimination.

The long history of limited education and job opportunities for the Negro in the United States has resulted in Negro family incomes considerably below those of white families. The median family income of the Negro is $3,233 ; the median family income of the white is $5,835. Although Negro families constitute 10·5 per cent of the total in the United States, they constitute 24 per cent of the families we classify as impoverished ; *i.e.*, those that earn less than $3,000 per year. Also 42·5 per cent of Negro families are in the poverty category.

The slum areas offer housing accommodations at relatively low rents, and this is where the poor live. But low rents only partly explain why the slum areas house large concentrations of Negroes. Negroes have long been denied the opportunity to live wherever their purchasing power would permit. The slum areas, the less desirable areas, are usually the only ones to which Negroes of all income groups can move. Only recently have public actions been taken to eliminate racial discrimination in housing ; but even with "fair housing" legislation in some states and cities with a Presidential Order on Equal Opportunity in Housing, and with the Civil Rights Act, 1964, we are still some distance from breaking existing patterns of housing discrimination.[30]

The central city concentration of Negroes also reflects the difficulty of Negro families in finding accommodations in suburban areas. Not only do such areas follow policies designed to make it difficult for Negroes to buy or rent ; little housing is available in these areas for families of low or lower middle income. This is strikingly illustrated by examining the population statistics for the Washington Metropolitan area. The percentage of Negroes has remained almost constant at 25 per cent for 40 years ; yet the percentage of Negroes in the City of Washington itself has risen from 29 per cent in 1940 to 55 per cent to-day. The percentage of Negroes outside the City of Washington has dropped from 14 per cent in 1940 to 6 per cent to-day.

It is in the central city slum areas, the areas that house the poor and the Negroes, that the urban renewal programme operates. And it is also in these areas that one finds the concentrations of the disadvantaged families with severe social problems.

The purpose of both public housing and urban renewal has been to eliminate these slum areas and, through the construction of public housing for low income families and through the relocation of families into standard housing, to improve their living conditions. The emphasis has been on providing a suitable physical environment, and this is what both programmes have done.

This approach was based on the assumption that the slum was a breeder of social maladjustment and anti-social behaviour and that the improvement of living conditions would improve the social condition of the family. There is no question but that the slum *per se* does breed social problems and anti-social behaviour, but it is also increasingly clear that this is not the sole cause. The improvement of living conditions does not by itself eliminate the social problems so evident in slum areas.

So long as our slum clearance programmes were relatively small and created little disturbance, since only a few areas were affected, there was not much concern by the citizenry at large with the social problems of slum areas. But as the urban renewal programme became more extensive, as the number of areas being renewed in any one city increased significantly, these social problems began to receive greater attention than they had in the past. They suddenly became more and more visible—and a threat.

The threat that families with social problems, and Negro families in particular, might move into standard areas of the city aroused the citizenry to take a greater personal interest in the social problems that had been so long ignored. So long as the slum and blighted areas were left undisturbed and the social problems were confined to those areas, the citizenry generally looked the other way.

Thus urban renewal has focused the attention of the public generally on the social problems found in slum and blighted areas. We have begun to realise that improving housing conditions—important as this is—is not enough, but that programmes are needed to deal directly with the social problems of slum-dwelling families. Coupled with this recognition has been the acceptance of the principle that if one could improve the economic status of such families, at the same time as their social status was being improved, they could move into the mainstream of middle-class life and thus no longer need the special subsidies upon which many of our social and housing programmes are built.

Anti-Poverty Programme.—Thus was generated our anti-poverty programme, one of the most important elements of President Johnson's Great Society. The basic principle upon which this programme is based is revolutionary, and the concepts embodied in its application are exciting new approaches to the social problems of an urban society. The importance of the anti-poverty programme[31] is not its impact —it is just now underway—but the revolutionary principle underlying it—namely, that our economy has now reached the stage of sufficient affluence so that it is possible for all citizens to share in the good life—the Great Society.

Up to now we have operated on the assumption that the amount of goods available for distribution was limited and that in the distribution of these goods there would always be

some who received very little. "The poor will always be with us" is the saying that best characterises our previous philosophy. Our programmes of assistance were aimed at alleviating the conditions of the poor, providing them with relief and welfare payments to enable them to exist, albeit poorly, in an urban environment.

The new principle embodies more than the distribution of more goods to the poor ; it includes elevating their income-producing capacity so that they may through their own efforts—not through the beneficence of the state—enter the mainstream of urban life as economic producers.

It is an understatement to say that this is an ambitious programme. It is, as I said before, revolutionary. It is an attempt to have each, through his own efforts, share in the affluence and the good life of the Great Society.

And just how will the anti-poverty achieve this ambitious goal? It has a two-pronged attack. One prong is to train those now unable to obtain an adequate return for their labour so that they can command a wage that will support a decent standard of living. This in turn requires an examination of our present employment structure to determine those areas where it is possible to increase employment, particularly in the face of anticipated reduction in employment because of automation. There will have to be increased emphasis on public activities in the fields of education, public improvements and the like, and there will have to be an emphasis on increasing job opportunities in the service industries.

Related to this retraining programme is a vastly increased programme of education, particularly for those children who begin their lives in a disadvantaged state.

The second prong of the attack on poverty is the concentration of social services to those families in need, rather than straight financial assistance which merely enables such families to eke out an existence. These services must be designed to remedy the particular social ill besetting the family or individual. They must cover a wide range of activities and be remedial, not ameliorative. They must be geared to the needs of the families rather than to the characteristics of a particular welfare programme. They should be family or individual-oriented — not welfare-programme-oriented.

Renewal and Anti-Poverty.—And how does the anti-poverty programme mesh with the urban renewal programme? It provides the social tool whose absence has been the basis for much anti-renewal criticism. By definition, urban renewal is a physical programme, a programme to improve the city's physical environment. The social aids available to families in slum and blighted areas have been limited. There has been no basic programme aimed at remedying the social and economic problems of these families.

Aided by the anti-poverty programme, urban renewal can now proceed with the assurance that assistance for socially-depressed families will be available A family to be displaced can receive remedial assistance prior to the time it must move. Its members will be able to move into the new neighbourhood with less trepidation since such assistance should enable them to become responsible citizens of the community.

In areas to be rehabilitated, the anti-poverty programme will also work directly with the families, aiding them in the solution of their social problems at the same time their housing and community are being rehabilitated. The family as well as its quarters will undergo rehabilitation.

For the first time, we shall be able to attack the problems of slum and blighted areas in a comprehensive fashion. Not only shall we eliminate slum and blight and rebuild these worn-out and obsolescent areas, but we shall also be helping families to help themselves in improving their earning capacity and their status in society.

Control of the Urban Environment

A most significant trend in terms of both its rapid development and its portent for the future is the shift in the basic concept of the urban renewal programme. Emphasis on individual unrelated projects that clear a slum and make a piece of land available for private development is yielding to the concept of urban renewal as a programme that can shape the development of the city and restructure it. It has dawned on city planners and elected officials alike that in the aggregate urban renewal projects can change the economic activities and social institutions of the city and its inhabitants. Thus it has come to be viewed as a programme that changes existing land uses for new ones and, in the process, alters the character of the city.

With this new concept has come recognition by some of the more sophisticated cities that a programme with this kind of leverage should be geared to basic development objectives. General objectives such as increasing the tax revenue and attracting middle-income families back to the central city are well and good, but they are not elements of a carefully-designed set of development objectives.

Hence if the community renewal programme had not been created by federal law, it would have been invented by the cities. The computerised studies under the community renewal programme analyse a city's existing situation, examine the effects of alternative development decisions, and forge a comprehensive development programme.

If a city can amalgamate its urban renewal programme, its public improvements programme, its major highway programme, its public housing programme, its housing code enforcement programme, and its fiscal programme into one comprehensive approach to certain stated objectives, it can exercise a considerable leverage over its development and redevelopment.

Thus the concept of positive programmes to achieve development goals was generated by urban renewal and has replaced the attitude of the past that the city was without effective control over its own development. In the past, the city's basic control was the zoning ordinance—negative in character and subject to the onslaughts of developers with their own, special objectives.

One can see to-day in such cities as New Haven, Boston, Pittsburgh, Philadelphia, and many others the actual execution of a strategy of development that is based upon achieving objectives established in advance of the programme.

Cities also now control their development to a much greater extent than in the past through highway planning, The old concept of highway location was to assume a straight line projection of land use and design and locate the highways to meet this projection. Now we know much more about traffic generation and land use. Increasingly, cities first decide how they want to grow in both direction and land use, and highways are designed to strengthen these objectives. Highway planning is another element in the city's positive development programme of which urban renewal plays such an important part.

Execution of this concept rests upon the use of sophisticated, and at times computerised techniques to provide better understanding of the development process and developmental relationships and upon the recognition of local officials that they have the instruments to direct and control development.

This process is a powerful tool—a physical tool with strong social implications. It can programme housing for

various income groups, it can encourage in-migration and out-migration, it can use the quality of a school to attract families to a particular neighbourhood, it can, in short, result in some social restructuring. This kind of social sophistication is beginning to emerge, but we still have much to learn in its analysis and use.

We are also acquiring greater insight into what urban design is and how urban areas ought to function. Urban design is, in fact, a fundamental part of a developmental programme, and through it we shall be able to give greater direction to the design of the city.

The prognostication is clear ; cities have begun to decide their own destinies ; they need no longer leave major development decisions primarily to the entrepreneur. As we become more adept in analysis and as we learn more of the administrative techniques of forging development programmes, we shall be even more effective in remaking our cities into much more desirable places to live and work.

Metropolitan Governmental Complexity

In discussing the city in the previous section, I have purposely discussed it as a separate entity for I did not want to complicate the exegesis with the metropolitan question. In truth, of course, developmental programmes must look to an area greater than the political boundaries of the city ; they must encompass the metropolitan area. But herein lies our problem.

In nearly every metropolitan area in the United States, one finds a major central city surrounded by numerous (varying from just a few to several hundred) independent political jurisdictions. Each has its own planning function, its own elected officials, frequently its own police department, its own school system, its own everything, really. They are complete municipalities and have as much authority as the major central city. Some metropolitan areas spill over into adjacent states. Most of the peripheral municipalities are inhabited by white middle- and upper-income families. The Negroes and the poor are concentrated in the central city.

Except for a few cities that have a wage tax (a tax based on where one earns his wages), the suburban municipalities have no fiscal responsibility in relation to the central city ; each city raised its own revenue, primarily from the real estate tax. Where state financial aid is distributed for specific purposes such as education, the basis is usually population.

Because the real estate tax rate is not uniform throughout the metropolitan area and because these taxes are paid to the municipality where the land is located, there is much vying among the municipalities for high tax-paying industries that impose a small fiscal drain on the municipality. Thus electronic research laboratories that employ only high-paid professionals and which have a high investment in the structures built are considered most desirable. They are clean, emit no noxious fumes, bring in no undesirable residents, and produce high taxes.

Metropolitan areas are expanding at a tremendous rate. In the United States we are urbanising land at a rate of 1m. acres or 1,500 square miles a year. The major expansion is in the larger metropolitan areas.

Except for the very largest metropolitan areas, there is no rapid transit system ; we must rely on the automobile and the buses, using city streets and expressways to transport people from the suburban areas to the central city.

This is our metropolitan jungle. Although we have fashioned some limited devices to civilise it, we must find means of accelerating the process.

We do have metropolitan planning commissions that look at the metropolitan complex as a whole. They are not strong, they do not have much authority, they are advisory only, and they lack a constituency to which to report. But they are there, and they are thinking and drawing maps at the metropolitan scale.

In a few metropolitan areas, we have organisations of elected officials who come together from time to time to discuss metropolitan problems. In some instances, as in the case of the Association of Bay Area Governments in the San Francisco-Oakland area, the body of elected officials has jurisdiction over the metropolitan planning function and thus is able to provide the missing constituency. In a few other cases, primarily the small metropolitan area, the central city has combined with the county to form a single government.

We have created special districts to provide specific services for metropolitan areas such as water and sewer districts, but such districts have no responsibility to the electorate and frequently are beyond the control of any planning operation or any unit of government other than themselves. They consequently can become the unfettered determiners of the development pattern of the metropolitan area.

We have had some instances of a city annexing the entire metropolitan area. Oklahoma City now has an area of over 600 square miles.

Three trends, however, do indicate that we may be moving in a rational direction. The first is the incipient one of the organisation of elected officials. This has progressed very slowly ; but with the stimulus of threatened intervention by the state or Federal Government, it may be speeded up by arguments for self preservation. The second trend, which is just beginning to make its appearance, is growing awareness of the role of the state governments in metropolitan affairs. Under our governmental structure, only the state government has sufficient authority to deal with the problems of the metropolitan area. Cities are creatures of the state and have authority only in their political jurisdiction.

But we also have a strong tradition of city " home rule " in the United States. State legislators are elected from districts in the state, and these districts are becoming more and more urban. Thus it may be difficult for the state government to overcome the strong " home rule " feelings of the legislators elected from districts in the cities.

Despite these obstacles, it appears that some states will establish some form of jurisdiction that can begin to deal with the development problems of metropolitan areas. California is making gestures in this direction, and other states may well follow suit.

The third trend concerns the role of the Federal Government. It cannot deal directly with metropolitan areas, but it can provide assistance for certain programmes that are carried out on a metropolitan basis and thus encourage the development of some form of coordinated metropolitan development. The Federal Government already requires that there be metropolitan planning in connection with its grant programmes for Open Space Land, Mass Transportation, and Urban Highways ; and the Federal Government pays for two-thirds of the cost of metropolitan planning where there is such a planning commission. Also legislation has been proposed to require review by a metropolitan planning commission of any federally assisted project in the area.

Coupled with these activities is the debate now going on in Congress on the Administration's modest proposals for encouraging the development of new communities—we have been careful to avoid your phrase, " New Towns." These

proposals are indeed modest, primarily providing incentives for private developers but also proposing loans to state development agencies which would acquire the raw land plan, the new communities, and sell the improved land to private developers who would build in accordance with the development plan much as is done in clearance areas under urban renewal. This would begin to involve the states more directly in the development of these new areas.

All this does not add up to a large-scale or promising programme for a metropolitan developmental approach, but it does indicate some moves in that direction. It is more than a glimmer on the horizon. President Johnson in his 2 March message to Congress entitled "Problems and Future of the Central City and Its Suburbs" said :—

> The interests and needs of many of the communities which make up the modern city often seem to be in conflict. But they all have an overriding interest in improving the quality of life of their people. And they have an overriding interest in enriching the quality of American civilization. These interests will only be served by looking at the metropolitan area as a whole, and planning and working for its development.
>
> The Federal Government cannot, and should not, require the communities which make up a metropolitan area to cooperate against their wills in the solution of their problems. But we can offer incentives to metropolitan area planning and cooperation.

These then are the major trends and projections as I see them in the field of urban development. The problems are great—the challenge considerable. But we are now clearly an urban society, and we must deal with our urban problems —social, physical, and governmental. Renewal has shown us a beginning in the rebuilding and restructuring of our older cities. But by itself it is inadequate. It must be part of a broader developmental programme dealing with metropolitan areas. The resources of all levels of government are needed.

Urban renewal has revealed many of the problems to be solved, it has conceived a process that can be adapted to other developmental programmes, it has given the city the hope of being able to direct and control its development and rebuilding, and it has established a viable working relationship between government and private enterprise that can be utilised in the building and development process. The objectives ahead loom large and although they are ambitious they are not insurmountable. If we can devise the means to put a man on the moon, we can certainly devise a means to provide the good life for all in an urban environment that no longer demeans but provides a stimulus to man's aspirations.
